							C.E.	
							SHEET 1 OF 6	

1. The specifications used for this project, "The New Mexico Standard Specifications for Public Works Construction," 1979 Edition, as amended by the contract documents.
2. All existing utilities shown were taken from Record Drawings and are located as accurately as possible from information available. It will be the Contractor's responsibility to verify exact locations of these utilities before construction begins.
3. Policy On the Proximity of Water & Sanitary Sewer Lines (SAS): "Whenever possible, it is desirable to lay parallel water and sewer lines at least 10 feet apart horizontally, and the water line should be a higher elevation than the sewer. If this is not possible, separate trenches will be required, and in all cases (this shall be effective even though one line has been installed prior to the other), the water line shall be at least 2 feet above the sewer. When water and sewer lines cross each other, the water line shall be at least 3 feet above the sewer; otherwise the sewer shall be of ductile iron pipe." A preferred alternative is encasement in concrete as shown in the Standard Details for 10' on each side of the water line. If ductile iron pipe is used it must be run from manhole to manhole.
4. All sanitary sewer lines to be VCP or PVC as per contract documents.
5. All sanitary sewer manholes shall be Type "C" 4' Dia., City of Albuquerque Standard Drawing S-1-3, unless otherwise noted.
6. Contractor shall be responsible for obtaining Blue Stakes prior to excavation.
7. Final clean-up grading required after installation and backfilling are completed.
