CITY ENGINEER

City of Albuquerque
400 Marquette Ave. N.W.
Albuquerque, New Mexico
ATTN: Engineering Division.

SUBJECT: Lot 5, Block 19, Paradise Hts Unit 1.

When inspecting the above owned lot we found that 15 or 20 feet of the front of the lot on the north side of Benton Ave has been washed away at a depth of approximatley 12 to 15 ft. This dirt washes across Golf Course Road and restricts traffic until equipment can remove the dirt after a large run off. To further clarify; the water runs from the East to the West across Golf Course Road.

After some inspection we found running behind; or on the west of Cibola High School running from the south in a northernly direction a large concrete flood control ditch which empties at the bottom of a valley creating this problem. If this condition is allowed to remain the asphalt street (Benton Ave) will be undermined and destroyed.

After paying for the lot and the improvements that have been made it is felt the city has an obligation to correct this problem.

Request an on site inspection be made to determine extent of damages; restoration of dirt to damaged lots and corrective action to solve the problem on a permenant basis.

Sincerely,

Robert E. Shepherd
