**DRAINAGE CONCEPT:**

The proposed development of the Cantata at the Trails consists of 260 single family units including 3-plexes, 4-plexes, 5-plexes and 6-plexes on approximately 17.5 acres. A park is located northeast of the development is 3.3 acres and will not impact the drainage of the developed site.

Cantata at the Trails is located on Albuquerque's West Mesa and is bounded on the north and east by Oakridge Street, on the west by Universe Blvd and on the south by Treeline East. The present condition of the area is mass graded in the southern two thirds and undisturbed in the northern third. The site slopes gradually to the south west corner of the tract.

The site has been mass graded to closely match existing drainage patterns with slopes ranging from 0.5% to 3%. An average of 4 feet of fill has been imported to raise the site above the preexisting undeveloped site where it is assumed that significant basalt exists. This assumption is based on design and development of previous projects in the area.

Storm runoff in Cantata at the Trails will be conveyed by an inverted crown and a concrete valley gutter in all the streets. Three (3) onsite basins are proposed and the runoff from each basin will be captured in inlets on grade as required by COA street capacity criteria. Each basin has a low point that will ultimately capture all remaining flows and be conveyed by the existing 30" storm drain and a proposed 36" storm drain. All flows will drain to the existing 48" storm drain in Universe Blvd.

**UTILITY CONCEPT:**

The proposed development of the site are condominium. The intent of the project is to provide public water and sanitary sewer systems within the site.

**Sanitary Sewer System:**

The sanitary sewer system is proposed to be an 8" diameter pvc pipe for the main located in the internal roads and alleys as shown. There is adequate slope on the site to provide for capacities in the 8" system to serve the site. Buildings on the site will consist of multiple units to be serviced by the main line. The system will outfall to a proposed 8" sewer line in Treeline Drive.

**Water System:**

The water system is proposed to be an 8" diameter pvc pipe located in the internal roads and alleys as shown. The water service connection will be to a proposed 8" water line in Treeline Drive. Water lines will be extended through the development to the west and north to provided looped water systems for other developments within the Trails master planned community. Buildings on the site will consist of multiple units serviced by the main line. Multiple service meters will be sited throughout the site. Meters will serve one or more buildings depending on locations and final design of the water system. It is anticipated that the service lines to individual units will be 3/4" lines.
