General Notes

1. Bearings are based upon New Mexico State Plane Grid Bearings (NAD 83— Central Zone) and were derived by static GPS observations to the existing S.S.C.A.F.C.A. control monument "SP–2" and verified by an NGS OPUS solution.
2. Elevations are based upon the NAVD 88 datum, and are referred to the S.S.C.A.F.C.A. control monument "SP–2" (published elevation = 5623.03').
3. Distances shown hereon are horizontal ground distances expressed in U.S. Survey Feet. Project CF = 0.999653636.
4. Field surveys were performed on July 25 and July 27, 2017.
5. Coordinates shown hereon are local project (surface) coordinates and were derived by scaling the State Plane coordinates by the project combined factor around an origin of 0,0.
6. Depth of cover shown hereon was obtained through the use of electromagnetic line locating equipment. Depths are to the top of pipe and should be considered approximate; this information is not intended for design purposes.
7. Gas lines as shown hereon and existing within the current project limits were constructed with no vertical curves or bends per New Mexico Gas Company personnel (Mr. Ruben Garcia, Inspector).
8. This drawing has been revised to include additional field survey data obtained on July 31, 2017.
