HYDRAULIC DRAINAGE STUDY FOR 19th Ave. and Unser Blvd. Box Culverts – Extension under Westside Blvd.

PURPOSE

This drainage report proposes to convey the storm water discharge from the existing concrete box culvert (CBC) at 19th Ave. and Unser Blvd. through an extension under Westside Blvd. to a surface channel conveyance. The developer intends to fill the existing arroyo for use as development. This report will demonstrate that the proposed stormwater conveyance system is capable of safely conveying the recommended flowrates from the Black Arroyo Watershed Management Plan (WMP) (August, 2002, ASCG Incorporated).

PROJECT LOCATION

Exhibit 1 – Vicinity Map

The project is located north of the intersection of 19th Ave. and Unser Blvd, and is part of the master planned Cabezon development. The site is currently undeveloped and in its natural condition. The existing CBC at the Unser Blvd. crossing is a four-barrel ten foot span by eight foot height culvert (4-10'x8' CBC).

RELATED REPORTS

The Black Arroyo Watershed Management Plan (August, 2002, ASCG Incorporated) provides the following data concerning the existing CBC crossing:

- Estimated Capacity w/ 2" FB (cfs): **2680**
- FEMA Hydrology (Existing Conditions) (cfs): 2687
- DEVEX FLOW 100 yr 6 hr (cfs): 5143
- DEVEX FLOW 100 yr 24 hr (cfs) 5105

This report and plans titled "Westside Blvd. Crossing of the West Branch Arroyo Concrete Box Culvert" are designed for 2680 cfs.

FLOOD HAZARD ZONES

Per FEMA's Flood Insurance Rate Map (FIRM) 35043C0894 C, dated July 16, 1996, the project site includes FEMA 100-year Flood Hazard Zone (Zone AE, Base Flood Elevations Determined). See **Exhibit 2**.

JURISDICTIONS OF PUBLIC AGENCIES

Local

This project is located entirely within the City of Rio Rancho (CoRR) Municipal Limits and is therefore within their jurisdiction and must comply with the City's development requirements.

Regional

This project is located within the jurisdiction of the Southern Sandoval County Arroyo Flood Control Authority (SSCAFCA) and is therefore subject to their review.

METHODOLOGY

This report analyzes a proposed extension of the existing CBC under Unser Blvd. The extension was analyzed by two methods as follows:

Analysis 1: The system was analyzed using HEC-RAS software.

Analysis 2: The system was analyzed using STORMCAD software. The hydraulic model included junctions at the connection between the existing CBC and the proposed CBC, and at the 45 degree bend of the proposed CBC.

The design flowrate used for both Analysis 1 & 2 is 2680 cfs, the "Estimated Capacity w/ 2' Freeboard" from the WMP. CulvertMaster was used to verify this value (page **A-1**), and this report concurs that the existing structure is capable of 2680 cfs.

RESULTS

Analysis 1

The hydraulic model includes cross sections upstream of the existing CBC and downstream of the proposed CBC. The results are shown on page **A-2** and **A-3**. As shown on these pages the proposed CBC will adequately convey 2680 cfs.

Analysis 2

The hydraulic model includes a junction to model the 45 degree bend. The headloss calculations are shown on page **A-6**. An absolute headloss of 1.8 ft was assigned to the 45 degree bend in the proposed CBC. The results of this analysis are shown graphically on page **A-5**. As shown on this page the proposed CBC will adequately convey 2680 cfs.

CONCLUSION

This report recommends that the proposed CBC extension will safely and effectively convey the WMP design event (2680 cfs) through the design reach. A downstream conveyance will be required, but design or analysis of downstream conveyance is currently beyond the scope of this report.

Four 10'x8' concrete box culverts will be required. A plan view of the proposed pipe system layout is presented on page **A-4**.

LEGEND

SPECIAL FLOOD HAZARD AREAS INUNDED BY 100-YEAR FLOOD

- ZONE A** No base flood elevations determined.
- ZONE AE** Base flood elevations determined.
- ZONE AH** Flood depths of 1 to 3 feet (usually areas of ponding); base flood elevations determined.
- ZONE A0** Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- ZONE ABB** To be protected from 100-year flood by Federal flood protection system under construction; no base elevations determined.
- ZONE V** Coastal flood with velocity hazard (wave action); no base flood elevations determined.
- ZONE VE** Coastal flood with velocity hazard (wave action); base flood elevations determined.

FLOODWAY AREAS IN ZONE AE

OTHER FLOOD AREAS

- ZONE X** Areas of 500-year flood; areas of 100-year flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 100-year flood.
- ZONE D** Areas determined to be outside 500-year flood plain.
- ZONE D** Areas in which flood hazards are undetermined.

OTHER AREAS

- ZONE X** Areas determined to be outside 500-year flood plain.
- ZONE D** Areas in which flood hazards are undetermined.

- Base Flood Elevation in Feet Where Uniform Within Zone
- RM7: Elevation Reference Mark

NOTES

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size, or all planimetric features outside Special Flood Hazard Areas.

Areas of special flood hazard (100-year flood) include Zones A, A1-30, AE, AH, A0, ABB, V, VE, and VE.

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures.

Boundaries of the floodways were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the Federal Emergency Management Agency.

Floodway widths in some areas may be too narrow to show to scale. Floodway widths are provided in the Flood Insurance Study Report.

Coastal base flood elevations apply only landward of the shoreline.

Corporate limits shown are current as of the date of this map. The user should contact appropriate community officials to determine if corporate limits have changed subsequent to the issuance of the map.

For community map revision history prior to countywide mapping, see Section 6.0 of the Flood Insurance Study Report.

For adjoining map panels see separately printed Map Index
