Thanks, CURTIS.

JAMES and I printed these right up and reviewed and we have a positive initial response.

We also very much like your "...knock some holes out of the sides to spread the flows over a larger area..." idea.

We look forward to seeing the improved design and calculations.

Thanks again,

Jay Lee Evans

The exhibit A plan is what is built today. The energy dissipator plan is the proposed plan. I had comments on it. Figured they should knock some holes out of the sides to spread the flows over a larger area.

Subject: Sundance Phase IA & IB - Exhibit A

Richard,

Attached is the original Exhibit A that was agreed to, as well as a final more revised drawing that we had worked with Brad Bingham on to make the outfall structure fit more inconspicuously with the adjacent escarpment.
