Angel Gomez, Owner/Builder
9600 Central SW, #104
Albuquerque, NM 87105

RE: Grading Plan Approval for residential building permit located at 8820 Florence NE, Lot 12, Block 16, Unit 3, North Albuquerque Acres, Engineer's stamped dated June 24, 1999, to address flood plain avulsion #5, NAA DMP.

Dear Mr. Gomez,

The referenced Grading Plan is approved for Building Permit.

Prior to Certificate of Occupancy, please submit an Engineer's Certification for building finished floor elevation and for lot grading contours/elevations for Hydrology approval.

If you have any questions, please call me at 924-3980.

Sincerely,

Loren D. Meinz, P.E.
Hydrology Division

DRAINAGE PLAN

The following items relating to the drainage plan for the property at 8820 Florence Avenue, N.E. are contained herein:

1. Vicinity Map
2. Grading Plan
3. Calculations
4. FROM mapping indicating subject lot.
5. AMAFCA topo map indicating subject lot.
6. AMAFCA mapping indicating Avulsion No. 5.

The subject property is located at 8820 Florence Avenue, N.E. The legal description is Lot 12, Block 16, Tract 1, Unit 3 in North Albuquerque Acres. As shown on the Vicinity Map, subject property is the fifth lot west of the intersection of Florence and Ventura on the south side of Florence. The property is undeveloped at this time.

As shown on Panel 4 of 50 of the National Flood Insurance Program's Flood Insurance Rate Map (FIRM) dated October 14, 1983, this site does not lie within a designated flood hazard zone. A flood hazard zone, associated with the El Camino Arroyo, has been identified to the south of this subject property. Based on the above referenced flood map, the north floodplain boundary of said arroyo lies to the south approximately 170 feet from the south property line of this subject site. As calculated herein, the actual setback of the proposed improvements from the floodplain exceed the minimum requirements for erosion setback.

The Grading Plan herein contains:

1. Existing grades shown by spot elevations with contours on 1.0 foot intervals developed from field top survey dated 25 October 1998.
2. Proposed final grade with contours at 1.0 foot intervals.
3. Proposed building footprint for single family residence.
4. Limits of gravel surfaced private driveways.
5. Office lot.

The calculations shown herein present an analysis of the existing and proposed future developed conditions anticipated during the 100 year, 6 hour flood event. Section 2.2.2, Hydrology, of the Development Process Manual (DPM), Volume 2, Design Criteria, dated January 1993, was used to develop both existing and proposed outfall flow conditions. A negligible increase of flows is anticipated due to the proposed development and will not effect project downstream of this site.

The subject property, containing 0.89 acres, is within Precipitation Zone 3 as defined in Table A-1 of the DPM. The property generally slopes from the southeast to the northwest at an approximate 4 percent grade and has native ground cover equating to a Land Treatment of "A". Drainage in the area of proposed development is sheet flow with the beginning of channelized flow at the northwest corner. No indication of erosion was evident during the field investigation and topo survey.

Offsite flows indicated herein generated approximately 3.0 cfs in the developed condition. Offsite drainage basins contributing flows to this property totals approximately 1.0 acres.

CALCULATIONS

ONSITE CONDITIONS - EXISTING

1. Precipitation Zone 3
2. Land Treatment "A"
3. Peak Discharge

$$Q_p = Q_{pA} + Q_{pB} + Q_{pC} + Q_{pD}$$

$$Q_p = Q_{pA} (1.87)(0.89) = 1.66 \text{ cfs, use 2.0 cfs}$$

4. Volume

$$E_v = (E_{vA} + E_{vB} + E_{vC} + E_{vD}) / A_T$$

$$E_v = (0.66(0.89) + 0.89) / 0.89 = 0.99 \text{ in}$$

$$V_{100} = (E_v / 12) A_T$$

$$V_{100} = (0.99 / 12) 0.89 = 0.0438 \text{ ac ft} = 1,906 \text{ cu ft}$$

ONSITE CONDITIONS - PROPOSED

From Table A-5, DPM

1. Percent Land Treatment "D" (Impervious)

$$D = 7(0.99) + 5(0.17)^2$$

$$D = 7(0.99) + 5(0.17)^2 = 1.00$$

$$D = 7(1.00) + 5(0.17)^2 = 1.17 \%$$

2. Developed Land Treatments

Treatment	Area (acres)	%
A	0.383	43.0
B	0.178	20.0
C	0.178	20.0
D	0.151	17.0

3. Peak Discharge

From Equation A-10, DPM

$$Q_p = Q_{pA} + Q_{pB} + Q_{pC} + Q_{pD} + Q_{pE}$$

$$Q_p = Q_{pA} (1.87)(0.383) + 2.66(0.178) + 3.45(0.178) + 5.02(0.151)$$

$$= 2.6 \text{ cfs, use 3.0 cfs}$$

4. Volume

$$E_v = (E_{vA} + E_{vB} + E_{vC} + E_{vD}) / A_T$$

$$E_v = (0.66(0.383) + 0.92(0.178) + 1.29(0.178) + 2.36(0.151)) / 0.89$$

$$= 1.13 \text{ inches}$$

$$V_{100} = (E_v / 12) A_T$$

$$= (1.13 / 12) 0.89 = 0.0838 \text{ ac ft} = 3,651 \text{ cu ft}$$

5. Evaluation

- a. Increase in peak discharge
3.0 cfs - 2.0 cfs = 1.0 cfs increase
- b. Increase in volume
3,651 cu ft - 1,906 cu ft = 1,745 cu ft increase

OFFSITE FLOWS ONTO SUBJECT PROPERTY

1. For drainage basins affecting subject property see portion of AMAFCA map, Zone Atlas B-20 herein.
2. Total drainage basin area = 0.55 acres, use 1.0 acres.
3. Developed Land Treatments

Treatment	Area (acres)	%
A	0.43	43.0
B	0.20	20.0
C	0.20	20.0
D	0.17	17.0

4. Peak Discharge

From Equation A-10, DPM

$$Q_p = Q_{pA} + Q_{pB} + Q_{pC} + Q_{pD} + Q_{pE}$$

$$Q_p = Q_{pA} (1.87)(0.43) + 2.66(0.20) + 3.45(0.20) + 5.02(0.17)$$

$$= 2.87 \text{ cfs, use 3.0 cfs}$$

4. Volume

$$E_v = (E_{vA} + E_{vB} + E_{vC} + E_{vD}) / A_T$$

$$E_v = (0.66(0.43) + 0.92(0.20) + 1.29(0.20) + 2.36(0.17)) / 1.0$$

$$= 1.13 \text{ inches}$$

$$V_{100} = (E_v / 12) A_T$$

$$= (0.942 / 12) 1.0 = 0.0785 \text{ ac ft}$$

TOTAL OF DEVELOPMENT ON SITE AND OFFSITE FLOWS

$$3.0 \text{ cfs} + 3.0 \text{ cfs} = 6.0 \text{ cfs}$$

EROSION SETBACK FROM EL CAMINO - MAIN CHANNEL

Using the "SEDIMENT AND EROSION DESIGN GUIDE", prepared for AMAFCA by Mussetter, Lagasse and Harvey, dated November 1994, and a 100 year flood event flow of 3,500 cfs in the El Camino Arroyo, the erosion set back is calculated as follows:

$$\text{Equation 3.80} \quad \text{Critical Slope} = S_c = 0.037 Q_p^{-0.113}$$

$$\text{Equation 3.77} \quad \text{where } Q_p = \text{dominant discharge} = 0.20 Q_{100}$$

$$\text{therefore, } Q_p = 0.20(3,500) = 700 \text{ cfs}$$

$$S_c = 0.037(700)^{-0.113} = 0.0155 \text{ or } 1.6\%$$

Slope in the El Camino Arroyo immediately to the south of this project is approximately 4.0%.

Therefore, the slope in El Camino Arroyo is greater than critical slope, use Equation 3.81b, Maximum Lateral Erosion Distance = $(0.92 + 4.6 \log(Q_p)) Q_p^{-0.4} = 192.5 \text{ ft, use } 200 \text{ ft}$.

Actual setback is approximately 290 feet from the proposed structure to the northernmost floodplain boundary of the El Camino Arroyo.

EROSION SETBACK FROM POTENTIAL AVULSION NO. 5

A potential avulsion has been identified by Resource Technology, Inc. in their "Report on North Albuquerque Acres Arroyo Avulsion Problems" that would affect this property. This potential avulsion is identified as No. 5 on mapping shown in above referenced document and shown herein. While subject mapping indicates the avulsion would occupy Florence Avenue in the area of subject lot actual field top indicates that the flow would be north of this property as indicated on the drainage plan herein. Flow in this potential avulsion No. 5 is estimated in 638 cfs as indicated in Table 2, Avulsion Matrix, page 8 of the report.

1. For drainage basins affecting subject property see portion of AMAFCA map, Zone Atlas B-20 herein.
2. Total drainage basin area = 30.0 acres.
3. Developed Land Treatments

Treatment	Area (acres)	%
A	12.9	43.0
B	6.0	20.0
C	6.0	20.0
D	5.1	17.0

4. Peak Discharge

From Equation A-10, DPM

$$Q_p = Q_{pA} + Q_{pB} + Q_{pC} + Q_{pD} + Q_{pE}$$

$$Q_p = Q_{pA} (1.87)(12.9) + 2.66(6.0) + 3.45(6.0) + 5.02(5.1)$$

$$= 134.6 \text{ cfs, use } 135 \text{ cfs}$$

5. Volume

$$E_v = (E_{vA} + E_{vB} + E_{vC} + E_{vD}) / A_T$$

$$E_v = (0.66(12.9) + 0.92(6.0) + 1.29(6.0) + 2.36(5.1)) / 30.0$$

$$= 1.11 \text{ inches}$$

$$V_{100} = (E_v / 12) A_T$$

$$= 2.83 \text{ ac ft} = 123,057 \text{ cu ft}$$

$$\text{Total flow} = Q_{\text{mainstem}} + \text{Peak discharge } (Q_{100}) = 638 \text{ cfs} + 135 \text{ cfs} = 773 \text{ cfs}$$

CALCULATION OF EROSION SETBACK FROM AVULSION NO. 5

$$\text{Equation 3.80} \quad \text{Critical Slope} = S_c = 0.037 Q_p^{-0.113}$$

$$\text{Equation 3.77} \quad \text{where } Q_p = \text{dominant discharge} = 0.20 Q_{100}$$

$$\text{therefore, } Q_p = 0.20(773) = 155 \text{ cfs}$$

$$S_c = 0.037(155)^{-0.113} = 0.0189 \text{ or } 1.9\%$$

Slope in the arroyo immediately to the north of this project is approximately 4.0%.

Therefore, the slope in subject arroyo is greater than critical slope, use Equation 3.81b, Maximum Lateral Erosion Distance = $(0.92 + 4.6 \log(Q_p)) Q_p^{-0.4} = 82.6 \text{ ft, use } 83 \text{ ft}$.

Actual setback is approximately 110 feet from the proposed structure to the southern most floodplain boundary (EGL) of the subject arroyo affected by avulsion No. 5.

FLOWS IN BAR/ROAD DITCH SOUTH SIDE OF FLORENCE AVENUE

Field topographic survey and investigation upstream (east of project site) along with AMAFCA mapping indicate that flows are carried from 0; south side of Florence Avenue to the north side. No existing culverts were found on the south side of Florence Avenue east of the subject lot to Ventura Street. Crossing from Florence Avenue to driveway across existing road ditch will be by slight grade or dip section. No culvert(s) will be used.

NORTH ALBUQUERQUE ACRES

GENERAL NOTES

- THIS IS NOT A BOUNDARY SURVEY, APPARENT PROPERTY CORNERS ARE SHOWN FOR ORIENTATION ONLY. BOUNDARY DATA SHOWN IS FROM FIELD DATA SHOWN HEREON.
- THE PEAK DISCHARGE AND VOLUME INCREASE OF 3.0 CFS AND 1.745 CFS RESPECTIVELY WILL NOT ADVERSELY AFFECT PROPERTIES DOWNSTREAM OF THIS SITE.
- NO ADDITIONAL GRADING WILL BE REQUIRED FOR THE DRIVEWAY. CROSSING FROM DRIVEWAY TO FLORENCE AVENUE ACROSS EXISTING DITCH WILL BE BY SLIGHT SWALE OR DIP SECTION. NO CULVERTS WILL BE USED.

ENGINEER'S CERTIFICATION

THIS IS TO CERTIFY THAT I, MICHAEL E. BEVER, A DULY QUALIFIED PROFESSIONAL ENGINEER AND SURVEYOR, LICENSED UNDER THE LAWS OF THE STATE OF NEW MEXICO, HAVE ON 16 MAY 1999 VISITED THE SUBJECT PROPERTY SITE AND DETERMINED THAT NO GRADING, FILLING OR EXCAVATION HAS OCCURRED SINCE THE EXISTING CONTOUR MAP WAS PREPARED.

LEGEND
