## EXECUTIVE SUMMARY

### *Study Purpose*

This report analyzes the traffic impacts of the proposed Universe View subdivision, which will be located in the northwest area of Albuquerque, New Mexico. This analysis will identify the traffic impacts of the Universe View development and develop mitigations for intersections that are adversely impacted.

### *Site Location and Study Area*

The proposed Universe View subdivision will include the developments listed below, which will be built in separate phases. A site plan of the proposed site is provided in **Appendix A1**.

- Phase I – 162 townhome units (Opening Year 2023)
- Phase II – 196 apartment units. An apartment leasing office and gym will also be built in this phase. The gym will only be available to apartment tenants. (Opening Year 2025)
- Phase III – 14,400 GSF pharmacy without drive-through and 14,726 GSF commercial building (Opening Year 2027)

The proposed subdivision will be located about 5 miles north of Interstate Highway 40 (IH 40) and about 7 miles west of Interstate Highway 25 (IH 25). The subdivision can be accessed through Universe Blvd, which connects to Paseo Del Norte Blvd and Rainbow Blvd. Currently the site of the proposed subdivision is vacant. Once the subdivision is built, it will only have access to Universe Blvd through driveways and the proposed Rosa Parks Rd and Perezoso Dr cross streets. The subdivision will have two driveways intersecting Universe Blvd, three driveways intersecting Rosa Parks Rd, and one driveway intersecting Perezoso Dr.

Major intersections in the vicinity of the project area were investigated for this study. **Table A** includes the intersections investigated, the intersection numbering used in this report, and the intersection control type. The study intersections are also identified with corresponding intersection numbers in **Figure 1 (Appendix B)**.

**Table A – Intersections Identified for Impact Analysis Numbering and Control Type**

| Intersection Numbering | Location                             | Control Type |
|------------------------|--------------------------------------|--------------|
| 1                      | Universe Blvd & Paseo Del Norte Blvd | Signalized   |
| 2                      | Universe Blvd & School Access Road   | Unsignalized |
| 3                      | Universe Blvd & Rosa Parks Rd        | Unsignalized |
| 4                      | Universe Blvd & Driveway 1           | Unsignalized |
| 5                      | Universe Blvd & Driveway 2           | Unsignalized |
| 6                      | Universe Blvd & Perezoso Dr          | Unsignalized |
| 7                      | Universe Blvd & Rainbow Blvd         | Signalized   |
| 8                      | Rosa Parks Rd & Driveway 3           | Unsignalized |
| 9                      | Rosa Parks Rd & Driveway 4           | Unsignalized |
| 10                     | Rosa Parks Rd & Driveway 5           | Unsignalized |
| 11                     | Perezoso Dr & Driveway 6             | Unsignalized |

For this study, Synchro 11 software was used to analyze the traffic conditions for the following scenarios:

- 2022 Existing Conditions
- Phase I No Build Conditions (Year 2023 without Universe View subdivision)
- Phase I Build Conditions (Year 2023 with Universe View subdivision)
- Phase II No Build Conditions (Year 2025 without Universe View subdivision)
- Phase II Build Conditions (Year 2025 with Universe View subdivision)
- Phase III No Build Conditions (Year 2027 without Universe View subdivision)
- Phase III Build Conditions (Year 2027 with Universe View subdivision)
- Horizon Year No Build (Year 2033 without Universe View subdivision)
- Horizon Year Build (Year 2033 with Universe View subdivision)

The sight distance was also evaluated for the proposed access points along Universe Blvd (Rosa Parks Rd, Driveway 1, Driveway 2, and Perezoso Dr). AASHTO's *A Policy on Geometric Design of Highways and Streets, 2018 7<sup>th</sup> Edition* methodology was followed in the sight distance evaluation.

### *Principal Findings*

Based on the results of the traffic analysis, it was concluded that the development will not adversely impact the intersections in the Phase I (2023), Phase II (2025), and Phase III (2027) scenarios. All intersections perform at a LOS D or better in 2027 for all scenarios, except for:

- Intersection 1 (Universe Blvd & Paseo del Norte Blvd) – The intersection is expected to deteriorate to a LOS E and F during the 2025 AM and PM peak hour, respectively. However, this deterioration in LOS is expected to occur even without the proposed development, which only increases the delay by less than one second during both peak hours. It was also noted that the EB and SB left-turns and NB right-turn auxiliary lane storage lengths are exceeded in the No Build conditions.

The City may consider increasing the storage length for these movements to accommodate the turning traffic. Intersection 1 may be improved in a future phase of the City's Paseo del Norte project; however, the intersection improvements and the timeline for their implementation have not been defined by the City at the moment.

By the Horizon 2033 year, all intersections are still expected to perform at a LOS D or better except for:

- Intersection 1 (Universe Blvd & Paseo del Norte Blvd) – The intersection is expected to deteriorate to a LOS F by 2033 during both peak hours. However, this deterioration in LOS is expected to occur even without the proposed development, which only increases the delay by less than one second during both peak hours.
- Intersection 2 (Universe Blvd and School Access Road) – A LOS E is expected during the 2033 AM Build peak hour for 1-stage EB left turns. However, the proposed cross section of Universe Blvd will include a median, which will allow a 2-staged left turn movement for the EB approach. This will improve the LOS to a C or better during both peak hours.
- Intersection 7 (Universe Blvd & Rainbow Blvd intersection) – The intersection is expected to deteriorate to a LOS E in the 2033 AM No Build and Build peak hour. However, the proposed development will increase the delay by almost 20 seconds when compared to the 2033 No Build conditions. It can also be noted that the Existing 2022 queue (without the development) exceeds the SB left-turn storage. The City may consider modifying the lane configuration for the SB movement to accommodate the high SB left-turn volumes.

Based on the traffic analysis results, it can be concluded that the Universe View development will adversely impact Intersection 7.

It was also concluded that the LOS and delay at Intersection 3 (Universe Blvd & Rosa Parks Rd) is not adversely impacted; however, the 2033 traffic volumes for the SB left turn movement are expected to exceed the traffic volume threshold requiring a left turn lane.

From the sight distance analysis performed, it was concluded that there will be no sight distance issues at the proposed Rosa Parks Rd and Perezoso Dr intersections with Universe Blvd, and the two driveway access points along Universe Blvd.

### *Recommendations*

To mitigate the traffic impacts at Intersection 7 in year 2033, a WB right-turn auxiliary lane (240-ft storage length with a 150-ft to 300-ft reverse curve transition), an additional SB left-turn auxiliary lane (300-ft storage length with a 150-ft to 300-ft storage length), and signal optimization are recommended after Phase III is completed. The Universe View Subdivision is expected to increase 2033 traffic by 10 percent at Intersection 7; therefore, the developer is responsible for up to 10 percent of the construction cost of the proposed mitigations at this intersection. However, before any improvements are implemented, it is recommended that the intersection be evaluated again at the completion of Phase III to verify that the improvements are required. If Rosa Parks Rd is extended to Unser Blvd by the end of this phase, the

amount of traffic accessing the development through Universe Blvd will be reduced given that traffic would be able to access the development through Rosa Parks Rd and Unser Blvd. This would decrease the development's generated traffic at Intersection 7 and minimize the traffic impacts; therefore, only signal optimization (without the additional WB right turn and SB left turn auxiliary lanes) would be recommended.

A SB left-turn lane (240-ft storage length with 150-ft to 300-ft reverse curve transition length) for Intersection 3 (Universe Blvd and Rosa Rd) would also be recommended to comply with the City of Albuquerque Development Process Manual (DPM) requirements for left turn volumes exceeding turn lane volume thresholds.

## INTRODUCTION

This report analyzes the traffic impacts of the proposed Universe View subdivision. The subdivision will include 162 townhome units, 196 apartment units, a pharmacy with no drive-through (14,400 GSF), and a commercial building (14,726 GSF). This analysis will determine the traffic impacts of the development and develop mitigations for intersections that are adversely impacted.

## PROPOSED DEVELOPMENT

The proposed Universe View subdivision will be located in the northwest area of Albuquerque, New Mexico. It will include the developments listed below, which will be built in separate phases. A site plan of the proposed development is provided in **Appendix A1**.

- Phase I – 162 townhome units (Opening Year 2023)
- Phase II – 196 apartment units (Opening Year 2025)
- Phase III – 14,400 GSF pharmacy without drive-through and 14,726 GSF commercial building (Opening Year 2027)

The Universe View subdivision will be located about 5 miles north of Interstate Highway 40 (IH 40) and about 7 miles west of Interstate Highway 25 (IH 25). The subdivision can be accessed through Universe Blvd, which connects to Paseo Del Norte Blvd. Paseo Del Norte Blvd is a principal arterial that provides direct access to IH 25. Access to IH 40 is also possible through Unser Blvd, a principal arterial east of the Universe View subdivision. **Figure 1 (Appendix B)** identifies the project area in relation to the surrounding roadway network.

Currently, the site of the proposed subdivision is vacant. Once the subdivision is built, it will have access to Universe Blvd through driveways and the proposed roadway at Rosa Parks Rd and Perezoso Dr. The subdivision will have two driveways intersecting Universe Blvd, three driveways intersecting Rosa Parks Rd, and one driveway intersecting Perezoso Dr. The characteristics of the main access roads to the subdivision site are described in **Table 1.1**. **Table 1.2** compares the existing and proposed characteristics of each access road. Exhibits of the existing and proposed typical sections are also presented in **Appendix A2**.

**Table 1.1 – Access Road Characteristics**

| Roadway                  | Number of Lanes | Classification | Speed Limit (mph) |
|--------------------------|-----------------|----------------|-------------------|
| Universe Blvd            | 2               | Minor Arterial | 35                |
| Rosa Parks Rd (Proposed) | 2               | Local Road     | 30                |
| Perezoso Dr (Proposed)   | 2               | Local Road     | 25                |

Table 1.2 – Existing and Proposed Typical Sections

| Roadway       | Cross-Section | Number of Lanes | Shoulder Width | Median Width | Curb | Bike Lanes | Sidewalk | Paved |
|---------------|---------------|-----------------|----------------|--------------|------|------------|----------|-------|
| Universe Blvd | Existing      | Two - 11 ft ea. | 4 to 6 ft      | None         | No   | No         | No       | Yes   |
|               | Proposed      | Two - 11 ft ea. | None           | 16 ft        | Yes  | Yes        | Yes      | Yes   |
| Rosa Parks Rd | Existing      | Unpaved Road    |                |              |      |            |          |       |
|               | Proposed      | Two - 11 ft ea. | None           | None         | Yes  | Yes        | Yes      | Yes   |
| Perezoso Dr   | Existing      | Unpaved Road    |                |              |      |            |          |       |
|               | Proposed      | Two - 9 ft ea.  | None           | None         | Yes  | None       | Yes      | Yes   |

## STUDY AREA

### Study Intersections

Major intersections in the vicinity of the project area were investigated for this study. **Table 2** includes the intersections investigated, the numbering used in this report, and the intersection control type. The study intersections are also identified with corresponding intersection numbers in **Figure 1 (Appendix B)**.

Table 2 – Study Intersections Numbering and Control Type

| Intersection Numbering | Location                             | Control Type |
|------------------------|--------------------------------------|--------------|
| 1                      | Universe Blvd & Paseo Del Norte Blvd | Signalized   |
| 2                      | Universe Blvd & School Access Road   | Unsignalized |
| 3                      | Universe Blvd & Rosa Parks Rd        | Unsignalized |
| 4                      | Universe Blvd & Driveway 1           | Unsignalized |
| 5                      | Universe Blvd & Driveway 2           | Unsignalized |
| 6                      | Universe Blvd & Perezoso Dr          | Unsignalized |
| 7                      | Universe Blvd & Rainbow Blvd         | Signalized   |
| 8                      | Rosa Parks Rd & Driveway 3           | Unsignalized |
| 9                      | Rosa Parks Rd & Driveway 4           | Unsignalized |
| 10                     | Rosa Parks Rd & Driveway 5           | Unsignalized |
| 11                     | Perezoso Dr & Driveway 6             | Unsignalized |

Intersection 1 is an existing signalized intersection at Universe Blvd and Paseo Del Norte Blvd. Universe Blvd southbound (SB) and Paseo Del Norte Blvd westbound (WB) include one channelized right-turn lane, one through lane, and one dedicated left-turn auxiliary lane. Universe Blvd northbound (NB) and Paseo Del Norte Blvd eastbound (EB) include one dedicated left-turn auxiliary lane, one through lane, and one right-turn auxiliary lane. All left-turns are permitted-protected.

Intersection 2 is an existing unsignalized intersection at Universe Blvd and an access road to Volcano Vista High School. The NB approach of Universe Blvd includes one auxiliary left-turn lane and one through lane. The SB approach of Universe Blvd includes one shared through/right-turn lane. The EB approach of the driveway includes one wide lane where vehicles separate into a left-turn lane and right-turn lane.

Intersection 3 is an unsignalized intersection at Universe Blvd and Rosa Park Rd. Currently, Rosa Parks Rd is an unpaved road. The Universe View subdivision will pave a segment of Rosa Parks Rd east of Universe Blvd and provide a two-lane street (one lane in each direction). The NB and SB directions along Universe Blvd will be free flow, and the WB direction will be stop-controlled.

Intersection 4 is a future unsignalized three-way intersection at Universe Blvd and Driveway 1. The driveway includes one entry and one exit lane to the development. The NB and SB directions along Universe Blvd will be free flow, and the WB direction will be stop-controlled.

Intersection 5 is a future unsignalized three-way intersection at Universe Blvd and Driveway 2. The driveway includes one entry and one exit lane to the development. The NB and SB directions along Universe Blvd will be free flow, and the WB direction will be stop-controlled.

Intersection 6 is an unsignalized intersection at Universe Blvd and Perezoso Dr. Currently, Perezoso Dr is an unpaved road. The Universe View subdivision will pave a segment of Perezoso Dr east of Universe Blvd and provide a two-lane road (one lane in each direction). The NB and SB directions along Universe Blvd will be free flow, and the WB direction will be stop-controlled.

Intersection 7 is an existing signalized intersection at Universe Blvd and Rainbow Blvd. Universe Blvd, NB and SB, include one dedicated left-turn auxiliary lane and one shared through/right-turn lane. Rainbow Blvd, EB and WB, include one dedicated left-turn auxiliary lane, one through lane, and one shared through/right-turn lane. All left-turns are permitted-protected.

Intersection 8 is a future unsignalized three-way intersection at Rosa Parks Rd and Driveway 3. The driveway includes one entry and one exit lane to the development. The EB and WB directions along Rosa Parks Rd will be free flow, and the NB direction will be stop-controlled.

Intersection 9 is a future unsignalized three-way intersection at Rosa Parks Rd and Driveway 4. The driveway includes one entry and one exit lane to the development. The EB and WB directions along Rosa Parks Rd will be free flow, and the NB direction will be stop-controlled.

Intersection 10 is a future unsignalized three-way intersection at Rosa Parks Rd and Driveway 5. The driveway includes one entry and one exit lane to the development. The EB and WB directions along Rosa Parks Rd will be free flow, and the NB direction will be stop-controlled.

Intersection 11 is a future unsignalized three-way intersection at Perezoso Dr and Driveway 6. The driveway includes one entry and one exit lane to the development. The EB and WB directions along Perezoso Dr will be free flow, and the SB direction will be stop-controlled.

### Adjacent Developments

The proposed project site is primarily surrounded by vacant land east and west of the project site, and residential developments north of the school access road and south of Rainbow Blvd. Volcano Vista High School and Tony Hillerman Middle School are located within a mile northwest of the project site. Ventana Ranch Park, Ventana Ranch Elementary, Sunset View Elementary, James Monroe Middle school, and a small shopping center are located north of Paseo del Norte approximately 1.5 miles from the project site.

### Future Developments

Four future developments planned in the vicinity of the project site were identified. The developments considered are described below and are labeled in **Figure 1 (Appendix B)**. Two of these developments were under construction during the data collection process, and the other two will be constructed in future years. Therefore, the expected generated trips for all developments will need to be considered in this study.

The traffic studies provided by the City of Albuquerque for the four developments were reviewed to identify the expected trip generation for each. The traffic generated by the developments was distributed through the roadway network and study intersections to consider their impact in the study area. The generated trips considered for the study intersections are presented in **Figures 7 through 10 in Appendix B**.

- Sonata Apartments
  - Description: 245-unit multi-family residential development on approximately 29.9 acres
  - Location: located along the east side of Universe Blvd, south of Paseo del Norte Blvd
  - Completion Year: 2022
- Trails Tract 1
  - Description: 333 multi-family residential units
  - Location: located in the southwest corner of Paseo del Norte and Woodmont Ave
  - Completion Year: 2022.
- La Cuentista
  - Description: 244-unit single family residential development on approximately 59.08 acres
  - Location: southeast of the Paseo del Norte Blvd and Unser Blvd intersection
  - Completion Year: 2024
- Ventana Ranch Retail Commercial Development
  - Description: 92,240 SF of retail commercial floor space on 11 acres of land
  - Location: northeast corner of the Paseo del Norte Blvd and Universe Blvd intersection
  - Completion Year: 2025

### Study Scenarios

For this study, Synchro 11 software was used to analyze the traffic conditions for the following scenarios:

- 2022 Existing Conditions
- Phase I No Build Conditions (Year 2023 without Universe View subdivision)
- Phase I Build Conditions (Year 2023 with Universe View subdivision)
- Phase II No Build Conditions (Year 2025 without Universe View subdivision)
- Phase II Build Conditions (Year 2025 with Universe View subdivision)
- Phase III No Build Conditions (Year 2027 without Universe View subdivision)
- Phase III Build Conditions (Year 2027 with Universe View subdivision)
- Horizon Year No Build (Year 2033 without Universe View subdivision)
- Horizon Year No Build (Year 2033 with Universe View subdivision)

All No Build and Build scenarios will include background traffic growth and the four future developments identified in the previous section.

## TRAFFIC VOLUMES

### Existing Traffic Volumes

Existing turning movement counts for the three existing project intersections were collected during the AM and PM peak hours on March 16 and 17 of year 2022. The data was collected between the hours of 7 AM to 9 AM and 4 PM to 6 PM for the Universe Blvd & Paseo del Norte Blvd intersection. For the Universe Blvd & School access road and Universe Blvd & Rainbow Blvd intersections, traffic volumes were collected from 6:45 AM to 8:45 AM, and 3:45 PM and 5:45 PM. Turning movement count data is included in the **Appendix C**.

Traffic volumes were analyzed to determine the AM and PM peak hour volumes (PHV) and peak hour factors (PHF). PHVs were calculated by taking the highest four-consecutive 15-minute total volumes for the intersection over their respective hour data collection period. Using this calculated peak hour, corresponding peak hour factors were calculated for each turning movement.

Peak hour factors are a traffic parameter used to describe the relationship between the peak 15-minute flow rate within the peak hour and the total peak hour volume. A high PHF (closer to 1) indicates that traffic is spread out relatively evenly throughout the peak hour. A low PHF (closer to 0) indicates that traffic is concentrated within the peak 15 minutes. **Table 3** shows the peak hour starting time, the peak hour turning movement volumes, and peak hour factors for the AM and PM periods. **Figure 2** in **Appendix B** shows the 2022 AM and PM turning movement volumes for the study intersections. Existing 2022 traffic volumes for Intersections 3 through 6 were determined by balancing traffic volumes between Intersections 2 and 7. Traffic volumes for Intersections 8 through 11 will be zero for all movements since the driveways to the Universe View development currently do not exist.

From **Table 3**, it is observed that AM peak hours mainly occurred at 6:45 AM or 7:00 AM. PHFs during the AM period range from 0.39 to 0.87. During the PM period, the PM peak hours mainly occurred at 4:30 PM or 4:45 PM. PHFs during the PM period range from 0.25 to 0.95.

Table 3 – Existing Peak Hour Movements

| 2022 Existing Peak Hour Movements* |                                      |             |            |         |         |        |           |         |         |        |            |         |         |        |           |         |         |        |
|------------------------------------|--------------------------------------|-------------|------------|---------|---------|--------|-----------|---------|---------|--------|------------|---------|---------|--------|-----------|---------|---------|--------|
| Intersection                       |                                      | Peak Hour   | Southbound |         |         |        | Westbound |         |         |        | Northbound |         |         |        | Eastbound |         |         |        |
|                                    |                                      |             | Left       | Thru    | Right   | U-Turn | Left      | Thru    | Right   | U-Turn | Left       | Thru    | Right   | U-Turn | Left      | Thru    | Right   | U-Turn |

\* The “-” indicates that there is no traffic for that movement

## Background Growth

The study area population and corresponding traffic volumes will continue to grow in future years. To account for future traffic growth, existing traffic counts were projected using a growth rate (GR) and a growth factor (GF). The growth rate is expressed as a percentage of growth over a year. For this study, a 3.1% growth rate was used to forecast existing 2022 traffic to the build-out years 2023, 2025, 2027, and the Horizon year 2033. This growth rate was determined from a linear regression of the historical average weekday daily traffic (AWDT) data obtained from the Mid-Region Council of Governments' (MRCOG) website. The traffic data and linear regression worksheet are provided in **Appendix D**.

In this study, future traffic forecasts were determined using a growth factor, which is dependent on the growth rate. This growth factor is calculated using the equation  $GF = (1+GR)^n$ , where  $n$  is time in years. The calculated growth factors for 2023, 2025, 2027 and 2033 are 1.03, 1.10, 1.16, and 1.40, respectively. The existing 2022 AM and PM turning movement volumes were multiplied by these growth factors to determine the forecasted turning movements for 2023, 2025, 2027, and 2033. **Figures 3 through 6 in Appendix B** include the projected peak hour traffic volumes for the 2023, 2025, 2027, and 2033 AM and PM scenarios.

In addition to considering traffic growth expected to occur by population growth, the generated traffic for the four future developments in the vicinity of the project area were included in the analysis years based on their respective completion year. Therefore, only the generated traffic for the Sonata and Trails Track 1 developments were included in the 2023 analysis scenarios. All developments were included in the 2025, 2027, and 2033 analysis scenarios. **Figures 11 through 14 in Appendix B** include the No Build peak hour traffic volumes for the 2023, 2025, 2027, and 2033 AM and PM scenarios. These volumes were calculated by adding the generated traffic of the four future developments to the projected traffic volumes.

## Trip Generation

The number of trips generated by the proposed developments were calculated using the *ITE Trip Generation Manual*, 11<sup>th</sup> Edition. The average trip rates for the peak hour of the adjacent street traffic were used for this study. These trips represent the highest peak hour vehicle trip ends generated by the development for a peak hour between 7 to 9 AM and a peak hour between 4 to 6 PM. The proposed Universe View subdivision developments were categorized into four different land uses. The developments were classified as follows:

- Phase I – 162 townhome units → Single-Family Attached Housing (Land Use 215)
- Phase II – 196 apartment units → Multifamily Housing (Low-Rise) (Land Use 220)
- Phase III –
  - 14,400 GSF pharmacy without drive-through → Pharmacy/Drugstore without Drive-Through Window (Land Use 880)
  - 14,726 GSF commercial building (Opening Year 2027) → Strip Retail Plaza (<40K) (Land Use 822)

Trip generation for these developments was calculated using the fitted curve equations for Land Use Codes 215, 220, 822 and 880. The generated trips for the AM and PM peak hour are presented in **Table 4**. Directional distribution for the generated trips were also determined using the *ITE Trip Generation Manual*. The number of vehicles entering and exiting the facility are also presented in **Table 4**.

**Table 4 – Proposed Development Generated Trips**

Internal capture and pass-by trips were also considered in this study and are described in the following sections.

#### *Internal Capture*

According to the *ITE Trip Generation Handbook 3<sup>rd</sup> Edition*, internal capture occurs at a site when two or more land uses have a possibility of interacting with each other, particularly where the trip can be made by walking. This can result in the total generation of trips being reduced. Internal capture was considered between the proposed apartments and the pharmacy and commercial developments since they will be directly connected through an internal street system and pedestrian walkways. The methodology outlined in Chapter 6 of the *ITE Trip Generation Handbook 3<sup>rd</sup> Edition* and the National Cooperative Highway Research Program (NCHRP) 684 Internal Trip Capture Estimation Tool were used to calculate internal capture for these developments. The spreadsheet tool considers the total trip generation of the proposed developments, vehicle occupancy, percent transit/non-motorized trips for entering and exiting traffic, and the distance between the developments. The total generated trips for the commercial development and pharmacy were considered retail trips in the spreadsheet calculations. An average weighted distance between the residential and commercial developments of 865-ft was calculated using the methodology presented in the handbook. Vehicle occupancy and percent transit/non-motorized trips were determined from Table B.2 of the *ITE Trip Generation Handbook*. To be conservative, smaller internal capture percentages than those calculated with the spreadsheet tool were considered for the outbound retail and inbound residential trips for the PM peak hour. The internal capture percentages used in the analysis are presented in **Table 5**. Additional information on the internal capture calculations is provided in **Appendix E**.

**Table 5 – Internal Capture Percentages by Land Use**

| Peak Hour    | Land Use    | Entering Trips | Exiting Trips |
|--------------|-------------|----------------|---------------|
| AM Peak Hour | Retail      | 1%             | 0%            |
|              | Residential | 0%             | 1%            |
| PM Peak Hour | Retail      | 8%             | 20%           |
|              | Residential | 35%            | 23%           |

*Pass-By Trips*

Pass-by trips are defined as intermediate stops on the way from an origin to a primary trip destination without a route diversion. Pass-by trips were considered in this study since the pharmacy and commercial developments are an attractive stop for commuters on Universe Blvd. Pass-by trips were only considered for the Universe Blvd & Rosa Parks Rd and Universe Blvd & Driveway 1 intersections. These two intersections are the access points for the pharmacy and commercial developments.

Using data from the *ITE Trip Generation Handbook 3<sup>rd</sup> Edition*, pass-by trip volume adjustments for the pharmacy and commercial developments were calculated. A 53% and 40% average pass-by trip adjustment was applied to the AM and PM peak hour generated trips of the pharmacy and commercial development, respectively. Pass-by trips were applied to the trips adjusted by internal capture; however, the number of entering and exiting trips to/from the driveways providing access to the pharmacy and commercial developments were not reduced by the pass-by trips.

*Trip Adjustment Summary*

Internal capture only affected the trips generated by the apartments, pharmacy, and commercial developments. Pass-by trips only affected trips generated by the pharmacy and commercial developments. The internal capture and pass-by trip adjustments for each development are presented in **Tables 6 through 8**.

**Table 6 – Trip Adjustments for Proposed Apartments**

| Generated Trips    | AM Peak Hour             |                                           | PM Peak Hour             |                                           |
|--------------------|--------------------------|-------------------------------------------|--------------------------|-------------------------------------------|
|                    | Original Generated Trips | Final Trips Adjusted for Internal Capture | Original Generated Trips | Final Trips Adjusted for Internal Capture |

\*Internal capture reductions were less than one trip, so they were not considered.

### Trip Distribution

Traffic generated by the proposed developments was distributed and assigned to the study area intersections using the Gravity Model distributions. Population and employment data for years 2016 and 2040 was obtained for all Data Analysis Subzones (DASZ) within a 2-mile radius of the proposed Universe View development. The data was obtained from the 2040 Socioeconomic Forecasts by Subareas for the Mid-Region of New Mexico supplied by MRCOG. Population data was used to determine the pharmacy and commercial development trip distributions, while employment data was used to determine the townhome and apartment trip distributions. Population and employment data was interpolated for each of the implementation years (Phase I – 2023, Phase II-2025, and Phase III- 2027). The DASZ were then grouped based on the possible origins/destinations of the trips generated by the proposed Universe View development. The figure in **Appendix F** shows the DASZ, possible origins/destinations (A through G), and the percentage of trips of each DASZ in route to/from the destinations/origins (A through G). The trip distribution calculations are also included in **Appendix F**. The following assumptions were also considered for the trip distribution of each driveway:

1. The townhomes will be accessed through the Universe Blvd & Rosa Parks Rd intersection, and Driveways 2, 4 and 5.
2. The apartments will be accessed through the Universe Blvd & Perezoso Dr intersection, and Driveways 1, 2 and 6.

3. The pharmacy and commercial developments will be accessed through Universe Blvd & Rosa Parks Rd intersection, and Driveways 1 and 3.

Considering the Gravity Model distributions and the assumptions mentioned, the trip distributions were assumed and generated trips were calculated for the turning movements. **Figures 15 through 30 (Appendix B)** summarize the inbound and outbound trip distribution and number of generated trips for the study intersections for the AM and PM peak hours. To determine the 2023, 2025, 2027 and 2033 Build traffic volumes, the generated trips of each development were then added to the 2023, 2025, 2027, and 2033 No Build traffic volumes according to opening year of each development. **Figures 31 through 34 (Appendix B)** show the AM and PM peak hour turning movements for the Build scenarios.

## TRAFFIC ANALYSIS

### Methodology

To determine the traffic impact, the intersection level of service (LOS) and delay were evaluated for the study intersections.

Intersection LOS is a measure of driving conditions and vehicle delay. In addition, the LOS describes the quality of traffic operation on roadway facilities. The traffic capacity of intersections was evaluated to determine the LOS for the AM and PM peak hours. LOS range from A (best) to F (poorest). LOS A, B, and C indicate conditions where traffic can move freely. LOS D describes conditions where delay is noticeable. LOS E and F indicate conditions where traffic volumes are close to capacity or beyond capacity, experiencing significant delays, slow speeds or stop-and-go conditions, and queuing at signalized intersections. **Table 9** outlines the LOS definitions for signalized and unsignalized intersections as defined in the Highway Capacity Manual.

**Table 9 – Level of Service Standards**

| LOS | Signalized Intersection Delay (sec) | Unsignalized Intersection Delay (sec) | Traffic Flow Characteristics                             |
|-----|-------------------------------------|---------------------------------------|----------------------------------------------------------|
| A   | <10                                 | 0-10                                  | Virtually free flow, completely unimpeded                |
| B   | >10-20                              | >10-15                                | Stable Flow with slight delays, less freedom to maneuver |
| C   | >20-35                              | >15-25                                | Stable flow with delays, less freedom to maneuver        |
| D   | >35-55                              | >25-35                                | High density, but stable flow                            |
| E   | >55-80                              | >35-50                                | Operating conditions at or near capacity, unstable flow  |
| F   | >80                                 | >50                                   | Forced flow, breakdown conditions                        |

< indicates less than

> indicates greater than

Intersection delay is calculated by taking a weighted average of the total delays for each intersection lane group. Total delay includes queue delay and delay from stopping for signalized intersections. Intersection delay for unsignalized intersections does not include queue delay. Using this intersection delay, a LOS value is assigned to the intersection.

For this study, Synchro 11 software was used to analyze the traffic conditions for the following scenarios:

- 2022 Existing Conditions
- Phase I No Build Conditions (Year 2023 without Universe View subdivision)
- Phase I Build Conditions (Year 2023 with Universe View subdivision)
- Phase II No Build Conditions (Year 2025 without Universe View subdivision)
- Phase II Build Conditions (Year 2025 with Universe View subdivision)
- Phase III No Build Conditions (Year 2027 without Universe View subdivision)
- Phase III Build Conditions (Year 2027 with Universe View subdivision)
- Horizon Year No Build (Year 2033 without Universe View subdivision)
- Horizon Year No Build (Year 2033 with Universe View subdivision)

### Traffic Analysis Results

The LOS and delay for all scenarios were calculated using the HCM 6<sup>th</sup> edition methodology included in Synchro Version 11. These parameters are summarized in **Tables 10** through **20** for both AM and PM peak hours. The volume to capacity (v/c) ratio and 95<sup>th</sup> percentile queue length are also included in the tables. Detailed results are included in the following appendices:

- **Appendix G** – Existing
- **Appendix H** – Phase I 2023, No Build
- **Appendix I** – Phase I 2023, Build
- **Appendix J** – Phase II 2025, No Build
- **Appendix K** – Phase II 2025, Build
- **Appendix L** – Phase III 2027, No Build
- **Appendix M** – Phase III 2027, Build
- **Appendix N** – Horizon 2033, No Build
- **Appendix O** – Horizon 2033, Build
- **Appendix P** – Mitigation 2033

Albuquerque, NM

November 23, 2022

**Table 10** summarizes the intersection LOS, approach LOS, 95<sup>th</sup> percentile queue length, and volume to capacity (v/c) ratio for all traffic movements of the signalized Intersection 1. The results are presented for the Existing, Phase I, Phase II, Phase III, and Horizon year AM and PM peak hours of the No Build and Build scenarios. Based on the analysis results, Intersection 1 is expected to fail in future years even without the proposed Universe View development. It can be noted that the proposed development will only increase the intersection delay by less than one second. Minimal impacts are also observed for the 95<sup>th</sup> percentile queue and v/c ratio. Therefore, no recommendations are made for Intersection 1. The City may consider optimizing the signal timing in the future to improve the intersection delay. **Table 10** also shows the approximate left-turn and right turn auxiliary lane storage lengths in the top row. It can be noted that the EB and SB left-turn and NB right-turn auxiliary lane storage lengths are exceeded in the No Build conditions. The City may consider increasing the storage length for these movements to accommodate the turning traffic.

# - Indicates that the volume for the 95<sup>th</sup> percentile cycle exceeds capacity.

**Table 11** summarizes the intersection LOS, approach LOS, 95<sup>th</sup> percentile queue length, and volume to capacity (v/c) ratio for all traffic movements of the unsignalized Intersection 2. The results are presented for the Existing, Phase I, Phase II, Phase III, and Horizon year AM and PM peak hours of the No Build and Build scenarios. The three-way intersection is stop controlled in the EB direction, and free flow in the NB and SB directions; therefore, Synchro only evaluates the EB approach and NB left-turn movement. The LOS E for the Horizon 2033 AM peak hour scenario is based on a single stage left turn movement. Since the proposed cross section of Universe Blvd will include a median, a 2-staged left turn movement will be allowed for the EB approach. This will improve the LOS to a C in the AM peak. Therefore, no recommendations are made for Intersection 2. The Synchro results for the 2- staged left turn analysis are provided in **Appendix P**.

Table 11 – Intersection 2 Traffic Analysis Results

Table 12 through 15 summarize the intersection LOS, approach LOS, 95<sup>th</sup> percentile queue length, and volume to capacity (v/c) ratio for all traffic movements of unsignalized Intersections 3 through 6. The results are presented for the Existing, Phase I, Phase II, Phase III, and Horizon year AM and PM peak hours of the No Build and Build scenarios. The three-way intersections are stop controlled in the WB direction, and free flow in the NB and SB directions; therefore, Synchro only evaluates the WB approach and SB left-turn movement. It can be noted that all scenarios evaluated meet the minimum acceptable LOS standard (LOS D or better); therefore, no recommendations are made for Intersections 3 through 6 based on LOS impacts. However, the 2033 traffic volumes for the SB left turn movement of Intersection 3 are expected to exceed the traffic volume threshold requiring a left turn lane, as per the City of Albuquerque Development Process Manual (DPM).

**Table 16** summarizes the intersection LOS, approach LOS, 95<sup>th</sup> percentile queue length, and volume to capacity (v/c) ratio for all traffic movements of the signalized Intersection 7. The results are presented for the Existing, Phase I, Phase II, Phase III, and Horizon year AM and PM peak hours of the No Build and Build scenarios. Based on the analysis results, Intersection 7 will only exceed the minimum LOS D standard in the Horizon 2033 AM peak hour for the No Build and Build scenarios. The 2033 Build scenario will increase the delay by almost 20 seconds when compared to the 2033 No Build conditions. To mitigate these impacts and accommodate the left/right turn 2033 volumes that exceed the City of Albuquerque DPM traffic volume threshold requiring left and right turn lanes, a 240-ft WB right turn auxiliary lane with a 150-ft to 300-ft reverse curve transition length, a 300-ft SB left turn auxiliary lane with a 150-ft to 300-ft reverse curve transition length, and signal optimization are recommended after Phase III is completed. This will improve the LOS to a C in the AM and PM peak hour as can be noted in **Table 16** under the 2033 Mitigation scenario. However, before any improvements are implemented, it is recommended that the intersection be evaluated again after the completion of Phase III to verify that the improvements are required. If Rosa Parks Rd is extended to Unser Blvd by the end of this phase, the amount of traffic accessing the development through Universe Blvd will be reduced given that traffic would be able to access the development through Rosa Parks Rd and Unser Blvd. This would decrease the development’s generated traffic at Intersection 7 and minimize the traffic impacts; therefore, only signal optimization (without the additional WB right turn and SB left turn auxiliary lane) would be recommended. As can be noted in **Table 16**, Intersection 7 is expected to maintain the same LOS and experience a minimal increase in delay in the Build 2033 conditions with the Rosa Parks Rd extension when compared to the No Build 2033 conditions. The extension of Rosa Parks Rd by the City or another development may be possible by 2027 given that the Rosa Parks Rd extension between Universe Blvd and Unser Blvd has been included in the MRMPO Long Range Roadway System Corridors (LRRS) Connections 2040 MTP projects and the project site is in an area that is rapidly growing and being developed.

**Table 17** through **20** summarize the intersection LOS, approach LOS, 95<sup>th</sup> percentile queue length, and volume to capacity (v/c) ratio for all traffic movements of unsignalized Intersections 8 through 11. The results are presented for the Existing, Phase I, Phase II, Phase III, and Horizon year AM and PM peak hours of the No Build and Build scenarios. The three-way intersections are stop controlled in the NB or SB direction, and free flow in the EB and WB directions; therefore, Synchro only evaluates the NB approach and WB left-turn movement, or SB approach and EB left-turn movement. It can be noted that all scenarios evaluated meet the minimum acceptable LOS standard (LOS D or better); therefore, no recommendations are made for Intersections 8 through 11.

## INTERSECTION SIGHT DISTANCE

The ability of drivers to safely maneuver turns from the proposed development to Universe Blvd was analyzed. Areas near the intersection should be clear of obstructions that might block a driver's view of potentially conflicting vehicles. These areas are known as clear sight triangles. The sight triangle leg dimensions depend on the design speeds of the intersecting roadways and the type of traffic control used at the intersection.

The sight distance was evaluated for the minor roads intersecting Universe Blvd (Rosa Parks Rd, Driveway 1, Driveway 2, and Perezoso Dr). AASHTO's *A Policy on Geometric Design of Highways and Streets, 2018 7<sup>th</sup> Edition* methodology was followed in the sight distance evaluation. The sight distance is affected by the type of stop control and speed along the major roadway (Universe Blvd). For the intersections evaluated, the control type can be classified as a Case B – "Intersection with stop control on the minor road". The existing speed along the major road, Universe Blvd, is 35 miles per hour (mph). In the case for right turns from a minor road to a major road, the departure sight triangle distance for traffic approaching from the left is 490 ft for trucks and passenger cars. In the case for left turns from a minor road to a major road, the departure sight triangle distance for traffic approaching from the right is 440 ft. **Figure 35** shows the sight distance triangles for right turns at all four intersections. **Figure 36** shows the sight distance triangles for left turns at all four intersections. The sight triangles are also presented in **Appendix Q**. **Figure 37** shows the street view from the proposed intersections for vehicles turning left and right. Currently, from the point of departure at the evaluated intersections, there are no obstructions that might block a driver's view of approaching vehicles. It is recommended that a driver's view be considered when making improvements to Universe Blvd. No obstructions should be placed within the driver's sight distance.

## CONCLUSIONS AND RECOMMENDATIONS

### Conclusions

Based on the results of the traffic analysis, it was concluded that the development will not adversely impact the intersections in the Phase I (2023), Phase II (2025), and Phase III (2027) scenarios. All intersections perform at a LOS D or better in 2027 for all scenarios, except for:

- Intersection 1 (Universe Blvd & Paseo del Norte Blvd) – The intersection is expected to deteriorate to a LOS E and F during the 2025 AM and PM peak hour, respectively. However, this deterioration in LOS is expected to occur even without the proposed development, which only increases the delay by less than one second during both peak hours. It was also noted that the EB and SB left-turns and NB right-turn auxiliary lane storage lengths are exceeded in the No Build conditions. The City may consider increasing the storage length for these movements to accommodate the turning traffic. Intersection 1 may be improved in a future phase of the City's Paseo del Norte project; however, the intersection improvements and the timeline for their implementation have not been defined by the City at the moment.

By the Horizon 2033 year, all intersections are still expected to perform at a LOS D or better except for:

- Intersection 1 (Universe Blvd & Paseo del Norte Blvd) – The intersection is expected to deteriorate to a LOS F by 2033 during both peak hours. However, this deterioration in LOS is expected to occur even without the proposed development, which only increases the delay by less than one second during both peak hours.
- Intersection 2 (Universe Blvd and School Driveway) – A LOS E is expected during the 2033 AM Build peak hour for 1-stage EB left turns. However, the proposed cross section of Universe Blvd will include a median, which will allow a 2-staged left turn movement for the EB approach. This will improve the LOS to a C or better during both peak hours.
- Intersection 7 (Universe Blvd & Rainbow Blvd intersection) – The intersection is expected to deteriorate to a LOS E in the 2033 AM No Build and Build peak hour. However, the proposed development will increase the delay by almost 20 seconds when compared to the 2033 No Build conditions. It can also be noted that the Existing 2022 queue (without the development) exceeds the SB left-turn storage. The City may consider modifying the lane configuration for the SB movement to accommodate the high SB left-turn volumes.

Based on the traffic analysis results, it can be concluded that the Universe View development will adversely impact Intersection 7.

It was also concluded that the LOS and delay at Intersection 3 (Universe Blvd & Rosa Parks Rd) is not adversely impacted; however, the 2033 traffic volumes for the SB left turn movement are expected to exceed the traffic volume threshold requiring a left turn lane.

Also, from the sight distance analysis performed, it can be concluded that there will be no sight distance issues at the proposed Rosa Parks Rd and Perezoso Dr intersections with Universe Blvd, and the two driveway access points along Universe Blvd.

**Recommendations**

To mitigate the traffic impacts at Intersection 7 in year 2033, a WB right-turn auxiliary lane (240-ft storage length with a 150-ft to 300-ft reverse curve transition), an additional SB left-turn auxiliary lane (300-ft storage length with a 150-ft to 300-ft storage length), and signal optimization are recommended after Phase III is completed. The Universe View Subdivision is expected to increase 2033 traffic by 10 percent at Intersection 7; therefore, the developer is responsible for up to 10 percent of the construction cost of the proposed mitigations at this intersection. However, before any improvements are implemented, it is recommended that the intersection be evaluated again at the completion of Phase III to verify that the improvements are required. If Rosa Parks Rd is extended to Unser Blvd by the end of this phase, the amount of traffic accessing the development through Universe Blvd will be reduced given that traffic would be able to access the development through Rosa Parks Rd and Unser Blvd. This would decrease the development's generated traffic at Intersection 7 and minimize the traffic impacts; therefore, only signal optimization (without the additional WB right turn and SB left turn auxiliary lanes) would be recommended.

A SB left-turn lane (240-ft storage length with 150-ft to 300-ft reverse curve transition length) for Intersection 3 (Universe Blvd and Rosa Rd) would also be recommended to comply with the City of Albuquerque DPM requirements for left turn volumes exceeding turn lane volume thresholds.

# **APPENDIX A2**

## **Typical Sections**

Plan view of a proposed 64' wide bus/bike lane (B/B) with a 38' EOA. The diagram shows a cross-section of the road with various lanes and buffers. From left to right: 10' PUE, 6' SDWK, 6' BUFFER, 2' C&G, 6' BIKE LANE, 11' DRIVE LANE, 1' DRIVE LANE, 2' C&G, 6' BIKE LANE, 6' BUFFER, 6' SDWK, 10' PUE. The total width is 64' B/B. The EOA is 38'. A future road is indicated above the diagram. Callouts 4, 5, and 6 point to specific features in the cross-section below the plan view.

Figure 1: Typical cross-section of a two-lane highway with a 30' F/F. The diagram shows a cross-section with a 30-foot finished floor (F/F) width. The total right-of-way (ROW) is 50 feet. The cross-section includes a 10-foot paved shoulder (PUE), a 5-foot shoulder (SDWK), a 5-foot buffer, a 6-foot parking area, a 9-foot drive lane, and a 9-foot drive lane. The cross-section also shows a 2% grade, a 4-foot curb, a 5-foot shoulder, and a 6-foot parking area. The cross-section is labeled with dimensions and components.

Plan view of a proposed 30' F/F intersection. The diagram shows a 30' wide intersection with a 24' EOA - EOA (Effective Offset Area - Effective Offset Area) and two 12' drive lanes. Key dimensions and setbacks include:

- ROW (Right of Way) to ROW: 50'
- Future street offset: 25' (each side)
- Intersection width: 30' F/F
- EOA - EOA: 24'
- Drive lanes: 12' each
- Setbacks from ROW: 5' (each side)
- Setbacks from PUE (Proposed Urban Edge): 10' - 5' - 11' (each side)
- Setbacks from SDWK (Side Drive Way): 5' (each side)
- Setbacks from PARKING DRIVE LANE: 6' (each side)
- Setbacks from DRIVE LANE PARKING: 9' (each side)
- Setbacks from BUFFER: 5' (each side)
- Setbacks from PUE: 10' (each side)
- Setbacks from ROW: 5' (each side)
- Setbacks from ROW: 10' - 5' - 11' (each side)
- Setbacks from ROW: 10' (each side)

Callouts 4, 5, 6, and 8 indicate specific areas of interest or construction details.

<sup>1</sup>Land Use Codes (LUCs) from *Trip Generation Manual*, published by the Institute of Transportation Engineers.

<sup>2</sup>Total estimate for all other land uses at mixed-use development site is not subject to internal trip capture computations in this estimator.

<sup>3</sup>Enter trips assuming no transit or non-motorized trips (as assumed in ITE *Trip Generation Manual*).

<sup>4</sup>Enter vehicle occupancy assumed in Table 1-A vehicle trips. If vehicle occupancy changes for proposed mixed-use project, manual adjustments must be made to Tables 5-A, 9-A (O and D). Enter transit, non-motorized percentages that will result with proposed mixed-use project complete.

<sup>5</sup>Vehicle-trips computed using the mode split and vehicle occupancy values provided in Table 2-A.

<sup>6</sup>Person-Trips

\*Indicates computation that has been rounded to the nearest whole number.

Estimation Tool Developed by the Texas A&M Transportation Institute - Version 2013.1

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 0 (0%), Referenced to phase 4:NBTL and 8:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.91

Intersection Signal Delay: 31.4

Intersection LOS: C

Intersection Capacity Utilization 68.6%

ICU Level of Service C

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Universe Blvd & Paseo Del Norte Blvd

Area Type: Other

Cycle Length: 100

Actuated Cycle Length: 100

Offset: 60 (60%), Referenced to phase 4:NETL and 8:SWTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.75

Intersection Signal Delay: 28.0

Intersection LOS: C

Intersection Capacity Utilization 59.5%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 7: Scenic Dr/Universe Blvd & Rainbow Blvd

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 48 (44%), Referenced to phase 4:NBTL and 8:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.10

Intersection Signal Delay: 47.1

Intersection LOS: D

Intersection Capacity Utilization 87.6%

ICU Level of Service E

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Universe Blvd & Paseo Del Norte Blvd

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 0 (0%), Referenced to phase 4:NBTL and 8:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.05

Intersection Signal Delay: 42.5

Intersection LOS: D

Intersection Capacity Utilization 71.3%

ICU Level of Service C

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Universe Blvd & Paseo Del Norte Blvd

Intersection Summary

Area Type: Other

Cycle Length: 100

Actuated Cycle Length: 100

Offset: 60 (60%), Referenced to phase 4:NETL and 8:SWTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.75

Intersection Signal Delay: 29.0

Intersection LOS: C

Intersection Capacity Utilization 62.8%

ICU Level of Service B

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 7: Scenic Dr/Universe Blvd & Rainbow Blvd

## Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 48 (44%), Referenced to phase 4:NBTL and 8:SBTL, Start of Green

Natural Cycle: 110

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.16

Intersection Signal Delay: 61.6

Intersection LOS: E

Intersection Capacity Utilization 94.0%

ICU Level of Service F

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Universe Blvd & Paseo Del Norte Blvd

## Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 0 (0%), Referenced to phase 4:NBTL and 8:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.06

Intersection Signal Delay: 43.0

Intersection LOS: D

Intersection Capacity Utilization 71.8%

ICU Level of Service C

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Universe Blvd & Paseo Del Norte Blvd

| Intersection             |                                                                                   |                                                                                   |                                                                                   |                                                                                   |                                                                                   |                                                                                   |

## Intersection Summary

Area Type: Other

Cycle Length: 100

Actuated Cycle Length: 100

Offset: 60 (60%), Referenced to phase 4:NETL and 8:SWTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.76

Intersection Signal Delay: 29.3

Intersection LOS: C

Intersection Capacity Utilization 64.2%

ICU Level of Service C

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 7: Scenic Dr/Universe Blvd & Rainbow Blvd

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 48 (44%), Referenced to phase 4:NBTL and 8:SBTL, Start of Green

Natural Cycle: 100

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.16

Intersection Signal Delay: 61.3

Intersection LOS: E

Intersection Capacity Utilization 94.1%

ICU Level of Service F

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Universe Blvd & Paseo Del Norte Blvd

### Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 0 (0%), Referenced to phase 4:NBTL and 8:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.20

Intersection Signal Delay: 56.6

Intersection LOS: E

Intersection Capacity Utilization 76.2%

ICU Level of Service D

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

# Lanes, Volumes, Timings

## 1: Universe Blvd & Paseo Del Norte Blvd

04/14/2022

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Universe Blvd & Paseo Del Norte Blvd

No Build 2025 AM  
2: Universe Blvd & School Driveway

04/14/2022
