RE: Sonta Trails Unit 4 Apartments
Grading Plans and Drainage Report
Engineer's Stamp Date: 06/03/21
Hydrology File: C10D001A

Dear Mr. Shell:

Based upon the information provided in your submittal received 08/18/2021, the Grading Plans and Drainage Report are approved for Building Permit.

Please attach a copy of this approved plan in the construction sets for Building Permit processing along with a copy of this letter. Prior to approval in support of Permanent Release of Occupancy by Hydrology, Engineer Certification per the DPM checklist will be required.

As a reminder, if the project total area of disturbance (including the staging area and any work within the adjacent Right-of-Way) is 1 acre or more, then an Erosion and Sediment Control (ESC) Plan and Owner's certified Notice of Intent (NOI) is required to be submitted to the Stormwater Quality Engineer (Doug Hughes, PE, jhughes@cabq.gov, 924-3420) 14 days prior to any earth disturbance.

Please provide the following per Article 6-15(C) of the DPM prior to Permanent Release of Occupancy or Release of Financial Guarantee for the Work Order (CPN 761284) whichever comes first:

- Agreement and Covenant with Exhibit A for Pond J.
- Agreement and Covenant with Exhibit A for Temporary Retention Pond on Tract 1A.
- Drainage Easement for Temporary Retention Pond on Tract 1A

Please submit the original copies along with the **$ 25.00** recording fee check made payable to Bernalillo County for each one to Marion G. Velasquez (mgvelasquez@cabq.gov) on the 4th floor of Plaza de Sol. Please note that Hydrology will need a pdf copy of the recorded Agreement and Covenants and the Drainage Easement prior to Hydrology's approval of Permanent Release of Occupancy or Release of Financial Guarantee for the Work Order (CPN 761284).

TABLE OF CONTENTS

1.0 INTRODUCTION

1.1 PURPOSE

The purpose of this conceptual drainage report is to demonstrate that the proposed development of Sonata Trails Unit 4 Apartments safely conveys the peak 100-year storm runoff. The drainage intent for proposed conditions is to fully retain the 100-year, 10-day storm event.

The proposed development of Sonata Trails Unit 4 Apartments site is within the "Upper Piedras Marcadas Watershed Drainage and Water Quality Management Plan" (UPM DMP) by Wilson & Company dated April 2017. The project site ultimately drains into an Albuquerque Metropolitan Arroyo and Flood Control Authority (AMAFCA) facility, the Piedras Marcadas Dam. The proposed development impacts the existing surge pond J from the Trails Units 1, 2, and 3, Drainage Master Plan (DMP). The Amendment to the Trails Units 1, 2, and 3 DMP was completed by Thompson Engineering Consultants (TEC) in April 2014 and approved by the City Hydrologist in May 2014. All the Trails surge ponds were based on conservative assumptions when modeled initially by AHYMO but were later modeled using PCSWMM software to maximize the efficiency of the system while decreasing the footprint of Pond D. The Addendum to the Amendment to the DMP for the Trails Units 1, 2, and 3, was completed by TEC in February 2017. We have revised the Trails PCSWMM model due to the proposed confined footprint of Pond J and propose increasing the water surface elevation in Pond K, without changing the footprint of Pond K, and ultimately be at or below the allowable discharge of 62 cfs at the outfall of the Universe Boulevard storm drain system. All elevations mentioned in this report are based on the North American Vertical Datum of 1988 (NAVD 88). The PCSWMM model elevations differ from the elevations mentioned in this report because they were based on the National Geodetic Vertical Datum of 1929 (NGVD 29).

1.2 LOCATION AND DESCRIPTION

Sonata Trails Unit 4 Apartments is located southeast of Paseo Del Norte NW and Universe Boulevard NE intersection and consists of approximately 17.4 acres. See Figure 1.2.1 below. The legal description of the property is Tracts 1 and 2, The Trails Unit 4, on the plat entitled "Bulk land plat of The Trails Unit 4 within the Town of Alameda Grant in projected Section 15, Township 11 North, Range 2 East, New Mexico Principal Meridian, City of Albuquerque, Bernalillo County, New Mexico, October, 2007." The existing site includes surge pond J for the Trails Units 1, 2, and 3, but is otherwise undeveloped. The existing conditions are described in more detail in Section 3.1 and the proposed conditions are described in Section 3.2.

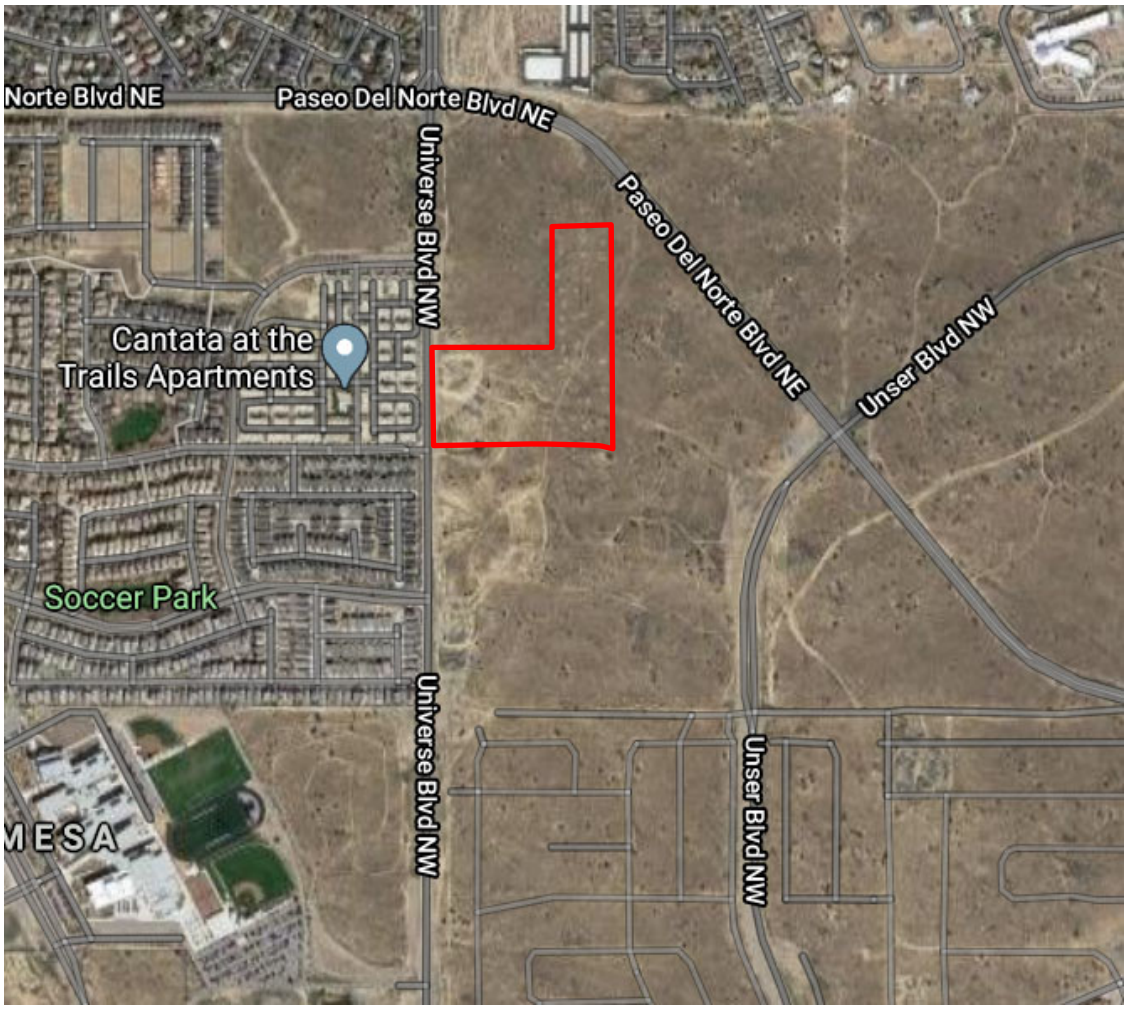

FIGURE 1.2.1 – PROJECT LOCATION

2.0 METHODOLOGY

The hydrologic analysis was performed for the site in accordance with the Albuquerque Development Process Manual (DPM) Section 22.2. AHYMO-S4 (April 2018) was used to develop peak flow rates for the 100-year, 24-hour design storm to ensure all flow paths are sufficient to carry flows. The temporary public retention pond, Pond A, was designed to fully retain the 100-year, 10-day storm. The required water quality volume was calculated by multiplying the onsite impervious area by the first flush runoff value of 0.34". All hydrologic and hydraulic calculations are included in this report.

3.0 HYDROLOGY

3.1 EXISTING CONDITIONS

The Sonata Trails Unit 4 Apartment receives offsite flows from the Trails Units 1, 2, and 3 and as well as the neighboring parcel to the northwest. The existing site is 100% pervious area and a portion of the site contains a surge pond, Pond J, which receives flows from the Trails Units 1, 2, and 3. The offsite

flows received from the Trails Units 1, 2, and 3 is received via storm drain and surges into Pond J while the neighboring property sheet flows across the northern portion of the site. The total flow generated by the property under existing conditions is 47.71 cfs. The existing site has been split into three sub-basins. Exhibit 1 shows the existing sub-basin boundaries for the site.

Basin A is located in the western corner of the site and is primarily made up of existing surge pond, Pond J, and undeveloped pervious area. In general, the basin slopes from north to south and south to north at varying slopes between 1%-20%. Under existing conditions, runoff from the Universe Blvd. storm drain system surges into Pond J and exits the surge pond back into the Universe Blvd. storm drain system or at the overflow weir at the northwest corner of the pond and discharges into Basin B and Basin C. The existing Pond J has a maximum water surface elevation of 5418.46 ft, maximum volume of 3.70 ac-ft, maximum inflow of 136.80 cfs, and maximum outflow of 26.65 cfs. Historically, before the berm and pond were built, the basin flowed northeast into Basins B and Basin C. Basin A generates 6.88 cfs.

Basin B consists of the southeast corner of the site and is undeveloped pervious area. In general, the basin slopes from south to north at varying slopes between 1-8%. After ponding a small amount, roughly 6", runoff exits this basin at the northern end of the basin and discharges into Basin C. Basin B generates 12.21 cfs.

Basin C consists of the north end of the site and offsite area west of the property boundary. The area contains undeveloped pervious area. In general, the basin slopes from southwest to northeast at varying slopes between 1-16%. Runoff exits this basin at the northern end of the basin. Basin C generates 28.63 cfs.

TABLE 3.1.1 – HYDROLOGIC DATA - EXISTING

HYDROLOGIC DATA - EXISTING							
SUB-BASIN	AREA (AC)	LAND USE PERCENTAGES				Q100 (CFS)	V100 (AC-FT)
		A	B	C	D		
A	5.14	100%	0%	0%	0%	6.88	0.188
B	9.14	100%	0%	0%	0%	12.21	0.335
C	21.44	100%	0%	0%	0%	28.63	0.785
TOTAL	**35.73**					**47.71**	**1.308**

3.2 PROPOSED CONDITIONS

The proposed site development for the Trails Unit 4 Apartments includes apartment buildings, parking lots, public and private streets, surge ponds, and landscaping. Under the proposed condition, approximately 80% of the site will consist of impervious area and 20% will be landscaped. The total flow generated by the proposed development is 82.34 cfs. There is no downstream infrastructure built for the watershed. Therefore, the drainage from the proposed conditions will be discharged into a temporary retention pond, Pond A, which will retain the 100-year, 10-day storm event. See Appendix A for the AHYMO input and output results, Pond A volume requirement calculations, and Pond A volume calculation. The proposed site has been split into nine proposed basins. Exhibit 2 shows the proposed private basin boundaries for the site.

3.2.1 PRIVATE DRAINAGE BASINS

Basin A consists of the edges of the property from the southwest corner to the northeast corner and is made up of apartment buildings, asphalt roads and parking, and landscaping. In general, the basin slopes from southwest to northeast at varying slopes between 0.5%-1%. Runoff is collected in proposed drop inlets in the new road which discharges into a storm drain that will connect to the public storm drain system, and ultimately discharge into the proposed Pond A. The proposed flow is 23.58 cfs.

Basin B consists of the center portion of the property and is made up of apartment buildings, asphalt roads and parking, and landscaping. In general, the basin slopes from west to east at varying slopes between 0.5%-1%. Runoff is collected in the new road which discharges into Basin A. The proposed flow is 11.40 cfs.

Basin C consists of the center portion of the property and is made up of apartment buildings, asphalt roads and parking, and landscaping. In general, the basin slopes from west to east at varying slopes between 0.5%-1%. Runoff is collected in the new road which discharges into Basin A. The proposed flow is 15.56 cfs.

Basin D is an undeveloped off-site basin to the west and north of the property. The basin also includes a proposed temporary public retention Pond A at the northeast corner of the basin. In general, the basin slopes from southwest to northeast at varying slopes between 3-5%. The southwestern portion of the basin discharges into the swale in Basin F. For a storm larger than the 100-year, 10-day event, runoff will exit Basin D at the overflow weir spillway in the proposed temporary retention Pond A and discharge to the northwest to match the historic discharge. We are proposing a wide spillway to best replicate the sheet flow that historically discharges to this point. The pond will retain the 100-year, 10-day storm event. The proposed temporary public retention Pond A has a maximum water surface elevation of 5411.40 ft, maximum inflow of 82.34 cfs, and no outflow. Basin D generates 16.41 cfs.

When this off-site basin is developed in the future the runoff will no longer be allowed to discharge into temporary public retention Pond A. The runoff from the future off-site developed area must be retained within their own site until adequate downstream public infrastructure has been provided to accept the flow, per City procedure for this area.

Basin F consists of the northwestern boundary of the property and is made up of landscaping and a swale. In general, the basin slopes east and then north at varying slopes between 0.5%-1%. Runoff is conveyed in a proposed swale. The primary purpose of the swale is to convey offsite drainage from Basin D to prevent the offsite drainage from affecting the proposed property. The proposed swale ultimately discharges into the ROW at the northwest corner of the property, into Basin D and then temporary public retention Pond A. The proposed flow is 0.84 cfs.

The hydrologic data table below depicts in further detail each private sub-basin and its characteristics.

TABLE 3.2.1 – HYDROLOGIC DATA – PROPOSED PRIVATE

HYDROLOGIC DATA - PROPOSED PRIVATE							
SUB-BASIN	AREA (AC)	LAND USE PERCENTAGES				Q100 (CFS)	V100 (AC-FT)
		A	B	C	D		
A	5.91	0%	10%	10%	80%	23.58	1.036
B	2.85	0%	10%	10%	80%	11.40	0.500
C	3.90	0%	10%	10%	80%	15.56	0.683
D	10.03	90%	0%	0%	10%	16.41	0.533
F	0.31	0%	45%	45%	10%	0.84	0.025
TOTAL	**22.99**					**67.79**	**2.777**

3.2.2 PUBLIC DRAINAGE BASINS

Basin E is an off-site basin and consists of the proposed public street, Oak Ridge Ave. In general, the basin slopes continuously from west to east at varying slopes between 0.5%-1%. Runoff is collected in storm drain in Oak Ridge and discharges into temporary public retention Pond A. The storm drain in Oak Ridge will be stubbed to the west for future connections as Oak Ridge expands to the west, see Exhibit 3. The proposed flow is 2.38 cfs.

Basin G is an off-site basin and consists primarily of the proposed public streets, Treeline Avenue and Chatsworth Drive but also includes small segments of on-site landscaping. The portion of on-site landscaping will discharge to the public right-of-way through sidewalk culverts and will not flow over the sidewalk. Treeline Ave is proposed as a full road width at the intersection of Treeline Ave and Universe Dr and transitions to half-road improvements at the Treeline Ave and Chatsworth Dr intersection. Chatsworth Dr is proposed as half-road improvements. In general, the basin slopes from west to east on Treeline Ave and south to north on Chatsworth Dr at varying slopes between 0.5%-1%. Chatsworth Dr will have a high point at the Treeline Ave and Chatsworth Dr intersection. Runoff north of Treeline Ave in Chatsworth Dr will flow north and future Chatsworth south of Treeline Ave will flow south. Runoff is collected in drop inlets which discharges into the proposed temporary public retention Pond A in Basin D via storm drain. There is a storm drain in Chatsworth that collects roadway flows from Treeline Ave and Chatsworth Dr as well as runoff from the private property. The proposed storm drain within Chatsworth Dr has been sized per the full developed road width. Exhibit 3 shows the proposed public and conceptual future public infrastructure. The proposed flow is 12.55 cfs.

Basin H is an off-site basin and consists of the half-street expansion of the proposed public street, Universe Boulevard. In general, the basin has a continuous slope from north to south at 0.5%. Runoff in Universe Boulevard continues south until it is collected in drop inlets immediately south of Woodmont Avenue which discharges directly into Pond K. There will be a high point in Treeline Ave at its intersection with Universe Boulevard to separate the runoff from those roadways. The proposed flow is 2.88 cfs. This flow has been accounted for in the existing PCSWMM model.

Basin I consists of the reconfiguration of Pond J and landscaping. In general, the basin slopes from north to south at varying slopes between 0.5%-1%. Runoff is collected in Pond J which discharges into the existing storm drain network paralleling Universe Blvd. The proposed flow in this basin is 2.00 cfs.

The hydrologic data table below depicts in further detail each public sub-basin and its characteristics.

TABLE 3.2.2 – HYDROLOGIC DATA – PROPOSED PUBLIC

HYDROLOGIC DATA - PROPOSED PUBLIC							
SUB-BASIN	AREA (AC)	LAND USE PERCENTAGES				Q100 (CFS)	V100 (AC-FT)
		A	B	C	D		
E	0.64	0%	17.5%	17.5%	65%	2.38	0.099
G	2.99	0%	5%	5%	90%	12.55	0.565
H	0.69	0%	5%	5%	90%	2.88	0.129
I	0.47	0%	5%	5%	90%	2.00	0.089
TOTAL	**4.79**					**19.81**	**0.882**

The pond data table in Appendix A depicts in further detail the characteristics and hydraulic results of the proposed temporary public retention Pond A. The existing flowrate for the site is 47.71 cfs, developed is 82.34, and 0.00 cfs is released from temporary public retention Pond A. The existing volume for the site is 1.308 ac-ft, developed is 3.441 ac-ft, and nothing is released. Temporary public retention Pond A is required to retain the 100-year, 10-day storm volume, 4.64 ac-ft. Temporary public retention Pond A has 4.71 ac-ft of retention volume, 1 foot of freeboard, 5.78 ac-ft of total volume and the spillway has capacity to pass the 100-year, 24-hour peak flow rate in an emergency situation. Additional calculations regarding temporary public retention Pond A are in Appendices A & B. Exhibit 4 provides detailed grading information for temporary public retention Pond A.

As the surrounding properties are developed, temporary public retention Pond A will ultimately discharge into the Upper Piedras Marcadas future 36" storm drain system within the Oak Ridge Ave extension crossing Paseo Del Norte Blvd NE. A copy of the Upper Piedras Marcadas Watershed Drainage map by Wilson & Company has been provided in Appendix A and shown conceptually on Exhibits 2 & 3. The proposed storm drain in Chatsworth and Oak Ridge discharges into temporary public retention Pond A in the interim condition. When the adjacent property to the northeast develops and builds the next portion of the downstream storm drain in Oak Ridge, the future developer will be responsible for retaining the runoff from their development, our proposed development, and all upstream basins, per City procedure, in this area. Once the adjacent property has been developed, the temporary public retention Pond A can be removed. Once downstream infrastructure is built to accept runoff from this area, a 48" storm drain will be extended east from the Chatsworth and Oak Ridge intersection in the future, see Exhibit 3. We anticipate that the storm drain crossing Paseo Del Norte Blvd NE will be a 48" pipe rather than 36" as shown on Exhibits 2 & 3 to accommodate flows that will contribute to this system.

The total first flush value of 0.34" required water quality volume for the site was calculated based on the total proposed onsite impervious area is13,064 cubic feet. The required stormwater quality volume has been provided in the proposed temporary public retention Pond A. More details regarding water quality will be provided at Building Permit review.

3.2.3 FUTURE PUBLIC/PRIVATE DRAINAGE BASINS

Future Basin D-1 is an undeveloped off-site private basin to the west and north of the property. In general, the basin slopes from southwest to northeast at varying slopes between 3-5%. For planning

purposes and conceptual future storm drain sizing, we have assumed this basin will be developed with 80% impervious area and discharge into a future storm drain in future Oak Ridge Ave. If there is not adequate downstream infrastructure available when this basin is developed, then this site must fully retain their runoff and cannot be discharged into temporary public retention Pond A. Basin D-1 generates 18.63 cfs.

Future Basin D-2 is an undeveloped off-site private basin to the west and north of the property. In general, the basin slopes from southwest to northeast at varying slopes between 3-5%. For planning purposes and conceptual future storm drain sizing, we have assumed this basin will be developed with 80% impervious area and discharge into a future storm drain in future Oak Ridge Ave. If there is not adequate downstream infrastructure available when this basin is developed, then this site must fully retain their runoff and cannot be discharged into temporary public retention Pond A. Future Basin D-2 generates 19.96 cfs.

Future Basin D-3 includes a proposed temporary public retention Pond A and undeveloped area around the pond. In general, the basin slopes from west to east at varying slopes between 1-5%. Runoff is retained within temporary public retention Pond A. Future Basin D-3 generates 5.17 cfs.

Future Basin G-2 is an off-site public basin and consists of the proposed public street, Chatsworth Drive. Chatsworth Dr is proposed as future half-road improvements. In general, the basin slopes from south to north at varying slopes between 0.5%-1%. Runoff is collected in future drop inlets which discharges into the proposed temporary public retention Pond A in Basin D via storm drain within Chatsworth Dr. Exhibit 3 shows the proposed public and conceptual future public infrastructure. The proposed flow is 5.37 cfs.

Future Basin H-2 is an off-site basin and consists of the future half-street expansion of the proposed public street, Universe Blvd. In general, the basin slopes from north to south at 0.5%. Runoff in Universe Blvd continues south until it is collected in drop inlets immediately south of Woodmont Avenue which discharges directly into Pond K. The proposed flow is 1.81 cfs. This flow has been accounted for in the existing PCSWMM model.

The hydrologic data table below depicts in further detail each future public/private sub-basin and its characteristics.

TABLE 3.2.3 – HYDROLOGIC DATA – FUTURE PUBLIC/PRIVATE

HYDROLOGIC DATA – FUTURE PUBLIC/PRIVATE							
FUTURE SUB-BASIN	AREA (AC)	LAND USE PERCENTAGES				Q100 (CFS)	V100 (AC-FT)
		A	B	C	D		
D-1	4.67	0%	10%	10%	80%	18.63	0.818
D-2	5.00	0%	10%	10%	80%	19.96	0.876
D-3	1.29	0%	10%	10%	80%	5.17	0.227
G-2	1.28	0%	5%	5%	90%	5.37	0.242
H-2	**0.43**	0%	5%	5%	90%	1.81	0.081
TOTAL	**12.67**					**50.94**	**2.244**

3.2.4 PCSWMM MODEL REVISIONS

Per the (UPM DMP), Section 1.4. Boca Negra Diversion, the Universe Boulevard storm drain system is designed to convey 62 cfs from properties owned by the Trails Subdivision through existing ponds J & K. The design basis and requirement for this system is to limit the discharge to a maximum peak flow of 62 cfs. Due to Pond J losing volume, we propose sending more drainage into Pond K, raising the 100-yr water surface elevation 0.26 feet from 5407.86' to 5408.12'. Pond K will still have 2.18' of freeboard available with the increase in water surface elevation and a peak discharge of 42.81 cfs. We propose installing a 3.7' diameter orifice plate on the southern downstream outfall storm drain in storm drain manhole "SDMH-5A" and reducing the diameter of the existing orifice on the southern downstream outfall storm drain in manhole "ORF_K" from 2.72' to 2.61'. The proposed Pond J has a maximum stored volume of 0.53 ac-ft, maximum inflow of 44.23 cfs, and maximum outflow of 30.85 cfs. In order to keep the hydraulic grade line below the existing manhole rim elevations, we propose installing a 24" storm drain out of the next storm drain manhole to the south into Pond K and installing a 3.5' diameter orifice plate in the Pond J manhole on the southern downstream outfall storm drain "MH-1". The PCSWMM model included the offsite basin flows from Basin D discharging into Pond J, so we removed input hydrograph "12" from the model since the offsite flows do not discharge into Pond J they flow to proposed temporary public retention Pond A. Also, input hydrograph "88" was revised from 12.31 cfs to 2.00 cfs to match the peak flow in Basin I. Also, after a field investigation it was discovered a 30" pipe discharges into Pond K at storm drain manhole "SDMH-5A". The existing 60" storm drain connecting to Pond J has been reduced to 48" since it does not negatively impact the system and will be replaced during construction. Although the maximum outflow increased from Ponds J & K, due to the reduction of input hydrograph "88", the removal of input hydrograph "12", and the differences in the time to maximum HGL, the Universe Blvd. storm drain discharge improved from 61.88 cfs to 55.76 cfs and remains below the 62 cfs design capacity. Even though the flow discharging out of Pond K is increasing, the overall system is discharging less flow south to the Boca Negra Dam and, therefore, the rest of the system outside of Ponds J and K are not negatively impacted. The existing and proposed results for all of the ponds in the PCSWMM model, including Ponds J and K, an overview map of the PCSWMM model revisions, and an elevation comparison table are included in Appendix A. Exhibit 5 provides detailed grading information for Pond J.

4.0 HYDRAULICS

4.1 STREETS

Runoff flow rates and volumes for the hydraulic design of the Sonata Trails Unit 4 development are those calculated by the AHYMO model. Private street capacities were checked at certain locations throughout the roadways where flow runoff rates are critical. These include the proposed roadways in Basins A, B, and C. The proposed public street capacities were calculated as well for their typical cross sections.

The maximum street capacity was determined for a given street section using ManningSolver Version 1.019 to ensure the design criteria mentioned in Section 2.0 of this report were met. Calculations for street capacities are shown in Appendix B.

4.2 STORM INLETS AND STORM DRAINS

Flow intercepted by drainage inlets were determined using the orifice and weir equations based on the City of Albuquerque Type "D" inlets. Flow quantities intercepted by curb inlets were determined using the Albuquerque DPM grating capacities rating curves for the appropriate inlets. All proposed storm drain capacities were determined using ManningSolver Version 1.019. The storm drain piping beneath the proposed public roads, Treeline and Chatsworth, were sized based on the full road width. For further information on drainage inlet and storm drain capacity calculations see Appendix B.

5.0 DRAINAGE MAINTENANCE COVENANTS

The existing Agreement and Covenants for ponds J, L3, and K will need to be modified to account for the revisions made to pond J and Universe storm drain system per Article 6-15 (C) of the DPM. The modified Agreement and Covenants will be provided before the building permit is approved. A new Agreement and Covenant for temporary public retention Pond A will need to be written and submitted before building permit approval.

6.0 CONCLUSION

This drainage report is prepared in support of the new development for Sonata Trails Unit 4 Apartments. The existing site is undeveloped and the new development will include apartments, parking, landscaping, public roadways, public Pond A, and revising existing Pond J. The existing surge Pond J will be redesigned to allow for the development of the apartment complex sending more drainage to existing Pond K. The 100-year water surface elevation in Pond K increases from 5407.86' to 5408.12', a 0.26' increase. Pond K will have 2.18' of remaining freeboard and a peak flow of 42.81 cfs after the proposed increase. There are two parts of Pond K. The larger portion on Tract 3 (Pond L3) and a smaller portion on Tract 4 (Pond K). The ponds are interconnected via the storm drain in Universe. Also, when the smaller pond on Tract 4 fills in larger events, it spills into the larger portion of Pond K on Tract 3. Both ponds are reliant on one another for the system to operate effectively. The allowable peak discharge at the outfall of the Universe storm drain system is 62 cfs. The flow rate resulting from the proposed conditions of this development is 55.76 cfs, which is below the allowable rate. The proposed 100-year, 10-day storm event volume, 4.64 ac-ft is fully retained in proposed temporary public retention Pond A. The proposed spillway for temporary public retention Pond A is wide to best replicate the sheet flow that historically discharges out of Basin D. Water discharging over the spillway from temporary public retention Pond A will only occur in emergency situations when the 100-year, 10-day storm event is exceeded.

As the surrounding properties are developed and capacity is made available, temporary public retention Pond A will ultimately discharge into the Upper Piedras Marcadas future 36" storm drain system within the future Oak Ridge Ave extension crossing Paseo Del Norte Blvd NE. We anticipate that the storm drain crossing Paseo Del Norte Blvd NE will be a 48" pipe rather than 36" as shown on Exhibit 2 to accommodate flows that will contribute to this system. The hydrologic calculations are included in Appendix A. The hydraulic calculations are included in Appendix B.

APPENDIX A

HYDROLOGIC CALCULATIONS

Water Quality:

Required Water Quality volume for first flush of 0.34"

Basin	Volume (cu. ft.)	Volume Provided (cu. ft.)
Total Onsite Impervious Area	13,064	122,383

PCSWMM MODEL VS CURRENT SURVEY/DESIGN ELEVATION COMPARISON		
PCSWMM JUNCTION	MODEL ELEVATION (NGVD 29)	SURVEY/DESIGN ELEVATION (NAVD 88)
	FT	FT
MH-1	5418.91	5421.71
SDMH-4A	5414.70	5417.33
PondJ	5414.20	5417.00

Link38 - Revised the 5' diameter storm drain into Pond J to 4' diameter

Pond J - Revised the storage capacity of Pond J

Revised the demand Time Series ID-88 to match new area of Pond J

Removed Node J - offsite flows do not drain to Pond J

MH-1

SDMH-4A

SDMH-5A

OR2 - Added 3.70' diameter orifice to the southern downstream outfall storm drain.

OR1 - Changed orifice plate diameter from 2.03' to 3.50'. The orifice location has not changed, still on the southern downstream outfall storm drain

Pond K - no revisions to the physical storage capacity, but are sending more flow to this pond due to revised storage capacity of Pond K. Discharge of out Pond K is 42.81 cfs.

Link64 - Added 24" diameter storm drain pipe to discharge into Pond K

Link63 - Added 30" diameter storm drain pipe to discharge into Pond K based on field inspection of the system

ORF_K - Changed orifice plate diameter from 2.72' to 2.61'. The orifice location has not changed, still on the southern downstream outfall storm drain

Manning Formula: Proposed 24" SD Max Flow

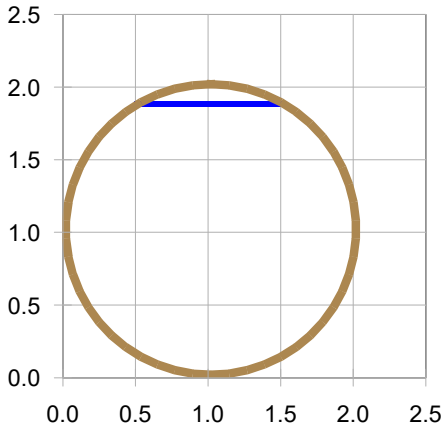
Circular Channel

Input

Flow	17.20 cfs
Slope	0.005 ft/ft
Manning's n	0.013
Diameter	24 in

Output

Depth	1.862 ft
Flow Area	3.05 sf
Velocity	5.65 fps
Velocity Head	0.495 ft
Top Width	1.01 ft
Froude Number	0.574
Critical Depth	1.495 ft
Critical Slope	0.00701 ft/ft



Manning Formula: Proposed 30" SD Max Flow

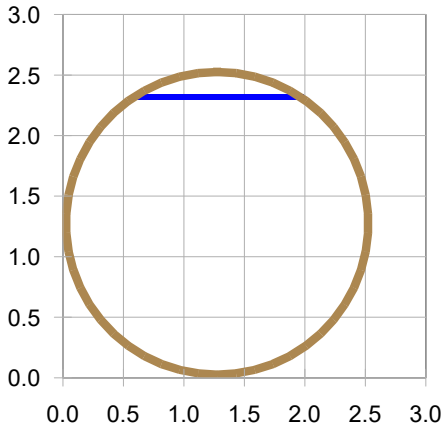
Circular Channel

Input

Flow	31.1 cfs
Slope	0.005 ft/ft
Manning's n	0.013
Diameter	30 in

Output

Depth	2.292 ft
Flow Area	4.71 sf
Velocity	6.60 fps
Velocity Head	0.677 ft
Top Width	1.38 ft
Froude Number	0.630
Critical Depth	1.900 ft
Critical Slope	0.00670 ft/ft



Manning Formula: Proposed 36" SD Max Flow

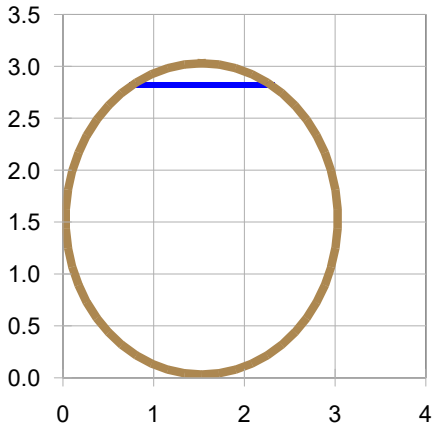
Circular Channel

Input

Flow	50.7 cfs
Slope	0.005 ft/ft
Manning's n	0.013
Diameter	36 in

Output

Depth	2.787 ft
Flow Area	6.85 sf
Velocity	7.41 fps
Velocity Head	0.852 ft
Top Width	1.54 ft
Froude Number	0.619
Critical Depth	2.317 ft
Critical Slope	0.00651 ft/ft



Manning Formula: Proposed 42" SD Max Flow

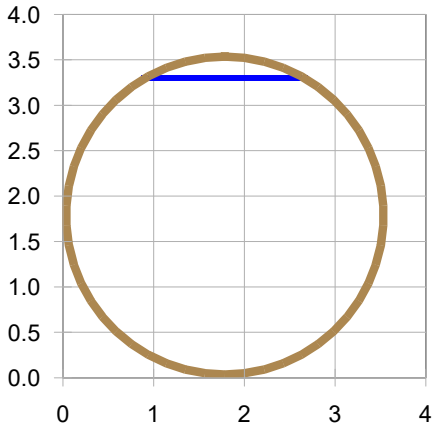
Circular Channel

Input

Flow	76.5 cfs
Slope	0.005 ft/ft
Manning's n	0.013
Diameter	42 in

Output

Depth	3.261 ft
Flow Area	9.34 sf
Velocity	8.19 fps
Velocity Head	1.04 ft
Top Width	1.77 ft
Froude Number	0.628
Critical Depth	2.737 ft
Critical Slope	0.00634 ft/ft



Manning Formula: Proposed 54" SD Max Flow

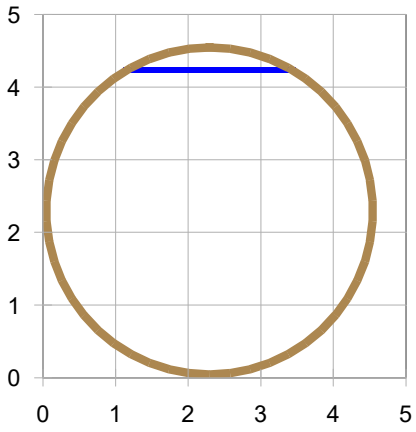
Circular Channel

Input

Flow	149.5 cfs
Slope	0.005 ft/ft
Manning's n	0.013
Diameter	54 in

Output

Depth	4.185 ft
Flow Area	15.4 sf
Velocity	9.70 fps
Velocity Head	1.46 ft
Top Width	2.30 ft
Froude Number	0.660
Critical Depth	3.588 ft
Critical Slope	0.00609 ft/ft



Manning Formula: Proposed 60" SD Max Flow

Circular Channel

Input

Flow	198.0 cfs
Slope	0.005 ft/ft
Manning's n	0.013
Diameter	60 in

Output

Depth	4.651 ft
Flow Area	19.0 sf
Velocity	10.4 fps
Velocity Head	1.68 ft
Top Width	2.55 ft
Froude Number	0.671
Critical Depth	4.019 ft
Critical Slope	0.00599 ft/ft

GRADING NOTES

1. CONTRACTOR TO FIELD VERIFY LOCATION AND ELEVATION OF ALL EXISTING DRY AND WET UTILITIES PRIOR TO CONSTRUCTION AND NOTIFY ENGINEER OF ANY ISSUES. UTILITY RELOCATION MAY BE REQUIRED.
2. FINISH GRADE OF SOIL EDGES ALONG PAVEMENT TO BE 1/2" BELOW EDGE OF PAVEMENT.
3. STRIP AND STOCKPILE TOPSOIL FROM GRADING AREAS. USE STOCKPILED TOPSOIL AND IMPORTED TOPSOIL AS NECESSARY FOR SURFACE RESTORATION.
4. GRADES SHOWN ARE FINAL SURFACE GRADES AFTER COMPLETION OF SURFACE IMPROVEMENTS AND PLACEMENT OF TOPSOIL.
5. GRADE AREAS AT SITE PERIMETER TO MATCH GRADES OF ADJACENT PARCELS.
6. REMOVE EXCESS SOIL FROM SITE AND DISPOSE OF PROPERLY IN ACCORDANCE WITH APPLICABLE REGULATIONS.
7. PROVIDE TEMPORARY GRADING FEATURES SUCH AS BERMS, SWALES, SUMPS AND BASINS TO MANAGE INTERIM STORM WATER RUNOFF DURING CONSTRUCTION PROCESS. STORM WATER RUNOFF LEAVING THE SITE SHALL MEET ALL FEDERAL, STATE AND LOCAL QUALITY REQUIREMENTS.
8. ALL DISTURBED AREAS TO BE RE-SEEDED PER LANDSCAPE PLAN PROVIDED BY OTHERS.
9. ALL INFRASTRUCTURE CONSTRUCTION WITHIN PUBLIC RIGHT-OF-WAY SHALL BE BUILT WITH PUBLIC WORK ORDER PLANS.
10. FINAL GRADES FOR ADJACENT ROADWAYS TO BE ESTABLISHED WITH WORK ORDER PLANS.
11. GRADING SHALL NOT ENCROACH ON ADJACENT PROPERTIES.

PNM NOTE

1. CONTRACTOR TO COORDINATE A SITE WALKTHROUGH WITH PNM PRIOR TO CONSTRUCTION. CONTRACTOR TO KEEP ALL EQUIPMENT A MINIMUM OF 15 FEET AWAY FROM ALL PNM POWER LINES.
