Based upon the information provided in your submittal received 08/21/2025, the LOMR Application is approved for submittal to FEMA, the Floodplain Development Permit (FPP# C18F043E) is approved for construction, and the Elevation Certificate is accepted.

PRIOR TO CERTIFICATE OF OCCUPANCY:

1. Engineer's Certification, per the DPM Part 6-14 (F) : *Engineer's Certification Checklist For Non-Subdivision* is required.
2. A final (as-built) elevation certificate must be submitted and approved by Hydrology prior to issuing approval for Certificate of Occupancy.
3. Approval of the LOMR by FEMA for the map revision.

As a reminder, if the project total area of disturbance (including the staging area and any work within the adjacent Right-of-Way) is 1 acre or more, then an Erosion and Sediment Control (ESC) Plan and Owner's certified Notice of Intent (NOI) is required to be submitted to the Stormwater Quality Engineer (Doug Hughes, PE, jhughes@cabq.gov, 924-3420) 14 days prior to any earth disturbance.

Item 1

Description of the Revision

Item 1. Description of the Revision

The purpose of the request is to revise the current floodplain mapping for the North Domingo Baca (NDB) Park between Wyoming Blvd NE and Louisiana Blvd NE. The map revision references The FIS report numbered 35001CV001D. This report provides the 1-percent-annual-chance peak discharge for the North Arroyo de Domingo Baca flooding source at Wyoming Boulevard.

The NDB Pool Complex will be the next project to be constructed within the North Domingo Baca development. This will include an indoor and outdoor aquatic center for community engagement. The North Domingo Baca development is currently documented as being within flood zone AO (Depth 1'), however current conditions altered the flood zone and is constrained to a designated area in the development. This report is only providing current conditions in order to update FIRM panels 0141G and 0137H.

The drainage structure that was constructed to direct the stormwater is two 6'x10' box culverts from Wyoming Blvd to the Kinney Dam and acts as the current drainage device that directs the stormwater to the Kinney Dam. Refer to the "Construction Plans for North Domingo Baca Park Phase 4 Construction – Box Culvert", (Smith Engineering, 2005) for culvert details located in Appendix 7. Hydraulic analysis was completed utilizing the HEC-RAS application and indicates the current culvert is efficient and directs the stormwater to Kinney Dam appropriately. The current FEMA flood zone indicates the development is within flood zone AO (Depth 1') and needs to be updated to reflect that the entire development, not including Kinney Dam should not be in a flood zone. See Exhibit 5 for the updated flood zone area (Kinney Dam is the flood zone in the area and will remain zone AE (EL 5320)). For the existing Kinney Dam Design please refer to "Final Design Analysis Report for Lower North Domingo Baca Detention Dam (Resource Technology, Inc., 1995)"

Huitt-Zollars requests that FEMA revise the current Flood Insurance Rate Map of Albuquerque, NM to incorporate and reflect the current flood zone conditions FIRM panels 0141G & 0137H.

Culvert Analysis
(HEC-RAS, North Arroyo de Domingo Baca)

Existing Pond Survey
&
Upstream North Domingo Baca Survey

Item 4. HEC-RAS, North Arroyo de Domingo Baca

HEC-RAS:
Version: 6.5 Date: 01Feb2024

The analysis for the culvert design utilizes HEC-RAS to assure the design is adequate to handle the peak flow. The culvert cross section was determined by way of new survey. The survey verified that the culvert is two 10' x 6' CBC's located between Wyoming Boulevard and the Kinney Dam entry opening. The cross-section dimensions will be held through the culvert beginning at the Wyoming location down to the outfall into Kinney Dam pond. See the HEC-RAS report for more details.

The peak flow was obtained from the existing Flood Insurance Study, Volume 1 of 2 for the Bernalillo County and Incorporated Areas. The indicated flow for the 1-Percent-Annual-Chance is 658 CFS at Wyoming Boulevard. The peak flow maintains an elevation that is lower then the top of the culvert and will efficiently be directed towards Kinney Dam. These results indicate that the culvert is currently functioning as a sustainable drainage device.

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 6/5/2024 at 6:09 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the summary of Stillwater Elevations table in the Flood Insurance Study Report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures in this jurisdiction.

The **projection** used in the preparation of this map was New Mexico State Plane, Central Zone. The **horizontal datum** was NAD 83, GRS80 spheroid. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov or contact the National Geodetic Survey at the following address:

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at **(301) 713-3242**, or visit their website at http://www.ngs.noaa.gov.

Base map information shown on this FIRM was provided in digital format by Bernalillo County produced at a scale of 1:12,000 from photography dated 1999 or later.

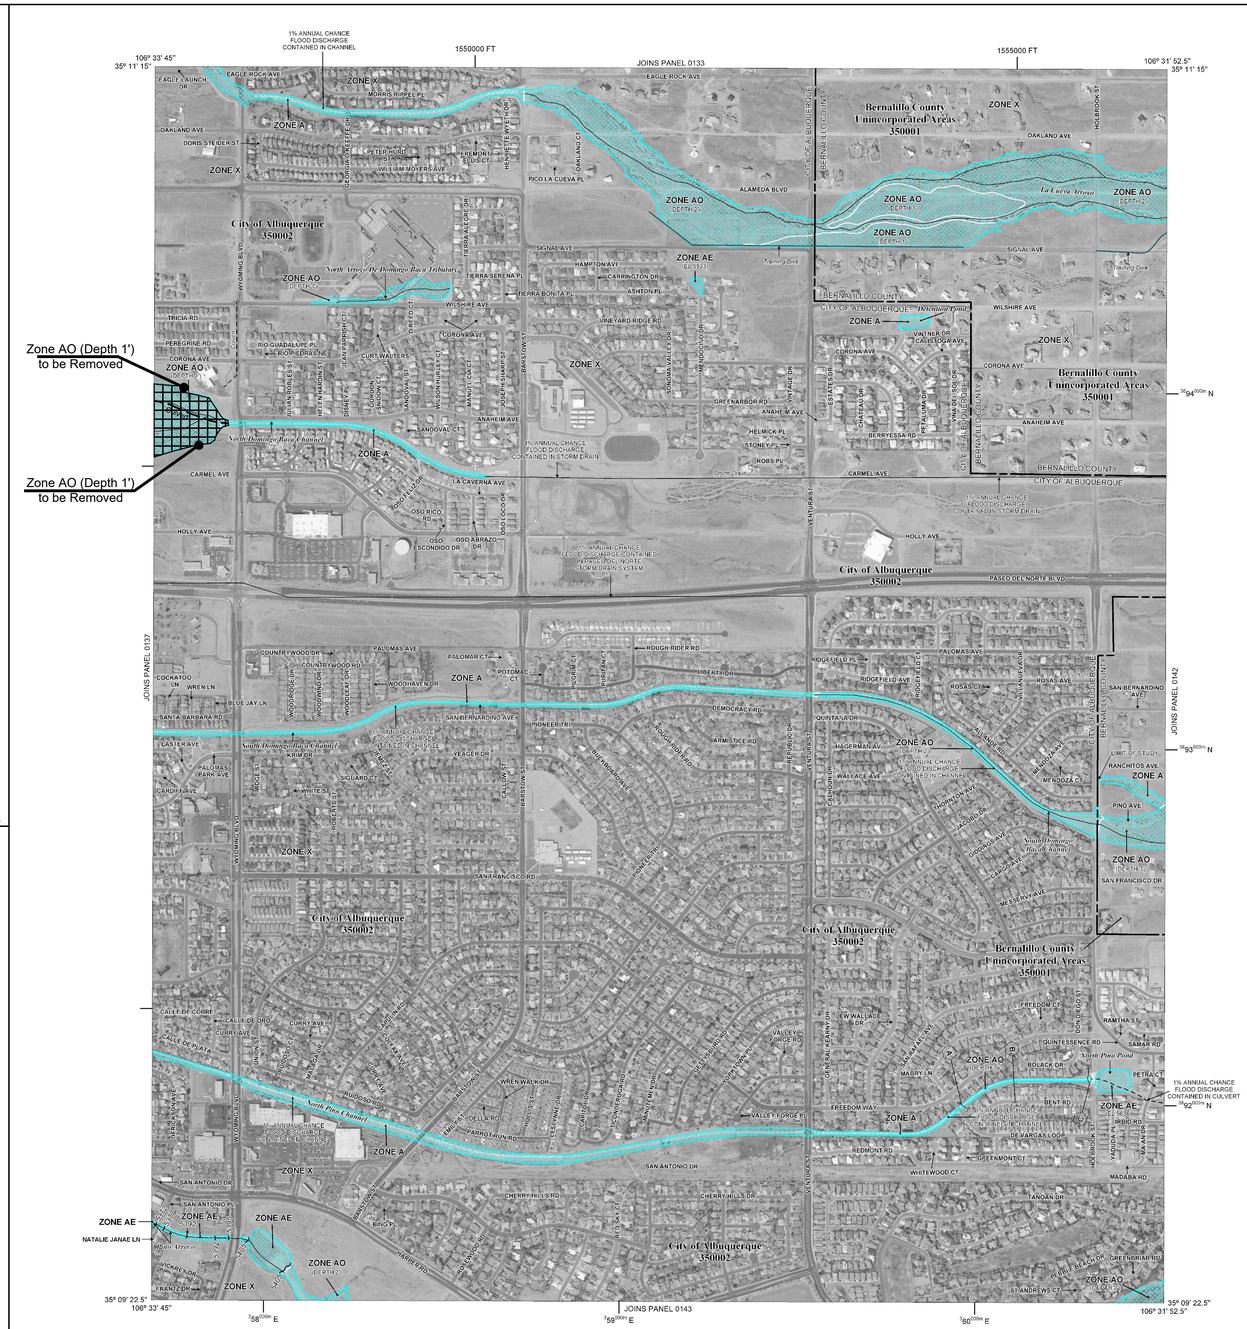
Based on updated topographic information, this map reflects more detailed and up-to-date **stream channel configurations and floodplain delineations** than those shown on the previous FIRM for this jurisdiction. As a result, the Flood Profiles and Floodway Data tables for the Flood Insurance Study report may reflect stream channel distances that differ from what is shown on the map. Also, the road to floodplain relationships for unrevised streams may differ from what is shown on previous maps.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Contact the **FEMA Map Service Center** at 1-800-358-9616 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and their website at http://www.msc.fema.gov.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call **1- 877- FEMA MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov/business/nfip.



LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

- **ZONE A** — No Base Flood Elevations determined.
- **ZONE AE** — Base Flood Elevations determined.
- **ZONE AH** — Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
- **ZONE AO** — Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- **ZONE AR** — Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
- **ZONE A99** — Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
- **ZONE VE** — Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

- **ZONE X** — Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

- **ZONE X** — Areas determined to be outside the 0.2% annual chance floodplain.
- **ZONE D** — Areas in which flood hazards are undetermined, but possible.
