Property Line

GROUND TREATMENT NOTES:

The area must be seeded with a native mix per City Standard specification 1012.3 depending on soil type for that City area. Please reference this native seed selection and the section on plan sheet.

ALL AREAS: Gravel 1/2 to 1 inch mulch. One layer thick, not stacked

Native grass establishment must be achieved by the contractor within a 3 year time frame. Temporary irrigation or water trucks must be used when rain is lacking. Seeds must germinate in one year or reseeding will likely be needed.

Native-grass seed mix shall be 50%/50% (by weight) combination of *Bouteloua gracilis* "Hachita" Blue Grama, and *Buchloe dactyloides* - Buffalo grass/ addition of Apache plum and Chamisa seeds) applied at a rate of 100#LS/AC, or as specified on the plans.

Maintenance will be per City of Albuquerque Specification 1012.3.1 and 1012.3.2.

Contractor must seed the area during/after the first growing season.

LANDSCAPE NOTES:

It is the intent of this plan to provide an alternative landscape plan in lieu of the traditional IDO required landscape plan.

The ALP (Alternative Landscape Plan) would provide a landscape buffer, approximately 20' wide, along the street frontage on the west starting at the railroad tracks, moving east along El Pueblo Rd., and continuing south along Tiburon St. to the south, ending at the railroad tracks.

Plantings proposed are the City's recommended tree list.

IRRIGATION NOTES:
Irrigation shall be a complete underground system with Trees to receive 1 Netatim spiral (100' length) with 3 loops at a final radius of 6' from tree trunk, pinned in place. Netatim shall have emitters 12" o.c. with a flow of 1 gph. Drip and Bubbler systems to be tied to 1/2" poly pipe with flush caps at each end.

Tree drip valve shall run 15 hours, 3 times per week. Run time will be adjusted according to the season.

Point of connection for irrigation system shall be as indicated on the Utility Plan, Civil drawings. Landscape Contractor point of connection and responsibility shall begin downstream of the point of connection.

Irrigation will be operated by smart irrigation systems automatic controller, capable of multi-programming ability.

Location of controller to be field determined and power source for controller to be provided by the owner.

Irrigation maintenance shall be the responsibility of the Property Owner.

Water and Power source for irrigation system shall be the responsibility of the Property Owner.

No Irrigation system for native seeding areas is required.
