January 20, 2017

Richard J. Berry, Mayor

Arthur Valverde, P.E.  
11009 San Antonio Dr. NE  
Albuquerque, NM, 87122

**RE:** 11009 San Antonio Dr.  
Grading and Drainage Plan  
Engineer's Stamp Date 12-28-2016 (File: D21D029)

Dear Mr. Valverde:

Based upon the information provided in your submittal received 12-28-2016, the above referenced Grading and Drainage Plan is approved for accepting drainage into city Right of Way.

If you have any questions, you can contact me at 924-3999.

PO Box 1293

Sincerely,

Albuquerque

New Mexico 87103

Shahab Biazar, P.E.  
City Engineer, Planning Dept.

GRADING AND DRAINAGE PLAN

LEGEND

Property Line	---
Existing Contours (2.0 Ft.)	~~~~~
Earth Swale	~~~~~
Proposed Development	=====
Existing Stucco Wall	=====
Existing Wrought Iron Fence	---□---
Drainage: Indicated by Arrows	→
Area Drains to Pound (Boundary)	-----
Existing Pond Limits	~~~~~

PURPOSE

Update drainage plan to include existing house, 30' x 30' garage, and asphalt paving.

SAMPLE DRAINAGE CALCULATIONS

Using the simplified procedures outlined in the DPM, this lot falls in zone 4.

Excess precipitation factors for 100 year event are:

$$E_A = 0.80, E_B = 1.08, E_C = 1.46, \text{ and } E_D = 2.64$$

$$\text{Weighted } E = (E_A A_A + E_B A_B + E_C A_C + E_D A_D) / (A_A + A_B + A_C + A_D)$$

$$\text{Volume of excess precipitation} = V_{360} = \text{Weighted } E (A_A + A_B + A_C + A_D)$$

Current land treatment areas are:

$$\begin{aligned} A_A &= 0.200 \text{ ac.} \\ A_B &= 0.147 \text{ ac.} \\ A_C &= 0.247 \text{ ac.} \\ A_D &= 0.296 \text{ ac.} \end{aligned}$$

$$E = [0.80(0.20) + 1.08(0.147) + 1.46(0.247) + 2.64(0.296)] / 0.89 = 1.641 \text{ in.}$$

$$V = [1.641 / 12] / 0.89 = 0.121 \text{ Ac.-Ft.} = 5303 \text{ c.f.}$$

$$Q = 2.20(0.20) + 2.92(0.147) + 3.73(0.247) + 5.25(0.296) = 3.44 \text{ cfs}$$

NAA drainage master plan allows  $Q = 2.82 \text{ cfs}$  and  $V = 4203 \text{ c.f.}$ , therefore, mitigation is required.

Existing pond must be considered. Existing pond is 1700 s.f. with an average depth of 1.5 ft., and a volume of 2550 c.f. The treatment areas captured by this pond are:

$$\begin{aligned} A_A &= 0.0630 \text{ ac.} \\ A_B &= 0.0315 \text{ ac.} \\ A_D &= 0.1033 \text{ ac.} \\ \text{Total Area} &= 0.1978 \text{ ac.} \end{aligned}$$

Excess precipitation captured is

$$E = [0.80(0.0630) + 1.46(0.0315) + 2.64(0.1033)] / 0.1978 = 1.866 \text{ in.}$$

$$V = 1.866(0.1978) = 0.0307 \text{ a.f.} = 1340 \text{ c.f.}$$

$$Q = 2.20(0.0630) + 3.73(0.0315) + 5.25(0.1033) = 0.798 \text{ cfs}$$

Check volume for larger storms:

$$\begin{aligned} V_{24 \text{ hr}} &= V_{1440} = V_{360} + [A_D (P_{1440} - P_{360})] / 12 \\ &= 0.0307 + 0.1033(3.65 - 2.90) / 12 = 0.0372 \text{ a.f.} = 1618 \text{ c.f.} \end{aligned}$$

$$\begin{aligned} V_{4 \text{ day}} &= V_{360} + A_D (P_{4 \text{ day}} - P_{360}) / 12 \\ &= 0.0307 + 0.1033(4.70 - 2.90) / 12 = 0.0461 \text{ a.f.} = 2012 \text{ c.f.} \end{aligned}$$

$$\begin{aligned} V_{10 \text{ day}} &= V_{360} + A_D (P_{10 \text{ day}} - P_{360}) / 12 \\ &= 0.0307 + 0.1033(5.95 - 2.90) / 12 = 0.0569 \text{ a.f.} = 2480 \text{ c.f.} \end{aligned}$$

Therefore, entire volume captured by pond can be considered.

Net volume of drainage to San Antonio Drive is

$$V = 5303 \text{ c.f.} - 1340 \text{ c.f.} = 3963 \text{ c.f.}$$

Net discharge is

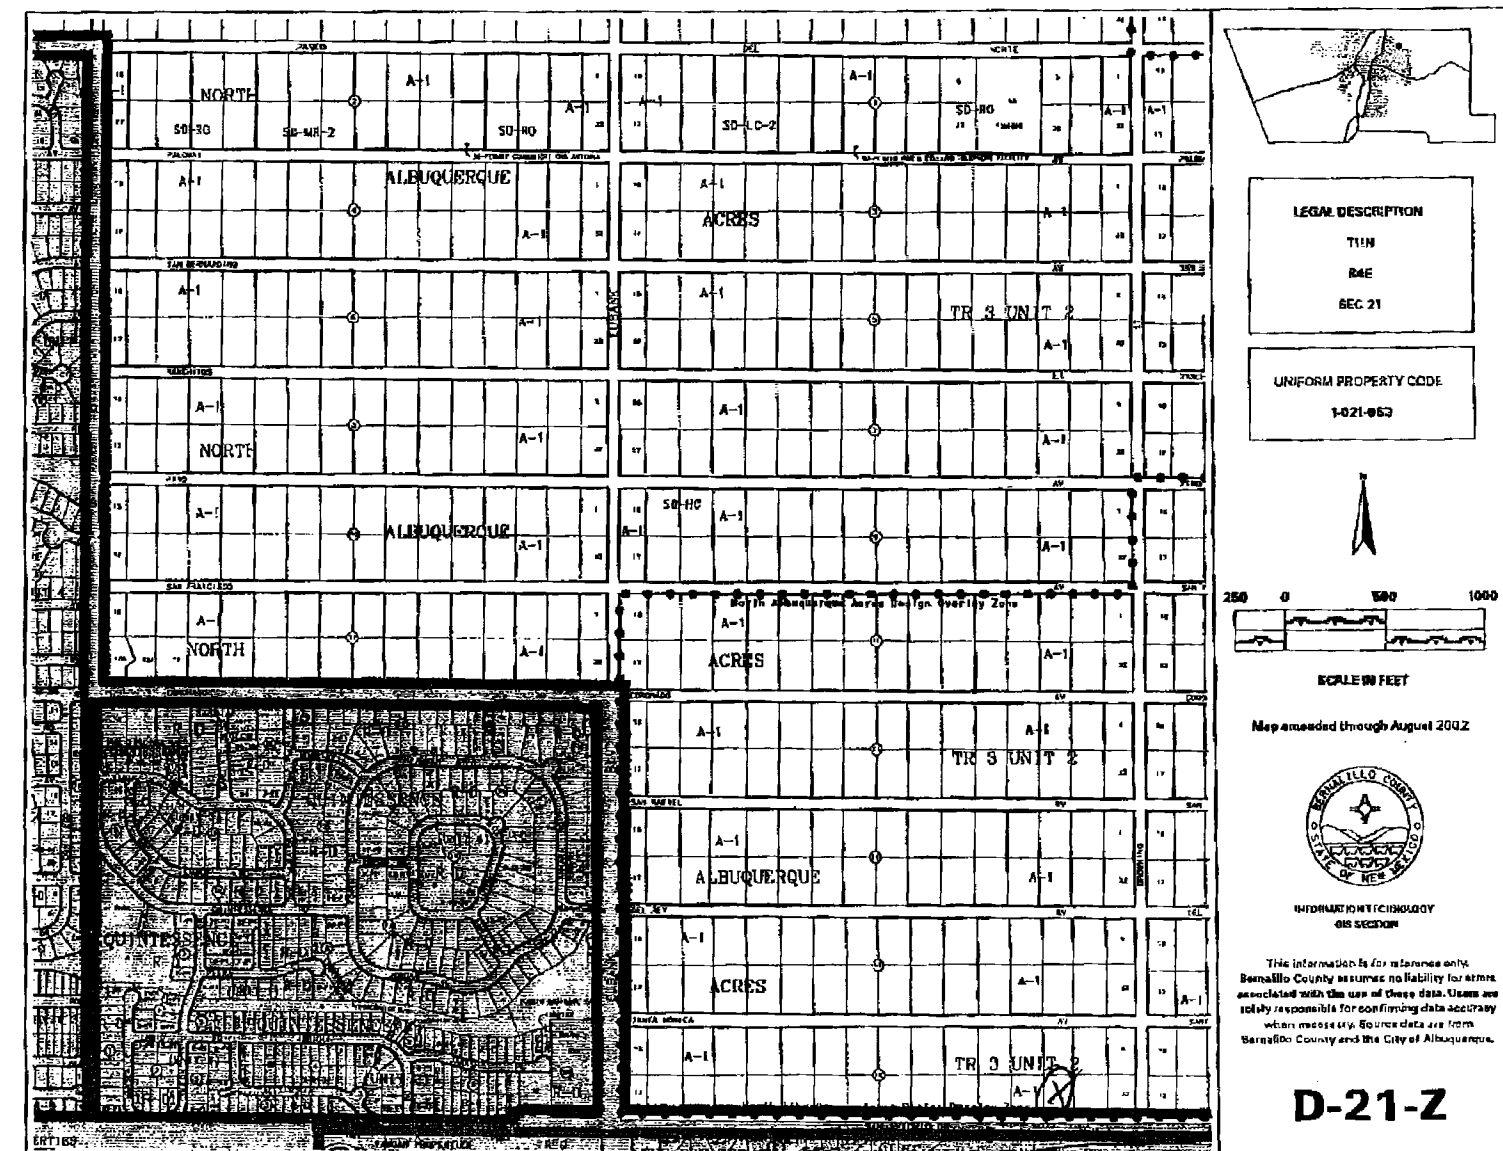

$$Q = 3.309 \text{ cfs} - 0.798 \text{ cfs} = 2.51 \text{ cfs}$$

CERTIFICATION

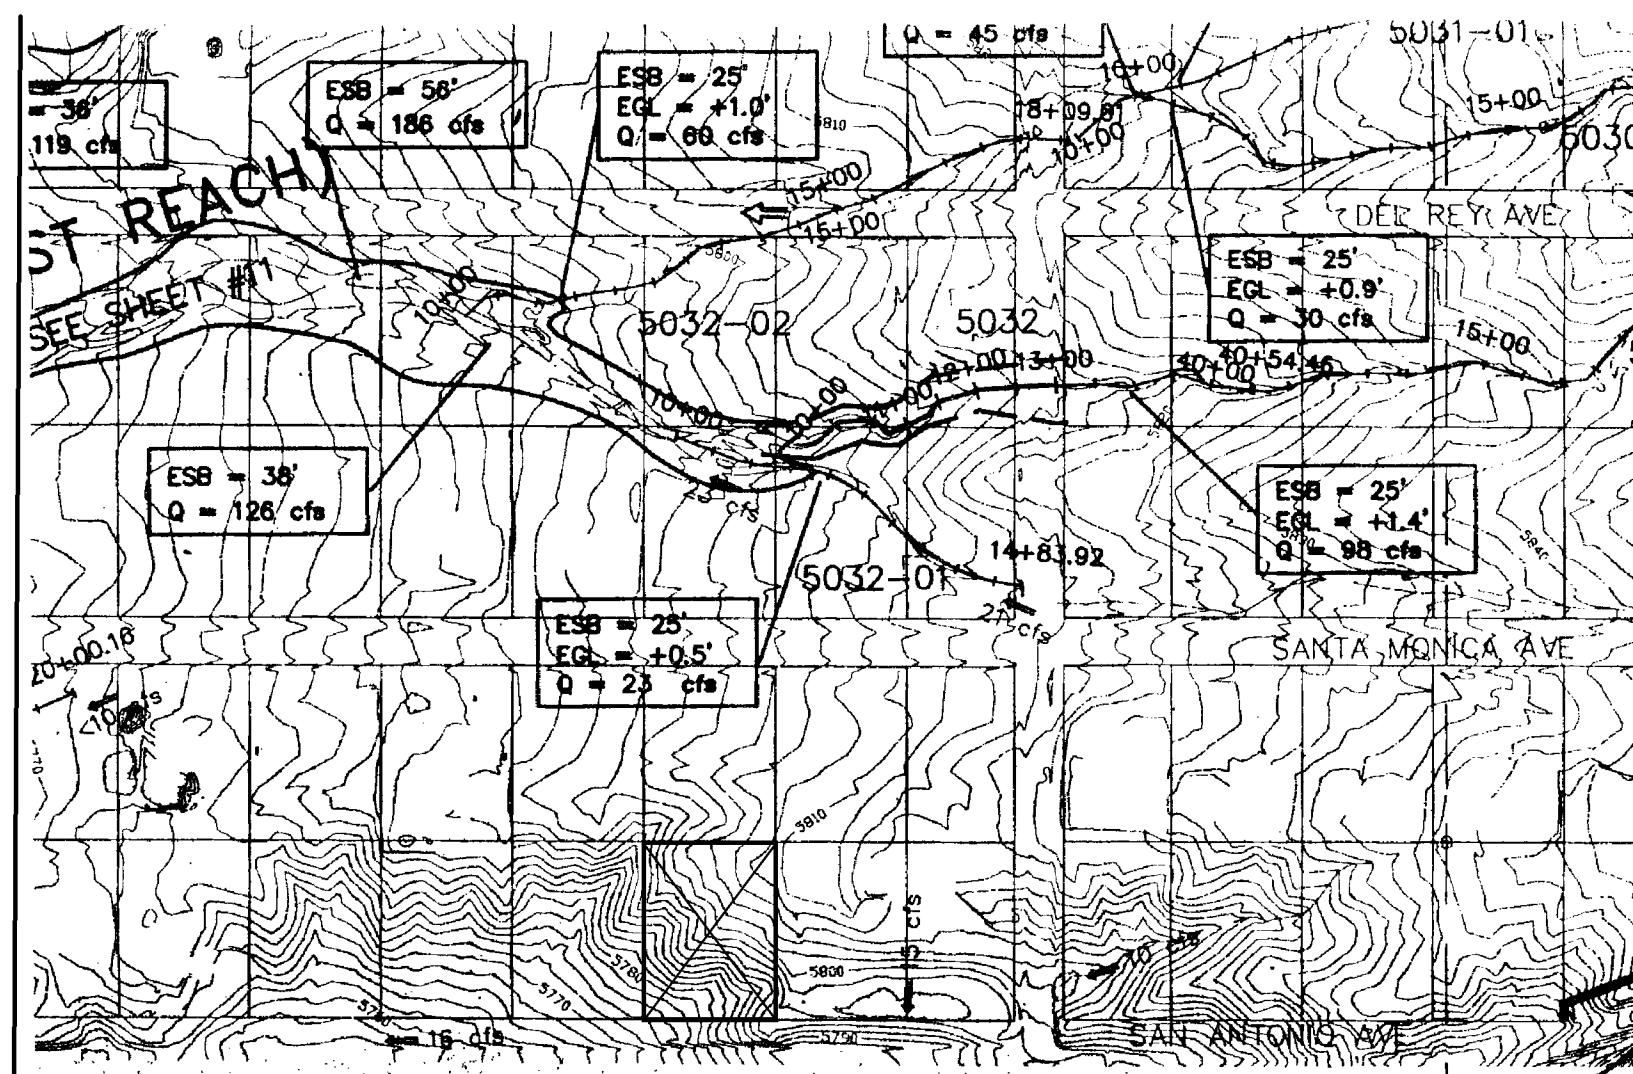

I have personally inspected the site and I certify that no grading, filling, or excavation has occurred since the preparation of the topography shown on the plan.
