1.0 OVERVIEW

1.1 Project Information

PROJECT INFORMATION

Project Name:	Desert Springs Church Additions
Control Number:	N/A
Project Location:	705 Osuna Road NE Albuquerque, New Mexico 87113 Bernalillo County
Site Area (Gross Acres):	4.5 acres
Site Area (Disturbed Acres):	4.5 acres
USGS Location:	35.1526° N 106.6126° W

OWNER INFORMATION

Owner	Desert Springs Church
Address:	705 Osuna Road NE Albuquerque, NM 87113
Phone:	(505) 797-8700
Fax:	
Contact:	Chase Jacobs

GENERAL CONTRACTOR/OPERATOR INFORMATION

General Contractor:	Wilger Enterprises
Address:	425 Edmon RD NE Albuquerque, NM 87107
Phone:	(505) 345-2824
Fax:	
Contact:	Scot McLelland

PROJECT SITE INFORMATION

Receiving Water(s):	Unnamed drainage to North Channel
Indian Lands:	This project is not on Indian lands
Estimated Project Start Date	1/24/22
Estimated Project End Date:	3/30/22
NPDES Permit:	ID Number is: NMR1004FP/NMR1004FK

1.2 Certifications

Project Title: Desert Springs Church Additions

Project Operator (Day-to-Day site control): Wilger Enterprises

Project Owner (specification control): Desert Springs Church

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

1.3 Letter of Designation (Wilger Enterprises)

"Director"

US EPA Region 6
Ariel Rios Building
1200 Pennsylvania Ave., NW
Washington, DC 20460

RE: Letter of designation in accordance with CGP Appendix I paragraph 11.2

Dear Director:

This letter serves to designate either a person or specifically described position as an authorized person for signing reports, storm water pollution prevention plans, certifications or other information requested by the Director or required by the permit. This authorization cannot be used for signing an NPDES permit application (e.g. Notice of Intent (NOI)) in accordance with 40 CFR 122.22. The following person or position is hereby authorized to sign reports, plans or certifications other than the NOI application:

Name: Caldon Seeding & Reclamation SWPPP Inspector Position: Inspector

By signing this authorization, I confirm that I meet the following requirements to make such a designation as set forth in either Appendix I.11 of the Construction general permit [63 Fed Reg 36506] or Part 9.7. of the Multi-Sector General Permit [65 Fed Reg 64746-64880].

For a corporation: by a responsible corporate officer. For the purpose of this section, a responsible corporate officer means: a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function or any other person who performs similar policy or decision making functions for the corporation; or the manager of one or more manufacturing, production or operating facilities employing more than 250 persons or having gross annual sales or expenditures exceeding \$25,000,000 (in second quarter 1980 dollars) if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures. For a partnership or sole proprietorship: by a general partner or the proprietor, respectively. For a municipality, State, Federal or other public agency: by either a principal executive officer or ranking elected official. For purposes of this section, a principal executive officer of a Federal agency includes (1) the chief executive officer of the agency, or (2) a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g. Regional Administrators of EPA).

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

1.4 Project Description

The Desert Springs Church Additions Project will fundamentally consist of additions to an existing building including drainage improvements for Desert Springs Church on Osuna Road in Albuquerque, New Mexico. There will be grading, asphalt, concrete, drainage, and finish work.

Soil disturbing activities will include but are not limited to: grading, excavation, and installation of erosion and sediment control measures.

1.5 Site Map/General Location Map[s]/Areas of Soil Disturbance

See next page for location of project, soil information, and historical precipitation data.

1.6 Scope of Work to be Completed

The construction activities will consist of:

Item	Begin	End
Installation of BMPs	3/1/22	3/1/23
Rough Grading	3/1/22	9/1/22
Demolition	3/1/22	6/1/22
Asphalt/Concrete	9/1/22	3/1/23
Finish Work	12/1/22	3/1/23
Vertical Construction	8/1/22	3/1/23
Final Grading	12/1/22	2/1/23
Revegetation/Landscaping	1/1/22	3/1/23

1.7 Measures to Prevent Pollutant Discharge into Waters of the US

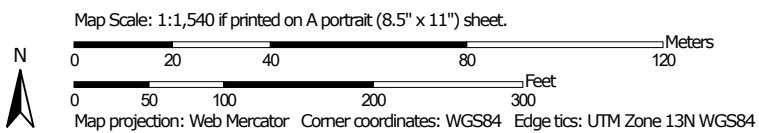

It is the intent of the Owner/Operator and Contractor/Operator to provide and comply with permitted coverage requirements until 70% of the original vegetated state [prior to disturbance] of the area is evenly stabilized back to an original non-disturbed vegetated percentage. At such time, this SWPPP will be amended to reflect the termination of coverage and a Notice of Termination [NOT] will be filed.

Required temporary erosion and sediment control devices will be installed prior to the commencement of construction activities on the Desert Springs Church Additions Project to prevent and control soil loss. While construction activities are occurring within the project; the appropriate control measures will be implemented by the operators in areas of soil disturbance to direct runoff and ensure that the transport of pollutants and sediment are minimized during storm water events. As the project is developed [progresses toward completion or in the event of rain] the entire project

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Bernalillo County and Parts of Sandoval and Valencia Counties, New Mexico

Survey Area Data: Version 16, Sep 12, 2021

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Nov 22, 2020—Jan 1, 2021

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
BKD	Bluepoint-Kokan association, hilly	1.2	19.9%
EmB	Embudo gravelly fine sandy loam, 0 to 5 percent slopes	4.7	80.1%
Totals for Area of Interest		5.9	100.0%

¹ Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

¹ Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

[Back to Top](#)

PF graphical

will be continually evaluated by inspection to determine and ensure that the appropriate control measures[s] are being utilized at each location or within certain areas.

When applicable, appropriate controls and measures will be implemented for each of the following major construction activities:

a. Excavation: Silt fence will be installed at the site perimeter and at any other discharging slopes to prevent “silty” storm water run-off from leaving the site.

b. Pouring of concrete; curbs, drives, sidewalks, footings and or pads: If necessary, prior to pouring concrete, a concrete/concrete-masonry washout area must be constructed. This washout consists of excavating or berming a hole approximately 7’x7’ square and approximately 3’ deep. Once hole is excavated, line with a plastic sheet. When washout fills to 50% capacity, contractor is required to remove material and dispose of properly at a controlled or designated landfill. Actual location is anticipated near major structure placement.. It is anticipated the majority of residual concrete that is left can be transported and returned by the delivering vehicle. Alternatively, a 10’x10’ concrete washout can be constructed using 18 inch compost socks.

c. Installation of any or all erosion or sediment control devices within the project or proposed phase: Temporary control practices will be utilized during the installation and construction of any or all infrastructure placement, including permanent sediment control devices. After sediment control devices have been installed and permanent controls [i.e. temporary sediment ponds or basins applied], protection will be removed to allow the discharge to go to pre-project grading.

d. Installation of temporary and permanent storm water/drainage structures: Maintain silt fence throughout the project, as needed. Follow manufacturer’s standards for silt fence, generally clean or replace silt fence when 50% full of sediment.

e. Installation of underground utilities: Reference [a] and [b] above.

f. Complete final planting and seeding [landscaping] of disturbed areas (see re-vegetation plan paragraph 2.12): At a minimum, the entire site must be evenly stabilized to 70% of original non-disturbed vegetated condition before the owner can prepare and submit the Notice of Termination [NOT]. Temporary seeding/mulch or soil polymer will be used in exposed areas, not constructed and with no activity for a period of 14 days or greater or by permanent stabilization [prior to filing NOT] stabilize by seeding.

After final construction, remove unnecessary temporary sediment control devices and stabilize area per [g] above.

All control measures will be implemented as soon as it is practical and within 14 days of work cession within locations where construction activities have temporarily or permanently ceased. Control measures may be needed [or implemented] on certain portions of a site where the total

time period that construction activity is temporarily ceased for less than 14 days [reference [c] above]. Once construction activities have permanently ceased, final stabilization practices will be applied.

1.8 STORM WATER POLLUTION PREVENTION TEAM

The storm water pollution prevention team is responsible for developing, implementing, maintaining and revising this SWPPP. The members of the team are familiar with the management and operations of the Desert Springs Church Additions Project.

Wilger Enterprises/Desert Springs Church is in operational control of construction and requested the origination of this SWPPP. Caldon Seeding and Reclamation, LLC is delegated and authorized to originate and design the SWPPP for NPDES compliance. The member[s] of the team and their responsibilities [i.e. implementing, maintaining, record keeping, submitting reports, conducting inspections, employee training, conducting the annual compliance evaluation, monitoring for non-storm water discharges and signing the required certifications] are as follows:

NAME & TITLE	RESPONSIBILITY
Desert Springs Church 705 Osuna Road NE Albuquerque, NM 87113 (505) 797-8700 Chase Jacobs	Owner/Development Specifications
Wilger Enterprises 435 Edmon RD NE Albuquerque, NM 87107 Scot McLelland (505) 345-2824	General Contractor/Construction Operations Team
Caldon Seeding and Reclamation (505) 699-5913 Len Horan	SWPPP & Inspections
Caldon Seeding/Desert Springs Church (505) 850-8412 Richie Caldon	Revegetation/BMPs

1.9 Employee Training and Inspector Training Certificates

Employee training is a major component in ensuring the success of the project's SWPPP. The more knowledgeable all employees are about the project's SWPPP and what is expected of them, the greater the potential that the plan is successful and is therefore an essential component of this project.

Use the following table to record training conducted:

Name	Company	Signature		Name	Company	Signature

1.10 Endangered/Threatened Species/Historical Site/Wetlands Information

“Environmental Commitments” sheet is included for reference

As required by Addendum C of the Construction General Permit, measures were taken to determine the potential effects of storm water runoff and construction related activities on federally listed endangered or threatened species. A thorough review of the area and a comparison made to listed endangered species was conducted. It was determined that the proposed construction would not involve habitat of endangered species. For the purposes of this documentation criterion [A] is utilized on the application for permitting purposes.

A listing of endangered and/or threatened species [animals and plants] and documentation to support any wetland areas located within the project county has been included in the SWPPP attachments (**TAB 3**).

This site is not located near any sites listed in the National Register of Historic Places in Bernalillo County.

1.11 Total Maximum Daily Loads

The State of New Mexico 2018-2020 Integrated Clean Water Act para 303 (d)/para305(b) Report was reviewed to determine existence of TMDLs. The project discharges to drainage to the North Diversion Channel. There is a onsite retention pond planned for the site.

2.0 EROSION AND SEDIMENT CONTROL MEASURES

2.1 Temporary Erosion and Sediment Control Plan Drawing[s]

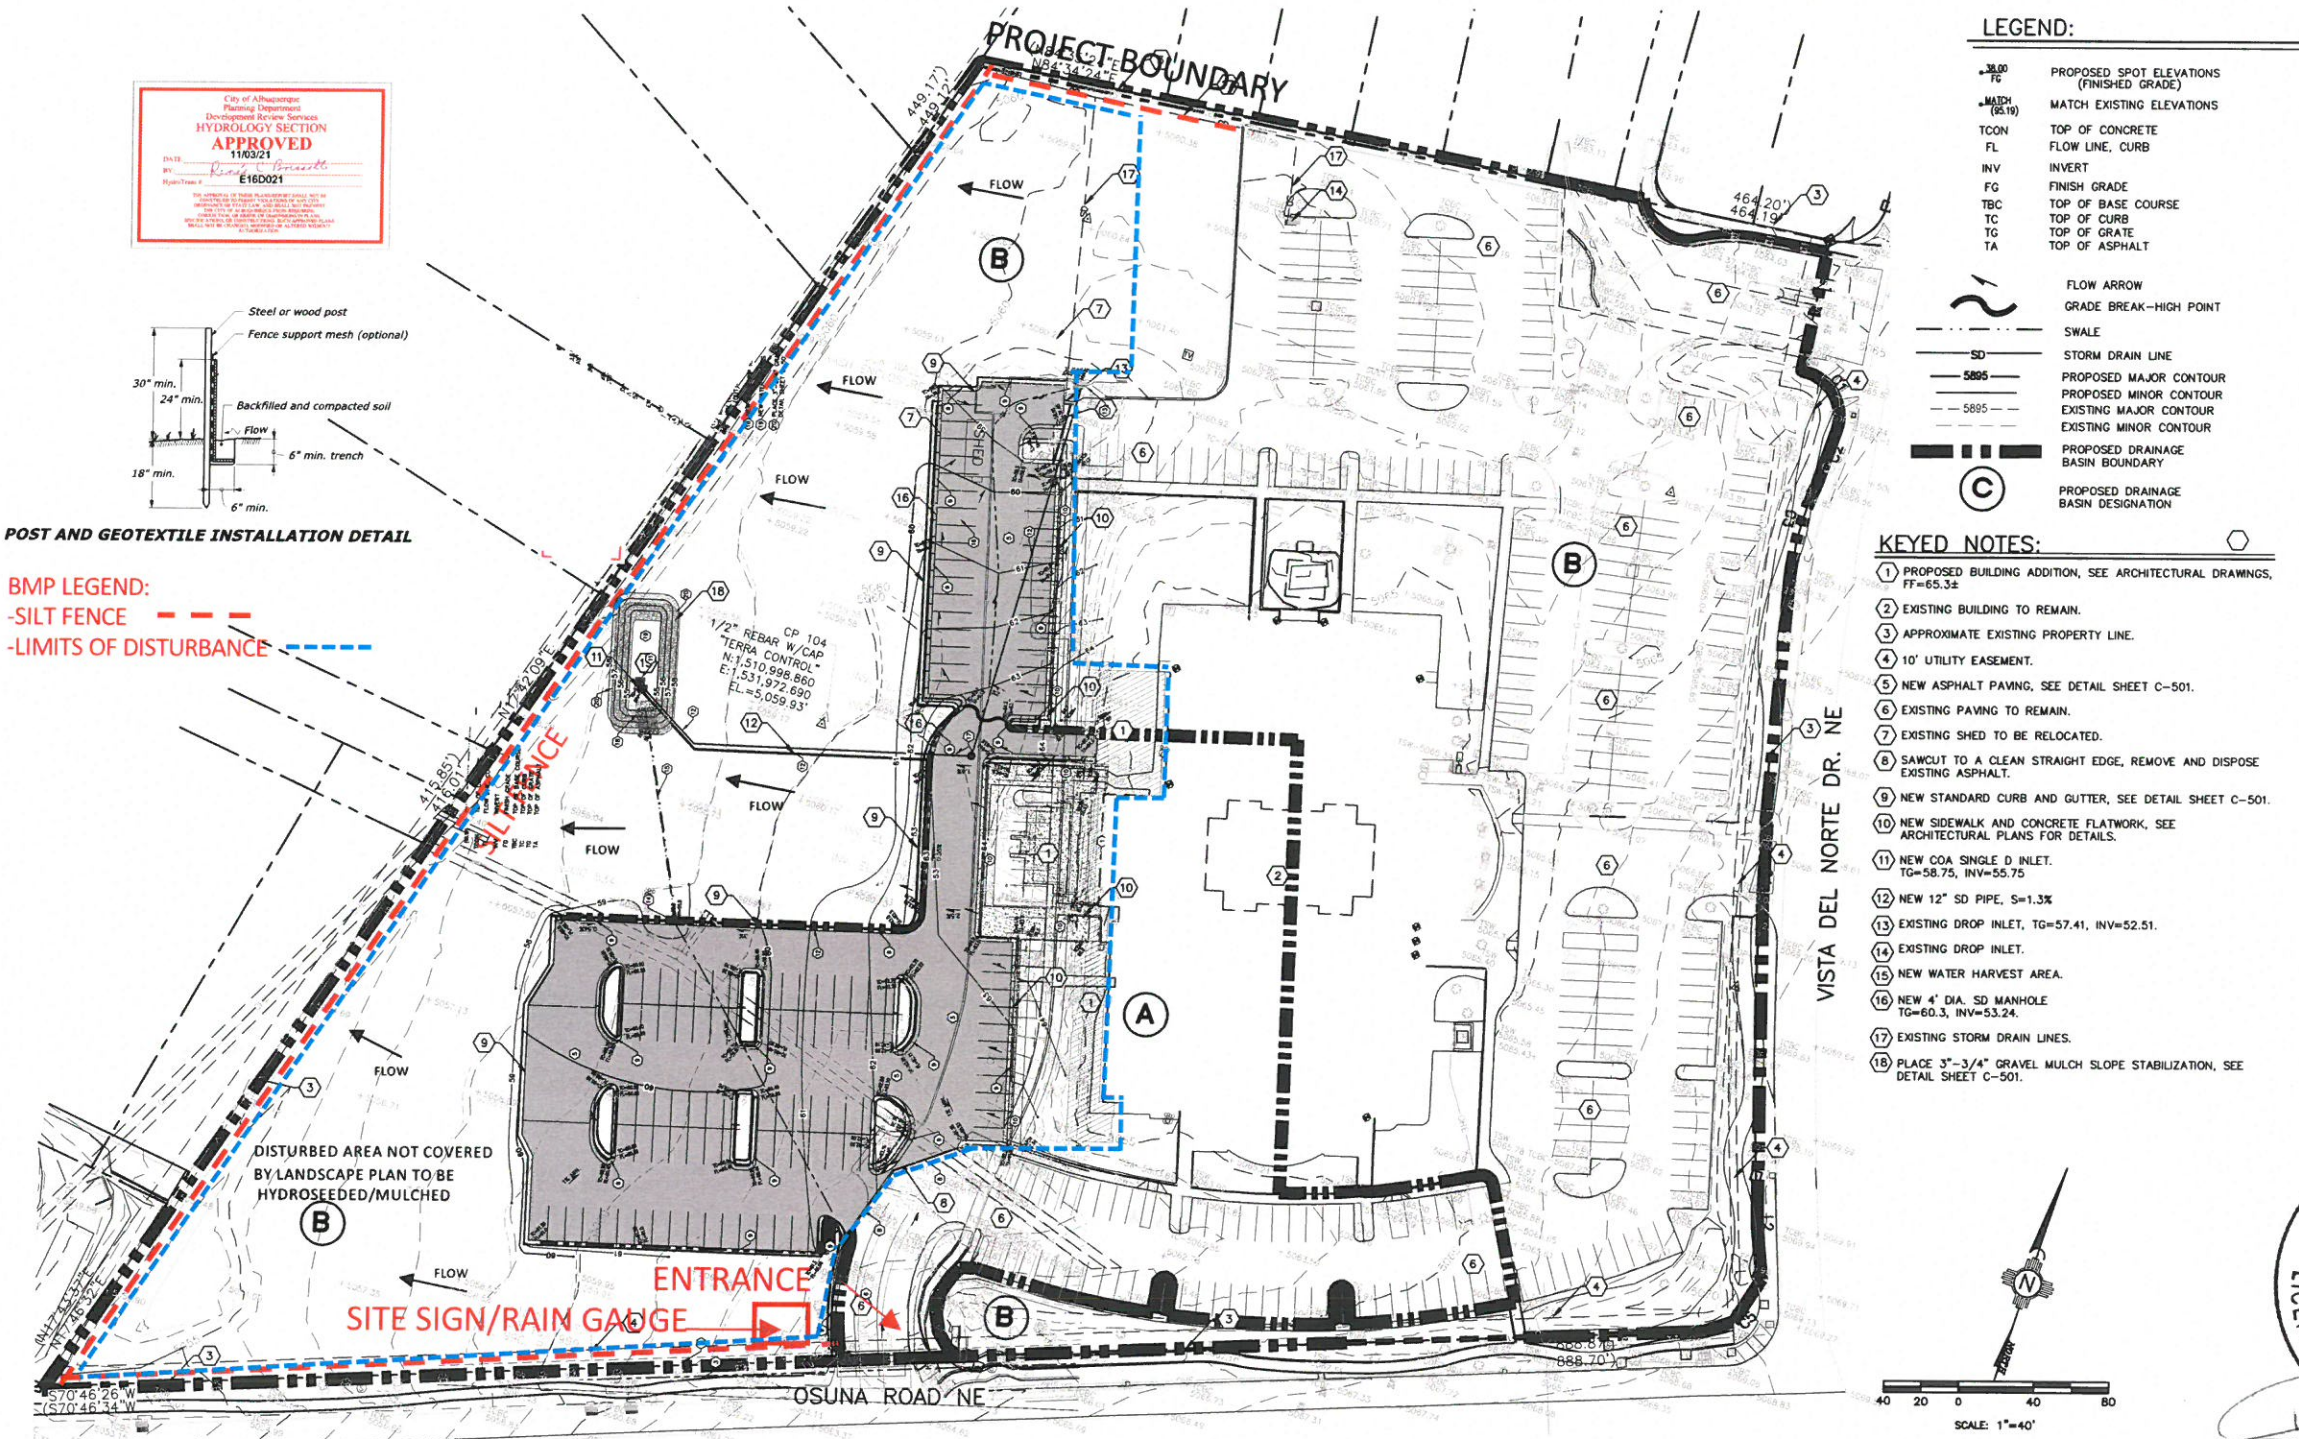

The following pages are the TЕСP that will be followed on the project.

ESC Plan Standard Notes (2021-03-24)

1. All Erosion and Sediment Control (ESC) work on these plans, except as otherwise stated or provided hereon shall be permitted, constructed, inspected, and maintained in accordance with:
 - a. The City Ordinance § 14-5-2-11, the ESC Ordinance,
 - b. The EPA's 2017 Construction General Permit (CGP), and
 - c. The City Of Albuquerque Construction BMP Manual.
2. All BMP's must be installed prior to beginning any earth moving activities except as specified hereon in the Phasing Plan. Construction of earthen BMP's such as sediment traps, sediment basins, and diversion berms shall be completed and inspected prior to any other construction or earthwork. Self-inspection is required after installation of the BMPs and prior to beginning construction.
3. Self-inspections - At a minimum a routine compliance self-inspection is required to review the project for compliance with the Construction General Permit once every 14 days and after any precipitation event of 1/4 inch or greater until the site construction has been completed and the site determined as stabilized by the city. Reports of these inspections shall be kept by the person or entity authorized to direct the construction activities on the site and made available upon request.
4. Corrective action reports must be kept by the person or entity authorized to direct the construction activities on the site and made available upon request.
5. Stabilization reports must be kept by the person or entity authorized to direct the construction activities on the site and made available upon request. Reports should include records of weed removal per City Ordinance (§ 9-8-1), sterilization, soil test results and recommendation, materials and manufacturer's specifications for application rates, estimated functional longevity, methods of application, inspection and maintenance. The reduced self-inspection schedule in CGP 4.4.1 applies to stabilized area and any damaged or worn stabilization must be identified in the reports along with weed problems. Corrective actions for stabilization shall be documented in a stabilization report including actual rates and dates of stabilization, and the materials and manufacturer's specifications used.
6. BMPs shall be inspected and maintained until all disturbed areas are stabilized in accordance with the Final Stabilization Criteria (CGP 2.2.14.b). Generally, all disturbed areas, other than structures and impervious surfaces, must have uniform perennial vegetation that provides 70 percent or more of the cover provided by native vegetation or seed the disturbed area and provide non-vegetative mulch that provides cover for at least three years without active maintenance. Final stabilization must be approved by the City of Albuquerque prior to removal of BMPs and discontinuation of inspections.

TESCP

SITE ADDRESS: 705 OSUNA ROAD NE, ALBUQUERQUE, NM 87113
LAT: 35.1526 DEG LONG: 106.6126 DEG. DISTURBANCE: 4.5 ACRES

2.2 Stabilization Practices

Temporary Stabilization: [Also see temporary erosion and sediment control drawing[s] Installation of silt fence protection as noted on plans.

Permanent Stabilization: Landscaping, seeding and/or mulching should take place to permanently stabilize project area once work ceases or areas not covered by permanent stabilization – paving or permanent structures. See Section 1 for responsibility of permanent stabilization.

Structural Practices [BMP Selection and Description(s)]:

Note: Selection and preference of use, of site-specific BMP's follows industry standards and acceptability conforming to loading capacities and durability.

Storm Water Management: Permanent seeding, landscaping and/or permanent stabilization will also take place in outlined/disturbed areas.

Waste Materials: All waste materials will be collected and stored in a secure area. All trash and construction debris will be deposited in a dumpster or other containment. Dumpster should be emptied at least once per week or as required. Dumpster shall have a secure cover and be secured each day.

Hazardous Waste: All hazardous waste materials will be disposed of in the manner specified by local or state regulations or by manufacturer. All sanitary waste will be collected from the portable units as required.

Offsite Vehicle Tracking: A stabilized construction entrance may be installed to help reduce vehicle tracking of sediments. Initially, no entrance will be established and vehicles will be discouraged from entering worksite. A designated parking area will be established.

Post Construction: Permanent stabilization will aid in stabilizing the project once work is complete. A retention pond is planned for the site.

2.3 Allowable Non-Storm Water Discharges [CGP]

The following are authorized allowable non-storm water discharges, provided the non-storm water component of the discharge is in compliance with [Non-Storm Water Discharge Management].

Likely on this project (Yes or No)

 N 1. Discharges from fire fighting activities

- Fire fighting activities and requirements are an unforeseen element but are an essential component and necessity. Outlined in this SWPPP are BMP requirements to slow, channel, confine and filter sediment during construction, therefore limiting contaminated water from departing the project area.

- N 2. Fire hydrant flushing
- Hydrant flushing activity generally is captured for the benefit and reuse as project water for general construction purposes and not allowed to free run, allowing erosion and offsite travel of excess sediment. Continued water drought predictability or probability continues to be of concern. Water conservation is and will be a management criterion for this project with reuse for compaction or air quality dust control.
- Y 3. Waters to wash vehicles where detergents are not used.
- Washing of any vehicles or equipment is prohibited and will be conducted in areas offsite that are managed with containment and permitted by others.
- Y 4. Water used to control dust in accordance with Subpart 3.4.G
- Offsite tracking is addressed within this SWPPP and will include a regiment of:
 - Street cleaning for prevention of dust by traffic [i.e. brooming or scraping off] as any visible aspect requires attention.
 - Dust control by watering and wetting with excess or erosion with reusable uncontaminated or potable dischargeable water.
- N 5. Potable water including uncontaminated water line flushing
- Project construction
 - Dust control
- N 6. Routine external building wash down that does not use detergents
- N/A to this project
- Y 7. Pavement wash waters where spills or leaks of toxic or hazardous materials
- Have not occurred [unless all spilled material has been removed] and where detergents are not used.
 - Inlet protection will be implemented for sediment deposit to be captured and contained in the street area for ease of clean up. For areas that travel offsite, filtered pockets are to be developed to contain the wash as to not allow further erosion or sediment travel caused by the erosion. [N/A to this project].
- N 8. Uncontaminated air conditioning or compressor condensation
- N/A to this project
- N 9. Uncontaminated ground water or spring water
- This project has no identifiable ground water or spring waters within project boundaries. In the event any such conditions arise and are identified, this SWPPP will immediately be amended with BMP's and management controls to accurately prevent contamination. This SWPPP has BMP's designated to prevent and reduce sediment-laden water from discharging and carrying offsite to any potential groundwater's or spring waters.

___N___ 10. Foundation or footing drains where flows are not contaminated with process materials such as solvents.

___N___ 11. Uncontaminated excavation dewatering

___N___ 12. Landscape irrigation

- Irrigation of landscaping is by design metered and controlled therefore not allowing excess discharge or runoff.

Allowable Storm Water Discharges [CGP]

The following are authorized allowable storm water discharges, provided the storm water component of the discharge is in compliance with [Non-Storm Water Discharge Management].

1. Storm water associated with large and small construction activity as defined in Appendix A.

2. Storm water discharges designated by the EPA as needing a storm water permit under 40 CFR §122.26(a) (1) (v) or §122.26(b) (15) (ii)

3. Discharges from support activities [e.g., concrete or asphalt batch plants, equipment staging yards, material storage areas, excavated material disposal areas, borrow areas] provided:

- The support activity is directly related to the construction site required to have a NPDES permit coverage for discharges of storm water associated with construction activity.
- The support activity is not a commercial operation serving multiple unrelated construction projects by different operators, and does not operate beyond the completion of the construction activity at the last construction project it supports.
- Appropriate controls and measures are identified in the Storm Water Pollution Prevention Plan [SWPPP] covering the discharges from the support activity areas.

4. Discharges composed of allowable discharges listed in 1.3.A. and 1.3.B commingled with discharge authorized by a different NPDES permit and/or a discharge that does not require NPDES permit authorization.

Allowable storm water discharges are addressed as components of this SWPPP.

2.4 Potential Sources of Storm Water Pollution

Inventory of potential sources of contamination:

Construction activities have been determined to create significant sources of storm water Contaminants.

The following have been identified as potential sources of storm water contamination.

- Areas of significant soil erosion
 - o Slopes greater than 3:1
 - o High velocity run-off channels
- Storage and maintenance areas for material handling equipment;
- Immediate access roads
- Material handling sites [storage loading, unloading, transportation, or, conveyance of any raw material, finished product, intermediate product, by-product or waste]
- Shipping and receiving areas
- Equipment storage
- Refuse sites
- Disposal or application of wastewater [i.e. well drilling waste water]
- Areas containing residual pollutants from past industrial activity, spills and leaks
- Vehicle maintenance and cleaning areas
- Human/animal waste
- Wind

2.5 Area/Equipment Tasks Frequency Preventive Maintenance/Inspections

INSPECTION REPORTS ARE LOCATED AT THE END OF THIS TAB (rainfall amounts will be recorded on inspection reports)

Preventative maintenance involves the regular inspection, testing and cleaning of project equipment and operational systems. These inspections will help to uncover conditions that might lead to a release of contaminants. This allows for preventative maintenance issues to prevent such release. The following equipment/activities will be included in the preventative maintenance program.

The Operator shall continually [during scheduled and unscheduled specific site visits] monitor the implemented temporary erosion and sediment control measures during site-specific and project construction activities to ensure the effectiveness and operation condition of the measures. If changes or repairs are needed to improve the effectiveness and operation of a sediment control measure, changes or repairs will be implemented as soon as practicable. In no case shall the discovery of needed corrective action be greater than 7 days.

Maintenance of temporary erosion and sediment control measures will continue until disturbed areas within the project have been stabilized. After the completion of construction activities maintenance measures will be performed when inspection finds it necessary to remove all silt accumulation or repair deteriorated or damaged structures. Any area detention ponds will be excavated when they lose 50% or more of their design capacity.

The Owner/Operator will provide qualified personnel or companies to inspect disturbed areas of the project. Areas exposed to precipitation such as topsoil stockpiles and non-final stabilized areas will be inspected. Inspections will ensure measures are properly installed or applied and effective.

The Owner/Operator is required to conform to the NPDES requirements, and is required [as the SWPPP requires] to verify that all contractors on this site complete and file a NOI and comply with this SWPPP or originate their own SWPPP. Any sub-contractors working under the directional control of a site operator will sign and participate in the SWPPP or be subject to compliance provisions.

All temporary erosion and sediment control structures, measures, practice locations, and site vehicle access [enter and exit] points **will be inspected every 14 days and within 24 hours after a storm water event of ¼ inch or greater**. Inspectors will document sediment accumulation and if necessary recommend that corrective measures be implemented immediately. If emergency repairs and measures are needed after a significant rainfall [greater than 1/4 inch], such measures and repairs will be performed and completed immediately and before the next significant rainfall event [if weather, supplies/materials and site conditions will permit]. Final stabilized areas and sites will be inspected every 14 days per the NPDES requirements effective February 16, 2017 until the “NOT” is submitted. Inspectors will insure control measures are maintained in good operating condition.

The Operator [qualified personnel] will inspect disturbed areas and structures for erosion and sediment control effectiveness and for the potential of pollutants entering the drainage system. All erosion and sediment control measures not including final stabilization will be inspected and observed to ensure proper operation. Discharge locations will be inspected to assure effectiveness. Inspections will document effectiveness of measures and potential impacts to receiving waters.

The Operator will modify/amend the SWPPP after an inspection has identified that a significant change is needed in the site/project [construction activities have been planned and identified or additional areas requiring temporary erosion and sediment control measures has been discovered]. Controls will then be incorporated into the plan at this location. If necessary, the SWPPP will be amended within seven days following an inspection’s discovery of needed measures and action[s] to disturbed or other eroding areas [caused by construction activities] within the project. An amended NOI will be submitted at least two days prior [unless immediate action is required] to the commencement of construction activities at new location[s] which add new disturbed area, and plan amendments will be incorporated prior to the submittal of the amended NOI.

The Operator will assure that the report is prepared and the inspection conducted by qualified personnel. The inspection report will summarize the inspection and shall contain the date of the inspection, findings, major observations, and certify project compliance with SWPPP and permit. If recommendations for actions are made, corrective measures shall be implemented. The SWPPP will be amended if necessary. Also, the inspection report will identify, describe and contain any incidents of non-compliance. The project Operator [or designated qualified personnel] will sign the inspection report and must comply with the signatory requirements set forth in the Construction General Permit [CGP]. All NPDES documents associated with this project will be kept for three years after the date on the Notice of Termination [“NOT”].

The Operator will ensure that non-storm water discharges do not cause sediments or pollutants to be discharged to receiving waters. Non-storm water discharges are not planned or expected to take place during the construction activities for the project, other than that exempt by the NPDES Program and this permit [i.e. dust control]. Other exempt non-storm water discharges that could possibly occur within the project during construction include flows from washing of vehicles [without detergents] or dust control.

Changes in construction activities that produce non-exempt non-storm water discharges will be identified and the SWPPP will be amended and the appropriate temporary Erosion and sediment control measures will be implemented.

2.6 Good Housekeeping

Good housekeeping practices are designed to maintain a clean and orderly work environment. This will reduce the potential for significant material to come in contact with storm water.

The following practices are included in our good housekeeping routine:

The contractor and subcontractors will use Best Management Practices [BMP's] and general common sense to limit contact between potential pollutants [chemical and other materials] and storm water. A designated parking area will be established, a construction yard will be designated on the Temporary Erosion and Sediment Control Drawing[s] and all temporary bathroom facilities will be located in this area. It is recommended clean rock or gravel be applied in this area to keep possible contaminants contained within this area. This also allows for the ease of cleanup should a spill occur. The contractor and subcontractors will implement good housekeeping practices by maintaining a clean and orderly construction site. BMP and good housekeeping practices will be utilized for: materials management; waste disposal; off-site tracking; spill prevention and response; sanitation; and non-storm water discharges:

Contractor and subcontractor practices will include:

- *Materials Management:* the proper handling and storage and labeling of chemicals and other potentially hazardous or toxic materials. A complete set of Material Safety Data Sheets [MSDS] sheets should be kept and maintained onsite for information purposes. **Service vehicles shall be equipped with an emergency spill kit;** materials will be stored and labeled within the designated staging area and potential hazard materials [i.e. paint, stucco, oil, grease, etc.] be placed on crates or pallets and protected.
- *Waste Disposal:* the disposal of excess materials and solid waste to off-site locations designated as acceptable disposal sites for such materials. The removed material should be disposed of according to local rules and regulations covering hazardous waste.
- *Off-site Tracking:* minimized by requiring vehicles to park in stabilized areas and periodic [once a week or as needed] watering of exposed areas. Should sediment be tracked onto adjacent roadways, a power broom will be used to sweep sediment back

onto the jobsite, or sediment can be hand shoveled or broomed from roadway back onto the site.

- *Spill Prevention and Response:* the discharge or spill of hazardous substances is not expected to occur due to or during construction activities. The project and its activities are not expected to use any substance in a manner or quantity that might require the reporting of a release in excess of reportable quantities. However, in the event that some unforeseen incident [spill of hazardous material in excess of reportable quantities] was to occur within the project during construction activities, the following measures will be followed:
 1. The operator will:
 - a) Stop the source of the spill
 - b) Contain the spill
 - c) Clean up the spill
 - d) Dispose of material contaminated by the spill in an environmentally approved disposal site
 2. Notify both the National Response Center (1-800-424-8802) and the New-Mexico Environment's Hazardous and Radioactive Materials Bureau (1-505-827-4300) within 24-hours of a release of hazardous materials in excess of reportable quantities
 3. The operator will submit within 14 calendar days of the notification a description of the incident to the appropriate authorities; the operator will modify the SWPPP, if appropriate, within 14 calendar days of the notification and identify measures to prevent a reoccurrence.
- *Sanitation:* providing temporary facilities [such as portable restrooms] to ensure that the site sanitation requirements comply with federal, state and local regulations. Anchor and place away from areas prone to activity or areas that could potentially carry a spill in the event of an accident.

2.7 Spill Control Practices

In addition to good housekeeping practices discussed in this SWPPP, the following practices will be followed for spill prevention and cleanup:

- Manufacturers recommended methods for spill cleanup will be clearly posted and site personnel will be made aware of the procedures and the location of the information and cleanup supplies.
- Materials and equipment necessary for spill cleanup will be kept in the material storage area onsite. Equipment materials will include but are not limited to: brooms, dust pans, mops, rags, gloves, goggles, cat litter, sand, saw dust as well as plastic and metal trash containers specifically for this purpose.
- All spills will be cleaned up after discovery.
- The spill area will be kept well ventilated and personnel will wear appropriate protective clothing to prevent injury from contact with a hazardous substance.

- Spills of toxic or hazardous material will be reported to the appropriate state or local government agency, regardless of size.

SUMMARY OF SPILLS AND LEAKS

A) <u>SUBSTANCE</u>	Date	Cause	Corrective Measures
(B)			
(C)			
(D)			
(E)			
(F)			
(G)			
(H)			

<u>Substance</u>	<u>Released to</u>	<u>Reportable quantity</u>
Engine oil, fuel, hydraulic and brake fluid	Land	25 gallons
Engine oil, fuel, hydraulic and brake fluid	Water	Visible Sheen
Antifreeze	Land	100 lbs.
Battery acid	Land, Water	100 lbs.
Freon	Air	1 lb.

Points of Contact for Reportable Quantities:

EPA National Response Center	(800) 424-8802
NM Environment Department	(505) 827-9329 (emergency) (505) 428-6535 (non-emergency)

2.8 Listed BMP Justification and Rationale

1. Rationale for BMP's

In this Temporary Erosion and Sediment Control drawing[s] silt fence was included in the sediment yield analysis. Silt fence was considered as the *major component* is due to the effectiveness for sediment control and the ease of use at the construction site.

2. BMP Design and Construction Specifications

The primary overall design specification for this BMP to be used in this project is that the listed BMP must be designed so as to reduce the construction phase sediment yield from the project to a level at or below the pre-construction undisturbed condition. The specifications are provided in the form of construction details and notes shown within the SWPPP documentation.

3. Maintenance Schedule and Inspection Criteria

The maintenance and inspection criterion for the BMP's to be used during construction is given in the SWPPP documentation. Inspection, maintenance and rain event forms are provided in the SWPPP that need to be completed to ensure the effectiveness of the required project BMP's. After construction is complete [70% of the original natural vegetated state is substantially complete for the NOT execution], sediment control is achieved primarily by stabilization practices as opposed to structural practices.

4. BMP Performance and Longevity

Given proper installation and maintenance, the BMP specified in the SWPPP documentation and analyzed herein are expected to perform at least as well as predicted by this analysis. Again, given proper maintenance as required by the SWPPP for operator performance during construction the longevity of the BMP's are expected to be equal to the duration of this project.

5. Conclusion

The RUSLE equation and sediment yield analysis indicates that composted silt fences will be effective in controlling the sediment yield [travel] during construction of this project. It is anticipated that the sediment yields [travel] after construction will be similar to yields under existing conditions and implementation of the BMP's will lessen sediment runoff after construction. Rainfall intensity and Frequency charts included after page 6 were used to calculate the RUSLE output. The during and post construction will have a lower RUSLE factor due to grading and improved velocity dissipating devices.

2.9 Pollutants from Support Activities (Asphalt/Concrete Plants)

There are no anticipated or potential impacts related to support activities from asphalt or concrete plants. Required materials are to be generated/produced and supplied by sources outside and away from project area. Others permit these sites and are required to comply with NPDES regulations.

2.10 Potential Pollutants Used and/or Found Onsite

The following potential pollutants were evaluated for this project and whether or not they have a potential to affect storm water discharge from the job site. Including but not limited to:

<u>Pollutant</u>		<u>Activity</u>
Oil	Potential Effect	Maintenance activity/Operations
Grease	Potential Effect	Maintenance activity/Operations
Ethylene Glycol	Potential Effect	Vehicle use/maintenance
Petroleum Hydrocarbons	Potential Effect	Vehicle use/maintenance
Suspended Solids	Potential Effect	Grading activities
Dissolved Solids	Potential Effect	Grading activities
Turbidity	Potential Effect	Grading activities
Trash (wood, paper, cigarettes, ash, etc)	Potential Effect	General operations
Fecal Coliforms (human/animal)	Potential Effect	Portapotty use
Tar	Potential Effect	Paving Ops (n/a)
Asphalt	Potential Effect	Curb/Gutter (n/a)
Cement	Potential Effect	Curb/Gutter (n/a)
Glues	Potential Effect	Finishing activities
Solvents	Potential Effect	Paving Ops/Maintenance
Metals	Potential Effect	Operations
Asbestos	Potential Effect.	Operations/Building Demo

2.11 Runoff Coefficient and RUSLE Calculations

See attached sediment control calculations and figures for:

- Pre existing sediment basins [pre construction]
- Bare ground sediment basins [during construction]
- Urban sediment basins [post construction]

Total Area and Area of Disturbed Soil/Sediment Control Flow Calculations

The project is subject to the requirements of the EPA Region VI General Permit. The project will utilize an **NPDES permit [NMR1004FP/NMR1004FK]** from the EPA and implement a SWPPP with Best Management Practices [BMP's] during construction activities to prevent and reduce pollutants and construction site run-off, due to activities performed, from leaving the project site during storm events. The SWPPP includes BMP's with temporary and permanent measures to prevent and reduce pollutants from leaving the project. The temporary erosion and sediment control

measures identified in this plan will be observed by project operators and contracted consultants to ensure measures are effective in preventing impacts to the receiving watershed.

See next page for RUSLE calculations.

2.12 Revegetation plan

COA Specification 1012 will be followed for Class A seeding for areas not covered by landscaping.

Pre construction and post construction soil loss computation will be identical due to no permanent measures or changes to topography. During construction, berms will be placed in ditches to slow velocity of flow. After construction activities are completed, berms will be removed.

2.14 Inspections (inspector certifications)

Inspection reports per the CGP will be located after this sheet

Conditions:

The decisions of operational control and implementation of BMP's of the Owner/Operator and/or by Contractor/Operator[s] of the Desert Springs Church Additions Project and components of the construction are the responsibility of the operators. Caldon Seeding and Reclamation, LLC is not liable for the operational decisions of the Owner/Operator and/or Contractor/Operators or the failure of the same to follow the recommendations outlined in the SWPPP documentation. The operator[s] agree to hold harmless Caldon Seeding and Reclamation for any potential violations the Contractor/Operator may receive for operational violations from regulatory agencies such as federal governments, city governments, the State, or EPA. CSR will answer inquiries on the preparation and recommendations made therein including the support of such recommendations or preparations to any regulatory agencies

By accepting the SWPPP, the owner/operator and contractor/operator accepts its conditions.

Submission of this Notice of Intent (NOI) constitutes notice that the operator identified in Section III of this form requests authorization to discharge pursuant to the NPDES Construction General Permit (CGP) permit number identified in Section II of this form. Submission of this NOI also constitutes notice that the operator identified in Section III of this form meets the eligibility requirements of Part 1.1 CGP for the project identified in Section IV of this form. Permit coverage is required prior to commencement of construction activity until you are eligible to terminate coverage as detailed in Part 8 of the CGP. To obtain authorization, you must submit a complete and accurate NOI form. Discharges are not authorized if your NOI is incomplete or inaccurate or if you were never eligible for permit coverage. Refer to the instructions at the end of this form.

Permit Information

NPDES ID: NMR1004FK

State/Territory to which your project/site is discharging: NM

Is your project/site located on federally recognized Indian Country lands? No

Are you requesting coverage under this NOI as a "*Federal Operator*" as defined in Appendix A (https://www.epa.gov/sites/production/files/2019-05/documents/final_2017_cgp_appendix_a_-_definitions.pdf)?
No

Have stormwater discharges from your current construction site been covered previously under an NPDES permit? No

Will you use polymers, flocculants, or other treatment chemicals at your construction site? No

Has a Stormwater Pollution Prevention Plan (SWPPP) been prepared in advance of filling this NOI, as required? Yes

Are you able to demonstrate that you meet one of the criteria listed in Appendix D (https://www.epa.gov/sites/production/files/2017-02/documents/2017_cgp_final_appendix_d_-_endangered_species_reqs_508.pdf) with respect to protection of threatened or endangered species listed under the Endangered Species Act (ESA) and federally designated critical habitat?
Yes

Have you completed the screening process in Appendix E (https://www.epa.gov/sites/production/files/2017-02/documents/2017_cgp_final_appendix_e_-_historic_properties_reqs_508.pdf) relating to the protection of historic properties?
Yes

Indicating "Yes" below, I confirm that I understand that CGP only authorized the allowable stormwater discharges in Part 1.2.1 and the allowable non-stormwater discharges listed in Part 1.2.2. Any discharges not expressly authorized in this permit cannot become authorized or shielded from liability under CWA section 402(k) by disclosure to EPA, state or local authorities after issuance of this permit via any means, including the Notice of Intent (NOI) to be covered by the permit, the Stormwater Pollution Prevention Plan (SWPPP), during an inspection, etc. If any discharges requiring NPDES permit coverage other than the allowable stormwater and non-stormwater discharges listed in Parts 1.2.1 and 1.2.2 will be discharged, they must be covered under another NPDES permit.
Yes

Endangered Species Protection

Using the Instructions in Appendix D of the CGP, under which criterion listed in Appendix D are you eligible for coverage under this permit?
Criterion A

Provide a brief summary of the basis for criterion selection listed above (the necessary content for a supportive basis statement is provided under the criterion you selected.):

Per communication with USFWS, there are no Critical Habitats within the Project Action Area.

Historic Preservation

Are you installing any stormwater controls as described in Appendix E (https://www.epa.gov/sites/production/files/2017-02/documents/2017_cgp_final_appendix_e_-_historic_properties_reqs_508.pdf) that require subsurface earth disturbances? (Appendix E (https://www.epa.gov/sites/production/files/2017-02/documents/2017_cgp_final_appendix_e_-_historic_properties_reqs_508.pdf), Step 1)

Yes

- ➔ Have prior surveys or evaluations conducted on the site already determined historic properties do not exist, or that prior disturbances have precluded the existence of historic properties? (Appendix E (https://www.epa.gov/sites/production/files/2017-02/documents/2017_cgp_final_appendix_e_-_historic_properties_reqs_508.pdf), Step 2):

Yes

EPA NPDES

Storm Water Program

The following information is posted in compliance with Part 3.12.B. of the NPDES Region 6 Storm Water Construction General Permit [68 Fed. Reg. 39087]. This form should be posted in a conspicuous place accessible by the public at the entrance of the facility. All parties that either individually, or taken together, meet the definition of "operator," must be permitted. Each party should complete and post a separate form. Each of these parties must have separate and distinct NPDES permit numbers (e.g. a separate permit is typically needed for each Owner/Developer, General Contractor, and/or Builder). If you do not know your NPDES Permit Number, contact the NOI Processing Center at (866)352-7755. EPA's Region 6 storm water hotline phone number is (214)665-8060. If you have mailed your NOI application form and have not received a permit number, you must post a copy of the NOI application form next to this document until you receive your permit number. This form was prepared as an example and it is not a required form for use with the permit. This information may be displayed in alternative form or formats within guidelines set forth in the permit. Additional information regarding the NPDES Region 6 storm water program may be found on the Internet at <http://www.epa.gov/region6/sw/>. Any person with a complaint about the operation of this facility in regards to this permit should contact EPA Region 6 at (214)665-8060.

Appendix F - Notice of Termination Form and Instructions

From the effective date of this permit, operators are to use the Notice of Termination Form contained in this Appendix to terminate permit coverage.

NPDES
Form

United States Environmental Protection Agency
Washington, DC 20460
**Notice of Termination (NOT) of Coverage Under an NPDES General Permit for Storm
Water Discharges Associated with Construction Activity**

Submission of this Notice of Termination constitutes notice that the party identified in Section II of this form is no longer authorized to discharge storm water associated with construction activity under the NPDES program from the site identified in Section III of this form. All necessary information must be included on this form. Refer to the instructions at the end of this form.

I. Permit Information

NPDES Storm Water General Permit Tracking Number:

Reason for Termination (Check only one):

Final stabilization has been achieved on all portions of the site for which you are responsible.

Another operator has assumed control, according to Appendix G, Section 11.C of the CGP, over all areas of the site that have not been finally stabilized.

Coverage under an alternative NPDES permit has been obtained.

For residential construction only, temporary stabilization has been completed and the residence has been transferred to the homeowner.

II. Operator Information

Name:

IRS Employer Identification Number (EIN): -

Mailing Address:

Street:

City: State: Zip Code: -

Phone: - - Fax (optional): - -

E-mail (optional):

III. Project/Site Information

Project/Site Name:

Project Street/Location:

City: State: Zip Code: -

County or similar government subdivision:

IV. Certification Information

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Instructions for Completing EPA Form 3510-13
**Notice of Termination (NOT) of Coverage Under an NPDES General Permit for
Storm Water Discharges Associated with Construction Activity**

NPDES Form

This Form Replaces Form 3517-7 (8-98)

Form Approved OMB Nos. 2040-0086 and 2040-0211

Who May File an NOT Form

Permittees who are presently covered under the EPA-issued National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with Construction Activity may submit an NOT form when final stabilization has been achieved on all portions of the site for which you are responsible; another operator has assumed control in accordance with Appendix G, Section 11.C of the General Permit over all areas of the site that have not been finally stabilized; coverage under an alternative NPDES permit has been obtained; or for residential construction only, temporary stabilization has been completed and the residence has been transferred to the homeowner.

"Final stabilization" means that all soil disturbing activities at the site have been completed and that a uniform perennial vegetative cover with a density of at least 70% of the native background vegetative cover for the area has been established on all unpaved areas and areas not covered by permanent structures, or equivalent permanent stabilization measures (such as the use of riprap, gabions, or geotextiles) have been employed. See "final stabilization" definition in Appendix A of the Construction General Permit for further guidance where background native vegetation covers less than 100 percent of the ground, in arid or semi-arid areas, for individual lots in residential construction, and for construction projects on land used for agricultural purposes.

Completing the Form

Type or print, using uppercase letters, in the appropriate areas only. Please place each character between the marks. Abbreviate if necessary to stay within the number of characters allowed for each item. Use only one space for breaks between words, but not for punctuation marks unless they are needed to clarify your response. If you have any questions about this form, refer to www.epa.gov/npdes/stormwater/cgp or telephone the Storm Water Notice Processing Center at (866) 352-7755. Please submit original document with signature in ink - do not send a photocopied signature.

Section I. Permit Number

Enter the existing NPDES Storm Water General Permit Tracking Number assigned to the project by EPA's Storm Water Notice Processing Center. If you do not know the permit tracking number, refer to www.epa.gov/npdes/stormwater/cgp or contact the Storm Water Notice Processing Center at (866) 352-7755.

Indicate your reason for submitting this Notice of Termination by checking the appropriate box. Check only one:

Final stabilization has been achieved on all portions of the site for which you are responsible.

Another operator has assumed control according to Appendix G, Section 11.C over all areas of the site that have not been finally stabilized.

Coverage under an alternative NPDES permit has been obtained.

For residential construction only, if temporary stabilization has been completed and the residence has been transferred to the homeowner.

Section II. Operator Information

Provide the legal name of the person, firm, public organization, or any other entity that operates the project described in this application and is covered by the permit tracking number identified in Section I. The

operator of the project is the legal entity that controls the site operation, rather than the site manager. Provide the employer identification number (EIN from the Internal Revenue Service; IRS). If the applicant does not have an EIN enter "NA" in the space provided. Enter the complete mailing address and telephone number of the operator. *Optional:* enter the fax number and e-mail address of the operator.

Section III. Project/Site Information

Enter the official or legal name and complete street address, including city, state, zip code, and county or similar government subdivision of the project or site. If the project or site lacks a street address, indicate the general location of the site (e.g., Intersection of State Highways 61 and 34). Complete site information must be provided for termination of permit coverage to be valid.

Section IV. Certification Information

All applications, including NOIs, must be signed as follows:

For a corporation: By a responsible corporate officer. For the purpose of this Part, a responsible corporate officer means: (i) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy- or decision-making functions for the corporation, or (ii) the manager of one or more manufacturing, production, or operating facilities, provided, the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long-term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

For a partnership or sole proprietorship: By a general partner or the proprietor, respectively; or

For a municipality, state, federal, or other public agency: By either a principal executive officer or ranking elected official. For purposes of this Part, a principal executive officer of a federal agency includes (i) the chief executive officer of the agency, or (ii) a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrator of EPA).

Include the name and title of the person signing the form and the date of signing. An unsigned or undated NOT form will not be considered valid termination of permit coverage.

Paperwork Reduction Act Notice

Public reporting burden for this application is estimated to average 0.5 hours per notice, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Send comments regarding the burden estimate, any other aspect of the collection of information, or suggestions for improving this form including any suggestions which may increase or reduce this burden to: Chief, Information Policy Branch, 2136, U.S. Environmental Protection Agency, 1200 Pennsylvania Avenue, NW, Washington, DC 20460. Include the OMB number on any correspondence. Do not send the completed form to this address. **Visit this website for mailing instructions:** http://cfpub.epa.gov/npdes/stormwater/application_coverage.cfm#mail

Event Code: 02ENNM00-2022-E-00912

Project Name: Desert Springs Church Additions

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

Thank you for your recent request for information on federally listed species and important wildlife habitats that may occur in your project area. The U.S. Fish and Wildlife Service (Service) has responsibility for certain species of New Mexico wildlife under the Endangered Species Act (ESA) of 1973 as amended (16 USC 1531 et seq.), the Migratory Bird Treaty Act (MBTA) as amended (16 USC 701-715), and the Bald and Golden Eagle Protection Act (BGEPA) as amended (16 USC 668-668c). We are providing the following guidance to assist you in determining which federally imperiled species may or may not occur within your project area and to recommend some conservation measures that can be included in your project design.

FEDERALLY-LISTED SPECIES AND DESIGNATED CRITICAL HABITAT

Attached is a list of endangered, threatened, and proposed species that may occur in your project area. Your project area may not necessarily include all or any of these species. Under the ESA, it is the responsibility of the Federal action agency or its designated representative to determine if a proposed action "may affect" endangered, threatened, or proposed species, or designated critical habitat, and if so, to consult with the Service further. Similarly, it is the responsibility of the Federal action agency or project proponent, not the Service, to make "no effect" determinations. If you determine that your proposed action will have "no effect" on threatened or endangered species or their respective critical habitat, you do not need to seek concurrence with the Service. Nevertheless, it is a violation of Federal law to harm or harass any federally-listed threatened or endangered fish or wildlife species without the appropriate permit.

If you determine that your proposed action may affect federally-listed species, consultation with the Service will be necessary. Through the consultation process, we will analyze information contained in a biological assessment that you provide. If your proposed action is associated with

Federal funding or permitting, consultation will occur with the Federal agency under section 7(a)(2) of the ESA. Otherwise, an incidental take permit pursuant to section 10(a)(1)(B) of the ESA (also known as a habitat conservation plan) is necessary to harm or harass federally listed threatened or endangered fish or wildlife species. In either case, there is no mechanism for authorizing incidental take "after-the-fact." For more information regarding formal consultation and HCPs, please see the Service's Consultation Handbook and Habitat Conservation Plans at www.fws.gov/endangered/esa-library/index.html#consultations.

The scope of federally listed species compliance not only includes direct effects, but also any interrelated or interdependent project activities (e.g., equipment staging areas, offsite borrow material areas, or utility relocations) and any indirect or cumulative effects that may occur in the action area. The action area includes all areas to be affected, not merely the immediate area involved in the action. Large projects may have effects outside the immediate area to species not listed here that should be addressed. If your action area has suitable habitat for any of the attached species, we recommend that species-specific surveys be conducted during the flowering season for plants and at the appropriate time for wildlife to evaluate any possible project-related impacts.

Candidate Species and Other Sensitive Species

A list of candidate and other sensitive species in your area is also attached. Candidate species and other sensitive species are species that have no legal protection under the ESA, although we recommend that candidate and other sensitive species be included in your surveys and considered for planning purposes. The Service monitors the status of these species. If significant declines occur, these species could potentially be listed. Therefore, actions that may contribute to their decline should be avoided.

Lists of sensitive species including State-listed endangered and threatened species are compiled by New Mexico state agencies. These lists, along with species information, can be found at the following websites:

Biota Information System of New Mexico (BISON-M): www.bison-m.org

New Mexico State Forestry. The New Mexico Endangered Plant Program:
www.emnrd.state.nm.us/SFD/ForestMgt/Endangered.html

New Mexico Rare Plant Technical Council, New Mexico Rare Plants: nmrareplants.unm.edu

Natural Heritage New Mexico, online species database: nhnm.unm.edu

WETLANDS AND FLOODPLAINS

Under Executive Orders 11988 and 11990, Federal agencies are required to minimize the destruction, loss, or degradation of wetlands and floodplains, and preserve and enhance their natural and beneficial values. These habitats should be conserved through avoidance, or mitigated to ensure that there would be no net loss of wetlands function and value.

We encourage you to use the National Wetland Inventory (NWI) maps in conjunction with ground-truthing to identify wetlands occurring in your project area. The Service's NWI program website, www.fws.gov/wetlands/Data/Mapper.html integrates digital map data with other resource information. We also recommend you contact the U.S. Army Corps of Engineers for permitting requirements under section 404 of the Clean Water Act if your proposed action could impact floodplains or wetlands.

MIGRATORY BIRDS

The MBTA prohibits the taking of migratory birds, nests, and eggs, except as permitted by the Service's Migratory Bird Office. To minimize the likelihood of adverse impacts to migratory birds, we recommend construction activities occur outside the general bird nesting season from March through August, or that areas proposed for construction during the nesting season be surveyed, and when occupied, avoided until the young have fledged.

We recommend review of Birds of Conservation Concern at website www.fws.gov/migratorybirds/CurrentBirdIssues/Management/BCC.html to fully evaluate the effects to the birds at your site. This list identifies birds that are potentially threatened by disturbance and construction.

BALD AND GOLDEN EAGLES

The bald eagle (*Haliaeetus leucocephalus*) was delisted under the ESA on August 9, 2007. Both the bald eagle and golden eagle (*Aquila chrysaetos*) are still protected under the MBTA and BGEPA. The BGEPA affords both eagles protection in addition to that provided by the MBTA, in particular, by making it unlawful to "disturb" eagles. Under the BGEPA, the Service may issue limited permits to incidentally "take" eagles (e.g., injury, interfering with normal breeding, feeding, or sheltering behavior nest abandonment). For information on bald and golden eagle management guidelines, we recommend you review information provided at www.fws.gov/midwest/eagle/guidelines/bgepa.html.

On our web site www.fws.gov/southwest/es/NewMexico/SBC_intro.cfm, we have included conservation measures that can minimize impacts to federally listed and other sensitive species. These include measures for communication towers, power line safety for raptors, road and highway improvements, spring developments and livestock watering facilities, wastewater facilities, and trenching operations.

We also suggest you contact the New Mexico Department of Game and Fish, and the New Mexico Energy, Minerals, and Natural Resources Department, Forestry Division for information regarding State fish, wildlife, and plants.

Thank you for your concern for endangered and threatened species and New Mexico's wildlife habitats. We appreciate your efforts to identify and avoid impacts to listed and sensitive species in your project area. For further consultation on your proposed activity, please call 505-346-2525 or email nmesfo@fws.gov and reference your Service Consultation Tracking Number.

Attachment(s):

- Official Species List
- Migratory Birds

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

New Mexico Ecological Services Field Office

Albuquerque, NM 87113-1001

(505) 346-2525

Project Summary

Consultation Code: 02ENNM00-2022-SLI-0376

Event Code: Some(02ENNM00-2022-E-00912)

Project Name: Desert Springs Church Additions

Project Type: LAND - RESTORATION / ENHANCEMENT

Project Description: Commercial project in Albuquerque, NM in 2022

Project Location:

Approximate location of the project can be viewed in Google Maps: <https://www.google.com/maps/@35.15250355,-106.61283151418681,14z>

Counties: Bernalillo County, New Mexico

Endangered Species Act Species

There is a total of 6 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries¹, as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

1. [NOAA Fisheries](#), also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Mammals

NAME	STATUS
New Mexico Meadow Jumping Mouse <i>Zapus hudsonius luteus</i> There is final critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/7965	Endangered

Birds

NAME	STATUS
Mexican Spotted Owl <i>Strix occidentalis lucida</i> There is final critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/8196	Threatened
Southwestern Willow Flycatcher <i>Empidonax traillii extimus</i> There is final critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/6749	Endangered
Yellow-billed Cuckoo <i>Coccyzus americanus</i> Population: Western U.S. DPS There is final critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/3911	Threatened

Fishes

NAME	STATUS
Rio Grande Silvery Minnow <i>Hybognathus amarus</i> Population: Wherever found, except where listed as an experimental population There is final critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/1391	Endangered

Insects

NAME	STATUS
Monarch Butterfly <i>Danaus plexippus</i> No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9743	Candidate

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

Migratory Birds

Certain birds are protected under the Migratory Bird Treaty Act¹ and the Bald and Golden Eagle Protection Act².

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described [below](#).

-
1. The [Migratory Birds Treaty Act](#) of 1918.
 2. The [Bald and Golden Eagle Protection Act](#) of 1940.
 3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

The birds listed below are birds of particular concern either because they occur on the [USFWS Birds of Conservation Concern](#) (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ [below](#). This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the [E-bird data mapping tool](#) (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found [below](#).

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
Bald Eagle <i>Haliaeetus leucocephalus</i> This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1626	Breeds Dec 1 to Aug 31
Cassin's Finch <i>Carpodacus cassinii</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9462	Breeds May 15 to Jul 15

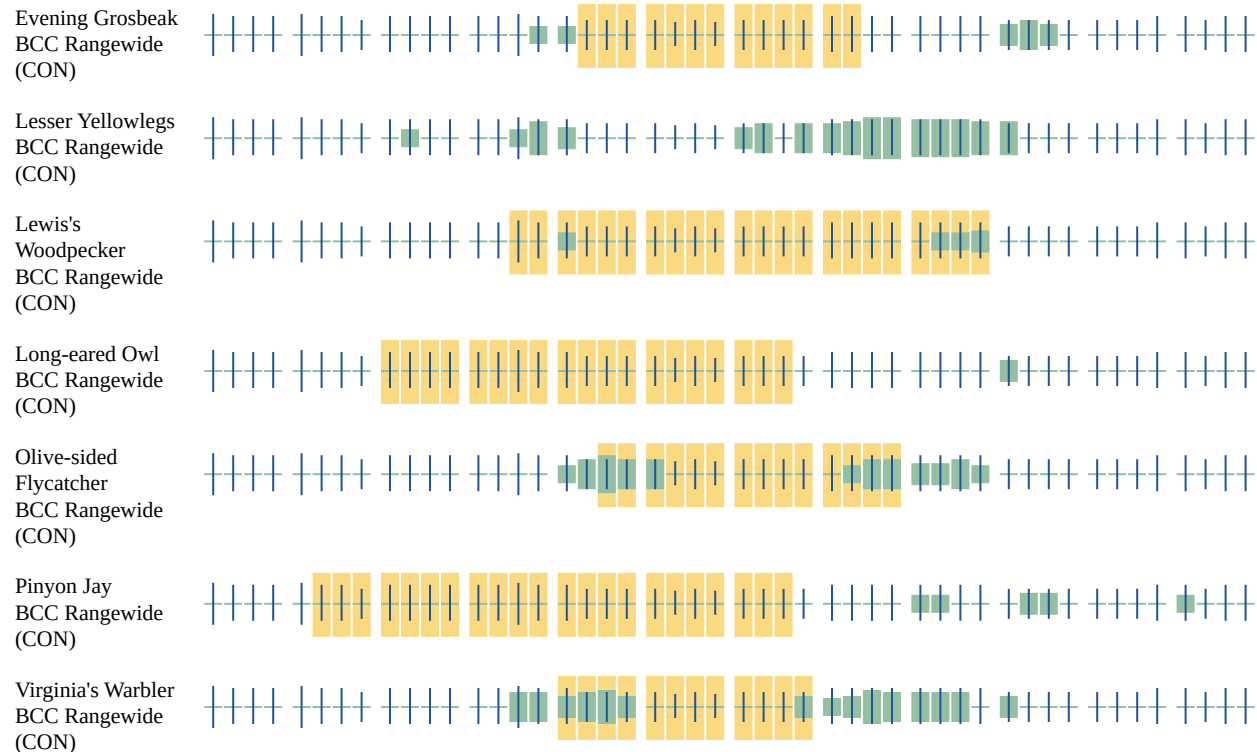

NAME	BREEDING SEASON
Evening Grosbeak <i>Coccothraustes vespertinus</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9679	Breeds May 15 to Aug 10
Lesser Yellowlegs <i>Tringa flavipes</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9679	Breeds elsewhere
Lewis's Woodpecker <i>Melanerpes lewis</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9408	Breeds Apr 20 to Sep 30
Long-eared Owl <i>asio otus</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/3631	Breeds Mar 1 to Jul 15
Olive-sided Flycatcher <i>Contopus cooperi</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/3914	Breeds May 20 to Aug 31
Pinyon Jay <i>Gymnorhinus cyanocephalus</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9420	Breeds Feb 15 to Jul 15
Virginia's Warbler <i>Vermivora virginiae</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9441	Breeds May 1 to Jul 31

Probability Of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

Additional information can be found using the following links:

- Birds of Conservation Concern <http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php>
- Measures for avoiding and minimizing impacts to birds <http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php>
- Nationwide conservation measures for birds <http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf>

Migratory Birds FAQ

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

[Nationwide Conservation Measures](#) describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. [Additional measures](#) or [permits](#) may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS [Birds of Conservation Concern \(BCC\)](#) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the [Avian Knowledge Network \(AKN\)](#). The AKN data is based on a growing collection of [survey, banding, and citizen science datasets](#) and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle ([Eagle Act](#) requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the [AKN Phenology Tool](#).

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the [Avian Knowledge Network \(AKN\)](#). This data is derived from a growing collection of [survey, banding, and citizen science datasets](#).

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: [The Cornell Lab of Ornithology All About Birds Bird Guide](#), or (if you are unsuccessful in locating the bird of interest there), the [Cornell Lab of Ornithology Neotropical Birds guide](#). If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are [Birds of Conservation Concern](#) (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
 2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
-

3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the [Eagle Act](#) requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the [Northeast Ocean Data Portal](#). The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the [NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf](#) project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the [Diving Bird Study](#) and the [nanotag studies](#) or contact [Caleb Spiegel](#) or [Pam Loring](#).

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to [obtain a permit](#) to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell

me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

BERNALILLO COUNTY HISTORICAL SITES				
Resource Name	Address	City	Listed	Multiple
Albuquerque Municipal Airport Building, Old	2920 Yale Blvd., SE	Albuquerque	5/5/89	
Albuquerque Veterans Administration Medical Center	2100 Ridgcrest, SE	Albuquerque	8/19/83	
Aldo Leopold Neighborhood Historic District	105-135 Fourteenth St., SW	Albuquerque	10/16/02	Twentieth Century Suburban Growth of Albuquerque MPS
Anaya, Gavino, House	2939 Duranes Rd., NW	Albuquerque	2/9/84	Albuquerque North Valley MRA
Armijo, Juan Cristobal, Homestead	207 Griegos Rd., NE	Albuquerque	9/30/82	Albuquerque North Valley MRA
Armijo, Sandoval, House	618 Rio Grande Blvd., NW	Albuquerque	10/8/76	
Art Annex	NE corner of Central Ave. and Terrace St., UNM	Albuquerque	9/22/88	New Mexico Campus Building Built 1906-1937 TR
Aztec Auto Court	3821 Central Ave., NE	Albuquerque	11/22/93	Route 66 through New Mexico MPS
