## 1.0 EXECUTIVE SUMMARY

### 1.1 Purpose of Study

This report documents the results of a Traffic Impact Study (TIS) and Neighborhood Impact Assessment (NIA) for a proposed charter school located at 6600 Gulton Ct. N.E. in Albuquerque, New Mexico. The purpose of this TIS is to assess traffic operations associated with traffic generated by this proposed project on the adjacent transportation network, specifically Osuna Road.

This study evaluated both the existing and proposed conditions of the corridor adjacent to the proposed site entrance, and was conducted in accordance with the City of Albuquerque Development Process Manual (COA DPM) Article 7-5 Traffic Studies. Study requirements were established through a traffic scoping meeting held with the City Traffic Engineer and utilizing information summarized in the Traffic Scoping Form (TSF, see Appendix A).

### 1.2 Principal Findings

Key findings of this analysis are summarized as follows:

1. Site-generated traffic is not expected to cause significant, adverse impacts to the adjacent roadway network including the traffic signalized intersections along Osuna Rd.
2. Adverse neighborhood impacts relative to idling and queuing traffic at the school site would not be expected to occur. Furthermore, the site is consistent with existing pedestrian, bicycle, and transit facilities.
3. Some traffic queuing may occur for westbound left turns on Osuna Rd. approaching Gulton Ct. as well as northbound traffic on Gulton Ct.

A traffic signal warrant study (TSWS) of the Osuna/Gulton intersection met certain warranting criteria but would not meet the 1000' minimum spacing criteria for signalization.

### 1.3 Conclusions & Recommendations

This analysis has demonstrated that significant detrimental traffic impacts associated with the proposed charter middle/high school are not expected to occur on the adjacent transportation system and the location is consistent with adjacent land uses as well as transportation services. The following recommendations are offered concerning on- and off-site access modifications.

1. Site Access Driveway
  - a. Widen the existing driveway to provide two ingress and one egress lane.
  - b. Install a channelization island, pavement markings, and signs to delineate lane assignments and direct traffic to appropriate drop-off or parking areas.
2. Off-Site Roadway Improvements
  - a. Provide pavement marking revisions on Gulton Ct. at Osuna Rd. to delineate left- and right-turn lanes.
  - b. Extend westbound left turn lane (WBL) on Osuna at Gulton Ct.
  - c. Traffic Management Considerations were also offered to encourage multi-modal uses and reduce traffic peaking issues during peak traffic periods.

See Section 9 of this report for details of these recommendations.

## 2.0 INTRODUCTION

### 2.1 Description of Proposed Project

The project consists of the remodeling of an existing 80,323 square foot (s.f.) building and repurposing it to serve as a charter school for middle and high school students grades 6 through 12. Existing parking will be utilized, and access is proposed via an existing paved driveway at the south end of Gulton Ct. Operations are projected to commence in year 2021.

### 2.2 Project Location

The project is located at 6600 Gulton Ct. in northeast Albuquerque south of Osuna Rd. and west of Jefferson St. as depicted in Figure 1.

*Figure 1: Vicinity Map*

Source: Google Earth

### 2.3 Study Area

The study area encompasses the site and adjacent roadways, namely Gulton Ct. and Osuna Rd. from Chappell Rd. to Jefferson St. Included in the analysis are the traffic signalized intersections of Osuna Rd. at Chappell Rd., Academy Parkway, and Jefferson St. as well as the unsignalized intersections of Osuna at Gulton Ct. and two adjacent commercial access roads.

### 2.4 Scope of Analysis

Primary tasks incorporated into this analysis include:

- A. **Data Collection** – including traffic volume counts, other roadway network parameters, and regional data for the traffic analysis.
- B. **Traffic Operations Analysis** – utilizing the collected data, computerized models were developed in *Synchro 10* software for analysis utilizing *Highway Capacity Manual (HCM)* procedures.
- C. **Crash Analysis** – review of records to evaluate whether recurring patterns requiring correction are exhibited.
- D. **Traffic Signal Warrant Evaluation** – analysis of whether a traffic signal at Osuna Rd./Gulton Ct. may be warranted based on traffic conditions.

- E. Geometric Evaluation – consideration of safe access measures such as auxiliary lanes and/or access geometry to mitigate traffic impacts, if necessary.

## 2.5 Planned Developments or Projects in the Vicinity

No imminent developments have been identified in this area.

## 3.0 EXISTING CONDITIONS

### 3.1 Current Land Use & Zoning

The environs are generally urban and built up with mixed developments in the area consisting of industrial, commercial office and retail land uses. Nearby institutional uses include a church on Osuna Rd. and a charter school on Academy Parkway. The nearest residential neighborhood is approximately 2/3-mile west and outside of the study limits.

The existing building previously housed an electronics manufacturing operation and is currently vacant. Following are the designations by the COA Integrated Development Ordinance (IDO).

1. Land use designation: Office;
2. Property zone: Non-Residential Business Park (NR-BP) for industrial, wholesale, and manufacturing uses;
3. Nearest designated employment Activity Center: Journal Center (employment);
4. Community Planning Area: North I-25;
5. Corridor: Major Transit (Route 141 – San Mateo).

### 3.3 Existing Roadway System

The existing study street network is shown in Figure 1 and described below. These routes are under the jurisdiction of the City of Albuquerque (COA) with designations as shown on the Functional Classification in the Albuquerque Metropolitan Planning Area by the Mid-Region Council of Governments (MRCOG).

#### 3.3.1 *Osuna Rd.*

Designated as a Principal Arterial, the route has a posted speed of 45 mph and consists of six travel lanes, a 36' raised median, 7' buffered bike lanes, curb & gutter, and 6' sidewalks. Average Weekday Traffic (AWDT) east of Chappell for year 2019 was 28,000. Intersection approach or spot lighting exists at the signalized intersections.

#### 3.3.2 *Chappell Rd.*

A Major Collector roadway that parallels the North Diversion Channel drainage facility, the roadway width is 25' and consists of 2 travel lanes, curb & gutter on the west side, and 6' shoulders. The posted speed is 35 mph and AWDT<sub>2018</sub> south of Osuna was 9,800.

#### 3.3.3 *Jefferson St.*

Jefferson is a Minor Arterial roadway with an urban typical section consisting of 4 travel lanes, a 28' raised median, curb & gutter, bike lanes, and 6' sidewalks. The posted speed is 35 mph and AWDT<sub>2018</sub> south of Osuna was 15,000.

#### 3.3.3 *Gulton Ct.*

Gulton is a 40' wide local road terminating in a cul-de-sac at the site and serving commercial offices with curb & gutter, 6' sidewalk along the west side and partially along the east side. An existing bus stop south of

Osuna provides access for Route 141 – San Mateo. A mid-block street light exists on the east side. A short left turn bay is designated at Osuna with pavement markings.

### 3.3.4 Academy Parkway

This is a local route which serves industrial and commercial uses and has a traffic signalized intersection with Osuna.

## 3.4 Existing Traffic Data

### 3.4.1 Traffic Counts

Manual turning movement counts (TMCs) were collected on Wednesday, November 18, 2020 during the AM (7-9 a.m.) and PM (4-6 p.m.) peak periods for use in analyzing traffic operations at the study intersections. Because traffic intersections on Osuna constitute a coordinated network, combined peak hour periods for the corridor were established as beginning at 7:30 a.m. and 4:30 p.m., respectively.

Consideration was given to traffic impacts associated with the COVID-19 pandemic and government-mandated closures. MRCOG has been periodically monitoring traffic patterns and reported that, in the spring of 2020, traffic volumes had dropped by 32.5% overall throughout the metro area. A 48-hour traffic volume count collected by MRCOG in December 2019 on Osuna west of Washington was used to compare the AM and PM peak hours, indicating that the manual TMC data was approximately 33% lower than the volume count. Therefore, certain adjustments to these TMCs accounting for reduced travel demand were considered as follows.

1. An adjustment factor of 1.49 was applied to the “baseline” TMC data to inflate the counts and thereby represent current “normal” traffic.
2. Because the traffic volume count was conducted in December, typically the highest volume month due to economic activity during the holidays, a monthly factor was used to derive a seasonal adjustment using historic MRCOG data. Thus, the November monthly factor (when the TMCs were collected) was divided by the December monthly factor (when the MRCOG traffic volume count was collected) to yield a monthly adjustment factor of  $1.022/1.056 = 0.97$ .
3. These two adjustment factors yielded a net adjustment of  $(1.49 * 0.97) = 1.45$ , which was applied to the TMCs to derive “existing” traffic data adjusted to represent current traffic conditions.
4. It should be noted that the directional distributions of the volume count were 56% eastbound (EB) during the AM and 57% westbound (WB) during the PM peak periods, respectively, but the TMC data reflected lower directional splits of about 51% to 52%. This may represent a temporary paradigm shift in commuter traffic, and should be monitored to evaluate whether it reflects a more permanent change in future travel patterns.

Detailed reports of the TMC data are contained in Appendix B. Adjusted peak hour traffic volumes derived for this analysis are presented in Figures 2 and 3. Utilizing these adjusted traffic count volumes, directional distribution of traffic at the site is tabulated in Table 1. Because site access is constrained to Osuna Rd., it was not necessary to employ regional gravity distribution models and therefore these distribution values were applied to new trips generated by the proposed project (see Appendix E).

*Figure 2: AM Peak Hour Volumes (Baseline)*

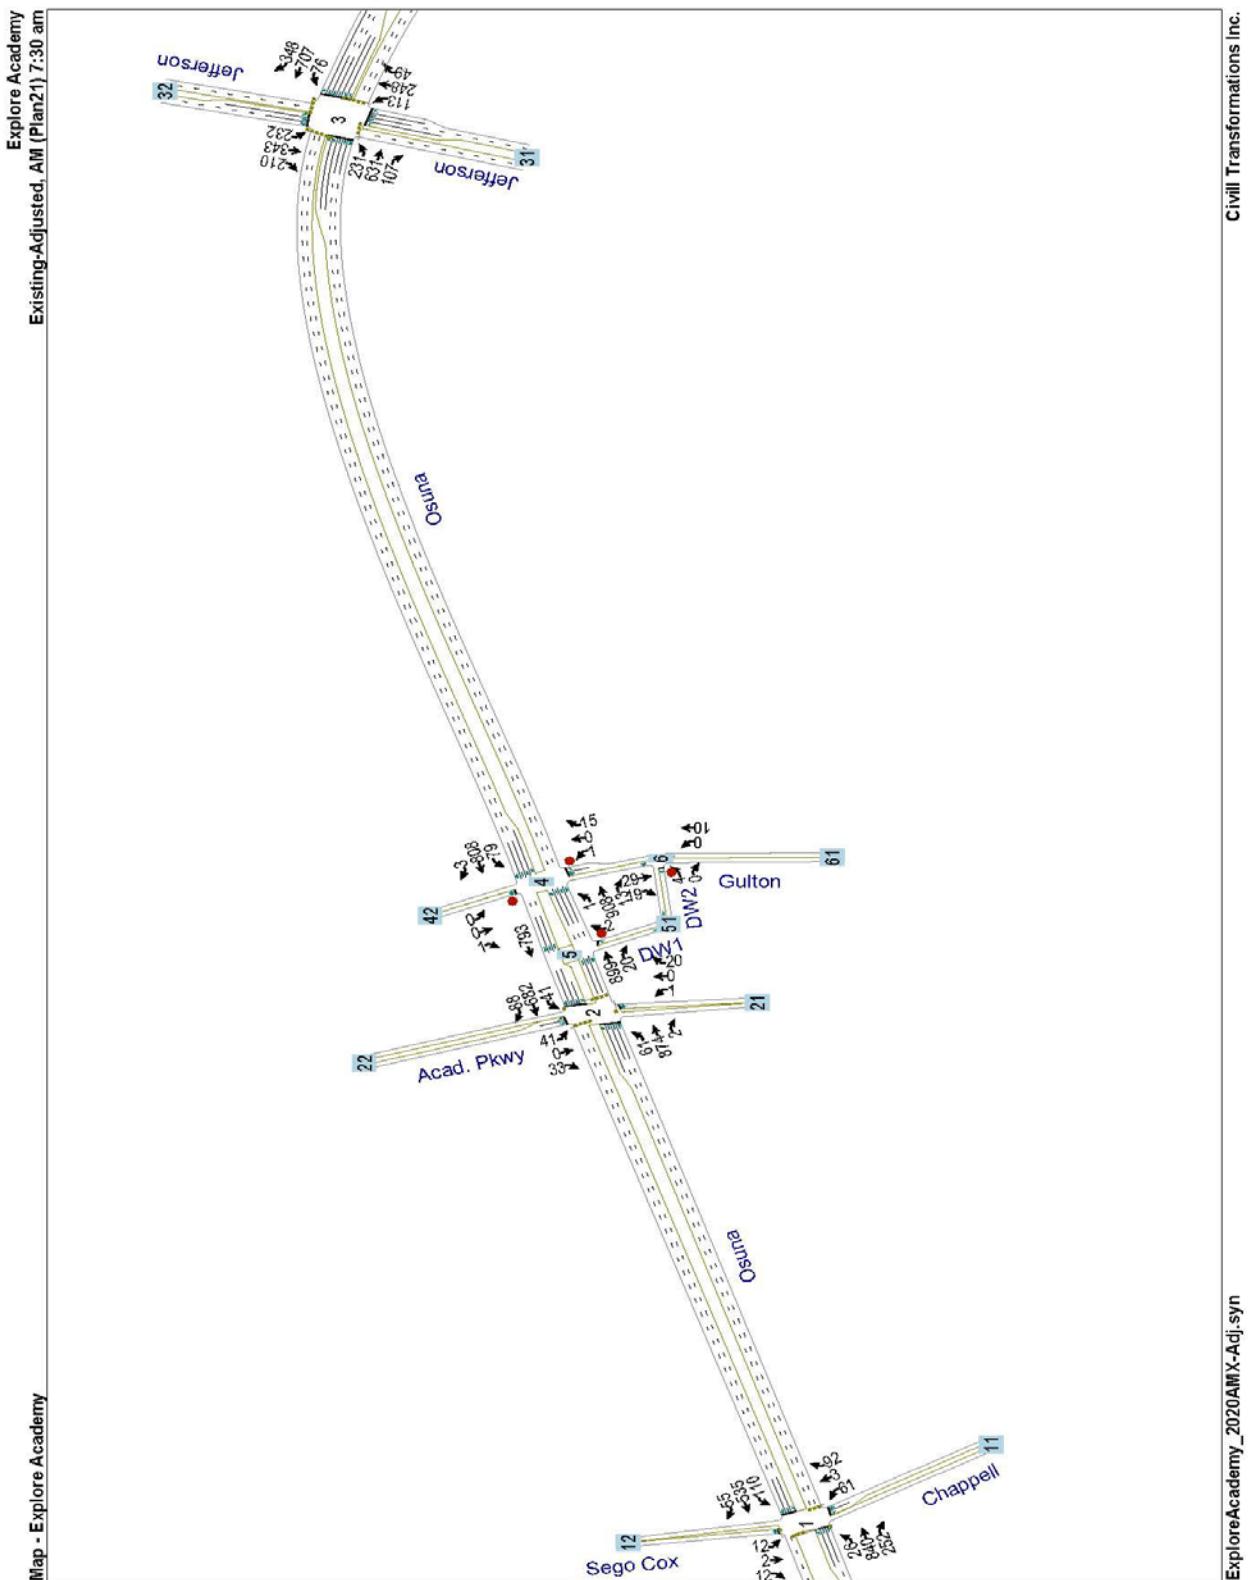

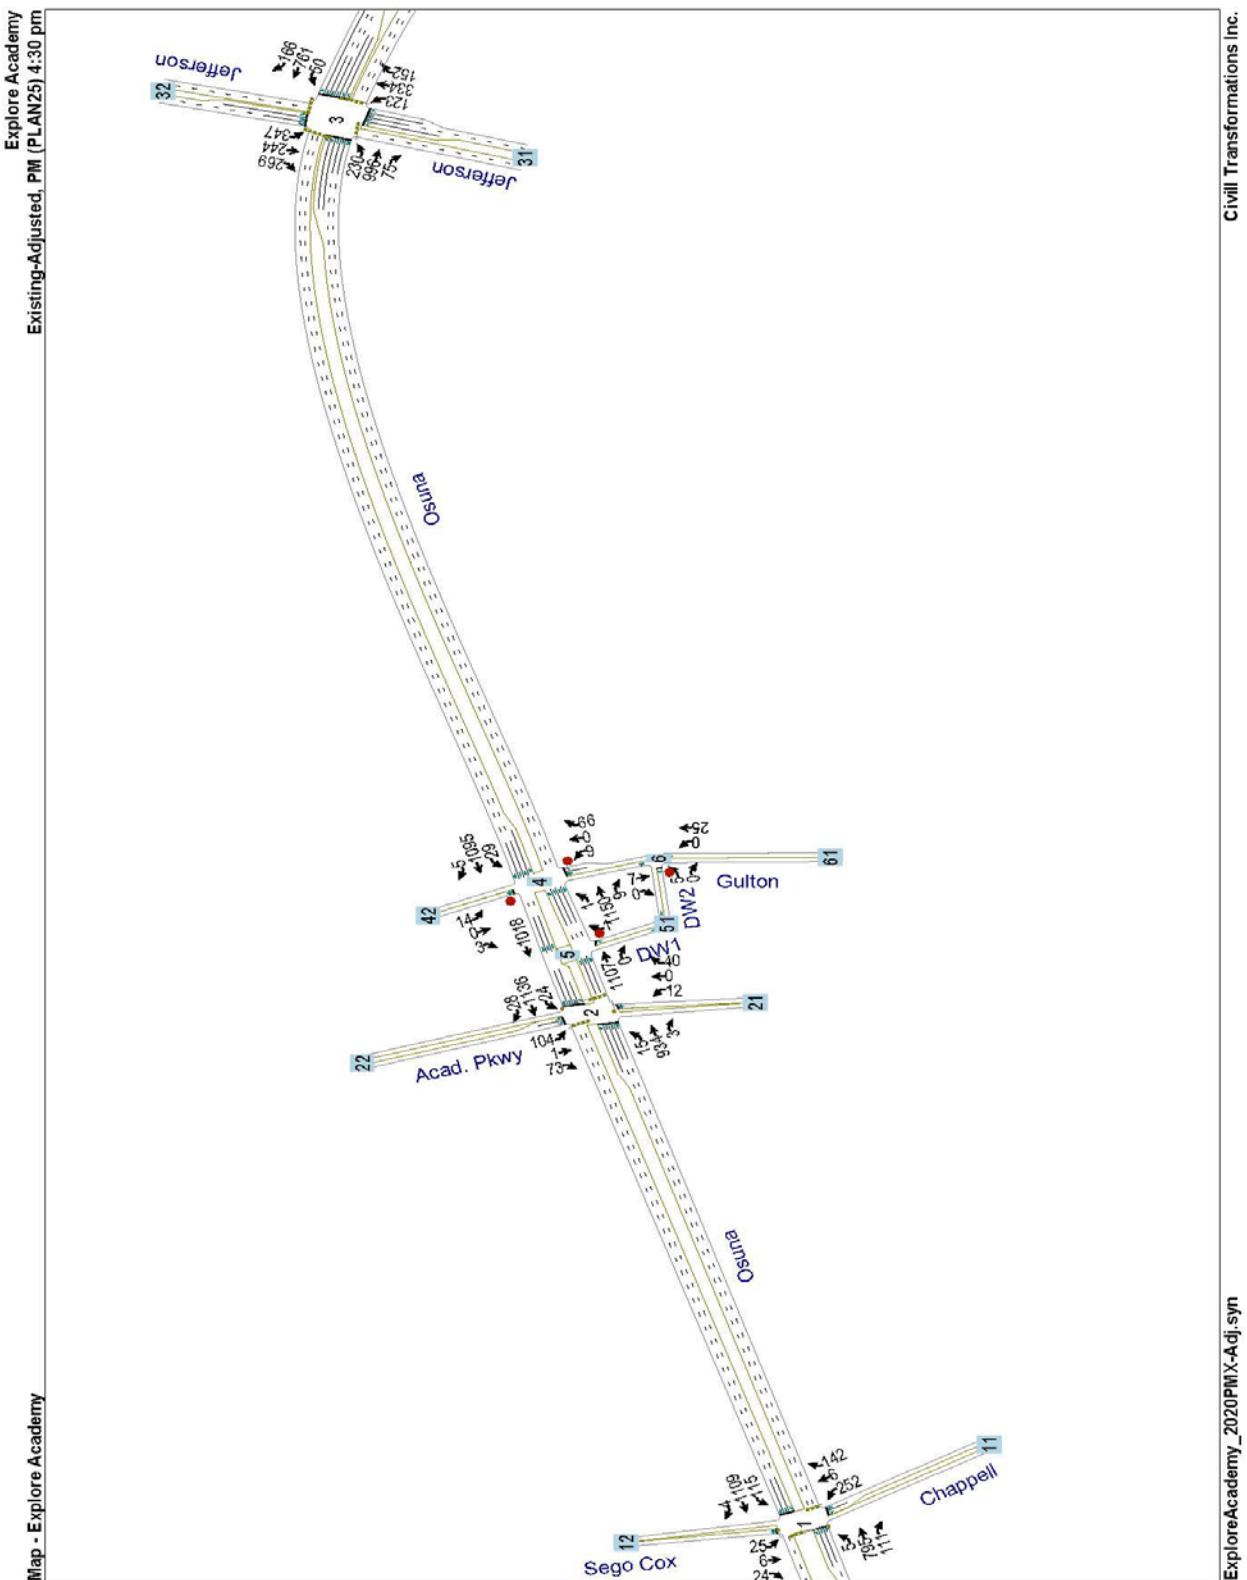

Figure 3: PM Peak Hour Volumes (Baseline)

*Table 1: Trip Distribution Summary*

Intersection and Traffic Movement	Inbound		Outbound	
	AM	PM	AM	PM
% from/to Osuna West	43%	38%	33%	44%
% from/to Chappell Southwest	5%	7%	7%	5%
% from/to Jefferson North	11%	13%	14%	9%
% from/to Osuna West	36%	36%	39%	39%
% from/to Jefferson South	6%	6%	7%	3%
Total	100%	100%	100%	100%

### 3.4.2 Adjacent Site Driveways

A commercial office complex in the southwest quadrant of the Osuna/Gulton intersection has a right-in/right-out (RIRO) driveway at Osuna and a full-access driveway on Gulton. Due to concerns of potential cut-through traffic, these driveways were included in the traffic analysis. However, traffic activity was light due to the COVID-19-related closures, and thus trip generation estimates were made to replicate existing traffic conditions. Directional splits collected with the driveway TMCs were applied to the baseline traffic counts to derive the existing traffic patterns at these driveways (see Appendix B).

## 3.5 Existing Roadway/Intersection Capacity

An analysis of the study intersections was conducted for the baseline and existing (adjusted) conditions as described in Section 6.1 of this report. These intersections operated at satisfactory levels of service (LOS) as summarized in Table 4, though certain lane groups experienced lower LOS as shown in the worksheets contained in Appendix F.

## 3.5 Existing Transit Service

Ridership data through 2018 for Route 141 – San Mateo was obtained from the COA Transit website (see Appendix C). This route runs from the bus stop on Gulton Ct. and service times extend from about 6:00 a.m. until 10:00 p.m. with approximately 20-minute headways. Thus, three stops occur during the AM and PM peak hours, respectively, out of 85 runs for a frequency of about 3.5%. Applying this rate to the route boarding data yields an estimate of about 1-2 boardings during the peak hours. Information regarding public transit usage by the school was not available. Thus, while this route provides an opportunity for staff and students to utilize the service to the site, trip reductions attributed to transit ridership was not included in the analysis as it was expected to be low.

## 3.6 Bicycle & Pedestrian Facilities

Existing bike and pedestrian infrastructure includes the following:

1. Continuous sidewalks along the west side of Gulton Ct. and on both sides of Osuna Rd.;
2. Buffered bike lanes on Osuna Rd. and bike lanes on Jefferson St.
3. Bear Canyon Arroyo multi-use trail south of the property provides connectivity to Osuna, the North Diversion Channel Trail, and Jefferson.

### 3.7 Crash Analysis

Crash records at the Osuna/Gulton intersection were obtained from the NMDOT Traffic Safety Division's database for a 3-year period extending from 2016 through 2018, the most recent data available at the time of this evaluation, for evaluation of potential safety issues. The focus for this study was on a review of recurring crash patterns that could pose safety concerns relative to the proposed project and that could be addressed in the design stage of project development. The raw crash data spreadsheets are contained in Appendix D with the most relevant columns displayed for clarity.

Several observations are offered regarding the tabulated crash data:

1. One collision was recorded in each of the 3 years, 1 on Osuna and 2 on Gulton Ct.
2. Times of day varied from 09:30, 12:30, and 14:31.
3. One collision was categorized as an injury crash and as being from the same direction, possibly sideswipe; the other 2 crashes were not classified.
4. Contributing factors included
  - a. Excessive speed (on Osuna)
  - b. Improper backing
  - c. Unknown
5. These collisions appear to have occurred during clear, daylight conditions.

This summary and suggested contributing factors do not appear to present a discernable pattern of collisions that would represent a safety concern subject to correction through engineering countermeasures.

## 4.0 PROPOSED SITE TRAFFIC CHARACTERISTICS

### 4.1 Proposed Project

A former electronics manufacturing building is proposed for renovation and repurposing to serve as a charter school for middle and high school students, grades 6 through 12. The existing building measures 83,323 square feet, as illustrated in Figure 4, with existing parking. Future expansion may include a gymnasium and athletic facilities.

### 4.2 Development Phasing and Timing

Renovations were underway during preparation of this study and school operations are projected to be relocated from the existing school at 5100 Masthead N.E. in order to commence on site by the fall of 2021.

### 4.3 Site Access and Circulation

As shown on Figure 4, existing access occurs via an existing 30' wide paved driveway at the south end of the cul-de-sac. Student parking and bus drop-off are designated to the west, making right turns into the site and buses will circulate counter-clockwise around the circulatory road to access the drop-off lanes in order to discharge students on the right side. Staff, visitors, and parents will be directed toward the east making left turns into the site. Parents will utilize a designated student drop-off lane adjacent to the building, circulate in a clockwise direction around the staff parking lot, and exit the site via the main, 40' wide east-west access route. A pedestrian route exists at the west side of the existing driveway to the existing sidewalk on Gulton Ct.

Figure 4: Proposed Site Plan

Explore Academy - Conceptual Site Plan

7/29/20

### **4.3 Trip Generation**

*Institute of Transportation Engineers Trip Generation, 10<sup>th</sup> Edition (ITE, 2017)* was used to estimate traffic generated by the proposed development. The peak of the adjacent street was selected for the calculations indicative of urban/suburban traffic patterns for typical AM and PM peak periods (i.e., 7-9 a.m., 4-6 p.m., respectively). The proposed land use consisted of a middle/high school with a capacity of up to 1,200 students, presumably split half and half between middle and high school grades. ITE land use (LU) codes include:

1. LU 522 Middle School/Junior High School
2. LU 530 High School

The following steps and assumptions were applied to the data:

1. The "peak hour of the adjacent street traffic" was the criterion selected for the calculations as this would most likely be impacted by site traffic during typical AM and PM peak periods given the characteristics of the proposed land uses. In the vicinity of the site, Osuna Rd. is urban/suburban in nature and thus "general urban/suburban" data were selected;
2. Students were used for the independent variables as the floor ratios vary widely in the database;
3. Fitted equations were not available for all land uses and thus average rates were used for consistency;
4. Pass-by or internal trips are not inherent to the proposed use and thus did not apply;
5. Transit trip reductions were not accounted for as the proposed use was not considered highly conducive to transit or pedestrian access given the distance to residential areas;
6. Eight (8) existing school bus routes will be transferred to the new school site (see Appendix C). The routes average up to 45 students each for a total of  $8 * 45 = 360$  student trips that were deducted from the total estimated trips as follows:
  - a. Deducting 360 trips from the PM peak would result in a negative value as the PM peak of school occurs earlier than the that of the adjacent street network;
  - b. It was assumed that bused students would be comprised of 75% middle school and 25% high school as more of the older students would likely drive to campus;
  - c. These percentages resulted in deductions of
    - i.  $75\% * 360 = -270$  middle school students
    - ii.  $25\% * 360 = -90$  high school students
  - d. The net number of students was then used as the independent variable for calculation of estimated trips (note: using these reduced numbers for the independent variables yielded similar reductions as compared with calculating trips and then subtracting bused students).

The calculated site traffic volume estimates are contained in Appendix E and summarized in Table 2 below.

Table 2: Estimated Site Trip Generation

ITE			Daily	AM			PM			
			Code	Quantity	Units	Total	Enter	Exit	Total	
<b>Unadjusted Trips</b>										
522	600	Students	1278	188	160	348	50	52	102	
530	600	Students	1218	209	103	312	40	44	84	
Totals	1200		2496	397	263	660	90	96	186	
<b>ADJUSTED TRIPS (Used for Analysis)</b>										
522	330	Students	703	103	88	191	27	29	56	
530	510	Students	1035	178	87	265	34	37	71	
<b>New Trips Added to Adjacent Street</b>			<b>1738</b>	<b>281</b>	<b>175</b>	<b>456</b>	<b>61</b>	<b>66</b>	<b>127</b>	

#### 4.4 Site Traffic Distribution and Assignment

Distribution of proposed site trips was made in proportion to the directional distribution percentages inherent to the corridor at the external nodes (trip distribution percentages derived from the traffic counts contained in Appendix B are presented in Table 1). Those distribution percentages were applied to the estimated site trips in Table 2, and proposed trips were then assigned to Osuna Rd. The distributed trips and resulting intersection peak hour volumes are shown in the map views as well as on the "Future Volume" rows in the level of service worksheets contained in Appendix F.

Designated school bus routes were reviewed with respect to access after they transfer from the existing school site on Masthead N.E. to this new site on Gulton Ct. It was determined that half (4) of the eight buses will arrive from the west and half (4) from the east along Osuna Rd. Thus, distributed bus trips were included in the overall distributed trips tabulated above.

### 5.0 FUTURE TRAFFIC CONDITIONS

#### 5.1 Background Traffic Projection

The project was initiated in 2020, which constituted the baseline condition to which the adjustments for COVID-19 closures were applied. Construction and opening is projected to be completed in year 2021, which was established as the Implementation Year. A Horizon Year analysis was included incorporating the Implementation Year plus 10 years, and thus traffic was projected to year 2031 for the horizon analysis.

Average Week Day Traffic (AWDT) data was obtained from the MRCOG Transportation Analysis & Querying Application (TAQA) that included the historic traffic volumes summarized in Table 3 below and observed traffic counts recorded by MRCOG. Trend line analysis was used to calculate growth rates as follows:

1. Annualized compound growth rate between 2008 and 2019 was 1.23%;
2. An annual rate calculated by Trend line analysis yielded a rate of 0.58%;
3. Because the trend line had a high degree of correlation, it was considered a reliable measure; nevertheless, these two rates were averaged in order to account for future variability;
4. The average rate calculated to 0.91% and was rounded to +1.0% per year for analysis;
5. It should be noted that the area is mostly developed but some vacant parcels remain and that Osuna Rd. is a principal arterial serving more regional traffic, and thus further growth could be expected.

This rate of 1.0% per year was used to calculate background growth factors for the implementation (1-year) and horizon (11-year) analysis periods. The calculated growth factors of 1.01 and 1.12, respectively, were input into the traffic models and applied to through traffic movements to expand background traffic volumes for analysis of the forecast traffic scenarios (see Appendix B for historic traffic data and projections). It should also be noted that the calculated growth rate was not indicative of statewide economic and related traffic growth but reflected local and regional activity in recent years. The recession associated with COVID-19 pandemic closures could be expected to negatively impact economic growth and therefore this growth rate may not be expected to continue unaltered but likely result in a conservative traffic forecast estimate.

**Table 3: Historic Traffic Volumes (AWDT)**

Year	Osuna: Chappell- Washington
2008	24073
2009	23784
2010	26173
2011	25414
2012	24982
2013	28177
2014	27388
2015	27717
2016	24181
2017	24945
2018	25124
2019	27550

## **6.0 TRANSPORTATION ANALYSIS**

### **6.1 Site Traffic Operations Analysis**

Intersection “nodes” constrain the capacity of a roadway segment, and therefore the baseline capacity of the study intersections were analyzed using the *Highway Capacity Manual 6<sup>th</sup> Edition (HCM)* methodology. The Level of Service (LOS) for an intersection is determined by the computed or measured delay and is defined for each minor movement at signalized, unsignalized, and roundabout intersections. LOS is assigned a letter grade from A (best) through F (worst), as summarized in Table 4 for signalized and unsignalized intersections. Signalized intersection have higher levels of delays due to higher volumes and driver expectation of greater delays. LOS D is generally considered acceptable in urban areas with right-of-way constraints; however, COA DPM Table 7.5.88 provides additional LOS criteria by location and corridor type.

Table 4: Intersection Level of Service (LOS) Criteria (HCM 6<sup>th</sup> Ed.)

LOS <sup>1</sup>	Signalized Control Delay (sec/veh)	Unsignalized Control Delay (sec/veh)
A	0 – 10	0 – 10
B	10 – 20	10 – 15
C	20 – 35	15 – 25
D	35 – 55	25 – 35
E	55 – 80	35 – 50
F	> 80	> 50

<sup>1</sup>For Volume-to-Capacity Ratio (V/C) ≤ 1.0; LOS = F for V/C > 1.

*Synchro 10* software package by *Trafficware Ltd.* was utilized to compute the results in HCM format. Traffic signal timing settings for the signalized intersections on Osuna Rd. were provided by COA Traffic Engineering section and input into the traffic models for analysis. These intersections are currently coordinated and therefore the appropriate time-of-day plans were used for the peak analyses. Capacity analyses were computed using the same, systematic method so results could be compared for the following alternative scenarios:

1. **Scenario 1: Baseline (2020)** – represents baseline conditions with the traffic collected in November 2020 and prior to development of the site.
2. **Scenario 2: Existing Traffic (2020)** – baseline traffic adjusted to represent existing conditions prior to COVID-19 closures.
3. **Scenario 3: Opening Year NO-Build (2021)** – baseline conditions plus background traffic growth without development, representing the implementation year operating conditions.
4. **Scenario 4: Opening Year BUILD (2021)** – existing traffic plus background traffic growth and completion of development.
5. **Scenario 5: Horizon NO-Build (2031)** – existing traffic conditions plus background traffic growth without development, representing the horizon year operating conditions.
6. **Scenario 6: Horizon BUILD (2031)** – forecast conditions including background traffic growth and site traffic, to assess forecast traffic operations with developed conditions.

Computed results are contained in Appendix F and summarized in Table 5 below.

Table 5: LOS Summary for Alternative Concepts\*

Scenario	Intersection	AM Peak						PM Peak					
		Intersection		Max. (worst-case movement)				Intersection		Max. (worst-case movement)			
		Delay	LOS	V/C	Delay	LOS	Dir.	Delay	LOS	V/C	Delay	LOS	Dir.

\*Notes:

1. Delay is measured in seconds/vehicle
2. V/C = volume-to-capacity ratio for traffic movement
3. Only critical movement LOS at unsignalized intersections is reported.

## 6.2 Assessment of Impacts

Conclusions drawn from the results of these capacity analyses include:

1. Overall, the study intersections operated with satisfactory LOS for all scenarios including developed conditions (LOS D-E for Major Transit access per DPM Table 7.5.88).
2. Slight increases in intersection delay resulted from background traffic growth and from the addition of site traffic, however, some delays actually decreased as a result of more balanced lane group flow rates.
3. Some side-street lane groups were at LOS E.
4. The SBL at Jefferson was LOS F during the PM peak for the NO-Build and Build scenarios.
5. NBL on Gulton at Osuna degraded with background and developed traffic leading to excessive delays and LOS F.
6. The Site driveway operated at satisfactory LOS as illustrated in Figure 6.
7. Driveways 1 and 2 at the commercial office complex in the SW quadrant of Osuna/Gulton Ct. were LOS A or B for critical movements and therefore not expected to be negatively impact by school traffic as eastbound school traffic would have unimpeded access to Gulton Ct.

Because traffic operations functioned at acceptable LOSs for all scenarios as summarized in Table 5, no mitigation measures were identified for analysis or implementation. It is anticipated that traffic signal timing adjustments at Jefferson may reduce delays for the SBL movement, though new TMCs should be collected once economic activity returns to pre-pandemic levels in order to more accurately assess this issue.

## 6.3 Queueing Summary

Queue length measurements are useful in evaluating traffic operations and for determination of turn lane storage requirements. As shown in the *HCM Guide*, "The 95th-percentile queue is defined to be the queue length (in vehicles) that has only a 5-percent probability of being exceeded during the analysis time period." A procedure for calculating queues is provided in the HCM and computations are included in the LOS worksheets in Appendix F. A summary of queues is provided in Table 6 for key turning lane groups that would increase with site traffic.

*Table 6: Calculated 95<sup>th</sup> Percentile Queue Lengths*

Intersection	Movement	Available Storage <sup>1</sup>	Scenario 3 Queue <sup>2</sup>		Scenario 4 Queue <sup>2</sup>	
			AM	PM	AM	PM
Jefferson	EBL	200 (8)	8.0	6.7	8.9	6.9
Jefferson	NBL	175 (7)	5.4	5.7	6.2	5.9
Gulton	NBL	100' (4)	0	0.4	10.9	2.8
Gulton	NBR	-- <sup>3</sup>	0.1	0.7	1.7	1.1
Gulton	WBL	125 (5)	1.0	0.3	7.4	0.8

<sup>1</sup>Storage length in feet (number of vehicles in parenthesis) at an average of 25' per vehicle.

<sup>2</sup>Calculated 95<sup>th</sup> Percentile queue per HCM procedures, listed in number of vehicles.

<sup>3</sup>Unlimited storage is theoretically available; however, may be partially blocked by NBL.

Extensive queues that require mitigation were identified at two locations:

1. Gulton Ct. NBL – existing pavement markings provide for left-turn storage of 50' plus a transition area, amounting to a total of about 100' of storage. This will need to be extended to accommodate

additional storage for left turning traffic, but should not extend beyond limits that would impact access to adjacent driveways.

2. Osuna WBL at Gulton – this movement is projected to exceed the existing 125' storage length by 2 to 3 vehicles in the Implementation Year and should be extended.

The EBL movement at Jefferson may nominally extend beyond the holding lane but there is additional space available in the transition area, and signal retiming may sufficiently address this lane group.

#### 6.4 Traffic Signal Warrant Study (TSWS)

An evaluation was made as to whether the Osuna/Gulton intersection might warrant traffic signalization as a result of increased traffic attributed to site development. A TSWS was conducted per Chapter 4C of the 2009 *Manual on Uniform Traffic Control Devices* (MUTCD). Of the nine defined in the MUTCD, all but Warrants 6, 8, and 9 were studied as these were not applicable to this intersection for the following reasons:

1. Warrant 6, Coordinated Signal System. Osuna Rd. already has a coordinated signal system and therefore this warrant did not apply.
2. Warrant 8, Roadway Network. Existing traffic flows are already organized by virtue of the existing coordinated traffic signal network and therefore this warrant did not apply.
3. Warrant 9, Intersection Near a Grade Crossing. A rail crossing does not exist in the vicinity and thus Warrant 9 did not apply.

A speed study was not conducted and it was therefore assumed that the 85<sup>th</sup> percentile speed was the same as the posted speed of 45 mph. The results of the TSWS are summarized in Table 7 below. Data and documentation are provided in Appendix G.

*Table 7: Summary of Traffic Signal Warrants*

Warrant	MET (✓) NOT Met (✗)
1 – Eight Hour Vehicular Volume	✓
2 – Four-Hour Vehicular Volume	✓
3 – Peak Hour Delay/Volumes	✓
4 – Pedestrian Volume	✗
5 – School Crossing	✗
7 – Crash Experience	✗

Several considerations relative to this evaluation follow:

1. For Warrants 1 – 3, Traffic volumes on Osuna partially met threshold requirements for some of the warranting criteria under existing conditions and the addition of site traffic contributes to meeting additional criteria.
2. Warrant 4 – pedestrians were observed crossing Gulton but there was insufficient pedestrian crossing activity of Osuna; marked crosswalks and pedestrian signals are available a short distance west at the Academy Parkway intersection and thus this warrant would not likely be justified.
3. Warrant 5 – there are no student crossings as a school doesn't exist; sufficient numbers of crossings would not be likely given the distance to residential areas.

4. Warrant 7 – there were insufficient numbers of crashes susceptible to correction with traffic signalization were recorded and therefore this warrant was not met.
5. Gaps from upstream traffic signals should provide opportunities for left-turns crossing into and out of the Osuna median, and the median is of sufficient width to provide temporary refuge.
6. Indirect turns may result during peak access periods. Multiple median breaks are available for this purpose. School access is typically most intense during opening and discharge times, though the discharge occurs earlier than the PM peak of the roadway and should have less impact as a result.
7. The distance between Gulton Ct. and Academy Parkway is approximately 370 feet. This would create traffic operational conflicts and is not conducive to progressive traffic flow. Furthermore, this short distance violates the MUTCD minimum traffic signal spacing requirement of 1,000 feet and therefore would not be recommended.

## 6.5 Neighborhood Impact Assessment (NIA) Considerations

As outlined in the Scope of Traffic Impact Study (TIS, Appendix A) and as referenced in the COA DPM Part 7-5(F), this report has addressed NIA issues with respect to school sites as follows.

### 6.5.1 Baseline Community Data

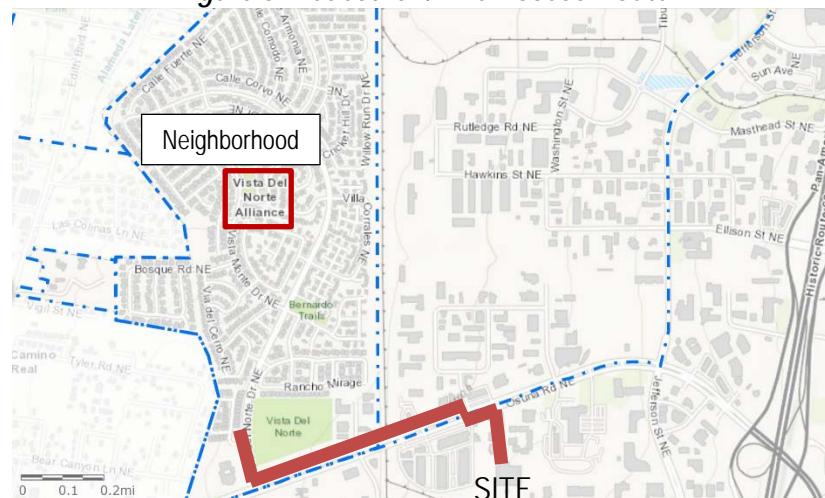

Section 3 of this report identified existing conditions with respect to adjacent land uses, traffic patterns and volumes, and multimodal options including transit, bike and pedestrian facilities.

### 6.5.2 Analysis of Neighborhood Impacts

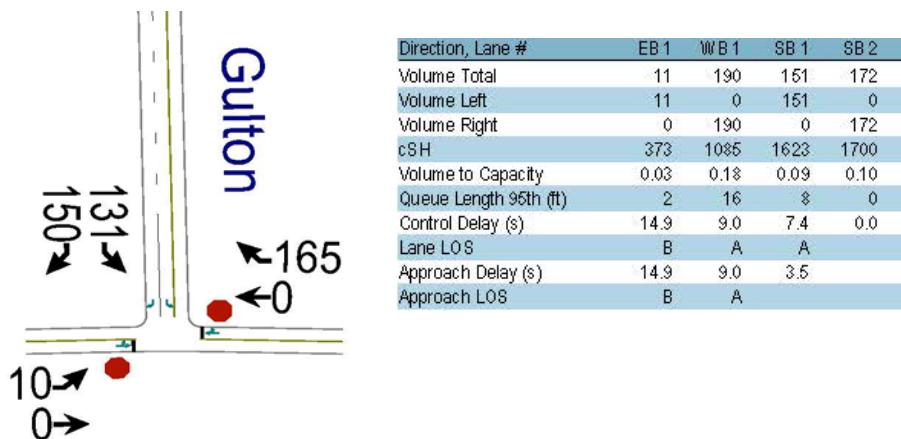

Following is a summary of the key considerations addressed in this evaluation.

1. Existing bicycle and pedestrian routes and circulation will be maintained.
  - a. If, for example, students and staff walk to the new school from the Vista del Norte neighborhood located approximately a mile west of the school, pedestrians may cross Osuna at one of the 3 traffic signalized intersections along the route and access the site via existing sidewalks, see Figure 5.
  - b. Similarly, a buffered bike lane is available on Osuna to accommodate bike access.

*Figure 5: Pedestrian/Bike Access Route*

2. Conflict points between pedestrians and automobiles would be minimal due to the availability of these existing facilities.
3. Existing major transit service (Route 141) on Gulton Ct. is available for staff and student use.
4. Noise and air quality impacts due to idling vehicles would not be expected for the following reasons:
  - a. Student drop-off and pick-up activities will take place on site rather than on the adjacent roadways.
  - b. The provision of 2 ingress lanes will separate bus/student driver traffic from parent/staff/visitor traffic as described in Section 4.3 of this report and thus facilitate access.
  - c. Calculated delay and traffic queues were low for the AM peak period as shown in the driveway capacity analysis illustrated in Figure 6 and provided in Appendix F.

**Figure 6: Site Access LOS A**

In summary, the site is removed from residential areas and will have internal measures to ensure efficient access, therefore it is not expected to adversely affect any neighborhoods.

## 7.0 SITE ACCESS REQUIREMENTS

### 7.1 Site Access

1. A 2-lane ingress as described in Section 4.3 would facilitate traffic access and reduce conflicts and queues during peak entering traffic periods.
2. The driveway should be widened eastward to provide a separate egress lane, preferably with a raised median for separation and channelization.
3. Traffic directions should be provided through pavement arrows and signing designating the drop-off and parking areas.
4. A crosswalk would provide connectivity from the school facility to the sidewalk on Gulton Ct.

### 7.2 Off-Site Access

1. New striping should extend from the stop bar at Osuna Rd. to include:
  - a. Double yellow striping to designate the left-turn lane extending to the first driveway.
  - b. Pavement arrows on Gulton Ct. should be refreshed to designate left and right-turn lanes.
2. The WBL turn lane on Osuna to Gulton Ct. should be extended to a length of 250' plus transition.

## 8.0 SUMMARY OF FINDINGS

Key findings of this analysis are summarized as follows:

1. Site-generated traffic is not expected to cause significant, adverse impacts to the adjacent roadway network including the traffic signalized intersections along on Osuna Rd.
2. Adverse neighborhood impacts relative to idling and queuing traffic at the school site would not be expected to occur. Furthermore, the site is consistent with existing pedestrian, bicycle, and transit facilities.
3. Some traffic queuing may occur for westbound left turns on Osuna Rd. approaching Gulton Ct. as well as northbound traffic on Gulton Ct.
4. A traffic signal warrant study (TSWS) of the Osuna/Gulton intersection met certain warranting criteria but would not meet the 1000' minimum spacing criteria for signalization.

## 9.0 RECOMMENDATIONS & MITIGATION MEASURES

This analysis has demonstrated that significant detrimental traffic impacts associated with the proposed charter middle/high school are not expected to occur on the adjacent transportation system. The following recommendations are offered concerning on- and off-site access modifications.

### 9.1 On-Site Access Driveway

1. The existing concrete drivepad should be maintained and modified as follows:
  - a. Provide lane striping to designate a 2-lane approach in the southbound direction, consisting of a solid white stripe between lanes and a solid yellow line on the left.
  - b. Provide directional lane arrows to designate right- and left-turn lanes.
  - c. Install signs directing traffic to parking and drop-off areas.
2. Widen the driveway to include an egress lane for exiting traffic.
3. Provide a channelization island between ingress and egress to separate inbound and outbound traffic.
4. The design vehicle should be a school bus.
5. Provide pavement markings at the entrance to direct traffic with:
  - a. Stop bar for eastbound and westbound traffic in the main east-west drive aisle.
  - b. Center striping to delineate directional traffic.
  - c. Directional pavement arrows.
  - d. A crosswalk from the sidewalk at the front of the building to the existing sidewalk on Gulton Ct. and the addition of an accessible ramp in front of the building.
  - e. Signs to direct traffic to the respective areas including bus drop-off, student parking, parent drop-off, staff, and visitor parking.

### 9.2 Off-Site Roadway Improvements

1. Revise pavement markings on Gulton Ct. at Osuna Rd. to include:
  - a. Double yellow striping to designate the left-turn lane extending to the return of the first driveway.
  - b. Solid white lane to delineate left- and right-turn lanes.
  - c. Pavement arrows to designate left and right-turn lanes.
  - d. Restripe existing stop bar.

- 
2. Extended the westbound left turn lane (WBL) on Osuna to Gulton Ct. to a length of 250' plus transition. Existing infrastructure that will require adjustments and/or relocation include:
    - a. Manhole to be lowered and curbing routed around it.
    - b. Landscaping and possibly irrigation lines.
    - c. Traffic signal interconnection, protect in place
    - d. Other utilities if present

### **9.3 *Traffic Management Considerations***

1. The use of parent and student carpools should be encouraged.
2. It may be beneficial to reducing traffic peaks if high and middle school start times could be staggered.
3. Apprise bus drivers of the AM peak conditions on Osuna Rd. at Gulton Ct. that may lead to long delays, and exiting to the east may be preferable.
4. Staff and students may be encouraged to utilize existing transit route 141 to the school site.

## APPENDIX A

### Traffic Scoping Requirements

# City of Albuquerque

Planning Department  
Development Review Services Division

## Traffic Scoping Form (REV 07/2020)

**Project Title:** Explore Academy Site and Building Improvements

Building Permit #: \_\_\_\_\_ Hydrology File #: \_\_\_\_\_

Zone Atlas Page: E-17 DRB#: \_\_\_\_\_ EPC#: \_\_\_\_\_ Work Order#: \_\_\_\_\_

Legal Description: 3-C A REPLAT LOT 3 INTERSTATE INDUSTRIAL TRACT UNIT II

Development Street Address: 6600 Gulton Court NE, Albuquerque, NM 87109

**Applicant:** Explore Academy c/o Dekker/Perich/Sabatini Contact: Cindy Terry

Address: 7601 Jefferson NE, Suite 100

Phone#: 505-761-9700 Fax#: \_\_\_\_\_

E-mail: cindyt@dpsdesign.org

### **Development Information**

Build out/Implementation Year: 2020 Current/Proposed Zoning: NR-BP

Project Type: New: ( ) Change of Use: (X) Same Use/Unchanged: ( ) Same Use/Increased Activity: ( )

Proposed Use (mark all that apply): Residential: ( ) Office: ( ) Retail: ( ) Mixed-Use: ( ) Charter School

Describe development and Uses:

Existing industrial warehouse being transformed to charter school for grades 6-12. Interior renovation and site improvements for new use, and accommodations for future addition of gymnasium.

Days and Hours of Operation (if known): M-F, 7:00 am - 5:00 pm with some after-hours usage.

### **Facility**

Building Size (sq. ft.): Renovation: 80,323 sf; Future Gym Expansion: 16,450 sf

Number of Residential Units: \_\_\_\_\_

Number of Commercial Units: \_\_\_\_\_

### **Traffic Considerations**

ITE Trip Generation Land Use Code LU522 (Mid. Sch.) & LU530 (High Sch.), up to 1,200 students

Expected Number of Daily Visitors/Patrons (if known): \*2,500

Expected Number of Employees (if known): \*

Expected Number of Delivery Trucks/Buses per Day (if known): \*

Trip Generations during PM/AM Peak Hour (if known): \*660 AM, 186 PM

Driveway(s) Located on: Gulton Ct.

Adjacent Roadway(s) Posted Speed: Street Name Osuna Rd \_\_\_\_\_ Posted Speed 45 \_\_\_\_\_  
Street Name \_\_\_\_\_ Posted Speed \_\_\_\_\_

\* If these values are not known, assumptions will be made by City staff. Depending on the assumptions, a full TIS may be required

### Roadway Information (adjacent to site)

Comprehensive Plan Corridor Designation/Functional Classification: Principal Arterial  
(arterial, collector, local, main street)

Comprehensive Plan Center Designation: N/A  
(urban center, employment center, activity center)

Jurisdiction of roadway (NMDOT, City, County): City AM: 0.55EB, 0.43WB

Adjacent Roadway(s) Traffic Volume: 27,550 (2019) Volume-to-Capacity Ratio (v/c): PM: 0.54EB, 0.70WB  
(if applicable)

Adjacent Transit Service(s): ABQ Ride Route 141 Nearest Transit Stop(s): Gulton Ct.

Is site within 660 feet of Premium Transit?: No

Current/Proposed Bicycle Infrastructure: Bike lanes on Osuna, trail along NDC at south boundary of site  
(bike lanes, trails)

Current/Proposed Sidewalk Infrastructure: Existing 6' SW on Gulton Ct. west side to site

### Relevant Web-sites for Filling out Roadway Information:

**City GIS Information:** <http://www.cabq.gov/gis/advanced-map-viewer>

**Comprehensive Plan Corridor/Designation:** <https://abc-zone.com/document/abc-comp-plan-chapter-5-land-use> (map after Page 5-5)

**Road Corridor Classification:** <https://www.mrcog-nm.gov/DocumentCenter/View/1920/Long-Range-Roadway-System-LRRS-PDF?bidId=>

**Traffic Volume and V/C Ratio:** <https://www.mrcog-nm.gov/285/Traffic-Counts> and <https://public.mrcog-nm.gov/taqa/>

**Bikeways:** [http://documents.cabq.gov/planning/adopted-longrange-plans/BTFP/Final/BTFP%20FINAL\\_Jun25.pdf](http://documents.cabq.gov/planning/adopted-longrange-plans/BTFP/Final/BTFP%20FINAL_Jun25.pdf) (Map Pages 75 to 81)

### TIS Determination

**Note:** Changes made to development proposals / assumptions, from the information provided above, will result in a new TIS determination.

**Traffic Impact Study (TIS) Required:** Yes  No

Thresholds Met? Yes  No

Mitigating Reasons for Not Requiring TIS: Previously Studied:

Notes:

 M. P. E.

9/2/2020

**Submittal**

The Scoping Form must be submitted as part of any building permit application, DRB application, or EPC application. See the Development Process Manual Chapter 7.4 for additional information.

Submit by email to [plndrs@cabq.gov](mailto:plndrs@cabq.gov) and to the City Traffic Engineer [mgrush@cabq.gov](mailto:mgrush@cabq.gov). Call 924-3362 for information.

**Site Plan/Traffic Scoping Checklist**

Site plan, building size in sq. ft. (show new, existing, remodel), to include the following items as applicable:

1. Access -- location and width of driveways
2. Sidewalks (Check DPM and IDO for sidewalk requirements. Also, Centers have wider sidewalk requirements.)
3. Bike Lanes (check for designated bike routes, long range bikeway system) ([check MRCOG Bikeways and Trails in the 2040 MTP map](#))
4. Location of nearby multi-use trails, if applicable ([check MRCOG Bikeways and Trails in the 2040 MTP map](#))
5. Location of nearby transit stops, transit stop amenities (eg. bench, shelter). Note if site is within 660 feet of premium transit.
6. Adjacent roadway(s) configuration (number of lanes, lane widths, turn bays, medians, etc.)
7. Distance from access point(s) to nearest adjacent driveways/intersections.
8. Note if site is within a Center and more specifically if it is within an Urban Center.
9. Note if site is adjacent to a Main Street.
10. Identify traffic volumes on adjacent roadway per MRCOG information. If site generates more than 100 vehicles per hour, identify volume to capacity (v/c) ratio on this form.

## **SCOPE OF TRAFFIC IMPACT STUDY (TIS)**

**TO:** Name  
Organization  
Address  
City, State, Zip

**MEETING DATE:** September 3, 2020

**ATTENDEES:** Matthew Grush, P.E., PTOE, COA Transportation Development Review;  
Timothy Simmons, P.E., PTOE, Civil Transformations Inc.

**PROJECT:** Explore Academy, Zone Atlas #E-17

**REQUESTED CITY ACTION:**  Zone Change of Use  Site Development Plan

Subdivision  Building Permit  Sector Plan  Sector Plan Amendment

Curb Cut Permit  Conditional Use  Annexation  Site Plan Amendment

**ASSOCIATED APPLICATION:** Charter school (see attached Traffic Scoping Form).

### **SCOPE OF REPORT:**

The Traffic Impact Study should follow the standard report format, which is outlined in the DPM. The following supplemental information is provided for the preparation of this specific study.

1. Trip Generation - Use Trip Generation Manual, 10th Edition. Trips to be distributed based on E-W directional distribution of Osuna Rd. as it is the only access.

2. Appropriate study area:

Signalized Intersections;

- a. Osuna/Chappell
- b. Osuna/Academy Parkway
- c. Osuna/Jefferson

Unsignalized Intersections;

- a. Osuna/Gulton Ct. – plus signal warrant analysis
- b. Osuna/Commercial Drive1
- c. Gulton/Commercial Drive 2

Driveway Intersections: all site drives (*n.a., site currently vacant*).

3. Intersection turning movement counts

Study Time – 7-9 a.m. peak hour, 4-6 p.m. peak hour

Consultant to provide for all intersections listed above.

4. Type of intersection progression and factors to be used.

Type III arrival type (see "Highway Capacity Manual, current edition" or equivalent as approved by staff). ~~Unless otherwise justified~~, peak hour factors and % heavy commercial

should be taken directly from the MRCOG turning movement data provided or as calculated from current count data by consultant.

5. Boundaries of area to be used for trip distribution – see Item 1.
6. Basis for trip distribution – see Item 1.
7. Traffic Assignment. Logical routing on the major street system – see Item 1.
8. Proposed developments which have been approved but not constructed that are to be included in the analyses. Projects in the area include: *none identified*.
  - a. Project 1 – Location (DRB # or Hyd #)
  - b. Project 2 – Location (DRB # or Hyd #)
9. Method of intersection capacity analysis - operational using *Synchro10*, output reported in HCM 6th Ed. format.  
Implementation Year: 2021
10. Traffic conditions for analysis:
  - a. Existing analysis  yes  no - year (2020);
  - b. Phase implementation year(s) without proposed development – 2021
  - c. Phase implementation year(s) with proposed development – 2021
  - d. Project completion year without proposed development – 2031
  - e. Project completion year with proposed development – 2031
  - f. Other – n.a.
11. Background traffic growth.  
Method: use 10-year historical growth based on standard data from the MRCOG Traffic Flow Maps. Minimum growth rate to be used is 1/2%.
12. Planned (programmed) traffic improvements.  
List planned CIP improvements in study area and projected project implementation year: *n.a., none identified*.
13. Items to be included in the study:
  - a. Intersection analysis.
  - b. Signal warrant analysis of Osuna/Gulton Ct.
  - c. Arterial LOS analysis;
  - d. Recommended street, intersection and signal improvements.
  - e. Site design features such as turning lanes, median cuts, queuing requirements and site circulation, including driveway ~~signalization~~ channelization and visibility.
  - f. Transportation system impacts.
  - g. Other mitigating measures.
  - h. Accident analyses  yes  no; Location(s): Osuna Rd. @ Gulton Ct. (3 yr.)
  - i. Weaving analyses  yes  no; Location(s):
14. Other:

**SUBMITTAL REQUIREMENTS:**

1. Number of copies of report required
  - a. 1 paper copy
  - b. 1 digital copy
2. Submittal Fee – \$1300 for up to 3 reviews

The Traffic Impact Study for this development proposal, project name, shall be performed in accordance with the above criteria. If there are any questions regarding the above items, please contact me at 924-3991.

10/20/2020

**Additional Info for NIA:**

Due to the request for access for a **new school**, and Bill No. O-13-61, a Neighborhood Impact Assessment (NIA) needs to be prepared. The required information for the NIA is shown below in the scope of report. Refer to Bill No. O-13-61 for additional criteria.

1. NIA Requirements – The following sections need to be included to satisfy the NIA ordinance requirements.
  - a. Baseline Community Data – identifying existing conditions with respect to adjacent land uses, traffic patterns, traffic turning movements and volumes, nearby multimodal transportation options, area pedestrian movements, and any other relevant information as determined
  - b. Analysis of the neighborhood impacts, including but not limited to:
    - 1) Impacts on pedestrian and bicycle circulation, and pedestrian and bicycle routes
    - 2) Automobile and pedestrian conflict points
    - 3) Noise and air quality impacts resulting from stacking of idling vehicles or vehicle circulation
    - 4) Consistency with existing or planned transit routes and stops
    - 5) Other potential impacts as determined

## APPENDIX B

### Existing & Projected Traffic Data

## **ABQ RIDE Ridership Statistics by Route**

### **Fiscal Year 2018 (July 2017 through June 2018)**

#### **What You Should Know:**

ABQ RIDE tracks route ridership through the use of a “farebox”; each time someone boards a bus an appropriate farebox key is activated by the bus driver or automatically by the farebox. In the accompanying tables, one table shows total ridership by route by transit service type. In a second set of tables, ridership information is combined with schedule information to show the number of boardings per in-service hour, by route, by time of day, and by service type.

The routes are categorized by route type in each table: Rapid Ride routes, Local all-day routes, and Commuter routes (routes that operate only during peak morning and evening commute hours and in the peak commuting direction).

- Routes are shown in order by overall ridership, from highest to lowest.
- Boardings are the number of times people get on a bus – commonly called “ridership.” Five people boarding a bus = five boardings.
- An “in-service hour” is one hour that an individual bus is operating in service for people to ride. If two buses are used on a route for an hour each, whether at the same time or at different times, that is two in-service hours.
- Boardings per in-service hour are the total boardings divided by the total in-service hours over the course of a specified time period.

#### **Why these numbers matter:**

Total ridership by route tells us how heavily each route is used and is useful as an overall gauge of how much benefit the route provides to the community. But it does not take into account the number of in-service hours operated on each route. If a route does not operate many in-service hours, its ridership will naturally be lower than a route that operates a lot of in-service hours.

Boardings per bus per hour (in service) measures both ridership and how much service is provided on a route – basically how “busy” the route is per day.

### **Why measure by time of day?**

Transit ridership varies according to the time of day, just as roads are less used late at night. By doing this, we are able to identify routes that may need more service at specific times of day or see which routes are used at peak commute times and used less at other times. Occasionally, certain times of day will be less productive but are considered important because they allow bus riders to use the bus at other times of the day. For example, someone who works in the evening may go to work in the afternoon peak time and return at night; if less productive evening service were eliminated, that person wouldn't be able to ride the bus at all resulting in a loss of both evening and afternoon ridership.

### **What are other important things to consider?**

A route with low productivity might be important to maintain if it's the only transportation in an area for people without a vehicle. Something else to consider is boardings per hour compared with the length of passengers' trips. For example a route that has many passengers who ride all the way from one end of the route to the other might not have very high boardings per hour, but it might be considered crowded compared to other routes because there are infrequent de-boardings from the buses until arrival at the primary destinations – everyone's on the bus at the same time.

### **Why concentrate on these statistics if other factors are important, too?**

ABQ RIDE considers other factors in making any decisions about service changes on a case-by-case basis and may develop other system-wide statistics in the future if needed. However, total ridership and ridership per in-service hour are two measures that are essential statistics to consider in all cases. The underlying data is readily available, and they provide basic indications of the value of the service to the community and the value generated per unit of service provided.

**ABQ Ride - Ridership Productivity by Route by Time of Day**  
**Fiscal Year 2018 Ridership**

**Weekday Boardings Per Bus Per Hour (In-Service)\***

\*Also known as Fixed-Route Unlinked Passenger Trips Per Vehicle Revenue Hour.

# TRANSPORTATION ROUTES

## EXPLORE ACADEMY 2019-2020

Updated 3.2.20

If you notice issues with unsafe driving, incorrect stop locations, or any other bus issue, you can call Herrera Buses directly at (505) 242-1108. You can also email [transportation@exploreacademy.org](mailto:transportation@exploreacademy.org) with questions.

The times below indicate the *departure time* for the bus at each given location. Students should arrive a few minutes earlier. Times and locations are subject to change based on approval and oversight from the chartered bus company.

Remember that in order to ride the bus, you MUST submit a **bus permission form**. The link is available to parents of enrolled students.

For a route map, see [here](#).

### MONDAY THROUGH THURSDAY

**West**

**Route One (Bus #1) : Rio Rancho** - Make sure you watch for Explore Academy on the bus to avoid APS buses that have stops in similar places/times

1. [6:38am] [4:08pm] Havasu Park – Near King and Unser
2. [6:48am] [3:58pm] French Funerals – Pine/Unser
3. [6:57am] [3:49pm] Rio Rancho Premiere Cinemas – Southern/Unser (1000 Premiere Pkwy)
4. [7:02am] [3:44pm] Cabezon Park – Cabezon Blvd
5. [7:08am] [3:38pm] Walgreens - McMahon and Unser
6. [7:22am] [3:31pm] Methodist Church – 4700 Paradise Blvd
7. [7:40am] [3:11pm] Explore Academy – 5100 Masthead

**West**

**Route Two (Bus #2) : Rio Rancho / North Valley**

1. [6:39am] [4:19pm] Lowe's – Northern and Loma Colorado
2. [6:48am] [4:10pm] Eagle Ridge Gymnastics – Quantum off Northern (581 Quantum)
3. [6:54am] [4:04pm] Bank of Albuquerque – Southern / NM 528 (3901 Southern)
4. [7:02am] [3:56pm] Haynes Park - NM 528 and 19th
5. [7:08am] [3:50pm] Salida del Sol Park - 7 Bar Loop Rd and Driftwood Dr
6. [7:12am] [3:46pm] Church (LDS) - Seven Bar and Ellison
7. [7:23am] [3:35pm] Northwest Animal Clinic – 1000 Alameda
8. [7:29am] [3:29pm] Nativity Church AM/ Ice Machine Parking Lot PM – Alameda/4<sup>th</sup> St

9. [7:40am] [3:11pm] Explore Academy - 5100 Masthead

## West

### Route Three (Bus #3) : Ventana Ranch

1. [6:41am] [4:13pm] Paradise Hills Park – Paradise/Chaparral
2. [6:47am] [4:07pm] CNM Westside – Universe S of McMahon
3. [6:53am] [4:01pm] Ventana Ranch Community Center – Rainbow/Ventana Village
4. [6:58am] [3:56pm] Church -LDS – Woodmont/Rainbow
5. [7:02am] [3:52pm] Park – Groundsel and Vista Terraza
6. [7:12am] [3:42pm] Shopping Center - Taylor Ranch Rd and Homestead Circle
7. [7:25am] [3:29pm] Rudolfo Anaya NV Public Library - 2nd St S of Los Ranchos
8. [7:40am] [3:11pm] Explore Academy - 5100 Masthead

## West

### Route Four (Bus #4) : Northwest Albuquerque

1. [6:36am] [4:22pm] Sundoro South Park - Endee Rd and Ekarma Dr
2. [6:44am] [4:16pm] Walgreens - 2200 Unser - Unser and Vista Oriente
3. [6:51am] [4:09pm] Ladera Golf Course - Ladera and Sequoia
4. [6:55am] [4:05pm] Our Savior Lutheran Church - Atrisco and Milne (4301 Atrisco)
5. [7:03am] [3:57pm] Mesa View Methodist Church - Taylor Ranch and Montano
6. [7:15am] [3:43pm] Lowe's Market - 4th and Griegos (4701 4th St NW)
7. [7:20am] [3:37pm] Smith's - 4th St and Solar (6125 4th St NW)
8. [-:--am] [3:32pm] Montano Transit Center (PM ONLY) – Montano E of 2<sup>nd</sup> St
9. [7:23am] [3:27pm] Sun Valley Commercial Center - (starting 3/9) 320 Osuna
10. [7:26am] [3:25pm] Vista Del Norte Park - 1005 Osuna
11. [7:40am] [3:11pm] Explore Academy - 5100 Masthead

## East

### Route Five (Bus #5) : South Valley

1. [6:25am] [4:21pm] Library - Central and Unser (8081 Central Ave)
2. [6:30am] [4:15pm] Southwest Self Storage – 700 98<sup>th</sup> St
3. [6:37am] [4:08pm] Vista Del Sol (Parking Lot) – Blake and Unser
4. [6:43am] [4:02pm] Iglesia de Cristo Elim – Arenal west of Coors
5. [6:49am] [3:56pm] Smith's – Arenal and Goff (1601 Arenal)
6. [6:54am] [3:51pm] Near the Westside Community Center – 1250 Isleta
7. [7:00am] [3:45pm] Shopping Center – Bridge and Goff (SW Corner)
8. [7:06am] [3:39pm] Atrisco Valley Little League Park – Atrisco and Osage

9. [7:11am] [3:34pm] Little Park St – Atrisco and Little Park St
10. [7:40am] [3:11pm] Explore Academy – 5100 Masthead

## **East**

### Route Six (Bus #6) : Southeast Albuquerque

1. [6:30am] [4:28pm] Lowe's Neighborhood Market – 701 11th St NW
2. [6:37am] [4:21pm] Lowe's – 12<sup>th</sup> St and I-40 (2001 12th St)
3. [6:48am] [4:12pm] Altura Shopping Center - Carlisle and Constitution
4. [7:00am] [4:00pm] Marriott - Yale and Ross
5. [7:06am] [3:54pm] Ridge crest Church - Eastern and San Mateo
6. [7:11am] [3:49pm] Wells Fargo - Zuni and San Mateo
7. [7:16am] [3:44pm] ACE (am) / T-Mobile (pm) - Lomas and San Mateo
8. [7:22am] [3:38pm] Shopping Center - Cutler and San Mateo
9. [7:29am] [3:31pm] Shopping Center - San Mateo and Aztec
10. [7:40am] [3:11pm] Explore Academy - 5100 Masthead

## **East**

### Route Seven (Bus #7) : Northeast Albuquerque

1. [6:40am] [4:30pm] Arby's – Juan Tabo and Indian School (1751 Juan Tabo)
2. [6:47am] [4:23pm] Smith's – Montgomery and Tramway (4700 Tramway)
3. [6:55am] [4:15pm] Hinkle Family Fun Center – Tramway and Indian School
4. [6:59am] [4:10pm] Lomas Tramway Library – Lomas and Tramway
5. [7:07am] [4:00pm] IHOP – Central E of Eubank (10605 Eubank)
6. [7:16am] [3:48pm] Silva Lanes – Candelaria and Eubank
7. [7:25am] [3:37pm] Arroyo del Oso Park - Spain and Wyoming
8. [7:35am] [3:28pm] Trombino's Bistro - Academy and Seagull
9. [7:40am] [3:11pm] Explore Academy – 5100 Masthead

## **East**

### Route Eight (Bus #8) : Heights

1. [6:55am] [4:03pm] Church (Prince of Peace) - 12500 Carmel Ave
2. [7:02am] [3:56pm] High Desert Park - Academy E of Cortaderia
3. [7:07am] [3:51pm] Church LDS – Lowell and San Victorio (11750 San Victorio Ave NE)
4. [7:16am] [3:44pm] Hoffmantown Church – Harper and Ventura (8888 Harper)
5. [7:25am] [3:35pm] North Domingo Baca Park - Corona Ave Parking Lot

6. [7:33am] [3:27pm] **Grace Church** – San Antonio/Louisiana (6901 San Antonio)
7. [7:40am] [3:11pm] **Explore Academy** – 5100 Masthead

Project : Explore Academy

Open Date : 7/1/2021

Analysis Date : 11/18/2020

Note Type : Land Use  
Alternative : Alternative 1  
Phase : Opening Year  
Land Use : SCHOOLMID 1

Used Average Rates as Std. Dev. / Avg. was > 45% and no equations for peak of adj. street.

Note Type : Land Use  
Alternative : Alternative 1  
Phase : Opening Year  
Land Use : SCHOOLMID 1

Accounted for bused students by deducting bused students from total:  
-approx. 360 total bused  
-assumed 75% will be middle school students  
-75% (360) = 330 middle school students

Note Type : Land Use  
Alternative : Alternative 1  
Phase : Opening Year  
Land Use : SCHOOLHIGH 1

Used Average Rates as Std. Dev. / Avg. was > 45% and no equations for peak of adj. street.

Note Type : Land Use  
Alternative : Alternative 1  
Phase : Opening Year  
Land Use : SCHOOLHIGH 1

Accounted for bused students by deducting bused students from total:  
-approx. 360 total bused  
-assumed 25% will be high school students  
-25% (360) = 90 high school students bused & deducted from total
