To: 'David Soule'
Subject: F22-D002 (Sandia Area Federal Credit Union/Starbucks)

Importance: High

David,

I have reviewed the latest drainage submittal and still need to have the following comments addressed prior to approval:

1. If the temporary pond is now sized to handle the 100-year 10-day storm runoff, label the WSEL Elevation within the pond on the plan view.
2. On the actual grading and drainage plan view, label the first flush volume for each run of the storm chambers that corresponds with drainage write-up. Also, label the total volume provided by the storm chambers on the plan view that corresponds with the drainage write-up. (Provide this information directly under the label showing number of storm chambers for each run of the storm chambers.)
3. Label all pipe sizes on the plan. There are some short pipe runs especially from the that are missing pipe size call-outs.
4. Provide detail for the 10-foot by 6" emergency overflow from the temporary pond. List the elevations. (It would make sense that the above invert elevation within the pond is above the WSEL Elevation from the upstream pond when labeling it.)
5. On the water quality pond in the middle of the site, the top elevation of 49.25 is far lower that the adjacent curb cut elevation opening of 52.25 and other adjacent curb elevations. Revise as necessary.
6. On the water quality pond on the west side of the site, there are top of pond elevations of 46.5 shown where the adjacent sidewalk would be approximately 4 feet higher based on the adjacent curb flowline elevations, and the adjacent building is also approximately 4 feet higher. Revise as necessary.
7. There are new 18-inch sidewalk culverts called out on the plan near the water quality pond to the west that have no elevation information listed. Also, how does water drain from the other 18-inch sidewalk culvert to this one? Provide a couple more spot elevations for information.
8. When you mention the cross-lot drainage easements in the write-up, there is only one parcel. (?)

Requests for approvals of Site Development Plans and/or Subdivision Plats shall be accompanied by a drainage submittal. The particular nature, location, and scope to the proposed development defines the degree of drainage detail. One or more of the following levels of submittal may be required based on the following:

1. **Conceptual Grading and Drainage Plan:** Required for approval of Site Development Plans greater than five (5) acres and Sector Plans
2. **Drainage Plans:** Required for building permits, grading permits, paving permits and site plans less than five (5) acres
3. **Drainage Report:** Required for subdivision containing more than ten (10) lots or constituting five (5) acres or more
4. **Erosion and Sediment Control Plan:** Required for any new development and redevelopment site with 1-acre or more of land disturbing area, including project less than 1-acre than are part of a larger common plan of development

RIO GRANDE ENGINEERING OF NEW MEXICO, LLC

March 24, 2015

Ms. Jeanne Wolfenbarger, PE
Senior Engineer, Planning Department
Development Review
City of Albuquerque

**RE: Grading and Drainage Plan
F22-D002
11301 Montgomery**

Dear Ms. Wolfenbarger:

The purpose of this letter is to accompany the revised drainage submittal. The plan has been modified to address your written comments dated June 12 2015. The following is a response to your comments

1. We have added the first flush calculation to the hydraulic calculations in appendix A, We have shown roof and flow arrows. The entire flow passes thru the infiltrators and the outlet elevation provides the volume, as shown on the elevation-volume spread sheet located in appendix b
2. We have added flow arrows
3. We have not added elevations at the islands, we are not depressing the islands but allowing the water to pass thru and top the curb on the low side
4. We have added the spot elevations at the street and adjacent building
5. The plan has changed due to uncertainty with what the future lot will look like. Due to the slope and nature of our drainage solution. We do not want bare dirt areas to contribute to our infiltrator systems, therefore we have modified the plan to retain the entire 100-year, 10-day volume generated within that basin. We have shown that 30 infiltrators with invert at 39.5 will be a reasonable solution when it develops, we have added stub for that to occur. We have added rip rap at the flow concentrations
6. We have included a 11x17 basin map
7. We have added the elevation of the inlet and added an orifice plate detail
8. We have labeled the junction boxes and corrected the typo
9. Appendix B and C contain the volume calculations for each tank section as well as a summary based upon the elevations. The pond calculation spreadsheet is a stage-storage chart that was used for the pond routing volumes in the AHYMO
10. The discharge rate of 4.7 was the rate designated for the site on the initial development
11. We have labeled the number of chambers and included a modification to the detail for a single row

12. We have labeled the inlets and referenced the location of the structures on the calculation.
The type D inlet is provided only to provide adequate box to construct orifice control most flow will not enter that inlet, inlet D is designed for all flow so the capacity of the type D inlet is not relevant
13. The dumpster was revised, and the spot elevations corrected
14. Note #1 on right hand side of sheet notes all elevations are flow lines
15. We have corrected the AHYMO for 15 minute increments and corrected the input so there is not the phantom flow
16. As discussed in the meeting the asphalt warps at that area and gutter not needed

Should you have any questions regarding this submittal, please do not hesitate to call me.

Sincerely,

David Soule, PE

**RE: Sandia Area Credit Union and Starbucks, 11301 Montgomery Boulevard
Grading and Drainage Plan
Engineer's Stamp Date 6-01-2015 (File: F22-D002)**

Dear Mr. Soule:

Based upon the information provided in your submittal received 6-01-15, the above referenced plan cannot be approved for Building Permit until the following comments are addressed:

PO Box 1293

Albuquerque

New Mexico 87103

www.cabq.gov

- 1) Show first flush calculation within the report. Show roof drain locations, and explain how first flush is being managed especially with regard to impervious facilities on the east side of the site. It appears as though an additional first flush pond may be needed to handle first flush from the building on the southeast corner of the site with added curb cuts to allow drainage into the pond from the drive-thru area. Label all first flush ponds as "first flush" along with volume information.
- 2) Show flow arrows and lot lines on the grading and drainage plan.
- 3) What are the curb cuts in the medians to the north of the Starbucks for? If a first flush pond was intended here, label it, and provide elevation and volume information. Provide curb flowline elevations at all curb openings.
- 4) Show existing curb elevations on Cairo at the access point, and show existing elevations along west property line to show how these existing elevations relate to new elevations. On the north side of the site, provide elevations for the existing building that abuts the property line, and ensure that the new contours tie into the correct existing contours.
- 5) Discuss what the temporary pond is for. What is the sizing of it based on since the 100-year 6-hour volume is much higher for Basin A? Discuss what the plans are for Basin A since an impervious area of 0.988 acres was given in the computations.

Also provide riprap within the proposed swale to the bottom of the pond from the east to prevent erosion.

- 6) Provide a larger basin map. An 11x17 would be easier to read along with upsizing of the text for the labeling of the basins.
- 7) Label grate elevation for the new Type "D" inlet. Provide a detail showing all elevation information for inlet including information for orifice. Show how this inlet ties into the storm chambers with pipe invert and size information.
- 8) Label size of Nyloplat junction boxes and the pipes that tie into the storm chambers. Between the high invert elevation of 48.00 for discharge from the site and the high invert elevations of the connecting nyloplat junction boxes, how does the entire system manage to drain, given that the top of the storm chambers are set at elevation 42.50??
- 9) For the AHYMO Run, show what the pond routing information is based on. Provide computations based on orifice for which the elevations given match what is on the plan.
- 10) Discuss what the downstream capacity of 4.7 cfs for the existing outlet is based on. The proposed discharge flow should match downstream capacity.
- 11) On the proposed layout for the storm chambers with the report, label the number of chambers used and the volume of each chamber. Then provide the overall volume for the chamber on this sheet and on the plan view. Provide a cross-sectional view of the storm chamber similar to what is shown on the report showing a detail of the stone and fabric surrounding it if it is just for one row. (It should be similar to the cross-section provided in the report for the multiple chambers.)
- 12) In the report, explain location of infrastructure for which capacities calculations were provided. Where is there a channel? What are the "Volume Computations" based on? Also include capacity calculations for the sidewalk culvert and for the Type "D" inlet within the "Inlet Capacity Calculations". On the plan view for the grading and drainage plan, label the discharge flow from the site, and label the flow captured at each of the inlets.
- 13) North of the credit union building, there is a curb cut elevation at an elevation of 49.40 which should be lowered if the intent is to drain to the "water quality pond". Also, the nearby "water quality" pond is labeled at an elevation of 46.50 for the top elevation. Correct discrepancy. Also, provide additional elevation information for the corners of the trash receptacle area.
- 14) If the proposed elevations shown are at flowline, provide general note to this effect.
- 15) Show AHYMO Run in 10-minute increments until about 90% of the pond has drained to demonstrate a more clear relationship between inflow and outflow. How does the pond have a constant outflow of 1.68 cfs for a time period of more than 8 days when it peaks at 1.75 hours??

16) Provide a small valley gutter from the sidewalk culvert from Starbucks across the accessway to prevent flow from discharging out the accessway.

If you have any questions, you can contact me at 924-3924.

Sincerely,

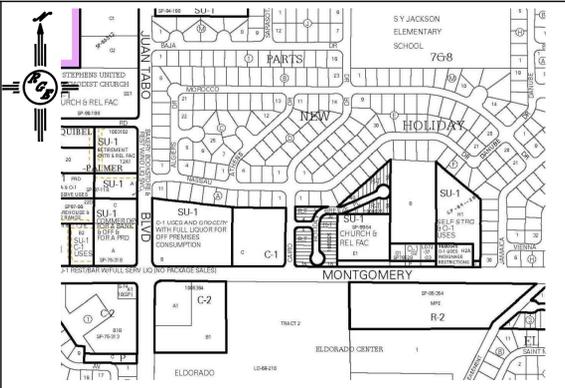

Jeanne Wolfenbarger, P.E.

Site Grading and Drainage Plan

PURPOSE

The purpose of this report is to provide the Drainage Management Plan for the redevelopment of a 3 acre property located at 11301 Montgomery. This plan was prepared in accordance with the City of Albuquerque design regulations, utilizing the City of Albuquerque's Development Process Manual drainage guidelines. This report will demonstrate that the grading does not adversely affect the surrounding properties, nor the upstream or downstream facilities.

INTRODUCTION

The subject of this report, as shown on the Exhibit A, is a 3 -acre parcel of land located on the north side of Montgomery between Cairo and Juan Tabo NE. The legal description of this site is tract c1,c2,c3 of the New Holiday Park subdivision. As shown on FIRM map35013C0144G, the entire site is located within Flood Zone X. The site has been fully developed in the past and this is a redevelopment of this site.

The site was designed and constructed with a buried retention tank and metered outflow. The outflow was limited to the 100-year 6-hour discharge rate assuming 100% native. The proposed development shall match existing patterns and limit the flow to similar rate. In addition the site shall retain onsite the first flush volume required.

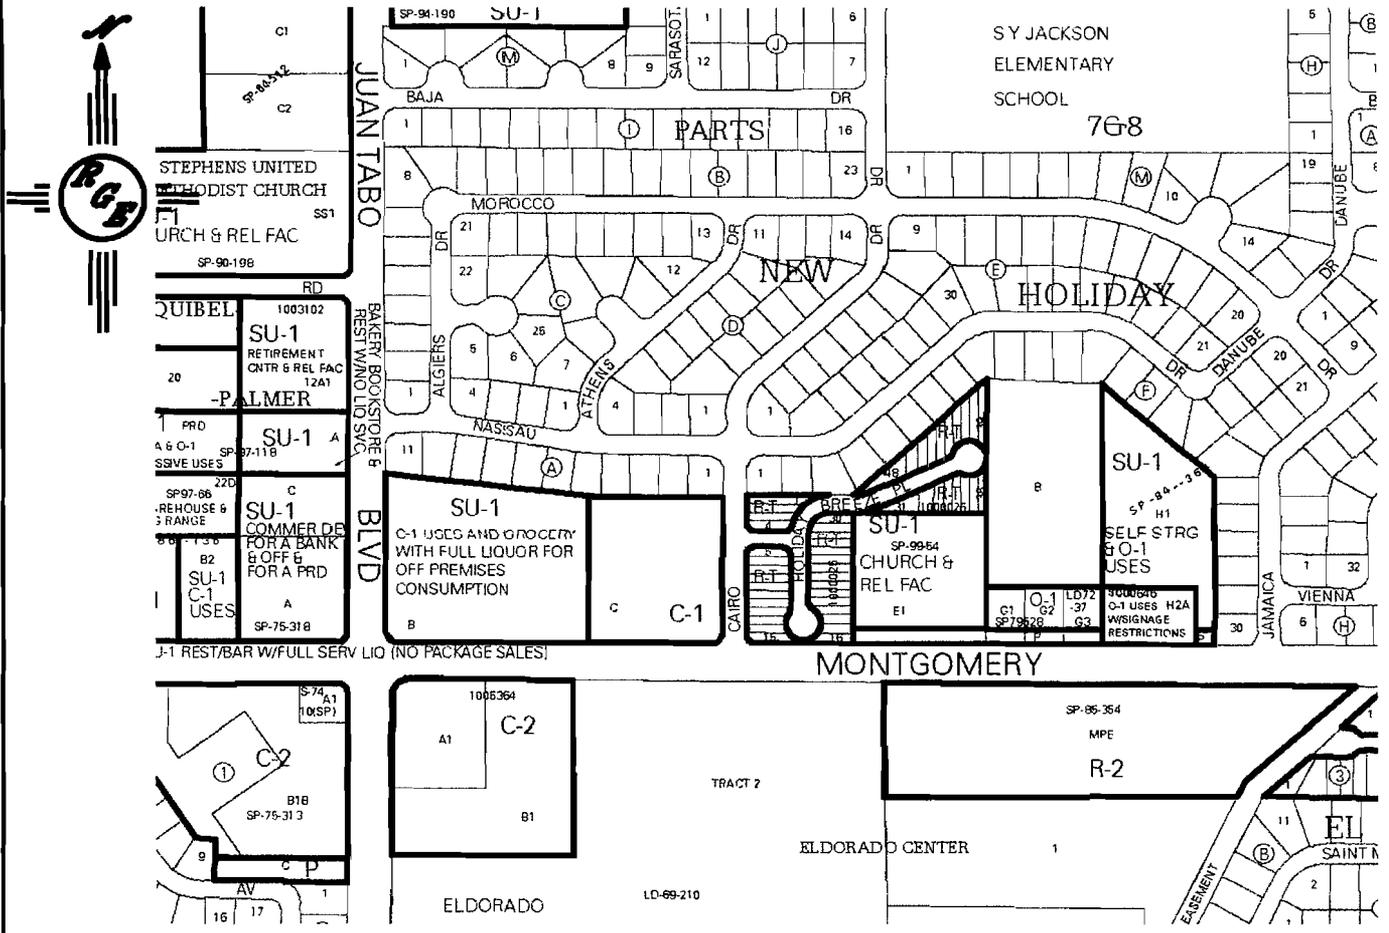

EXISTING CONDITIONS

The site currently is graded per the grading plan F22-d2. The site drains to a single type d inlet. This inlet is connected to a large underground concrete vault. The outlet is sized such that the flow will not exceed 4.7 cfs.

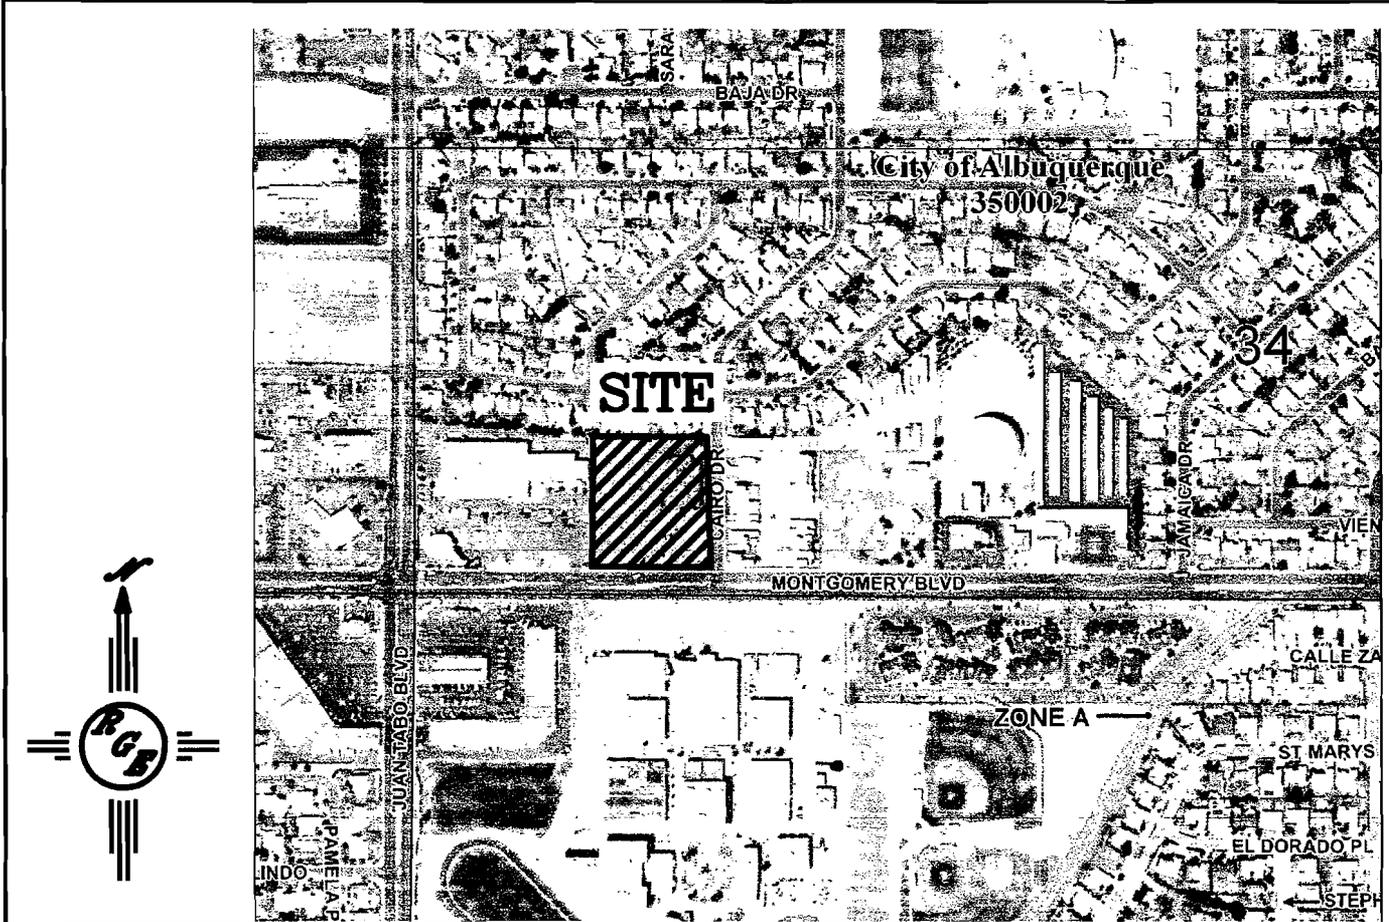

PROPOSED CONDITIONS

The proposed improvements consist of removal the replacement of the existing pavement and the construction of two new buildings and one parcel for future development. The lots have cross lot drainage easements and will free discharge to two inlets that are connected to an underground infiltration chamber. The site contains 5 onsite sub basins, which were partitioned to verify the capacity of each collection and conveyance structure. Basins E and D discharge 4.69 cfs to a type C inlet at the southwest corner of the site. Basin B and C discharge 3.95 cfs to a type C inlet located at the west property line. Basin A is a future development and will retain its developed flow onsite of 5600 cubic feet, with and emergency overflow. Once the flows are captured they are stored in the infiltration system and metered out by a 9" orifice plate on the existing storm drain stub. The system was modeled using the AHYMO computer program. The site was modeled for the interim condition and ultimate condition. As shown in appendix B, in the interim condition the site will discharge 3.98 cfs to the existing Montgomery storm system. In the ultimate condition the site will discharge 5.28 cfs which exceeds the existing by .58 cfs, which when the development occurs can be reduced by additional throttling of that discharge. The ultimate condition model located in appendix c was included as a guide for the future development. The interim condition which we are constructing discharges less than existing

The first flush volume is captured within the infiltrator tanks, the outlet of tank 1 is set at 40, which will retain the first 2379 cubic feet which is more than the 1922 cubic feet required. When the rear pad is developed the first flush volume will be retained by setting the outlet elevation of the tanks. A copy of the site hydrology and capacity calculations is included in appendix A. The tank volumes and stage storage spread sheet as well as the AHYMO model is included in appendix B for the proposed and ultimate conditions are in appendix C. The infiltrator details are located in appendix C.

VICINITY MAP: F-22-Z

FIRM MAP: 35001C0144G

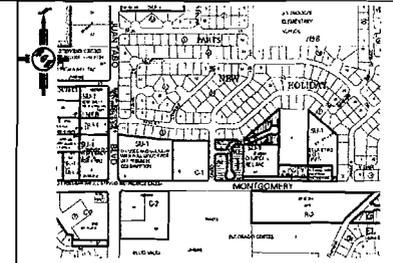

SUMMARY AND RECOMMENDATIONS

This project is a redevelopment of an existing site. The redevelopment is consistent with the approved grading plan. The proposed site will discharge less than existing and retain the first flush volume. The development will not affect the upstream or downstream properties or infrastructure. Since the effected area site encompasses more than 1 acre, a NPDES permit will be required prior to any construction activity.

VOLUME CALCULATIONS

for Pond Retig

ACTUAL ELEV.	DEPTH (FT)	VOLUME (AC-FT)	Q (CFS)
39	0	0.030	0.01
40	0.75	0.080	1.30
40.5	1.25	0.108	1.99
41	1.75	0.135	2.49
41.5	2.25	0.161	2.91
42	2.75	0.186	3.28
42.5	3.25	0.209	3.61
43	3.75	0.230	3.91
43.5	4.25	0.248	4.19
44	4.75	0.262	4.45
44.5	5.25	0.273	4.70
45	5.75	0.282	4.93
45.5	6.25	0.288	5.16
46	6.75	0.296	5.37

Orifice Equation

$$Q = CA \text{ SQRT}(2gH)$$

C = 0.6

Diameter (in) = 9

Area (ft²) = 0.44178647

g = 32.2

H (Ft) = Depth of water above center of orifice

Q (CFS) = Flow

PROJECT NO	84281

SAFCU
ALBUQUERQUE, NM

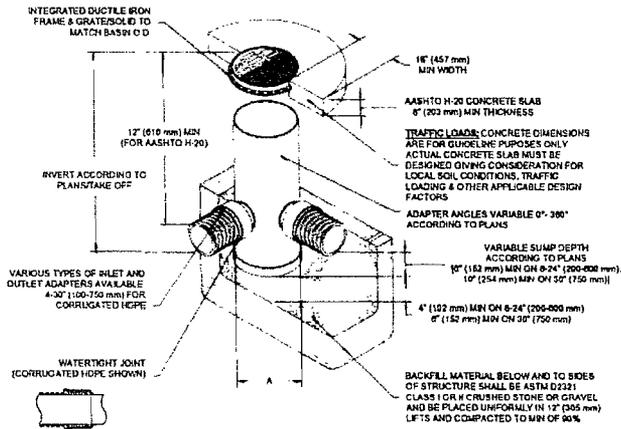

STORMWATER CHAMBER SPECIFICATIONS

1. CHAMBERS SHALL BE STORMTECH MC-4500 OR APPROVED EQUAL
2. CHAMBERS SHALL BE MANUFACTURED FROM VIRGIN IMPACT-MODIFIED POLYPROPYLENE COPOLYMERS
3. CHAMBER ROWS SHALL PROVIDE CONTINUOUS UNOBSTRUCTED INTERNAL SPACE WITH NO INTERNAL SUPPORT PANELS THAT WOULD IMPIDE FLOW OR LIMIT ACCESS FOR INSPECTION
4. THE STRUCTURAL DESIGN OF THE CHAMBERS, THE STRUCTURAL BACKFILL, AND THE INSTALLATION REQUIREMENTS SHALL ENSURE THAT THE LOAD FACTORS SPECIFIED IN THE AASHTO LRFD BRIDGE DESIGN SPECIFICATIONS, SECTION 12.12, ARE MET FOR 1) LONG-DURATION DEAD LOADS AND 2) SHORT-DURATION LIVE LOADS, BASED ON THE AASHTO DESIGN TRUCK WITH CONSIDERATION FOR IMPACT AND MULTIPLE VEHICLE PRESENCES
5. CHAMBERS SHALL MEET THE REQUIREMENTS OF ASTM F2416, "STANDARD SPECIFICATION FOR POLYPROPYLENE (PP) CORRUGATED WALL STORMWATER COLLECTION CHAMBERS"
6. CHAMBERS SHALL BE DESIGNED AND ALLOWABLE LOADS DETERMINED IN ACCORDANCE WITH ASTM F2787, "STANDARD PRACTICE FOR STRUCTURAL DESIGN OF THERMOPLASTIC CORRUGATED WALL STORMWATER COLLECTION CHAMBERS"
7. ONLY CHAMBERS THAT ARE APPROVED BY THE SITE DESIGN ENGINEER WILL BE ALLOWED. THE CHAMBER MANUFACTURER SHALL SUBMIT THE FOLLOWING UPON REQUEST TO THE SITE DESIGN ENGINEER FOR APPROVAL BEFORE DELIVERING CHAMBERS TO THE PROJECT SITE:
 - a. A STRUCTURAL EVALUATION SEALED BY A REGISTERED PROFESSIONAL ENGINEER THAT DEMONSTRATES THAT THE SAFETY FACTORS ARE GREATER THAN OR EQUAL TO 1.25 FOR DEAD LOAD AND 1.75 FOR LIVE LOAD. THE MINIMUM REQUIRED BY ASTM F2787 AND BY AASHTO FOR THERMOPLASTIC PIPE
 - b. A STRUCTURAL EVALUATION SEALED BY A REGISTERED PROFESSIONAL ENGINEER THAT DEMONSTRATES THAT THE LOAD FACTORS SPECIFIED IN THE AASHTO LRFD BRIDGE DESIGN SPECIFICATIONS, SECTION 12.12, ARE MET, THE 50 YEAR CREEP MODULUS DATA SPECIFIED IN ASTM F2416 MUST BE USED AS PART OF THE AASHTO STRUCTURAL EVALUATION TO VERIFY LONG-TERM PERFORMANCE
 - c. STRUCTURAL CROSS SECTION DETAIL ON WHICH THE STRUCTURAL EVALUATION IS BASED
8. CHAMBERS AND END CAPS SHALL BE PRODUCED AT AN ISO 9001 CERTIFIED MANUFACTURING FACILITY

IMPORTANT - NOTES FOR THE BIDDING AND INSTALLATION OF MC-4500 CHAMBER SYSTEM

1. STORMTECH MC-4500 CHAMBERS SHALL NOT BE INSTALLED UNTIL THE MANUFACTURER'S REPRESENTATIVE HAS COMPLETED A PRE-CONSTRUCTION MEETING WITH THE INSTALLERS
 2. STORMTECH MC-4500 CHAMBERS SHALL BE INSTALLED IN ACCORDANCE WITH THE "STORMTECH MC-3500/MC-4500 CONSTRUCTION GUIDE"
 3. CHAMBERS ARE NOT TO BE BACKFILLED WITH A DOZER OR EXCAVATOR SITUATED OVER THE CHAMBERS
 STORMTECH RECOMMENDS 2 BACKFILL METHODS:
 - STONESHOOTER LOCATED OFF THE CHAMBER BED
 - BACKFILL AIR ROWS ARE BUILT USING AN EXCAVATOR ON THE FOUNDATION STONE OR SUBGRADE
 - BACKFILL FROM OUTSIDE THE EXCAVATION USING A LONG BOOM WOE OR EXCAVATOR
 4. THE FOUNDATION STONE SHALL BE LEVELLED AND COMPACTED PRIOR TO PLACING CHAMBERS
 5. JOINTS BETWEEN CHAMBERS SHALL BE PROPERLY SEATED PRIOR TO PLACING STONE
 6. MAINTAIN MINIMUM 1" (25.4 mm) SPACING BETWEEN THE CHAMBER ROWS.
 7. INLET AND OUTLET MANIFOLDS MUST BE INSERTED A MINIMUM OF 12" (304.8 mm) INTO CHAMBER END CAPS
 8. EMBEDMENT STONE SURROUNDING CHAMBERS MUST BE A CLEAN, CRUSHED, ANGULAR STONE 3/4" (19.05 mm) MEETING THE AASHTO M443 DESIGNATION OF #3 DR #4
 9. STONE SHALL BE BROUGHT UP EVENLY AROUND CHAMBERS SO AS NOT TO DISTORT THE CHAMBER SHAPE. STONE DEPTHS SHOULD NEVER DIFFER BY MORE THAN 1/2" (12.7 mm) BETWEEN ADJACENT CHAMBER ROWS
 10. STONE MUST BE PLACED ON THE TOP CENTER OF THE CHAMBER TO ANCHOR THE CHAMBERS IN PLACE AND PRESERVE ROW SPACING
 11. ADS RECOMMENDS THE USE OF "FLEX STORM CATCH IT" INSERTS DURING CONSTRUCTION FOR ALL INLETS TO PROTECT THE SUBSURFACE STORMWATER MANAGEMENT SYSTEM FROM CONSTRUCTION SITE RUNOFF
- NOTES FOR CONSTRUCTION EQUIPMENT**
1. STORMTECH MC-4500 CHAMBERS SHALL BE INSTALLED IN ACCORDANCE WITH THE "STORMTECH MC-3500/MC-4500 CONSTRUCTION GUIDE"
 2. THE USE OF EQUIPMENT OVER MC-4500 CHAMBERS IS LIMITED:
 - NO EQUIPMENT IS ALLOWED ON BARE CHAMBERS
 - NO RUBBER Tired LOADER, DUMP TRUCK, OR EXCAVATORS ARE ALLOWED UNTIL PROPER FILL DEPTHS ARE REACHED IN ACCORDANCE WITH THE "STORMTECH MC-3500/MC-4500 CONSTRUCTION GUIDE"
 - WEIGHT LIMITS FOR CONSTRUCTION EQUIPMENT CAN BE FOUND IN THE "STORMTECH MC-3500/MC-4500 CONSTRUCTION GUIDE"
 3. FILL 30" (762 mm) OF STABILIZED COVER MATERIALS OVER THE CHAMBERS IS REQUIRED FOR DUMP TRUCK TRAVEL OR DUMPING
- USE OF A DOZER TO PUSH EMBEDMENT STONE BETWEEN THE ROWS OF CHAMBERS MAY CAUSE DAMAGE TO CHAMBERS AND IS NOT AN ACCEPTABLE BACKFILL METHOD. ANY CHAMBERS DAMAGED BY USING THE "DUMP AND PUSH" METHOD ARE NOT COVERED UNDER THE STORMTECH STANDARD WARRANTY
- CONTACT STORMTECH AT 1-888-892-7604 WITH ANY QUESTIONS ON INSTALLATION REQUIREMENTS OR WEIGHT LIMITS OR CONSTRUCTION EQUIPMENT

NYLOPLAST DRAIN BASIN
NTS

NOTES

1. 6-32" (160-750 mm) GRATE/SOLID COVERS SHALL BE DUCTILE IRON PER ASTM A538 GRADE 70-50-05
2. 12-30" (309-750 mm) FRAMES SHALL BE DUCTILE IRON PER ASTM A538 GRADE 70-50-05
3. DRAIN BASIN TO BE CUSTOM MANUFACTURED ACCORDING TO PLAN DETAILS
4. DRAINAGE CONNECTION STUB JOINT TIGHTNESS SHALL CONFORM TO ASTM D3212 FOR CORRUGATED HDPE (ADS & HANCON DUAL WALL) & SDR 35 PVC
5. FOR COMPLETE DESIGN AND PRODUCT INFORMATION: WWW.NYLOPLAST-US.COM
6. TO ORDER CALL: 800-821-8710
