Subject: RE: Sequoia Ct. minimum Curb and Gutter Grade

Sheldon,
I think it may be acceptable, but you have to show us street depth and that it doesn't go through private property on the east side of Sequoia Ct. You should have a profile for the entire street.

Curtis

Subject: Sequoia Ct. minimum Curb and Gutter Grade

Gentlemen, per our discussion yesterday, due to the extraordinary conditions that exist on Sequoia Court I requested that the minimum allowable slope for curb and gutter along the east side of the roadway and sloping toward Sequoia be 0.2% grade. You indicated that given the minimal flow and the existing conditions that this would be acceptable. Can you please respond in the affirmative so that I may proceed with the final construction drawings for the Sequoia Ct. modifications.

Also, does transportation, Nilo or Kristal, need to concur with this decision and if so can you please discuss/explain the reasoning to him/her to obtain this concurrence if required.

Your assistance is very much appreciated.

Thank you,
Sheldon Greer P.E.

Cherne, Curtis

From: Dourte, Richard H.
Sent: Tuesday, April 24, 2012 4:47 PM
To: Stover, Debbie L.; Westbrook, Sara; Romero, Elaine T.
Cc: Cherne, Curtis
Subject: RE: Sequoia Court - Sequoia and Coors

Deborah, Sara, Elaine,

Development of this site creates substantial downstream drainage problems. It would likely cause flooding problems for lots 18 or 17a and we don't want to see this happen. To allow this site to develop without drainage mitigation is in violation of the City Drainage Ordinance, otherwise this would not be an issue. Our Hydrology Engineer is actively working with Mr. Waid's engineer to come up with a viable low cost solution.

Thank you..hope this helps,

Richard

Subject: Sequoia Court - Sequoia and Coors

Hi Debbie,

Councilor Lewis received a call from Mr. Joe Waid, 220-5059, who owns the property outlined in red. He would like to put a home on it (this is off of Sequoia and Coors, on Sequoia Court – right next to the river) but is being told that before he can develop the property he is required to put in storm drainage and street improvements (which he said the other homes were not required to). Since the redistricting process, this area is technically in Councilor Sanchez's district but Elaine and I have been working together on issues such as this as we transition to the new districts. Is there someone in the Planning Department who can help us with this concern?

Thanks,

Sara and Elaine

Re: Lots 7B and 8 Grande Heights Addition, Grading and Drainage Plan
Engineer's Stamp date 9-17-09 (G11/D068)

Dear Mr. Green,

Based upon the information provided in your submittal received 9-18-09, the above referenced plan cannot be approved for Preliminary Plat action by the DRB until the following comments are addressed:

- How will driveways be constructed on Lots 8A and 8B with a channel running across the front of the lot?
- Demonstrate that the flow in the channel will remain in the channel at the 90 degree corners.
- A channel built on the outside of Lots 8A and 8B may address the two comments above.
- Provide proposed pads on Lots 8A and 8B.
- How high is the hydraulic jump at the bottom of the channel near the ROW and what is the velocity? Provide calculations.
- The proposed double flume in the ROW will not be ADA accessible.
- Hydrology is concerned about the properties at the north east end of Sequoia Ct. To mitigate this, an asphalt swale could be built on the west side of Sequoia Ct to Sequoia Rd or curb and gutter could be built on the east side of Sequoia Ct.
- It seems that Lot 7C could be graded to drain without storm drain.
- On Sheet C2, the note to "Maintain wall 0.67' above existing grade" should be changed to "Maintain wall to 0.67 feet above new grade" to prevent runoff from running over the wall.
- Provide Hydrology calculations for proposed Lots 7C, D, and E.
- The splash block/rundown from Lot 7C will not be acceptable if a sidewalk is required.
- There area calculations for a storm drain from Lot 7C to Lot 7D, but there does not appear to be one.
- Provide the correct Legal Description on the Drainage Information Sheet.

PO Box 1293

Albuquerque

NM 87103

www.cabq.gov

CITY OF ALBUQUERQUE

- Rather than stating the slope is greater than 20% (Sheet 7), provide the approximate/average slope.
- The soil underneath the channels should be compacted.
- Provide a scale on Sheet C3.
- On Detail G/D5 one of the channels is referenced incorrectly (E5 rather then D5).

If you have any questions, you can contact me at 924-3695 or schedule a meeting.

Sincerely,

Curtis A. Cherne

Re: Lots 7B and 8 Grande Heights Addition, Grading and Drainage Plan Engineer's Stamp date 12-22-09 (G11/D068)

Dear Mr. Green,

Based upon the information provided in your submittal received 12-22-09, the above referenced plan cannot be approved for Preliminary Plat action by the DRB until the following comments are addressed:

- The proposed flume in the City ROW may cause transportation problems. Hydrology is requiring that curb and gutter be constructed along the frontage of this property on Sequoia Ct with the site discharging to the ROW through a sidewalk culvert(s). The channel could widen to 4 feet or similar to spread out the flow prior to entering the street. The grading plan should reflect the standard curb and gutter as well as a 2% slope up from the top of curb to the property line.
- Building curb and gutter on Sequoia Ct would alleviate the need for the north-south channel on lots 8A and 8B.
- Provide calculations for the channels on Lot 7D as well as east-west channel on Lot 8A.
- Provide the Froude number, including calculations, for the east-west Channel on Lot 8A and whether there will be a significant hydraulic jump.
- Provide an Infrastructure List, which must include all items for this development to be built (e.g. curb and gutter, retaining walls, earth work, etc)
- The invert for the rundown from Lot 7C is higher than the invert from the storm drain (94.33 vs. 87.60).
- It appears a retaining wall may be required on Lot 7C at the southwest corner of the lot, where there is a grade change from 99 to 96.
- The retaining wall at the west side of Lot 7D should remain close to the easement rather than angling south.
- Show the location of the driveways.
- The Note on Sheet C2 stating to maintain the tw 0.67 min above ex. grade should state to maintain the tw 0.67 min above new grade.

PO Box 1293

Albuquerque

NM 87103

www.cabq.gov

CITY OF ALBUQUERQUE

- What is to prevent sediment from entering the north-south channel on Lot 7D?
- Detail B5 depicts the rundown is 19 inches high, yet there is about 7 feet of grade difference. It would also be beneficial to show the entire construction of this rundown in one detail rather than referencing Detail I/C5.
- Detail G/C5 specifies that the north-south channel is per Detail E/C5, while Sheet C2 specifies Detail D/C5 for the same channel.

If you have any questions, you can contact me at 924-3695 or schedule a meeting.

Sincerely,

Curtis A. Cherne

PLANNING DEPARTMENT – Development & Building Services

December 5, 2008

Mr. Tucker Green, P.E.
Per Se Engineering
2116 Lead Avenue S.E.
Albuquerque, New Mexico 87106

RE: **Lots 7A & 7B Vista Grande Addition** File: **G11-D 068**
Drainage Report & Plan for Platting, Grading & paving PE Stamp [illegible]

Dear Mr. Green:

Based upon the information provided in your submittal received 11-03-08, the above referenced Drainage Report & Plan **cannot be approved** for Preliminary/Final Plat, Grading Permit nor Paving Permit until the following comments are addressed:

1. The conceptual grading plan is acceptable as presented, with following specific issues needing to be addressed.

2. On your resubmittal, on the Drainage Information Sheet provide the correct Legal Description and Site Address for this site (*not "Airport Industrial Park"*).

3. Although the grading plan proposes development of only the proposed Lot 7A. drainage for proposed Lot 7B must be addressed with this plan. Mr. Bingham has had recent discussions with the owner (Joe Wade) regarding the need to dedicate a storm drainage easement across Lot 8 for the benefit of Lot 7B. This easement will be required as a condition of replat of Lot 7 to Lots 7A & 7B, and should be reflected on your resubmitted Grading Plan.

4. On C-101 and in the Drainage Report, Section "Grading and Drainage" clarify with references to proposed Lots 7A and 7B where they are discussed.

5. On C-101, clearly show and label the location of the proposed boundary between Lots 7A & 7B on the Grading Plan and on the Utility and Driveway Plans.

6. On the Grading Plan, verify and correct the spot elevations on the swales around the pad on the western portion of proposed Lot 7A. Provide a spot elevation near the NW corner of the pad and check the ones around the east and south side of the pad, which do not coincide with the 1% grade shown.

7. Provide a spot elevation on the existing gutter flowline west of the sidewalk plate to verify that site runoff will flow west on Ward Avenue. pr

DATE SUBMITTED: Nov 3, 2008 BY: Tucker Green

Requests for approvals of Site Development Plans and/or Subdivision Flats shall be accompanied by a drainage submittal. The particular nature , location and scope ot the proposed development defines the degree of drainage detail. One or more of the following levels of submittal may be required based on the following:

(1) **Conceptual Grading and Drainage Plan:** Required for approval of Site Development Plans greater than five acres. and Sector Plans

(2) **Drainage Plans:** Required for building permits, grading permits, paving permits and site plans less than five (5) acres.

(3) **Drainage Report:** Required for subdivisions containing more than ten (10) lots or constituting five (5) acres or more.

Drainage Report for:
Lots 7A and 7B, Block A, Grande Heights Subdivision, Albuquerque, NM (COA MAP G-11)

Project Address / Location: 3420 Ward Dr, between Sequoia Ct. and Ward Dr. NW (east of Coors & Sequoia Rd)

Legal Description: Lots 7-A and 7-B, Block A, Grande Heights Subdivision, Albuquerque, Bernalillo County, NM

Flood Zone: None, per FEMA panel 35001-c037g, September 2008

Project Description:

The owners propose to replat Lot 7 into 2 lots. The upper, westerly, lot will contain about 1/4 acre and will be developed as a residential lot. The remaining area, roughly 3/4 acre, is not proposed to be developed at this time except as needed to (1) develop the upper lot (borrow dirt to raise the upper lot); (2) prevent sediment and erosion problems; and (3) provide utility stubs to accommodate a future division of the remainder. In the near future, but not now, the owners will develop the rest of 8ot 7 and Lot 8, which they also own.

Site Existing Conditions / History:

The project site, accessed from a bend in Ward Ct, is currently undeveloped, contains slightly over 1 acre, and has 2 distinctly different parts roughly equal in size: a fairly level upper half and a steep lower half. Lot 8 lies downhill from Lot 7 and fronts on Sequoia Ct., which is the 1st street west of the Rio Grande. Lot 8, containing slightly over 0.5 acres, is also steep, is also currently undeveloped. The land south of the site is undeveloped. There is existing residential development directly west of the site, northwest of the site, and on 2 of the lots directly north of the site. The views, across the river and toward the mountains, are magnificent.

Project History:

Grande Heights Subdivision was created in approximately 1960. In August 2007 the owners made a Sketch Plat submittal to the City and received comments. Since then there have been several discussions with City of Albuquerque staff (particularly Brad Bingham of Hydrology) about how to develop both Lots 7 and Lot 8 into an eventual total of 6 residential lots. This submittal draws on those discussions.

Grading and Drainage:

The new residential lot will be raised and graded to drain to Ward Dr. with free discharge. Immediately east of this new lot is an area roughly equal in size with slopes under 3% and bounded downhill by a low chainlink fence. Borrow to raise the upper lot will be taken from this area. The borrow area will be left low to trap any sediment arising from construction operations, but hydrology design will not count on storage there. The east side of the borrow area will be graded to as to avoid concentrated flow. East of the fence the site steepens.

Hydrology calculations are per COA DPM (City of Albuquerque Development Process Manual) Chapter 22 methods for small watersheds. No credit is claimed for water harvesting or onsite ponding. The project will have no adverse drainage effect on neighboring or downstream properties.
