RE: 3401 Calle Vigo NW
Grading and Drainage Plan
Engineer's Stamp Date: 12/21/21
Hydrology File: H12D003A1

Dear Mr. Lopez:

Based upon the information provided in your submittal received 07/26/2022, the Grading & Drainage Plan is **not** approved for Building Permit and Grading Permit. The following comments need to be addressed for approval of the above referenced project:

1. Since this site is in the Valley region, please follow Article 6-5 Valley Drainage Criteria of the DPM. The following conditions must be applied to the site:
 - a. The maximum percent impervious of the lot and the contributing area may not be greater than 45%.
 - b. Pad elevation shall be a minimum of one (1) foot above the 100 year 10-day stormwater surface elevation.
 - c. The flow between the front yard and back yard cannot be obstructed. The stormwater must be allowed to equalize to the same level between the front yard and back yard.
 - d. A permanent perimeter wall or barrier around the development is required to contain the 100-year 24-hour storm developed runoff.

As stated, this site is also part of an approved Master Grading Plan which has taken the older DPM Valley Drainage Criteria into account. Therefore, this project will just need to follow what was outlined there. You can download the approved plans by accessing the City's GIS from Hydrology's webpage <https://www.cabq.gov/planning/development-review-services/hydrology-section> and follow the instructions.

2. According to the approved Master Grading Plan, this site has a maximum pad size of 5,596 SF and a required retention pond volume of 0.279 AC-FT or 12,153.22 CF. This design will have to be revised to accommodate this requirement. The site flows outside the Building Lines drains to the street(s) and the flows inside the Building Lines drains to the rear retention pond.

MAP PANELS

- The map shown on this map is an approximate point selected by the user and does not represent an authoritative property location.
- This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards.
- The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 12/8/2021 at 8:41 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.
- This map image is void if the one or more of the following map elements do not appear basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifier, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.
