RE: **TPS Hotel at IPCC**
1015 Indian School NE
Grading Plan Stamp Date: 12/15/18
Drainage Report Stamp Date: 12/15/18
Drainage File: H13D112

Dear Mr. Soule:

PO Box 1293

Based on the submittal received on 12/26/18, the grading plan and drainage report cannot be approved until the following are corrected:

Albuquerque

1. With AHYMO S4, be sure to use NOAA Atlas 14 precipitation depths in conjunction with the NOAA Atlas 14 distribution. Include the location map and tables obtained from the NOAA website.

NM 87103

2. The 3" and 4" orifice plates seem to be flipped in the orifice plate excel table vs the AHYMO model. There also doesn't seem to be any application for the 4" orifice plate; please recheck and remove if so.

www.cabq.gov

3. Total head loss for the pump station needs to be calculated using Hazen-Williams. What is the outfall elevation for this system? The street elevation at the 9th St inlet is likely sufficient. Please provide legible pump curves and tables from the manufacturer along with your performance curve based on the total head loss.

4. The performance of the entire system needs to be evaluated for three cases: the existing lift station pumping alone, the new pump station pumping alone, and both stations pumping together. Ensure that cleaning velocities are maintained and neither pump reaches shutoff head. Provide system curves for each.

5. The backflow preventers at the junction are unnecessary as each pump has a check valve at its wet well.

6. Ensure any clean-outs are sealed against back pressure, unless you can show that the HGL remains below grade.

CITY OF ALBUQUERQUE

Planning Department
David Campbell, Director

Mayor Timothy M. Keller

7. Provide a design for the wet well and electric control box (specifying pump on, pump off, and alarm) ensuring adequate depth and room for the drawdown, controls, and appurtenances.
8. This project requires an ESC Plan, submitted to the Stormwater Quality Engineer (Curtis Cherne PE, ccherne@cabq.gov or 924-3420).

If you have any questions, please contact me at 924-3695 or dpeterson@cabq.gov.

Sincerely,

Dana Peterson, P.E.

Site Grading and Drainage Plan

PURPOSE

The purpose of this report is to provide the Drainage Management Plan for the development of a hotel located within the Indian Pueblo Cultural Center property. The site is located on the north east corner of Eagle Way NW and turquoise Road. The site is part of a larger overall development. This plan was prepared in accordance with the City of Albuquerque design regulations, utilizing the City of Albuquerque's Development Process Manual drainage guidelines. This report will demonstrate that the proposed development does not adversely affect the surrounding properties, nor the upstream or downstream facilities.

INTRODUCTION

The subject of this report, as shown on the Exhibit A, is a 2.53-acre portion of and overall 47.4 acre parcel that has been developed in phases. A master drainage plan for the entire site is not locatable within the City files. Based upon the narrative in approved grading plan for the previous phase (H13D106, H16D098A, H13D106), each phase collects the developed storm water at an inlet/lift station and discharges to the city storm drain located east of the site within 9th street. This storm drain discharges to the public line in Menaul. Since there is no overall discharge rates published within a master drainage plan for the property, the site discharge shall be limited to native conditions as approved within the previous phases will be utilized. The site will drain to a new lift station and discharge to the existing force main at a rate significantly less than native conditions.

EXISTING CONDITIONS

The site is currently undeveloped, yet has been graded and developed in the past. The site is impacted by 9.51 cfs offsite flows from the surrounding roads as shown in drainage file H13D106, based upon AHYMO model the rate is updated to be 8.06 cfs. This site currently retains the entire developed flow. The site is bisected by a force main from the west. This force

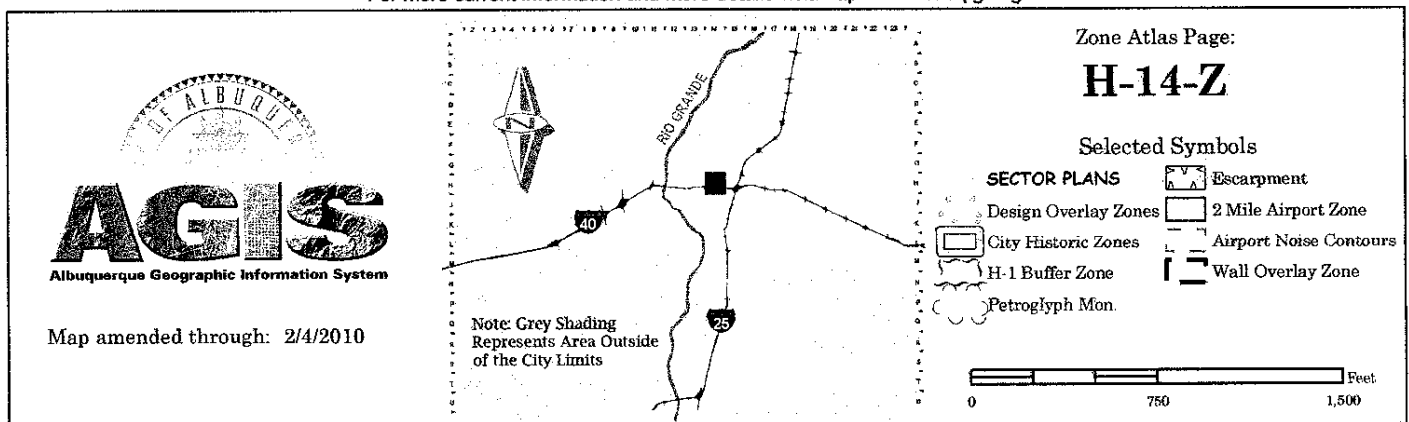

main discharges 1.99 cfs from western portion of this development to an inlet on 9th street as shown in Drainage file H13D106. The site is not impacted by offsite flows, and is surrounded by developed properties and undeveloped land that drains to the east. The site discharges to the existing retention pond. As shown in Appendix A, the existing site, including the adjacent roadway discharges at a peak rate of 6.61cfs in a 100-year, 6-hour event in the native undeveloped condition. Since the site has been developed in the past and include roadways that are paved and a retention pond, the native condition will be used as the base line for any development that will discharge.

PROPOSED CONDITIONS

The proposed improvements consist of a Hotel and associated parking area. The site will be graded to create 2 basins. Basin A contains the north half of the buildings and the parking areas. This basin generates 5.51 cfs that will drain to a water harvest pond islands located within the parking area. The flows are captured by inlets and are conveyed to the main pond by a 12" storm drain. The outfall is restricted by a 4" orifice plate placed on the last inlet. The parking lot functions as a detention basin and the routed flow is decreased to 0.84 cfs. The maximum water surface elevation will be 4964.49. The parking lot will discharge to the street at 5965 in the event of clogging. This basin will retain a water quality volume of 1,789 cf, which exceeds the required of 1394 cf. Basin B contains the southern portion of the buildings and the large ponding area. This basin will generate a peak flow rate of 2.59 cfs which drain to the pond. The pond also captures the flow from the surrounding roadways in the amount of 8.06 cfs. The pond will fill to an elevation of 4961.00 and then enter a type D inlet. The inlet contains a submersible pump with a max discharge rate of 1.3 cfs. The pond will retain a water quality volume of 8592 cubic feet which exceed the required volume for the road and hotel basin of 3,864 cubic feet. The

For more current information and more details visit: <http://www.cabq.gov/gis>

peak discharge rate will be 1.3 cfs. The AHYMO Model predicted a lower discharge rate of 1.08 cfs, this is due to the routing function within AHYMO, so the actual water surface elevation will be less than 4961.75. The discharge will connect to the existing force main and drain to the existing outfall inlet in 9th street. The existing force main will be re-routed around the building and check valves shall be added to each leg to prevent back flow between the lines. In the event of clogging, the pond has a total volume of 0.773 acre feet, and the contributing basins generate .704 acre feet during the 100-year, 6 hour event. The surrounding private roadways will become inundated in clogging event in excess of the 6 year event, ultimately discharging to the surrounding public streets. The combined flow leaving the site will be 1.30 cfs compared to the native rate of 6.61 cfs. The volume of retained water exceeds the required water quality amount. The drainage patterns maintain the existing outfall. The downstream collection point remains the inlet at 9th street adjacent to the site

SUMMARY AND RECOMMENDATIONS

This project is an infill project within a completely developed area of the near north Valley Albuquerque. The project is a redevelopment of an existing site. The site currently generates 6.61 cfs. The proposed drainage plan captures the flow and reduces the discharge to 1.3 cfs (.28cfs/acre). The existing force main will be rerouted around the hotel and this site will connects to the main. The existing force main will continue to drain to the existing inlet at 9th street. The first flush volume is retained onsite.

APPENDIX A
SITE HYDROLOGY

CAUTION:
EXISTING UTILITIES ARE NOT SHOWN.
THE CONTRACTOR SHALL BE RESPONSIBLE

CAUTION:
EXISTING UTILITIES ARE NOT SHOWN.
IT SHALL BE THE SOLE RESPONSIBILITY
OF THE CONTRACTOR TO CONDUCT ALL
NECESSARY FIELD INVESTIGATIONS PRIOR
TO ANY EXCAVATION TO DETERMINE THE
ACTUAL LOCATION OF UTILITIES & OTHER
IMPROVEMENTS.

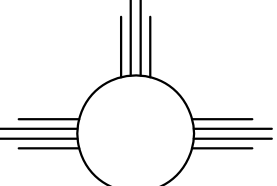

EROSION CONTROL NOTES:

1. CONTRACTOR IS RESPONSIBLE FOR OBTAINING A TOPSOIL DISTURBANCE PERMIT PRIOR TO BEGINNING WORK.
2. CONTRACTOR IS RESPONSIBLE FOR MAINTAINING RUN-OFF ON SITE DURING CONSTRUCTION.
3. CONTRACTOR IS RESPONSIBLE FOR CLEANING ALL SEDIMENT THAT GETS INTO EXISTING RIGHT-OF-WAY.
4. REPAIR OF DAMAGED FACILITIES AND CLEANUP OF SEDIMENT ACCUMULATIONS ON ADJACENT PROPERTIES AND IN PUBLIC FACILITIES IS THE RESPONSIBILITY OF THE CONTRACTOR.
5. ALL EXPOSED EARTH SURFACES MUST BE PROTECTED FROM WIND AND WATER EROSION PRIOR TO FINAL ACCEPTANCE OF ANY PROJECT.

- LEGAL DESCRIPTION:
- NOTES:
1. ALL SPOT ELEVATIONS REPRESENT FLOWLINE ELEVATION UNLESS OTHERWISE NOTED.
 2. ALL CURB AND GUTTER TO 6" HEADER UNLESS OTHERWISE NOTED.
 3. ALL RETAINING WALL DESIGN SHALL BE BY OTHERS.
 4. ANY CURBS OR PAVEMENT NEGATIVELY IMPACTED BY CONSTRUCTION ACTIVITY SHALL BE REPLACED TO MATCH EXISTING CONDITIONS.
 5. ALL SITE WORK SHALL CONFORM TO CITY OF ALBUQUERQUE STANDARDS FOR PUBLIC WORKS CONSTRUCTION EDITION 9

		SHEET # JOB # 218153

GENERAL NOTES:

1. STORM INLET CUTTER TRANSITION WILL BE SHOWN ON THE CONSTRUCTION PLANS.
2. OUTLET PIPE, PER DESIGN REQUIREMENT.
3. FOR FRAME & GRATING, SEE DWG. 2216, 2220 & 2221

CONSTRUCTION NOTES:

- A. FRAME & GRATE
- B. CUT ONE HORIZONTAL AND ONE VERTICAL BAR MAX. AT PIPE OPENING.
- C. NO. 4 BARS @ 6" O.C. EACH WAY
- D. USE STANDARD STEPS, SEE DWG. 2229.
- E. CONC. FILL, SEE NOTE C DWG. 2201
- F. INVERT PER DESIGN
- G. INSTALL STEPS ON DOWNSTREAM FACE
- H. CENTER SUPPORT ASSEMBLY

TECHNICAL DATA SHEET SEWAGE WASTE SERIES Models 611, 621, 631, 641, 651, 661 Submersible Sewage Pumps

PRODUCT SPECIFICATIONS

MOTOR	MOTOR	
	Motor	Motor
Horse Power	1 (611), 1-1/2 (621), 2 (631), 3 (641), 5 (651), 7-1/2 (661)	
Voltage	208, 230, 480	
Phase	1, 3 Ph	
Herfs	90 Hz	
HPM	1750	
Type	Capacitor start capacitor run or 3 Ph	
Insulation	Class F	
Amps	1.7 - 26.0	
Operation	Nonautomatic	
Discharge Size	3" NPT (optional 2" or 4" flange available)	
Static Head	2-1/2" (63 mm) (optional static)	
Cord Length	25' (8 m) standard	
Cord Type	UL listed 3 wire cord	
Max. Head	85' (19.8 m)	
Max. Flow Rate	500 GPM (2,338 LPM)	
Max. Operating Temp.	150°F (65°C)	
Cooling	Oil filled	
Motor Protection	Thermal sensors with automatic reset	

All Cast-50 cast iron construction.
NOTE: See model comparison chart for specific details.

* All single phase units require external starting capacitor and relay circuits.
Additional cast lengths are available in 25' (7.6 m) and 50' (15.2 m).

CAUTION All installation of controls, protection devices and wiring should be done by a qualified licensed electrician. All electrical and safety codes should be followed including the most recent National Electrical Code (NEC) and the Occupational Safety and Health Act (OSHA).
