

CONCEPTUAL DRAINAGE PLAN  
FOR  
OFFICE BUILDING  
ON  
TRACT 2-B-1  
OF THE  
BELLAMAH OFFICE ADDITION  
AUGUST 1981

SCANLON & ASSOCIATES, INC.  
8008 PENNSYLVANIA CIRCLE NE  
ALBUQUERQUE, NEW MEXICO 87110

### CONCEPTUAL DRAINAGE PLAN

Purpose: The purpose of the conceptual drainage plan is to show the existing and the proposed drainage pattern for the site to be developed. Also to show the existing and proposed drainage patterns of those lots which border on its north and east sides. See Exhibit "A".

Existing Storm Drain Facilities: An existing 56 inch RCP storm drain is located in a ten (10) foot utility easement along the west side of the lot. A private 36 inch RCP storm drain runs along the east side of the lot in a fifteen (15) foot drainage easement. The 36 inch S.D. then runs east to the 66 inch RCP storm drain in Jeannedale Drive.

Topography and Soils: The site generally slopes from 0 to 5 percent to the south west. These areas have medium runoff and the erosion hazard is moderate.

Using the Soil Survey of Bernalillo County by the SCS, the major soils in the area are Tijeras gravelly fine sandy loam (TgB) and Embudo-Tijeras complex (EtC) with the majority of the lot falling on Tijeras gravelly fine sandy loam.

Development: The entire block will be developed into an office building complex, housing five (5) large office buildings, two of which are completed. The other three are now proposed. A four (4) story office building with the required parking will be constructed on the site.

Preliminary Analysis: Tract 2-B-1 is located such that no large drainage area outside of the proposed development will contribute storm flows to the drainage facilities. When the complex has been completed there should be little if any storm flow from adjacent tracts, see Exhibit "B". The following is a rough estimate of the 100 year storm flow.

# PEAK RATE OF DISCHARGE - SCS METHOD

## Hydrology Data: For Tract 2-B-1

1.	Total drainage area tract 2-B-1 (see Exhibit C)	2.96	acres
2.	Total roof area (20,775 s.f.)	0.48	acres
3.	Total parking area	1.89	acres
4.	Total lawn area	0.59	acres
5.	Length of flow path	500	feet
6.	Elevation difference (57-47)	10	feet
7.	Average slope	0.020	
8.	Soil Symbol (Tijeras)	TgB	
9.	Hydrologic Soil Grouping	B	
10.	Land use	commercial	
11.	Runoff Curve Number-AMC-II (Table 2-1)	95	CN
12.	Time of Concentration (Fig. 2-2)	0.075	hr.
13.	Rainfall, 24 hr. 100 yr. (Exh. 2-2)	2.70	in.
14.	Find potential retention $S = (1000/CN) - 10$	0.53	
15.	Find direct runoff - 24 hr. precipitation $R_{100} = (P - 0.20 \times S)^2 / (P + 0.80 \times S)$ $R_{100} = (2.70 - 0.11)^2 / (2.70 + 0.42)$	2.94	in.
16.	Distribution curve (RM-2) (Exh. 2-3)	65	
17.	Cfs per acre per inch of runoff (Fig. 2-5)	1.30	CSM/in.
18.	Peak Discharge $q = A \times Q \times \text{cfs/ac/in}$ $q_{100} = 2.96 \times 2.94 \times 1.30$	11.3	cfs
19.	Volume of runoff $(Q \times A) / 12$ $Vol = 2.94 \times 2.96 / 12$	0.73	ac.ft.

## Hydrology Data: For Area of Coronado Draining to 36" RCP

1.	Total drainage area (see Exhibit D)	12.16	acres
2.	Length of flow path	2000	feet
3.	Elevation difference (84-56)	28	feet
4.	Average slope	0.0140	
5.	Land use	commercial	
6.	Runoff curve no. (Table 2-1)	95	CN
7.	Time of concentration (Figure 2-2)	0.23	hr.
8.	Rainfall, 24 hr. 100 yr. (Exhibit 2-2)	2.70	in.
9.	$S = (1000/CN) - 10$	0.53	
10.	$R_{100} = (2.70 - 0.11)^2 / (2.70 + 0.42)$	2.94	in.
11.	Distribution curve (RM-2)	65	
12.	Cfs per acre per inch of runoff	1.20	CSM/in
13.	Peak Discharge $q = A \times Q \times \text{cfs/ac/in}$ $q_{100} = 12.16 \times 2.94 \times 1.20$	42.9	cfs

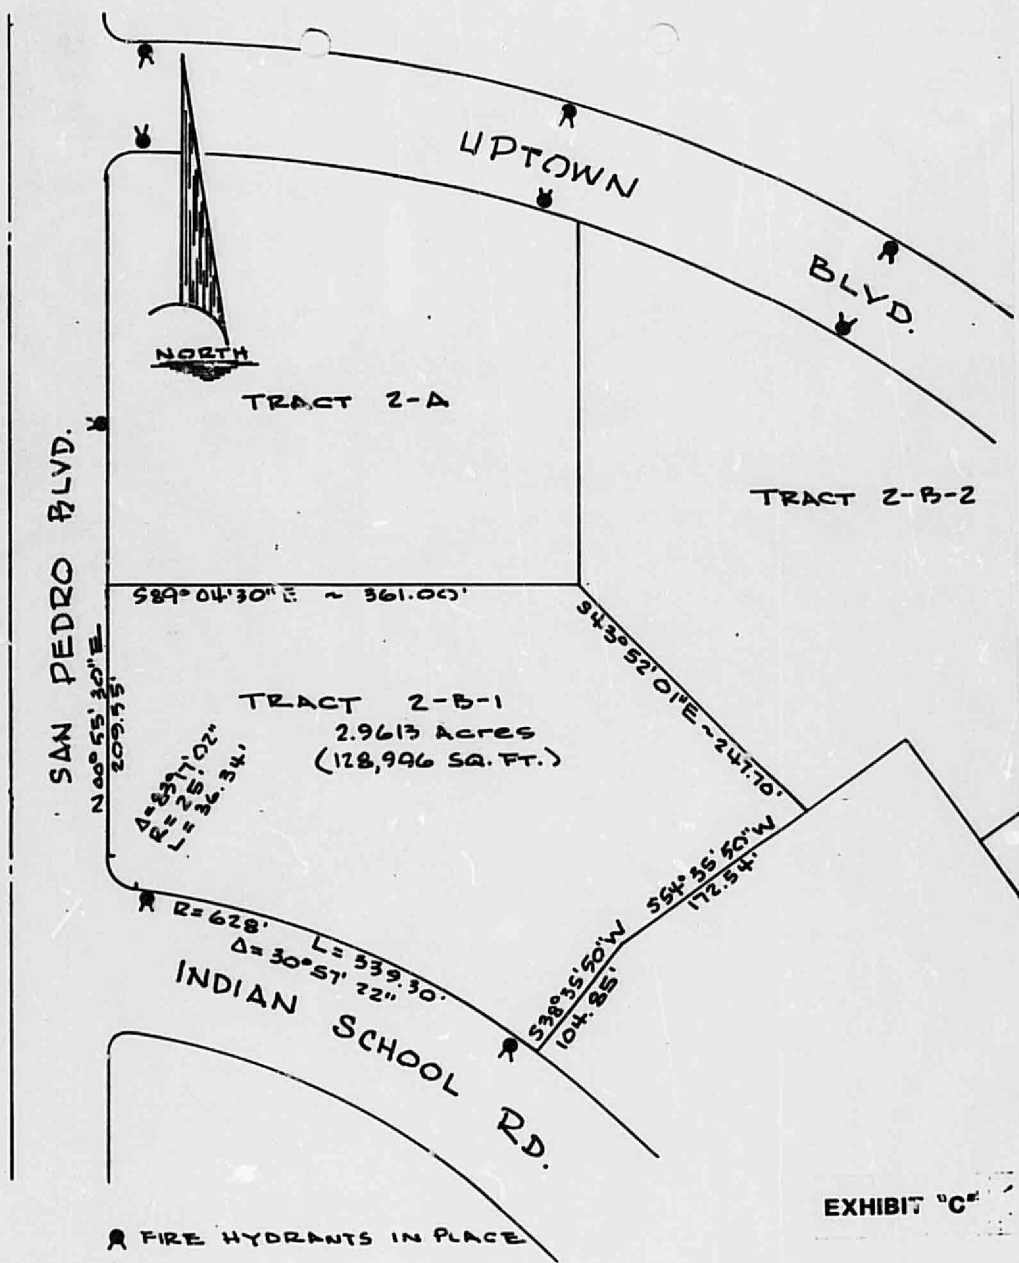

**Recommendation:** That the majority of the storm flow from Tract 2-B-1 be drained west to San Pedro Boulevard where it can be picked up by an on-site catch basin system and discharged directly into the existing 54 inch storm drain in San Pedro Boulevard. That the storm water that cannot be drained to the west, will be drained east and picked up by an on-site catch basin system and discharged into an existing 36 inch RCP storm drain that runs along the easterly boundary of Tract 2-B-1. Any over flow due to the combined entrance from Indian School could run through the One Towne Centre parking lot to its low point drain.

**Conclusion:** Most of the storm water from a major storm should be dissipated by the time the upstream drainage areas or the channel peak flow occur.

Transamerica Properties  
Drainage Covenant

Dear Mr. Fink:

On March 3, 1982, we delivered a Drainage Covenant, dated March 2, 1982 ("Covenant"), between the City of Albuquerque and our client, Transamerica Properties, covering Tract 2-N-1 of the Bellamah Office Addition to the City of Albuquerque, New Mexico.

If the Covenant has been approved and signed on behalf of the City, we would appreciate your returning a copy of the fully signed Covenant to us for our client's records. Based on our telephone conversation with you concerning this matter, we understand that the City does not plan to record the Covenant at this time and that the Covenant will be recorded only if it becomes necessary in the future.

Thank you for your assistance, and please forward a copy of the fully signed Covenant to us at your earliest convenience.

Very truly yours,

SUTIN, THAYER & BROWNE

CITY ENGINEER

Dear Mr. Fink:

We enclose three copies of a Drainage Covenant, dated March 2, 1982 ("Covenant"), between the City of Albuquerque and our client, Transamerica Properties.

If the enclosed Covenant is acceptable, please have it signed by the appropriate people on behalf of the City of Albuquerque and return one fully executed original to me for recording in the Bernalillo County Clerk's office. I will return the original Covenant to you after it has been recorded.

Thank you for your assistance and please call me if you have any questions concerning the Covenant or otherwise.

Very truly yours,

## DRAINAGE COVENANT

THIS COVENANT made this 2nd day of March, 1982, by and between the City of Albuquerque, a municipal corporation, (City) and Transamerica Properties, a California Partnership (Owner, which term includes successors and assigns.)

### RECITAL

The Owner is owner of certain real property located at 6001 Indian School Road, N.E. in Albuquerque, New Mexico, (the Property) and more particularly described as follows:

Tract 2-B-1, as the same is shown and designated on the Plat of Tracts 2-B-1, 2-B-2 and 2-B-3. BELLAMAH OFFICE ADDITION, Albuquerque, Bernalillo County, New Mexico, (being a Replat of Tract 2-B), filed in the office of the County Clerk of Bernalillo County, New Mexico, on the 20th day of May, 1981, Book of Plats Vol. C-18, Folio 85.

That pursuant to City ordinances, regulations, and other applicable laws, the Owner is required to install and/or maintain certain drainage facilities on the Property, and the parties wish to provide for an agreement as to the obligations and responsibilities for same.

### DESCRIPTION OF FACILITIES

The following facilities are to be constructed and/or maintained by the owner:

Transamerica Center, Albuquerque a five story, 80,000 sq.ft. office building.

### CONSTRUCTION OF DRAINAGE FACILITIES

The Owner shall construct the drainage facilities in accordance with standards, plans, and specifications prescribed and approved by the City.

### MAINTENANCE OF FACILITIES

The Owner shall, at his cost in accordance with the standards, plans, and specifications prescribed by the City, maintain said drainage facility. The City shall have the right to enter periodically upon the Property to inspect the drainage facility.

### FAILURE TO COMPLY AND LIEN

In the event that the Owner shall fail to construct the drainage facility in accordance with standards, plans, and specifications prescribed and approved by the City or fail to adequately maintain said facilities, the City shall give the Owner notice in writing to construct, correct, or maintain said

facilities, and if the Owner fails to comply therewith within 30 days, the City may enter upon said property to perform the necessary construction or maintenance. The cost of the City's performing such construction or maintenance shall be paid by the Owner. In the event the Owner fails to pay said cost within thirty (30) days after being billed for same, the City may file a lien against the Property.

#### LIABILITY

The City shall not be liable for any damages to the Owner resulting from its construction, modification, or maintenance of said facilities.

#### NOTICE

The written notice provided for herein shall be accomplished by mailing same to:

Transamerica Properties  
c/o Transamerica Realty Investors  
1150 S. Olive Street, Suite 2723  
Los Angeles, California 90015  
ATT: Lyman K. Lokken, Vice President

The Owner may change said address by giving written notice, certified mail, return receipt requested, to the City Engineer, City Hall, at 505 Marquette Street, Albuquerque, New Mexico, 87103.

#### INDEMNIFICATION AND HOLD HARMLESS

The Owner agrees to defend, indemnify, and hold harmless, the City, its officials, agents and employees from and against any and all claims, actions, suits, or proceedings of any kind brought against said parties for or on account of any matter arising from the drainage facility provided for herein or the Owner's failure to construct, maintain, or modify the drainage facility under this Covenant.

#### COVENANT RUNNING WITH THE PROPERTY

The obligation of the Owner set forth herein shall be binding upon the Owner, his heirs, and assigns, and the property of the Owner as described herein and will run with said property until released by the City.

Re: TRACT 2-B-1, BELLAMAH OFFICE ADDITION DRAINAGE REPORT

Dear Ross:

Mr. Charles M. Easterling, Principal Assistant City Engineer/Hydrology,  
concurs with the following proposals for the referenced site:

1. Storm runoff from Tract 2-B-1 may be collected by an on-site catch basin system and discharged directly in the 54 inch storm drain located in San Pedro Boulevard.
2. The private 36 inch RCP storm drain may be utilized for discharging storm runoff if written consent granting such use is obtained from the owner.

If I can be of further help on this matter, please call.

Very truly yours,

Brian G. Burnett

RE: Conceptual Drainage Plan  
Tract 2-B-1, Bellamah Office Addition

It is proposed to construct a four (4) story office building of 76,736 sq. ft. gross floor area on Tract 2-B-1 of the Bellamah Office Addition. This property is located on the Northeast corner of Indian School Road and San Pedro Blvd. The site is approximately 2.56 acres.

Enclosed is a copy of the conceptual drainage plan, which shows the proposed flow patterns of the Bellamah Office Complex. The information shown on the drainage plan is preliminary in nature and as soon as a survey can be made of the property a final drainage study will be undertaken.

Sincerely yours,

Re: Transamerica Center Drainage Report  
Tract 2-B-1 of the Bellamah Office Addition

Dear Mr. Easterling:

It is proposed to construct a five (5) story office building of 86,600 square feet gross floor area, which includes a 7,000 square foot basement, on Tract 2-B-1 of the Bellamah Office Addition. This property is located on the northeast corner of the intersection of Indian School Road and San Pedro Boulevard. The site contains approximately 2.94 acres.

For your approval, enclosed are two (2) copies of the drainage report which showing the present and future drainage patterns and facility requirements.

Sincerely,

**TRANSAMERICA CENTER**  
**DRAINAGE REPORT REQUIREMENTS**

The following four (4) pages are in response to the drainage report requirements checklist.

**GENERAL**

1. Engineer Certifies: - Engineer certificates are not included in this report. The Drainage Report information sheet is filled out and included.
2. Planning History: - Present zone is C-2 which will allow for office buildings. See Exhibit "A", Zoning Map H-18-2.
3. Professional Certification: - The Engineer's professional stamp with signature and date appears on the title sheet of the drainage report and on the drainage plan. The Surveyor's professional stamp with signature and date appears on the drainage plan as required. The Architect's professional stamp with signature and date also appears on the drainage plan.
4. Flood Hazard Map: - The site has been delineated on the flood hazard boundary map. See Exhibit "C", from the Albuquerque Master Drainage Study, H-18. The only 100 year flood hazard area in the near vicinity is south-east of the site which is down stream. The majority of storm flow from this site drains to the existing 54 inch storm drain in San Pedro and does not effect that area.
5. Watershed Soil Map: - The soil type is T<sub>g</sub>B, Tijeras gravelly fine sand loam. This site has been delineated on the soils map. See Exhibit "D", from the soil survey of Bernalillo County by S.C.S.
6. Soils: - A soils investigation report for ponding within 15 feet of the structure is not required since storm waters from the site are to be discharged directly into the 54 inch storm drain system on San Pedro Boulevard.
7. Watershed Area: - Lots to the north and east of the proposed site drain away from the tract boundary to self contained drainage structures. The area north of Uptown Boulevard is collected and drained into either the private 36 inch drain to the east or the 54 inch City Storm Drain on San Pedro Boulevard. The finished

floor elevation of the proposed building is elevation 5250.0 while the top of curb on San Pedro Boulevard is elevation 5245.0 at the northwest corner of the lot. See Exhibit "B".

8. Storm Flows: - The 100 year frequency storm flows from the 4.52 acres to the north contributes 7.05 cfs to the 54 inch city storm drain. This flow poses no hazard to the Transamerica Center Site.
9. Flow Depth and Velocity: - The only offsite flow that could affect Tract 2-B-1 is the storm flow on San Pedro Boulevard. The capacity of the street section to the crown is 96.46 cfs with a velocity of 4.70 fps, while the 100 year frequency storm flow from both the tracts to the north is only 7.05 cfs. See Hydrology Data Sheets.
10. Other Off-Site Conditions: - The two (2) tracts to the north of Tract 2-B-1, discharge directly into the 54 inch storm drain, in San Pedro, through a sump inlet. This flow is but a fraction of the capacity of the 54 inch drain and should have no effect on drainage on the Transamerican tract.

The other discharge point into an existing 36" RCP side of the tract is affected by the discharge of a large portion of the Coronado Shopping Center. The  $Q_{100}$  from the shopping area is 42.9 cfs while the 36 inch drain will carry 47.1 cfs. This will allow for the Transamerica Site  $Q_{100}$  discharge of 1.41 cfs.

11. Proposed Treatment of Offsite Flows: - There is no requirement for treating offsite flows. The street capacity is sufficient to handle any storm flow which may occur due to clogged catch basins upstream of the site.
12. Right-of-Way and Easements: - There are no right-of-way or easements required to accommodate offsite flows.
13. Flow Volumes and Rates: - On site storm flow volumes and rates for undeveloped and proposed development are as follows:

Undeveloped Tract = 2.96 acres  
 Flow: Q100 - 24 hr. = 3.06 cfs  
 Q10 - 24 hr. = 1.53 cfs

Volume = 0.20 ac. ft.  
 Q100 =  
 Q10 = 0.10 ac. ft.

Developed Tract - See Drainage Map.

Drainage Area		Flow		Volume	
		Q10-24 hr	Q100-24 hr	V10	V100
Area	1	1.15	1.83	0.07	0.12
	2	0.62	1.00	0.04	0.06
	3	0.66	1.04	0.04	0.07
	4	0.61	0.96	0.04	0.06
	5	0.25	0.40	0.02	0.03
	6	0.23	0.37	0.02	0.02
	7	0.89	1.41	0.06	0.09
	8	0.02	0.04	0.001	0.003
	9	0.05	0.09	0.003	0.006
Totals				0.30	0.46

14. Flow Depth and Velocity: - Flow depth and velocity across the parking lot will be comparatively small due to sheet flow and four (4) points of pick up. The largest volume has Q100 of 1.83 cfs with an average velocity of 2.7 fps. This would occur in Area No. 1 (see drainage plan) at the upper end of the storm drain system.

15. Proposed Treatment of On-site Drainage: - It is proposed to collect the runoff from the parking lot and roof and discharge the flow into the existing 54" storm drain systems as fast as is possible.

A. The required drainage facilities will include two (2) 18" storm drain pipes to two existing storm drain systems, one on the west side and the other on the east side of the tract. Four sump catch basins and a manhole are required.

B. Each of the four (4) catch basins will be sumped providing some ponding. Ponding as such is not a requirement of this project. See attached letter.

- 58
1. Pond Volume Calculations: - None required for this project. However, we are ponding two (2) small areas to stop flow on to Bellamah Tract. See Ponding Calculations.
  2. Positive Discharge: - Storm waters will be discharged as quickly as possible through two (2) 18 inch on-site storm drain systems.
  3. Pond Emergency Spillway Calculations: - These are included in the report and the spillway is sufficient to discharge the 100 year frequency runoff from the parking lot.
  4. Pond Fencing: - Pond fencing is not required.
  5. Pond Landscaping: - Landscaping is not required.
  6. Pond Maintenance: - Catch basin maintenance is required, cleaning of trash from the grating will be necessary from time to time, especially after a major storm.
  7. Channel Characteristics: - There are no channel requirements.
  8. Storm Sewer Characteristics: - The two (2) storm drains will be constructed of 18" RCP on a minimum slope of 0.0176. Four (4) drop inlet sump type catch basins and one (1) manhole are required.
  9. Other Storm Drainage Facilities: - A small drain pipe will drain roof flows to the proposed manhole on the 54" City storm drain.
  16. Rights-of-Way and Easements: - There will be only one drainage easement required on this project. This is an easement for an 18 inch storm drain pipe to join the existing manhole in the Bellamah Corporation Office Building Parking Lot on the east side. See attached agreement.

## DRAINAGE REPORT

**PURPOSE:** The purpose of this drainage report is to show the existing and proposed drainage flow for the area effected by the proposed development on Tract 2-B-1 of the Bellamah Office Addition, (see Exhibit A). The report also shows the existing drainage pattern of those lots which border on the north and east sides (see Exhibit B).

**TOPOGRAPHY AND SOILS:** The site generally slopes from 0 to 5 percent to the southwest. These areas have medium runoff and erosion hazard is moderate.

Using the Soil Survey of Bernalillo County by the SCS, the major soils in the area are Tijeras gravelly fine sandy loam (T<sub>2</sub>B) and Embudo-Tijeras complex (EtC) with the majority of the lot falling on the Tijeras gravelly fine sandy loam. (see Exhibit D).

**DEVELOPMENT:** The entire area will be developed into an office building complex, housing five (5) large office buildings, two of which are already completed. The other three (3) are now proposed or under construction. A five (5) story office building, with the required parking, will be constructed on the proposed site, Tract 2-B-1.

**EXISTING STORM DRAIN FACILITIES:** An existing 54 inch storm drain is located in a ten (10) foot utility easement along the west side of the tract. Another 36 inch storm drain runs along the east side of the tract in a fifteen (15) foot drainage easement. The 36 inch storm drain belongs to the Bellamah Corporation. They have given Transamerica Center permission to discharge 2.50 cfs into their storm drain. See Drainage Map. There is also a 72 inch storm drain in Jeannedale Drive to the east of the Bellamah building.

**DRAINAGE ANALYSIS:** Tract 2-B-1 is located on the lower extremity of a drainage area, which is bounded by San Pedro Boulevard on the west, by Menaul Boulevard on the north, by Louisiana Boulevard on the east and by Indian School Road on the south. See Exhibit C. That portion of the drainage area to the north of Uptown Boulevard, Coronado shopping Center, is divided into four (4) subdrainage areas. Area I, the northwesterly portion, drains westerly toward San Pedro Boulevard where it is sumped in the parking lot and through sump catch basins discharged into a 54 inch storm drain on San Pedro Boulevard. Area II, the northeasterly portion, drains to sump catch basins in the parking lot and is discharged into a 72 inch storm drain in Jeannedale Drive. The south portion is divided into two sub-areas, Area III and Area IV. Area No. III, drains into a private 36 inch storm

drain owned by Bellamah Land Company. Area IV the southern most portion drains south to Uptown Boulevard where it is picked up by several catch basins and discharged into a 72 inch storm drain on Jeannedale Drive.

The four (4) lots that are to the north and east of the proposed site drain, as shown on Exhibit B, either to the 54 inch, 36 inch or 72 inch storm drains. At the intersection of Jeannedale Drive and Indian School Road is the beginning of an open channel. The channel collects street flows and discharges them directly into the I-40 channel. Catch basins on San Pedro Boulevard discharges directly into a 54 inch storm drain which in turn discharges into the I-40 channel.

There is no danger of the Transamerica Center Office Building being flooded from off-site flow, since the finished floor is 5.0 feet above the top of curb on the northwest corner. Any over flow from the site, which may occur due to catch basin malfunction, will discharge onto San Pedro Boulevard and flow south to catch basins or an emergency spillway chute at the I-40 channel.

Storm flows from the tract itself are divided into nine (9) areas of origin, see Drainage Plan. Areas 1, 2 and 3 (the parking lot) and area 4, (the roof) will drain into a catch basin system and will discharge into the existing City 54 inch storm drain on San Pedro Boulevard. Area 7, (a parking lot) will drain into a drain system and discharge into an existing 36 inch storm drain on the Bellamah Tract. Areas 5 and 6, (a lawn area) have a total possible discharge into San Pedro of  $Q_{100} = 0.77$  cfs which is much smaller than the Undeveloped  $Q_{10} = 1.53$  cfs. When the area is grassed the discharge should be much less than 0.77 cfs. Areas 8 and 9, (lawn area) have a total possible discharge of 0.14 cfs and very little volume. These areas have been sumped to catch the runoff. Both areas will have sufficient ponding volume after the lawns have become well established. See Ponding Calculations.

Using Soil Conservation Services' Chapter 2, (Revised October, 1973 for New Mexico) Engineering Field Manual for Conservation Practices Peak Rates of Discharge for Small Watersheds. The following are the expected segment storm flows for the 100 and 10 year frequency storms.

# DESIGN CRITERIA

11. Cfs per acre per inch of runoff (Fig.2-5)	1.20	cfs
12. Peak Discharge $g=A \times Q \times \text{cfs/ac/in}$	1.75	cfs
$g = 12.16 \times 1.20 \times 1.20$	1.22	ac. ft.
13. Volume of Runoff ( $Q \times A$ )/12		

**Capacity of Existing 36" Storm Drain**

1. Pipe Size	36	in
2. n Factor	0.013	
3. Slope of Pipe	0.005	
4. $S^{1/2}$	0.0707	
5. Cross Section Area	7.069	sq. ft.
6. $d^{8/3}$	18.70	
7. K' for pipe running full	0.463	
8. $Q = (K'/n) d^{8/3} S^{1/2}$	47.1	cfs

# Storm Drain Pipe Design

1. Q100 at 54 inch storm drain	3.84	cfs
2. Top of 54 inch pipe	39.0	ft
3. Grate elevation of sump catch basin	45.0	ft.
no. 3		
4. 18 inch pipe slope	0.0176	
5. $s^{1/2}$	0.1328	
6. Pipe type for proposed storm drain	RCP	
7. n Factor	0.015	
8. Invert elevation at sump CB No. 3	40.0	ft.
9. Trial pipe size	18	inch
10. Cross section area	1.767	sq. ft.
11. $d^{8/3}$	2.95	
12. $d^{5/2}$	2.756	
13. Approximate $Q = (0.463/n) d^{8/3} s^{1/2}$	12.1	cfs
14. Normal depth in pipe for Q100 =	3.84	cfs
15. $K' = Q n / d^{8/3} s^{1/2}$	0.147	
16. $D_n$	0.39	
17. $D_n/d$	0.59	ft.
18. $A = C d^2$ ( $C = 0.2836$ )	0.638	sq. ft.
19. $V = Q/A$	6.02	f.p.s.
20. $H_v$	0.56	ft.
21. Critical depth in pipe for Q100 =	3.84	cfs
22. $K'_c = d^{5/2}$	1.393	
23. $D_c/d$	0.500	
24. $D_c$	0.75	ft.
25. $A = C d^2$ ( $C = 0.393$ )	0.884	sq. ft.
26. $V = Q/A$	4.34	f.p.s.
27. Use 18" R.C.P. throughout drainage system to prevent clogging and maintain a flushing velocity.		

### Required Grated Catch Basin Opening

1.	Q100 from area No. 1		1.83	c.f.s.
2.	Grating width (Gross) 25.5"		2.125	ft.
3.	Grating Length (Gross) 41.375"		3.448	ft.
4.	Grating width (net) 15.5"		1.292	ft.
5.	Grating Length (net) 33.375"		2.781	ft.
6.	Clear area of grating (1.292 x 2.781) A		3.593	sq. ft.
7.	Depth of Grating		3.5	inch
8.	Thickness of grating		0.5	inch

### Emergency Spillway Calculations from Parking Lot to San Pedro Boulevard

#### Design Criteria

1.	Spillway Crest Elevation		5045.32	
2.	Width of Spillway, L =		24	ft.
3.	C		2.70	
4.	Q100		3.87	cfs
5.	Top of Curb		5045.92	ft.
	Q = CLH <sup>1.5</sup> = 2.70 x 24 x H <sup>1.5</sup>		64.8H <sup>1.5</sup>	
6.	Trial No. 1, Water Surface Elevation		45.72	ft.
7.	H		0.40	ft.
8.	C		2.70	
9.	Q = 64.8 (0.40) <sup>1.5</sup>		16.4	cfs
10.	Trial No. 2, Water Surface = T.C.		45.92	ft.
11.	H		0.60	ft.
12.	C		2.70	ft.
13.	Q = 64.8 (0.60) <sup>1.5</sup>		30.1	cfs
14.	Q from parking lot area 1, 2 and 3		3.87	cfs
15.	Trial No. 3, Water Surface Elevation		45.52	ft.
16.	H		0.20	ft.
17.	C		2.70	
18.	Q = 64.8 (0.20) <sup>1.5</sup>		5.80	cfs
19.	5.80 is larger than 3.87			

# Ponding for Areas 8 and 9 Drainage Plan

## Ponding For Area 8

1. Storage area high elevation of pond	47.35	ft.
2. Surface area @ elevation 47.35	330	sq. ft.
3. Depth of pond	0.5	ft.
4. Surface area @ elevation 46.35	320	
5. Volume of pond $(330+320/2 \times 0.5)$	162	cu.ft.
6. Required volume for Q100		
$V = 0.04 \times 0.80/12$	0.0027	ac. ft.
$V = 0.0027 \times 43,560$	116	cu. ft.
116 < 162 ok		

## Ponding for Area 9

1. Storage area high elevation of pond	48.0	ft.
2. Surface area @ elevation 48.0	630	sq. ft.
3. Depth of pond	0.75	ft.
4. Surface area @ elevation 47.25	120	sq. ft.
5. Volume of pond $(630+120/2 \times 0.75)$	281	cu. ft.
6. Required volume for Q100		
$V = 0.09 \times 0.80/12$	0.006	ac. ft.
$V = 0.006 \times 43,560$	261	cu. ft.

# San Pedro Cross Section Flow Capacity

1. Right-of-way width	100	ft.
2. Street section width	64	ft.
3. Cross slope	2	%
4. Crown height at street center line	0.64	ft.
5. Curb height at gutter	0.667	ft.
6. Length of curb and gutter	220	ft.
7. Elevation difference (5045-5042)	3	ft.
8. Slope of gutter line	0.0136	
9. S 1/2	0.1168	
10. Coefficient "n"	0.017	
Assume water in street to crown height.	0.64	ft.
11. Depth of water to gutter	32	ft.
12. Width of water surface to crown	10.24	sq. ft.
13. Water area: one half street	32.64	ft.

**Recommendation:** The storm flow from areas 1, 2 and 3 (parking lot areas) be collected in an 18 inch storm drain through three (3) sump catch basins and be discharged into an existing 54 inch storm drain on San Pedro Blvd. The storm flow from area 7 (parking lot area) be collected in an 18 inch storm drain through a sump catch basin and be discharged into an existing private 36 inch storm drain on the easterly side of the tract. The storm flow from areas 8 and 9 (lawn areas) be collected into sumps and drained into the area 7 storm drain through four (4) inch PVC drain pipes. The storm flow from areas 5 and 6 (lawn areas) be discharged as sheet flow into San Pedro Blvd. and Indian School Road respectfully. The storm flow from area 4 (Roof area) be split into two areas, east and west, and be drained through pipes to the areas 1, 2 and 3 storm drain.

P.O. Box 3325  
Albuquerque, NM 87190

Attention: Mr. V. M. Kimmick

RE: Storm water flow from Tract 2-B-1 into existing 36 inch  
RCP along easterly boundary.

Dear Mr. Kimmick:

Per our phone conversation Monday, August 25, 1981: this is a request to discharge 2.50 cfs into the existing 36 inch RCP storm drain along the easterly boundary of Tract 2-B-1. The total Q 100 from the 2.96 acres is approximately 11.3 cfs. The above discharge is about 25 per cent of the total runoff. It is anticipated that the final discharge into the 36 inch RCP will be less than the 2.50 cfs requested.

Enclosed, for your information, is a copy of the Conceptual Drainage plan. Should there be any questions concerning this request, please contact our office.

Sincerely,

SCANLON & ASSOCIATES, INC.

  
Ross E. Schmidt, P.E.

Gentlemen:

This is to certify that the two sump catch basins shown on Sheet No. C-1 of the referenced plans were constructed in close compliance to the drawings. I inspected the storm drain facilities on October 5, 1982. The sump catch basins had been poured, the grating and a large pile of stone were near by. The sump catch basins were located at the bottom of their respective sumps.

Sincerely

Re: Transamerica Center Drainage Report  
Tract 2-B-1 of the Bellamah Office Addition

Dear Mr. Easterling:

It is proposed to construct a five (5) story office building of 86,600 square feet gross floor area, which includes a 7,000 square foot basement, on Tract 2-B-1 of the Bellamah Office Addition. This property is located on the northeast corner of the intersection of Indian School Road and San Pedro Boulevard. The site contains approximately 2.94 acres.

For your approval, enclosed are two (2) copies of the drainage report which showing the present and future drainage patterns and facility requirements.

Sincerely,

MUNICIPAL DEVELOPMENT DEPARTMENT

**TRANSAMERICA CENTER**  
**DRAINAGE REPORT REQUIREMENTS**

The following four (4) pages are in response to the drainage report requirements checklist.

**GENERAL**

1. Engineer Certifies: - Engineer certificates are not included in this report. The Drainage Report information sheet is filled out and included.
2. Planning History: - Present zone is C-2 which will allow for office buildings. See Exhibit "A", Zoning Map H-18-2.
3. Professional Certification: - The Engineer's professional stamp with signature and date appears on the title sheet of the drainage report and on the drainage plan. The Surveyor's professional stamp with signature and date appears on the drainage plan as required. The Architect's professional stamp with signature and date also appears on the drainage plan.
4. Flood Hazard Map: - The site has been delineated on the flood hazard boundary map. See Exhibit "C", from the Albuquerque Master Drainage Study, H-18. The only 100 year flood hazard area in the near vicinity is south-east of the site which is down stream. The majority of storm flow from this site drains to the existing 54 inch storm drain in San Pedro and does not effect that area.
5. Watershed Soil Map: - The soil type is TgB, Tijeras gravelly fine sand loam. This site has been delineated on the soils map. See Exhibit "D", from the soil survey of Bernalillo County by S.C.S.
6. Soils: - A soils investigation report for ponding within 15 feet of the structure is not required since storm waters from the site are to be discharged directly into the 54 inch storm drain system on San Pedro Boulevard.
7. Watershed Area: - Lots to the north and east of the proposed site drain away from the tract boundary to self contained drainage structures. The area north of Uptown Boulevard is collected and drained into either the private 36 inch drain to the east or the 54 inch City Storm Drain on San Pedro Boulevard. The finished

floor elevation of the proposed building is elevation 5250.0 while the top of curb on San Pedro Boulevard is elevation 5245.0 at the northwest corner of the lot. See Exhibit "B".

8. Storm Flows: - The 100 year frequency storm flows from the 4.52 acres to the north contributes 7.05 cfs to the 54 inch city storm drain. This flow poses no hazard to the Transamerica Center Site.
9. Flow Depth and Velocity: - The only offsite flow that could affect Tract 2-B-1 is the storm flow on San Pedro Boulevard. The capacity of the street section to the crown is 96.46 cfs with a velocity of 4.70 fps, while the 100 year frequency storm flow from both the tracts to the north is only 7.05 cfs. See Hydrology Data Sheets.
10. Other Off-Site Conditions: - The two (2) tracts to the north of Tract 2-B-1, discharge directly into the 54 inch storm drain, in San Pedro, through a sump inlet. This flow is but a fraction of the capacity of the 54 inch drain and should have no effect on drainage on the Transamerican tract.

The other discharge point into an existing 36" RCP side of the tract is affected by the discharge of a large portion of the Coronado Shopping Center. The  $Q_{100}$  from the shopping area is 42.9 cfs while the 36 inch drain will carry 47.1 cfs. This will allow for the Transamerica Site  $Q_{100}$  discharge of 1.41 cfs.

11. Proposed Treatment of Offsite Flows: - There is no requirement for treating offsite flows. The street capacity is sufficient to handle any storm flow which may occur due to clogged catch basins upstream of the site.
12. Right-of-Way and Easements: - There are no right-of-way or easements required to accommodate offsite flows.
13. Flow Volumes and Rates: - On site storm flow volumes and rates for undeveloped and proposed development are as follows:

Undeveloped Tract	=	2.96 acres
Flow: Q100 - 24 hr.	=	3.06 cfs
Q10 - 24 hr.	=	1.53 cfs

Volume	=	0.20 ac. ft.
Q100	=	0.10 ac. ft.
Q10	=	

Developed Tract - See Drainage Map.

Drainage Area	Flow		Volume	
	Q10-24 hr	Q100-24 hr	V10	V100
Area 1	1.15	1.83	0.07	0.12
2	0.62	1.00	0.04	0.06
3	0.66	1.04	0.04	0.07
4	0.61	0.96	0.04	0.06
5	0.25	0.40	0.02	0.03
6	0.23	0.37	0.02	0.02
7	0.89	1.41	0.06	0.09
8	0.02	0.04	0.001	0.003
9	0.05	0.09	0.003	0.006
Totals			0.30	0.46

14. Flow Depth and Velocity: - Flow depth and velocity across the parking lot will be comparatively small due to sheet flow and four (4) points of pick up. The largest volume has Q100 of 1.83 cfs with an average velocity of 2.7 fps. This would occur in Area No. 1 (see drainage plan) at the upper end of the storm drain system.
15. Proposed Treatment of On-site Drainage: - It is proposed to collect the runoff from the parking lot and roof and discharge the flow into the existing 54" storm drain systems as fast as is possible.
  - A. The required drainage facilities will include two (2) 18" storm drain pipes to two existing storm drain systems, one on the west side and the other on the east side of the tract. Four sump catch basins and a manhole are required.
  - B. Each of the four (4) catch basins will be sumped providing some ponding. Ponding as such is not a requirement of this project. See attached letter.

1. Pond Volume Calculations: - None required for this project. However, we are ponding two (2) small areas to stop flow on to Bellamah Tract. See Ponding Calculations.
  2. Positive Discharge: - Storm waters will be discharged as quickly as possible through two (2) 18 inch on-site storm drain systems.
  3. Pond Emergency Spillway Calculations: - These are included in the report and the spillway is sufficient to discharge the 100 year frequency runoff from the parking lot.
  4. Pond Fencing: - Pond fencing is not required.
  5. Pond Landscaping: - Landscaping is not required.
  6. Pond Maintenance: - Catch basin maintenance is required, cleaning of trash from the grating will be necessary from time to time, especially after a major storm.
  7. Channel Characteristics: - There are no channel requirements.
  8. Storm Sewer Characteristics: - The two (2) storm drains will be constructed of 18" RCP on a minimum slope of 0.0176. Four (4) drop inlet sump type catch basins and one (1) manhole are required.
  9. Other Storm Drainage Facilities: - A small drain pipe will drain roof flows to the proposed manhole on the 54" City storm drain.
16. Rights-of-Way and Easements: - There will be only one drainage easement required on this project. This is an easement for an 18 inch storm drain pipe to join the existing manhole in the Bellamah Corporation Office Building Parking Lot on the east side. See attached agreement.

## DRAINAGE REPORT

**PURPOSE:** The purpose of this drainage report is to show the existing and proposed drainage for the area effected by the proposed development on Tract 2-B-1 of the Bellamah Office Addition, (see Exhibit A). The report also shows the existing drainage pattern of those lots which border on the north and east sides (see Exhibit B).

**TOPOGRAPHY AND SOILS:** The site generally slopes from 0 to 5 percent to the southwest. These areas have medium runoff and erosion hazard is moderate.

Using the Soil Survey of Bernalillo County by the SCS, the major soils in the area are Tijeras gravelly fine sandy loam (TgB) and Embudo-Tijeras complex (EtC) with the majority of the lot falling on the Tijeras gravelly fine sandy loam. (see Exhibit D).

**DEVELOPMENT:** The entire area will be developed into an office building complex, housing five (5) large office buildings, two of which are already completed. The other three (3) are now proposed or under construction. A five (5) story office building, with the required parking, will be constructed on the proposed site, Tract 2-B-1.

**EXISTING STORM DRAIN FACILITIES:** An existing 54 inch storm drain is located in a ten (10) foot utility easement along the west side of the tract. Another 36 inch storm drain runs along the east side of the tract in a fifteen (15) foot drainage easement. The 36 inch storm drain belongs to the Bellamah Corporation. They have given Transamerica Center permission to discharge 2.50 cfs into their storm drain. See Drainage Map. There is also a 72 inch storm drain in Jeannedale Drive to the east of the Bellamah building.

**DRAINAGE ANALYSIS:** Tract 2-B-1 is located on the lower extremity of a drainage area, which is bounded by San Pedro Boulevard on the west, by Menaul Boulevard on the north, by Louisiana Boulevard on the east and by Indian School Road on the south. See Exhibit C. That portion of the drainage area to the north of Uptown Boulevard, Coronado shopping Center, is divided into four (4) subdrainage areas. Area I, the northwesterly portion, drains westerly toward San Pedro Boulevard where it is sumped in the parking lot and through sump catch basins discharged into a 54 inch storm drain on San Pedro Boulevard. Area II, the northeasterly portion, drains to sump catch basins in the parking lot and is discharged into a 72 inch storm drain in Jeannedale Drive. The south portion is divided into two sub-areas, Area III and Area IV. Area No. III, drains into a private 36 inch storm

drain owned by Bellamah Land Company. Area IV the southern most portion drains south to Uptown Boulevard where it is picked up by several catch basins and discharged into a 72 inch storm drain on Jeannedale Drive.

The four (4) lots that are to the north and east of the proposed site drain, as shown on Exhibit B, either to the 54 inch, 36 inch or 72 inch storm drains. At the intersection of Jeannedale Drive and Indian School Road is the beginning of an open channel. The channel collects street flows and discharges them directly into the I-40 channel. Catch basins on San Pedro Boulevard discharges directly into a 54 inch storm drain which in turn discharges into the I-40 channel.

There is no danger of the Transamerica Center Office Building being flooded from off-site flow, since the finished floor is 5.0 feet above the top of curb on the northwest corner. Any over flow from the site, which may occur due to catch basin malfunction, will discharge onto San Pedro Boulevard and flow south to catch basins or an emergency spillway chute at the I-40 channel.

Storm flows from the tract itself are divided into nine (9) areas of origin, see Drainage Plan. Areas 1, 2 and 3 (the parking lot) and area 4, (the roof) will drain into a catch basin system and will discharge into the existing City 54 inch storm drain on San Pedro Boulevard. Area 7, (a parking lot) will drain into a drain system and discharge into an existing 36 inch storm drain on the Bellamah Tract. Areas 5 and 6, (a lawn area) have a total possible discharge into San Pedro of  $Q_{100} = 0.77$  cfs which is much smaller than the Undeveloped  $Q_{10} = 1.53$  cfs. When the area is grassed the discharge should be much less than 0.77 cfs. Areas 8 and 9, (lawn area) have a total possible discharge of 0.14 cfs and very little volume. These areas have been sumped to catch the runoff. Both areas will have sufficient ponding volume after the lawns have become well established. See Ponding Calculations.

Using Soil Conservation Services' Chapter 2, (Revised October, 1973 for New Mexico) Engineering Field Manual for Conservation Practices Peak Rates of Discharge for Small Watersheds. The following are the expected segment storm flows for the 100 year frequency storm.

# DESIGN CRITERIA

Drainage Area Number	Drainage Area in acres	Length of run in ft.	Elev. Diff. in ft	Slope in %	Velocity in fps	Time of Concentration in hr.

**Recommendation:** The storm flow from areas 1, 2 and 3 (parking lot areas) be collected in an 18 inch storm drain through three (3) sump catch basins and be discharged into an existing 54 inch storm drain on San Pedro Blvd. The storm flow from area 7 (parking lot area) be collected in an 18 inch storm drain through a sump catch basin and be discharged into an existing private 36 inch storm drain on the easterly side of the tract. The storm flow from areas 8 and 9 (lawn areas) be collected into sumps and drained into the area 7 storm drain through four (4) inch PVC drain pipes. The storm flow from areas 5 and 6 (lawn areas) be discharged as sheet flow into San Pedro Blvd. and Indian School Road respectfully. The storm flow from area 4 (Roof area) be split into two areas, east and west, and be drained through pipes to the areas 1, 2 and 3 storm drain.

Attention: Mr. V. M. Kimmick

RE: Storm water flow from Tract 2-B-1 into existing 36 inch  
RCP along easterly boundary.

Dear Mr. Kimmick:

Per our phone conversation Monday, August 25, 1981: this is a request to discharge 2.50 cfs into the existing 36 inch RCP storm drain along the easterly boundary of Tract 2-B-1. The total Q 100 from the 2.96 acres is approximately 11.3 cfs. The above discharge is about 25 per cent of the total runoff. It is anticipated that the final discharge into the 36 inch RCP will be less than the 2.50 cfs requested.

Enclosed, for your information, is a copy of the Conceptual Drainage plan. Should there be any questions concerning this request, please contact our office.

Sincerely,

SCANLON & ASSOCIATES, INC.

  
Ross E. Schmidt, P.E.

RES/jmr

enclosure

Approved for discharge of 2.50 cfs into 36 inch private storm drain.

  
V. M. Kimmick, P.E., Development Manager

FLOOR PLAN AT C-C

**CROSS SECTION A-A**

PLAN AT D-D

**CROSS SECTION B-B**

GENERAL NOTES:

1. USE M II "TYPE C" FOR DEPTHS OF LESS THAN 6 FT. MEASURED FROM INV. TO RIM.
2. CONTRACTOR HAS OPTION TO CONSTRUCT "TYPE C" M II IN LIEU OF "TYPE E" M II FOR DEPTHS OF 6 FT. OR MORE.
3. THIS M II DESIGN APPLIES TO 4, 6 OR 8 FT. I.D.
4. M II GREATER THAN 18 FT. IN DEPTH SHALL BE CONSTRUCTED OF PRECAST CONC. SECTIONS ONLY.
5. USE NON-SHRINK GROUT FOR JOINTS & FILLETS.

**CONSTRUCTION NOTES:**

- A. CONC. PIPE SUPPORTS SHALL EXTEND OUTSIDE M. TO BELL OF FIRST JOINT A SMALL CHAIR PIPE TO SPRING LINE.
- △ B. FIRST TWO STEPS TO PRODUCE 4" INTO M. ALL OTHERS 5" STEPS TO BE PRECAST IN PLACE OR SET IN EPOXY CEMENT (MUNT. PROCESS H8-233 OR SET APPROVED EQUAL) AT 16 O.C. SEE DWG. S-11 FOR STEP DETAIL.
- C. M/H MAY BE CONSTRUCTED OF CONC. BLOCK, GRADE 45 BRICK, POURED CONC. OR PRECAST REINF. CONC. IF BLOCK OR BRICK, PLASTER INSIDE & OUT WITH ONE HALF INCH MORTAR. SEE DWG. S-6 FOR DETAIL.
- D. SEE DWG. S-3 FOR PRECAST CONC. COVER.
- E. USE FOUR COURSES OF GRADE 45 BRICK ON UNPAVED STREETS FOR FUTURE ADJUSTMENT OF M/H FRAME TO PAVEMENT GRADE.
- F. CONC. NAME TO BE FURNISHED IN PLACE. MINIMUM 4" LARGER AT 16 O.C. LARGER AT 12 O.C. MIN. PL-11 OF 14" OR GREATER, USE NO. 4 BARS AT 12" O.C. EACH WAY FOR M/H LESS THAN 16" IN DCTH.
- G. IN UNPAVED AREAS, TOP OF M/H COVER SHALL BE SET 3" BELOW GRADE.
- H. INVERT ELEVATION OF STUB OR LATERAL AS SHOWN ON PLANS.
- J. 6" GROUT FILL ON UPPER HALF OF PIPE.
- △ K. USE CONC. PAD 5' X 5' IN ALL AREAS.
- L. SEE DWG. S-5 FOR M/H FRAMES AND COVERS.
- M. CONC. FILL TO BE TYPE II CEMENT.
- N. COMPACTED FILL.
- O. 6" GROUT FILL AROUND BASE.
- P. SLOPE ONE INCH PER FT.
- Q. SHOULDER TO BE A MIN. OF 6" WIDE.

MANHOLE TYPE C	
DWG. S-1-2	NOV 1979

PLAN

SECTION A-A

SECTION B-B

### GENERAL NOTES:

1. FOR SINGLE GRATE TYPE CATCH BASIN, MOVE ONE END WALL TO FORM NEW SINGLE GRATE CATCH BASIN.
2. FRAME OF GRATING SHALL BE WELDED AND/OR RIVETED.
3. AFTER CLEANING SURFACE OF SCALE, RUST ETC, GRATING FRAME AND CENTER SUPPORT TO BE PAINTED WITH ONE SHOP COAT RED OXIDE. TWO FINISH COATS ALUMINUM PAINT (AASHO M69).

### CONSTRUCTION NOTES:

- A. SEE DWG. K-8 FOR FRAME AND GRATING DETAILS.
- B. SEE DWG. K-9 FOR CENTER SUPPORT ASSEMBLY.
- C. CUT ONE HORIZONTAL AND ONE VERTICAL BAR MAX. AT PIPE OPENING.
- D. SPACERS, SEE DWG. K-8.
- E. USE STANDARD MH STEPS, SEE DWG. S-II. FIRST STEP TO BE 18" FROM TOP OF GRATE AND SHALL PROTRUDE 7" SPACING BETWEEN STEPS TO BE AT 12" O.C., LAST STEP 18" MAX. FROM BOTTOM.
- F. CONC. FILL, SEE NOTE E, DWG. K-1.
- G. INVERT PER DESIGN.
- H. NO. 4 BARS AT 6" O.C. EACH WAY.
