I. EXECUTIVE SUMMARY

Diversified Real Estate is proposing a development on a parcel located on the southeast corner of Coors Blvd and Brayton Rd NW in Albuquerque, New Mexico. The proposed development is a 928 sf drive thru only coffee shop. There is a second portion of this site slated for future, but as yet unknown, development. For the purposes of this study, a 2,400 sf Fast Food Restaurant with Drive Thru was assumed. The site contains approximately 0.94 acres.

The purpose of this study is to evaluate the impact of the vehicular trips projected to be generated by the proposed development on the study area intersections and roadway system

The study area encompasses the existing roadway system in the vicinity of the project site. Specifically, the following existing intersections were evaluated, as specified by NMDOT and the City of Albuquerque:

- Coors Blvd NW / Hanover Rd NW
- Coors Blvd NW / Brayton Rd NW
- Coors Blvd NW / Fortuna Rd NW
- Brayton Rd NW / 59th St NW
- Hanover Rd NW / Two Taco Bell Access Points
- Hanover Rd NW / Dolores Dr NW

The following table summarizes the proposed Trip Generation for the site:

Nearby Starbucks Counts	Daily	AM Peak Hour			PM Peak Hour		
		Enter	Exit	Total	Enter	Exit	Total
Trip Generation		39	58	97	46	41	87
Pass-By Trips (50%)		19	19	38	23	23	46

Pass-By Trips (50%)		27	27	54	20	20	40
NET	467	28	25	53	21	18	49

Summary of Findings

The proposed 928 sf drive-thru only coffee shop and 2,400 sf fast food restaurant development will not have a significant impact on the adjacent road system. LOS will not change at study area intersections with the addition of traffic from the development. Delay will increase slightly on some intersection movements due to site traffic. The one exception is the southbound left turn movement on Coors Blvd at Brayton. Analysis shows LOS dropping to "E" in the peak hours in 2032 with site traffic. This is not an uncommon situation on major roads and queues will not extend past the available storage. Also, the HCM7 methodology used for unsignalized

intersections does not account for gaps created by adjacent traffic signals. Actual LOS should be better than indicated.

Recommendations and Mitigation Measures

Based on the analyses contained herein, the following roadway or multi-modal improvements are recommended to the study area intersections:

Intersection	Recommendations	Responsible	Timing
Coors / Fortuna	<ul style="list-style-type: none">- Consider adding a separate westbound right turn lane to fix the existing LOS issue- Lengthen the northbound left turn lane and the southbound left and right turn lanes to meet SAMM deceleration requirements	NMDOT	When deemed needed
Coors / Hanover	<ul style="list-style-type: none">- Lengthen the southbound left turn lane to meet SAMM deceleration requirements- Lengthen the northbound left turn lane to maximum extent possible	NMDOT	When deemed needed
Coors / Brayton	<ul style="list-style-type: none">- Construct a northbound right turn deceleration lane 100' long	Developer	By Opening
59 th St / Site Access	<ul style="list-style-type: none">- Install a "stop" sign on the eastbound exiting approach- One lane exiting will be sufficient- No separate left or right turn lanes are needed on 59th Street	Developer	By Opening

II. INTRODUCTION

A. Purpose of Study

Diversified Real Estate is proposing a development on a parcel located on the southeast corner of Coors Blvd and Brayton Rd NW in Albuquerque, New Mexico. The proposed development is a 928 sf drive thru only coffee shop. There is a second portion of this site slated for future, but as yet unknown, development. For the purposes of this study, a 2,400 sf Fast Food Restaurant with Drive Thru was assumed. The site contains approximately 0.94 acres. The purpose of this study is to evaluate the impact of the vehicular trips projected to be generated by the proposed development on the study area intersections and roadway system.

B. Study Procedures

Information Sources – Traffic count data from a nearby drive thru only coffee shop was used for trip generation estimates. Information from the MRCOG website was used to estimate an annual traffic growth rate. The MRCOG website and internet searches were used to identify population densities, other coffee shop locations in the region, locations of transit routes and pedestrian/bicycle facilities.

Scope – The study area encompasses the existing roadway system in the vicinity of the project site and was approved by NMDOT and the City Traffic Engineering during the scoping process. The study includes 2022 (year of anticipated site build) plus 2032 analysis horizons. Figure 1 illustrates the location of the study area intersections. Specifically, the following existing intersections were evaluated:

- Coors Blvd NW / Hanover Rd NW
- Coors Blvd NW / Brayton Rd NW
- Coors Blvd NW / Fortuna Rd NW
- Brayton Rd NW / 59th St NW
- Hanover Rd NW / Two Taco Bell Access Points
- Hanover Rd NW / Dolores Dr NW

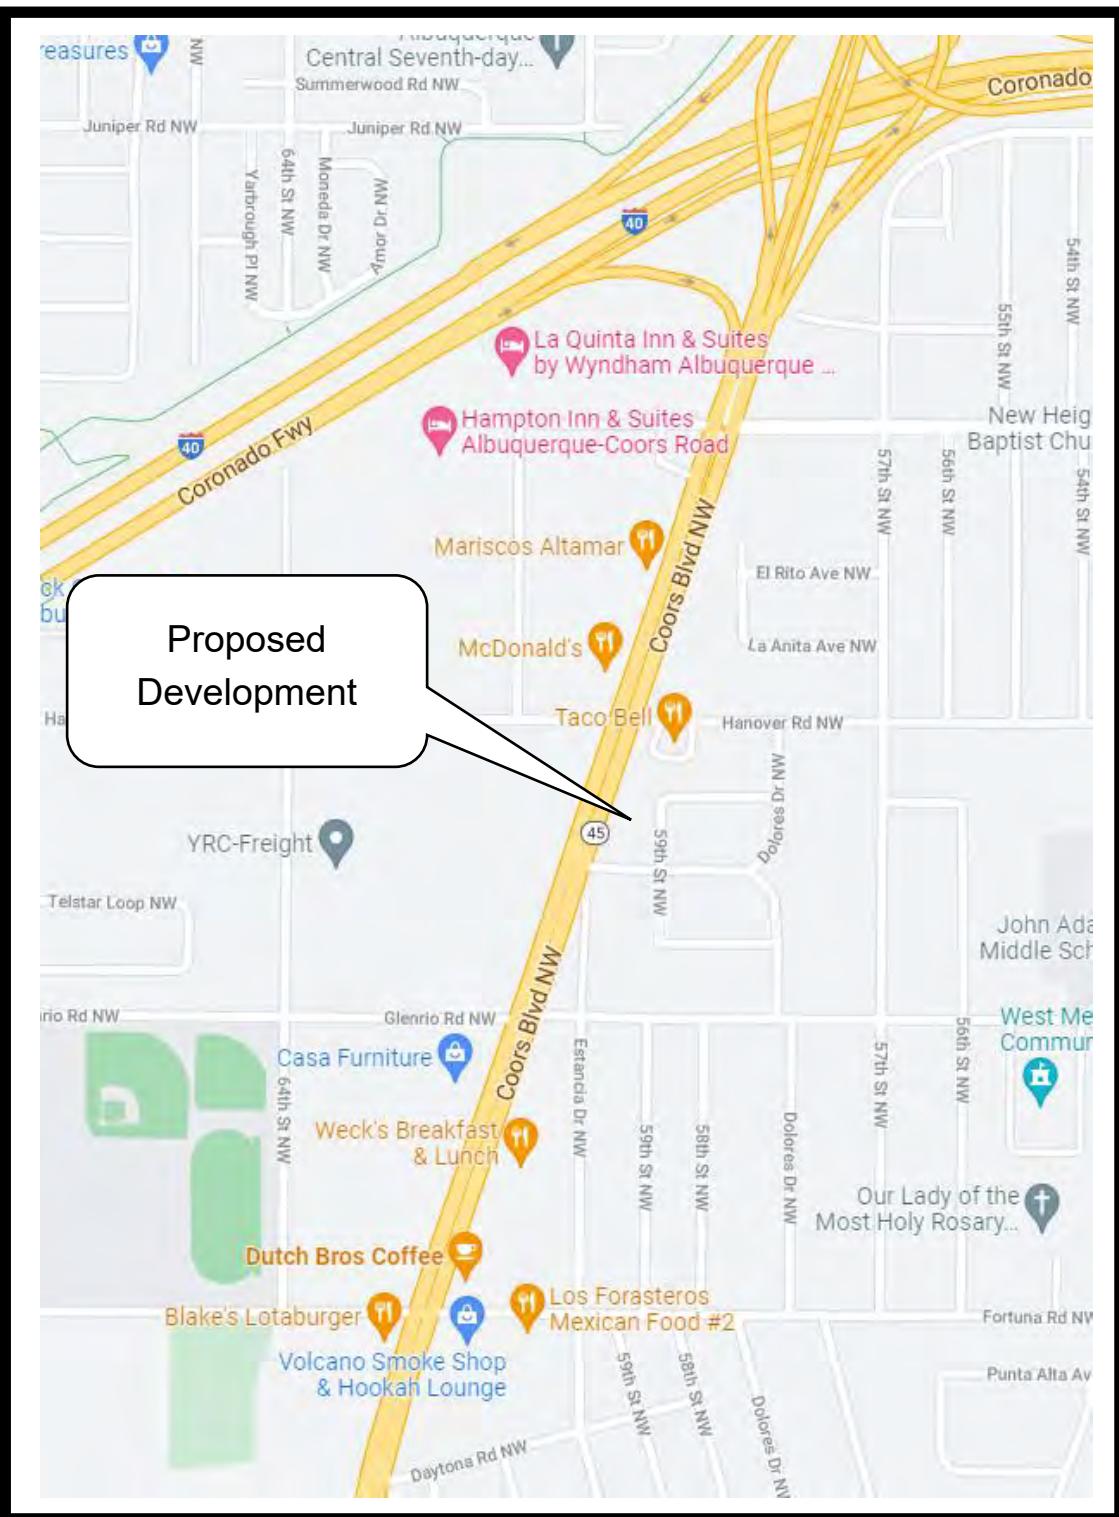

Level of Service (LOS) – According to the “ABC Comprehensive Plan” - 2017 update, this area around Coors Blvd NW / Brayton Rd NW does not have a special economic development designation. Coors Blvd NW is designated a Major Transit Corridor. Using Table 7.5.81 in the “Development Process Manual”, 2020, LOS D is considered acceptable in the study area.

III. EXISTING CONDITIONS

A. General Area Characteristics

Figure 1 illustrates the location of the development site.

Existing land uses around the site consist of a mix of retail/commercial and residential. The site is zoned MX-L which can include a wide array of low-intensity retail, commercial, institutional and residential uses. The proposed site plan is included in Figure 2. It shows the proposed access location – one to 59th Street NW.

Diversified Real Estate, Albuquerque, NM

Diversified Real Estate, Albuquerque, NM

Associates, LLC

Site Concept Plan

Figure 2

B. Area Street Network

The existing transportation network in the vicinity of the proposed development is illustrated in Figure 1. All roads in the study area are under the jurisdiction of the City of Albuquerque, except for Coors Blvd NW which is under the jurisdiction of NMDOT. The study area roads include the following:

Study Area Roadways:

- **Coors Blvd NW** – Coors Blvd NW is a Principal Arterial and part of the National Highway System. By the site, the roadway section consists of three travel lanes in each direction with a raised median and left and right turn lanes on some approaches at intersections. There are detached sidewalks on both sides. The posted speed limit is 45 mph.
- **Hanover Rd NW** – Hanover Rd NW is a major collector east of Coors Blvd and a local street to the west. By the site, the roadway section consists of one travel lane in each direction. There are attached sidewalks on both sides. The speed limit is 30 mph.
- **Brayton Rd NW** – Brayton Rd ENW is a local roadway, consisting of one travel lane per direction with sidewalks on both sides. The speed limit is 30 mph.
- **Fortuna Rd NW** – Fortuna Rd NE is a local roadway, consisting of one travel lane per direction with sidewalks on both sides. The speed limit is 30 mph.
- **59th St NW** – 59th St NW is a local roadway, consisting of one travel lane per direction with sidewalks on both sides. The speed limit is 30 mph
- **Dolores Dr NW** – Dolores Dr NW is a local roadway, consisting of one travel lane per direction with sidewalks on both sides. The speed limit is 30 mph

Study Area Intersections:

- **Coors Blvd NW / Hanover Rd NW** – The Coors Blvd NW / Hanover Rd NW intersection is a signalized four-legged intersection, with protected/permitted left turn signal phases on all approaches. The northbound leg of the intersection has one left turn lane, three through lanes and one right turn lane. The left turn lane has approximately 160 feet of storage, while the right turn lane has approximately 150 feet of storage. The southbound leg has one left turn lane, two through lanes, and one shared through/right turn lane. The left turn lane has approximately 210 feet of storage. The westbound leg has one left turn lane, one through lane and one right turn lane. The left and right turn lanes each have approximately 125 feet of storage. The eastbound leg has one left turn lane and one shared through-right turn lane.
- **Coors Blvd NW / Brayton Rd NW** – The Coors Blvd NW / Brayton Rd NW intersection is an unsignalized three-legged intersection, with “stop” sign control on the westbound approach. The northbound and southbound legs each consist of two through lanes. Southbound, there is one left turn lane with approximately 125 feet of storage. The westbound leg consists of one right turn lane.
- **Coors Blvd NW / Fortuna Rd NW** – The Coors Blvd NW / Fortuna Rd NW intersection is a four-legged intersection controlled by a traffic signal. Protected/permitted left turn

phase exists on the northbound, southbound and eastbound approaches. Left turns on the westbound approach are permitted-only. The southbound leg of the intersection has one left turn lane, three through lanes and one right turn lane. The left turn lane has approximately 175 feet of storage, while the right turn lane has approximately 200 feet of storage. The northbound leg has one left turn lane, two through lanes, and one shared through/right turn lane. The left turn lane has approximately 210 feet of storage. The westbound leg has one left turn lane, and one shared through/right turn lane. The eastbound leg has one left turn lane and one shared through-right turn lane. The left turn lane has approximately 200 feet of storage.

- **Hanover Rd NW / Dolores Dr NW** – The Hanover Road NW / Dolores Dr NW intersection is a three-legged intersection with “stop” sign control on the northbound approach. Each approach consists of one lane per direction.
- **Brayton Rd NW / 59th St NW** – The Brayton Rd NW/59th St NW intersection is a four-legged intersection with “stop” sign control on the north and south legs. Each approach consists of one lane per direction.
- **Hanover Rd NW / Taco Bell Access Points** – Both the western and eastern Taco Bell Access Points to Hanover Rd NW consist of one land northbound. There are no separate striped westbound left turn lanes, although at the western access, the westbound left turn lane for the Coors Blvd NW intersection serves as a left turn lane for the access.

C. Existing Traffic Volumes

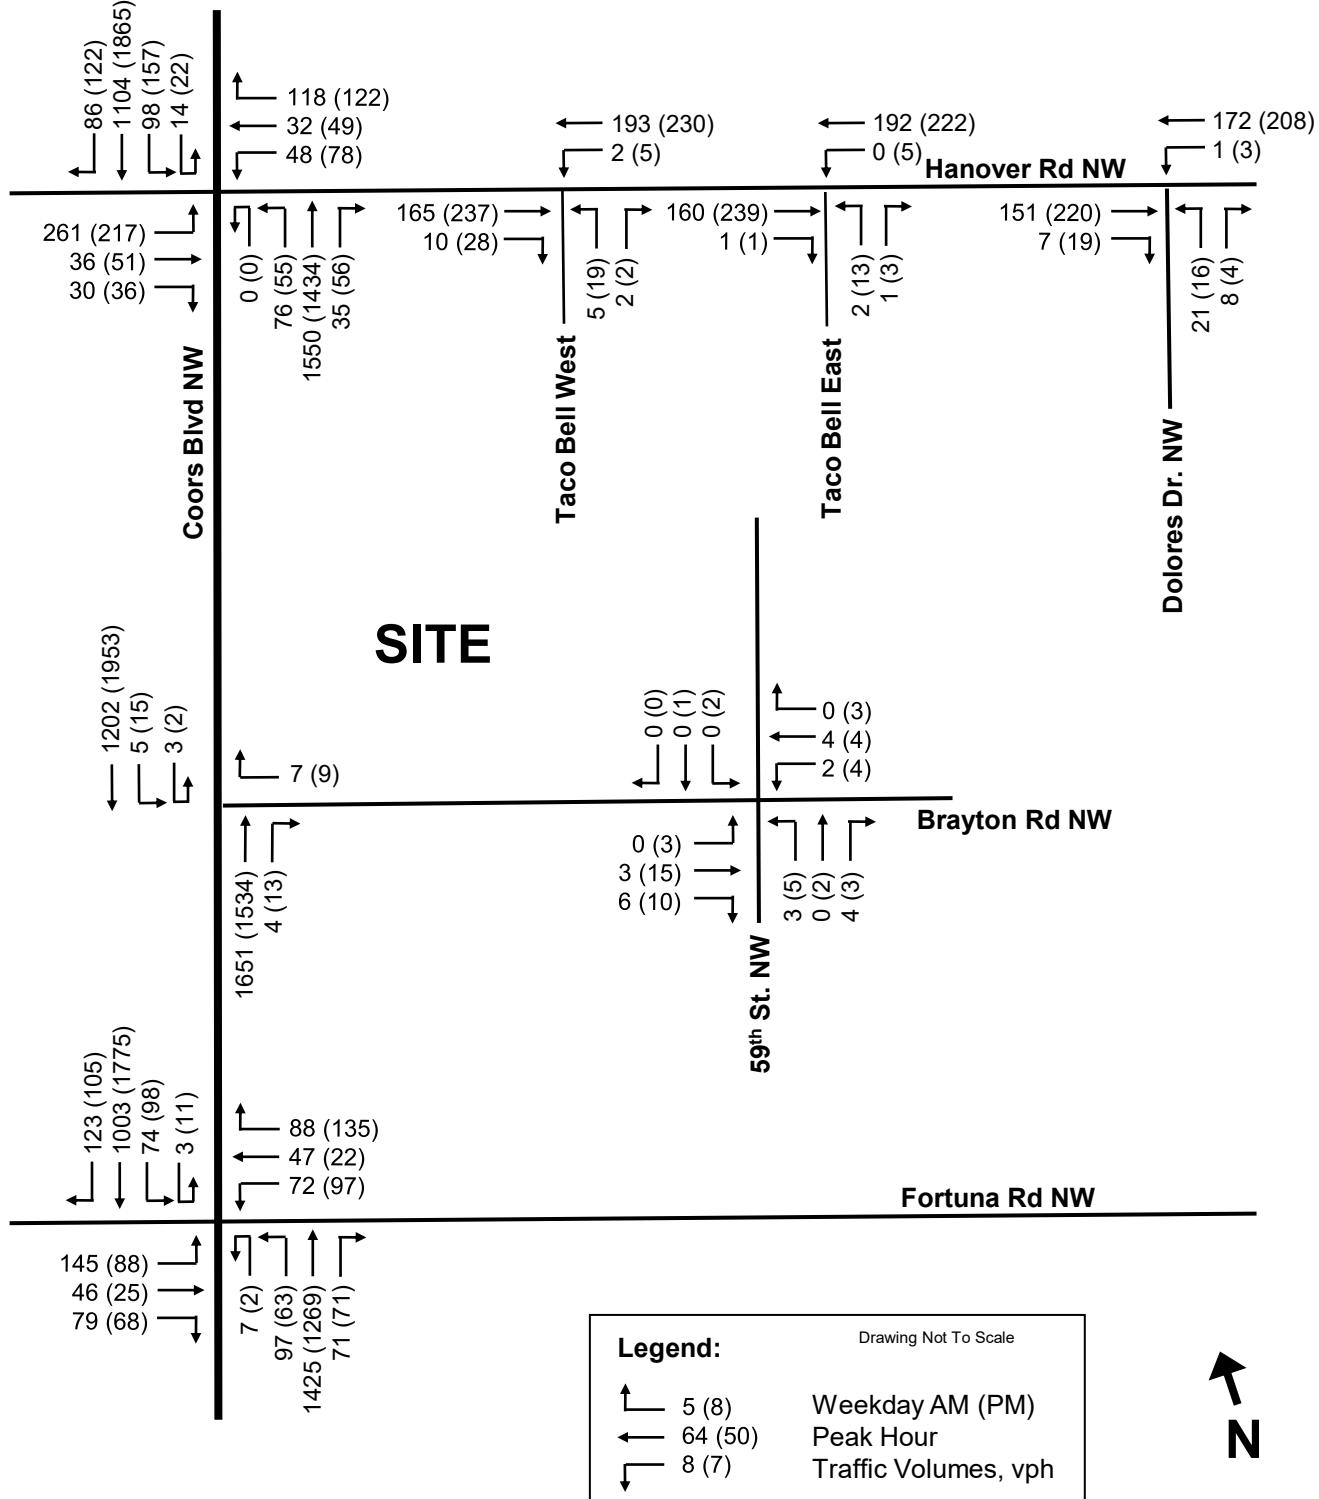

Existing (2021) peak period intersection turning movement traffic volume counts were collected for this study at the following intersections on Wednesday, December 1, 2021:

- Coors Blvd NW / Hanover Rd NW
- Coors Blvd NW / Brayton Rd NW
- Coors Blvd NW / Fortuna Rd NW
- Brayton Rd NW / 59th St NW
- Hanover Rd NW / Two Taco Bell Access Points
- Hanover Rd NW / Dolores Dr NW

A summary of the existing peak hour intersection turning movement traffic volume counts are illustrated in Figure 3. Detailed traffic count data is provided in Appendix “A”.

D. Existing Levels of Service

The capacity analyses in this study utilized the methodologies contained in the Highway Capacity Manual (HCM) employing “HCS7” software and resulted in a qualitative measure of the operational characteristics of each intersection described by a letter designation ranging from “A” to “F” known as “Level of Service” (LOS). LOS “A” represents free-flow operating conditions, whereas LOS “F” represents excessive congestion and delay. Unsignalized intersection capacity analysis reports a LOS designation for each impeded intersection movement. Signalized intersection capacity analysis reports state the overall LOS designation for the intersection as well as for each lane group and approach. According to the State Access Management Manual (SAMM), LOS “D” is considered acceptable on Coors Blvd.

Diversified Real Estate, Albuquerque, NM

2021 Existing Traffic Volumes

Figure 3

Capacity analysis was conducted for both the AM and PM peak hours using the 2021 Existing Traffic Volumes, shown in Figure 3. The calculated LOS, by movement and for the overall intersections, are shown in Table 4 and on Figure 13. Review indicates that the westbound right turn movement at Coors & Hanover experiences LOS “E” during both the morning and evening peak hours. Right turns on red are permitted for this movement, so actual LOS is likely better. At Coors & Fortuna, the westbound left turning operates a LOS “E” during the evening peak hour. Also westbound, the through/right turn movement operates at LOS “E” during the morning and evening peak hours. This delay is caused by some congestion, but mostly by the long traffic signal cycle lengths. When cycle lengths are longer (which is typical on arterial roads), vehicles waiting to make mainline left turns and on the side streets must wait longer at red lights. Mitigations for this are to either increase the amount of green time for the movements or reduce the cycle length. Both solutions will degrade the traffic signal progression and are not recommended. Adding a separate westbound right turn lane would also improve the westbound through/right LOS.

E. Existing Transit Service

Regular ABQ Ride Bus Route 155 travels north-south along Coors Blvd. There are bus stops with shelters in the study area, but no bus pull-outs.

F. Bicycle and Pedestrian Considerations

Pedestrians – Attached and detached sidewalks are present along both sides of each of the study area roads. Pedestrian crosswalks, ADA ramps, signal heads and push buttons exist for all approaches of the intersections of Coors Blvd with Hanover, Fortuna and Brayton. Hanover has some ADA ramps but no marked crosswalks. The intersection of Brayton and 59th St has no ADA ramps. There are no existing or proposed pedestrian trails in or near the study area. There is a bridge across Coors Blvd, just north of Fortuna, for pedestrians to use.

Bicycles – Fortuna Blvd to the west has a designated bike lane. Fortuna Blvd to the east is a designated bike route where bikes and cars share the road. There is a bridge across Coors Blvd, just north of Fortuna, for bicycles to use. The MRCOG long range bike plan identifies Coors Blvd. as a bike route.

G. Safety Evaluation/Crash Data

Crash data was provided for the study area intersections from MRCOG, for the years 2015 – 2019. The data was reviewed to see if there were any obvious patterns or crash causes that could be mitigated through traffic engineering improvements. Table 1 presents a summary of the data. Overall, 366 crashes occurred during this period. Weather and lighting did not appear to be significant factors. There were 80 hit and run crashes and 4 involving trucks, plus 9 involving alcohol or drugs. There were 4 crashes involving a pedestrian and 3 involving a bicyclist. Most of the crashes occurred at Coors/Hanover and Coors/Fortuna. Crash data is presented in Appendix C.

Review of the crash statistics show a higher-than-expected number of injury crashes, which makes sense given the higher number of head-on and right angle/turning crashes, which tend to be more severe. Sideswipe crashes are also higher than expected. Left turn signal phasing at

Coors/Hanover and Coors/Fortuna is permitted/protected. It is recommended that a detailed study be conducted to see if protected-only left turn phasing would reduce the number of turn crashes and their severity, which still maintaining acceptable traffic operations. Site-generated traffic is not anticipated to have a significant effect on crash rates or patterns.

TABLE 1
SUMMARY OF CRASH DATA

Intersec. of Coors with:				Type		Cause						Weather		Lighting

IV. PROPOSED SITE TRAFFIC CHARACTERISTICS

A. Site Development Characteristics

The proposed development will consist of a 928 sf drive-thru only coffee shop. There is a second portion of this site slated for future, but as yet unknown, development. For the purposes of this study, a 2,400 sf Fast Food Restaurant with Drive Thru was assumed. There are a few parking spaces proposed for employees only, with space for 11 vehicles to queue in the drive-thru lane, with additional storage on-site for an additional 20+ cars. There is only one development phase and the coffee shop is anticipated to be in operation in 2022. The site will have one access point to 59th St NW.

B. Trip Generation

Normally, Trip Generation, 11th Edition, by ITE is used for trip generation estimates for a coffee shop. However, the coffee shop land use with a drive-thru only used a small sample size. As such, entering and exiting traffic counts were collected on December 1, 2021, at a nearby Starbucks with a drive-thru only, located on NM 528 / Eastlake Dr. These counts were used a trip generation estimate for this proposed site. ITE Trip Generation, 11th Edition, Land Use 938 – Coffee / Donut Shop with Drive Thru and No Indoor Seating was used for the daily trips figure. For the second future site building, Land Use 934 – Fast Food Restaurant with Drive Thru was used. As indicated in ITE Trip Generation Handbook, 3rd edition, 50% pass-by trips were assumed. Trip generation projections are provided in Table 2.

TABLE 2 - SITE TRIP GENERATION

Pass-By Trips (50%)		27	27	54	20	20	40
NET	467	28	25	53	21	18	49

C. Trip Distribution

The distribution of the projected vehicle trips generated by the development was established based on an examination of population locations within a 2-mile radius of the site. Figure 4 illustrates the population census tracts and approach routes for the site. Locations of other coffee shops are shown in Figure 5. The red star is the project site. The census tract map and population statistics were obtained from the MRCOG website. There are several other coffee shops in the area, mostly located to the east and south. There is an unserved population area

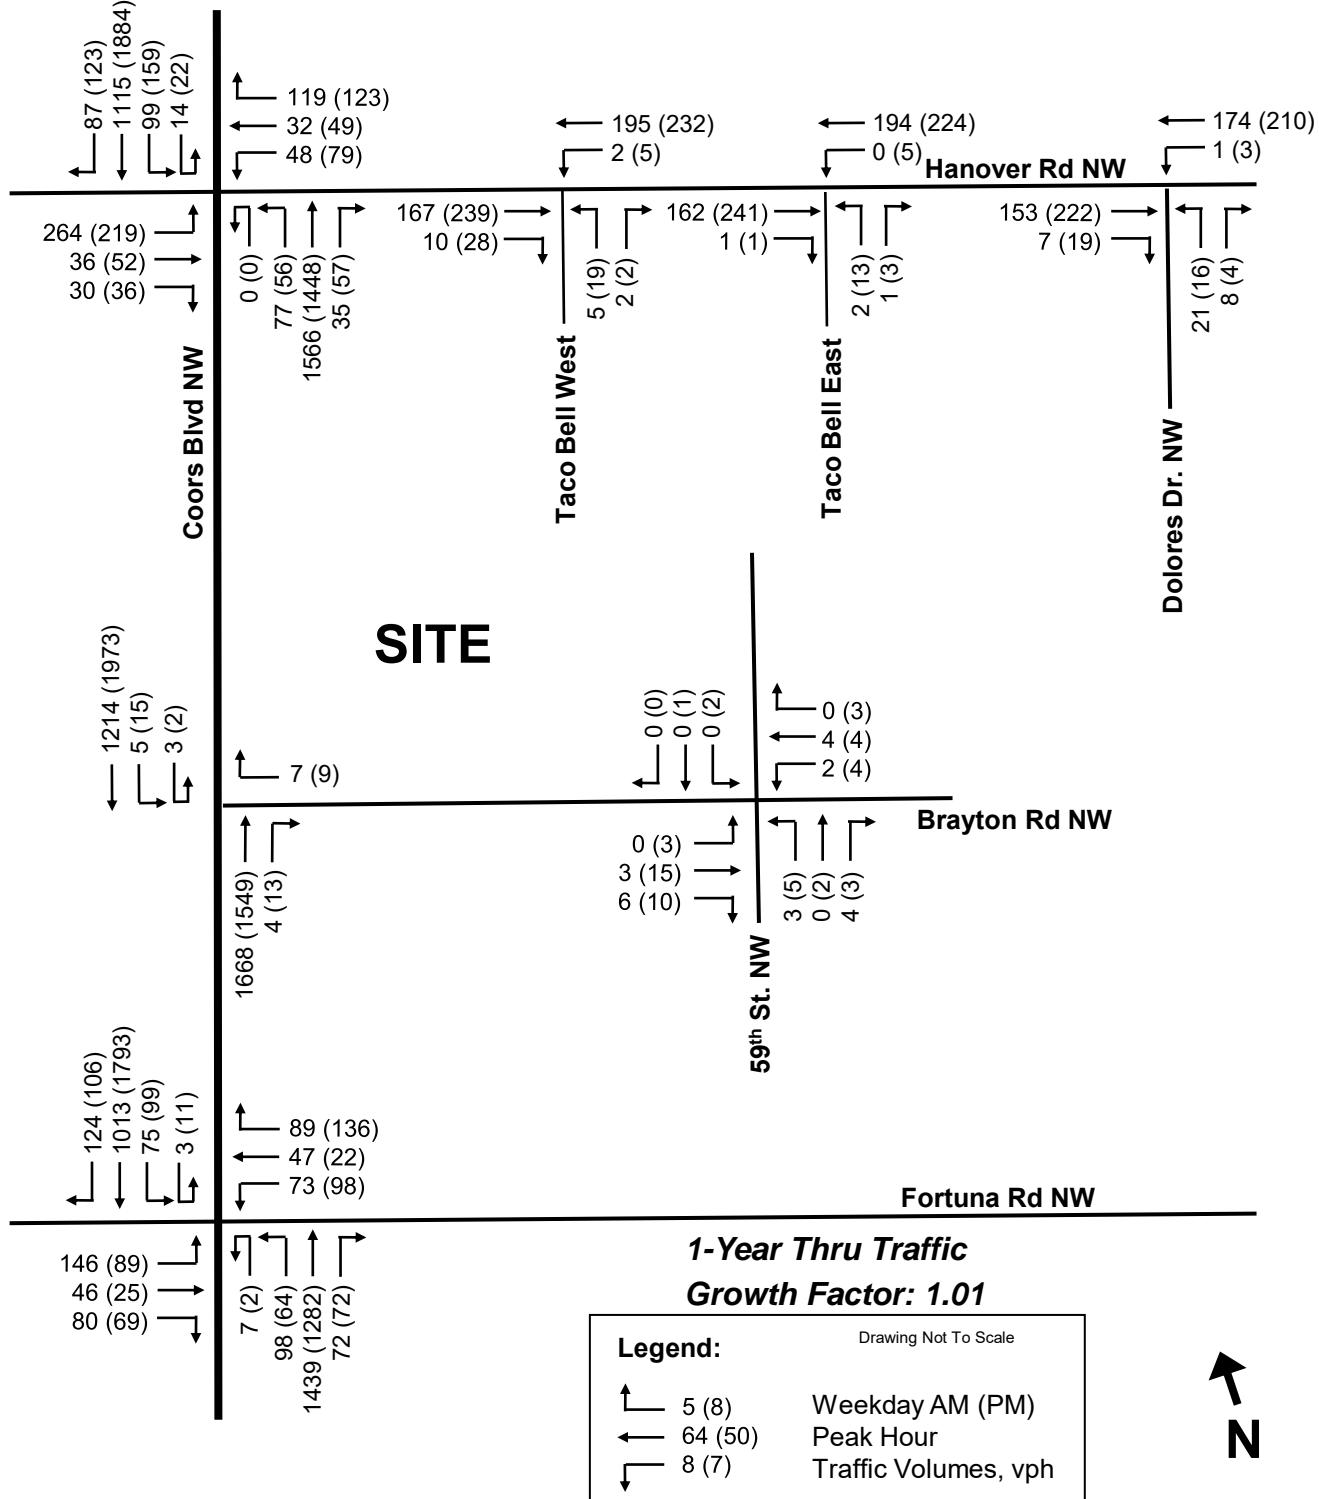

mainly to the north and west of the site. It is assumed that the proposed Fast Food restaurant will follow a similar distribution. Table 3 presents the gravity model used to determine the trip distribution. Figure 6 illustrates the new trip distribution patterns for the development.

V. FUTURE TRAFFIC CONDITIONS AND ANALYSIS YEARS

A. Project Implementation Year

The project development is forecast to open and be operating in 2022.

B. Growth in Through Traffic

No-build traffic volume forecasts for the 2022 and 2032 analysis horizons were developed by applying a 1% annual growth rate, as approved by the City of Albuquerque Traffic Engineer.

C. Other Planned Development

No other planned developments were specified by the City Traffic Engineer for inclusion in this study. Figure 9 illustrates the projected no-build traffic volumes for the 2022 analysis horizon, and Figure 10 for the 2032 horizon.

D. Consideration of Planned Roadway Improvements

No planned roadway improvements were specified by the City Traffic Engineer for the study area. Plans call for an eventual fourth lane in each direction on Coors Blvd., plus a bike lane, but the timeframe for these projects is unknown.

E. Build Future Traffic

The site generated new and pass-by trips were added to the no build volumes to form the build future traffic volumes. Figure 11 presents the 2022 build traffic volumes, and Figure 12 presents the 2032 build traffic volumes.

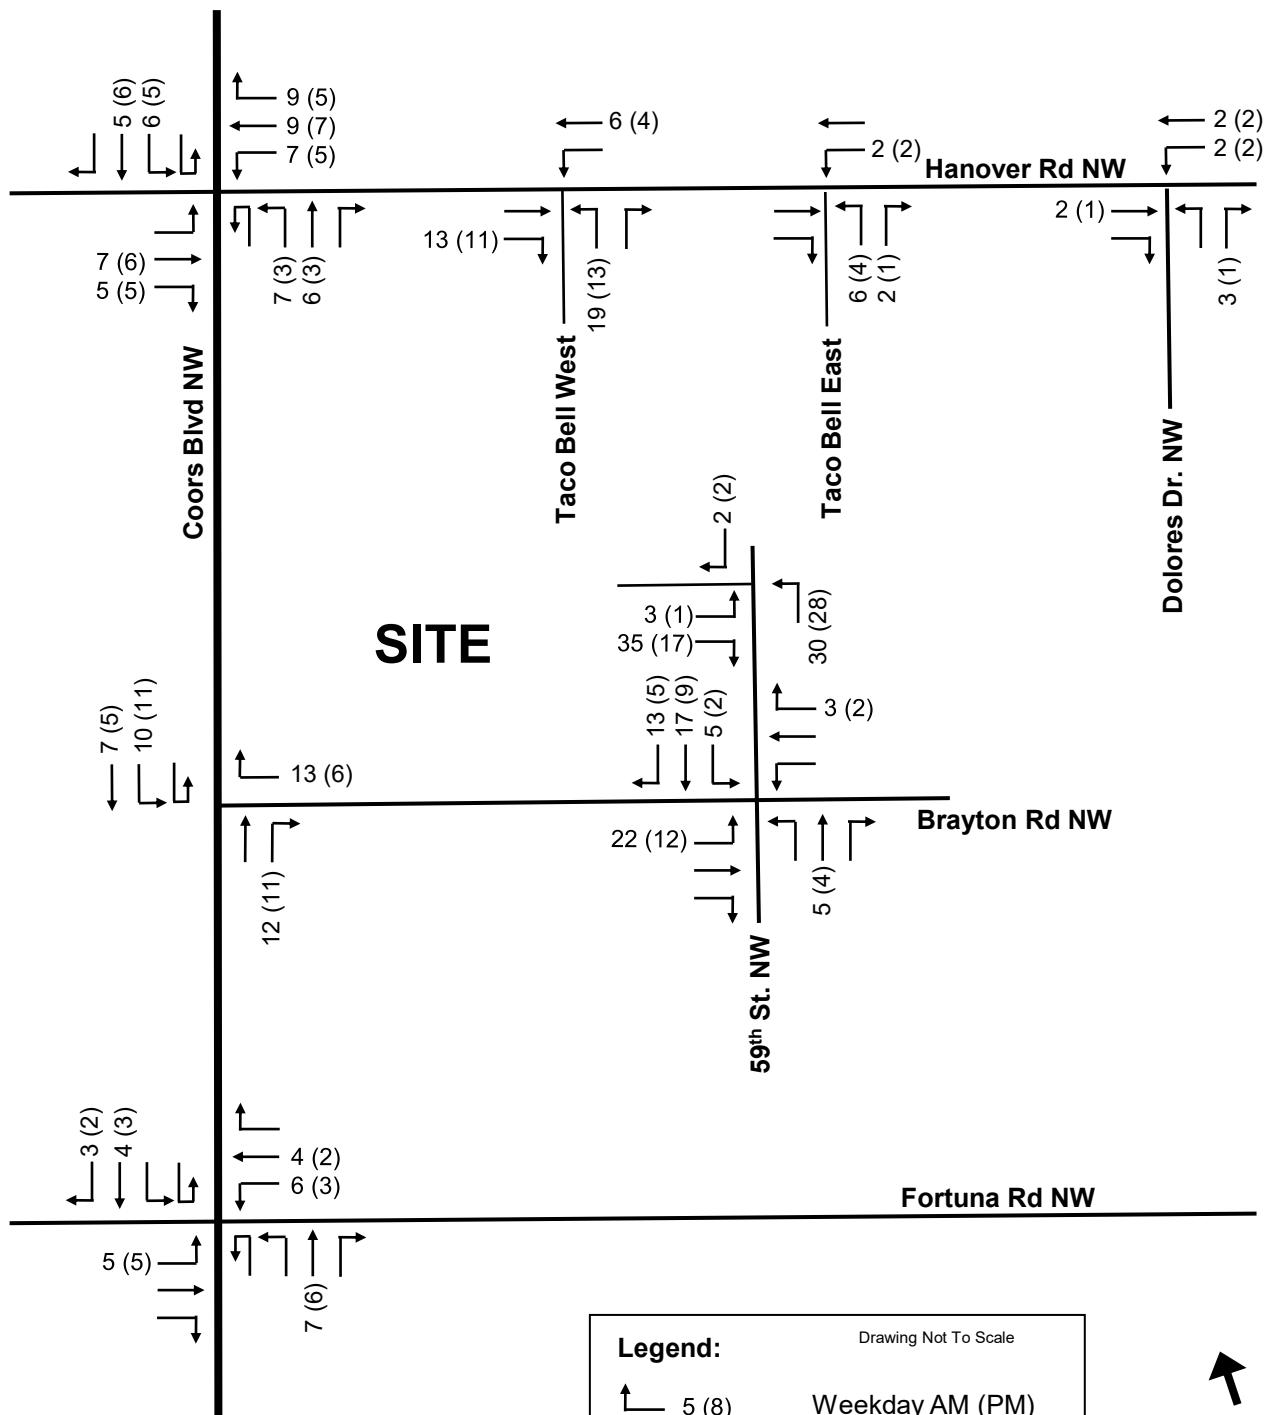

VI. TRAFFIC ANALYSIS

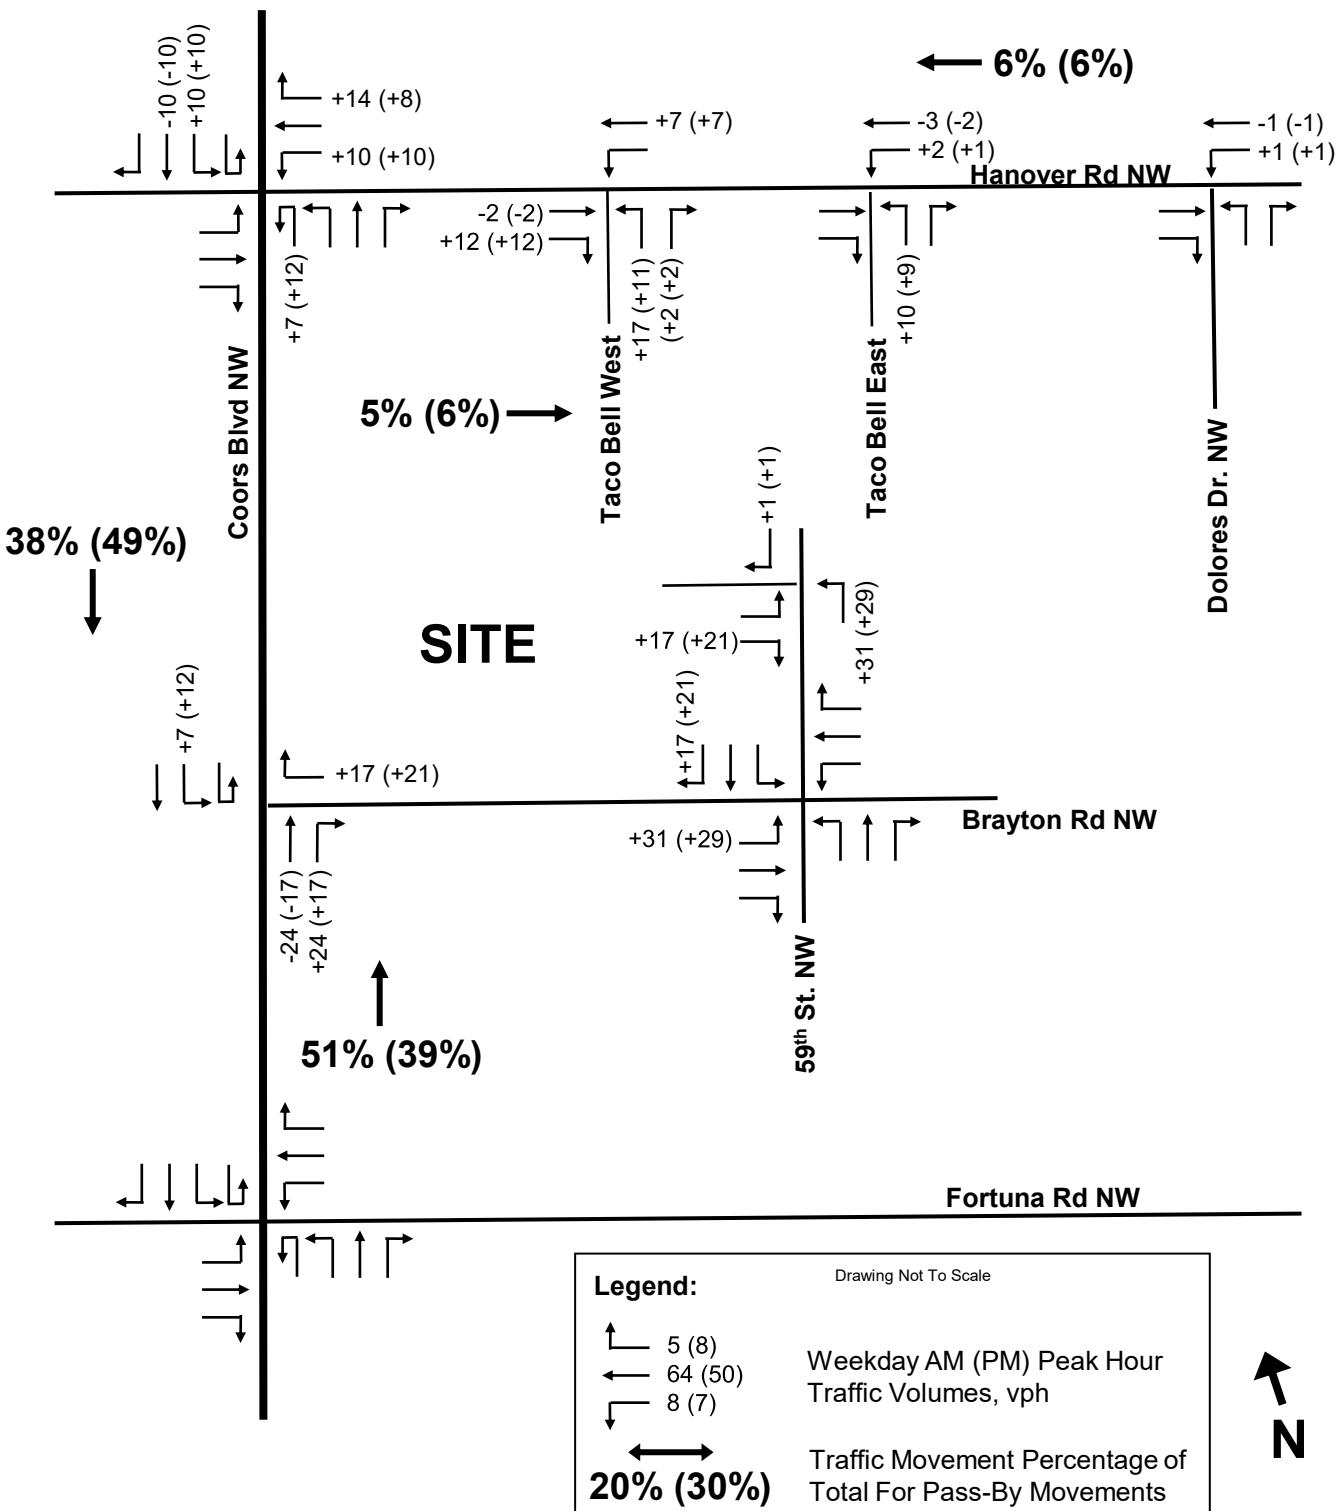

All traffic scenarios (AM and PM peaks, existing, no-build and build volumes) were analyzed to assess the traffic effects of the proposed coffee shop.

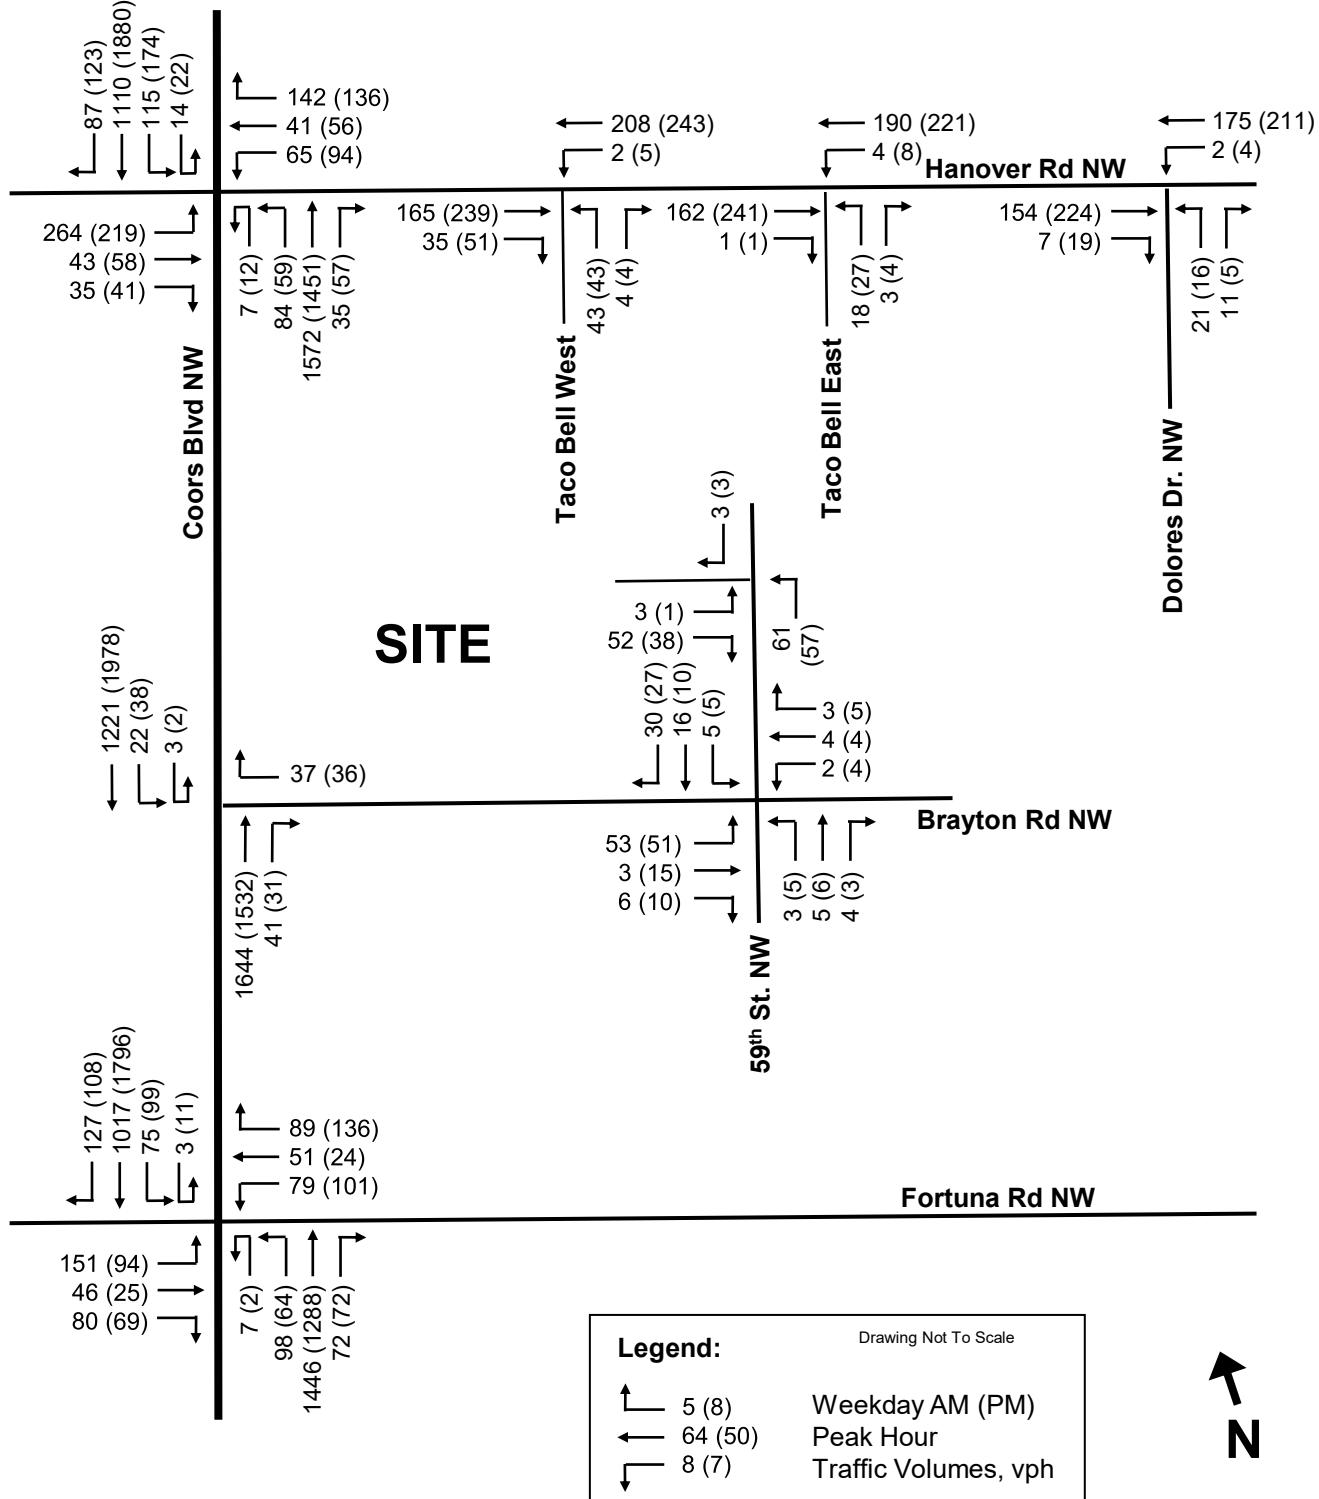

A. Intersection and Roadway Analysis

In order to establish a base condition from which to evaluate the impact of the traffic generated by the proposed development on the study area intersections, peak hour capacity analyses were performed for the 2021 existing and 2022 and 2032 analysis horizons no-build traffic conditions. Existing signal timing data was provided by the City Traffic Engineer and used in all analysis scenarios.

Traffic operational conditions for the 2021 existing, 2022 no-build and 2032 no-build scenarios are illustrated in Figures 13, 14 and 15, respectively, plus summarized in Table 4. Analysis indicates that existing overall intersection LOS will be maintained at acceptable levels with the traffic growth to 2032, as will most individual movements. Movements that are currently operating at LOS "E" will remain at that level with forecast growth.

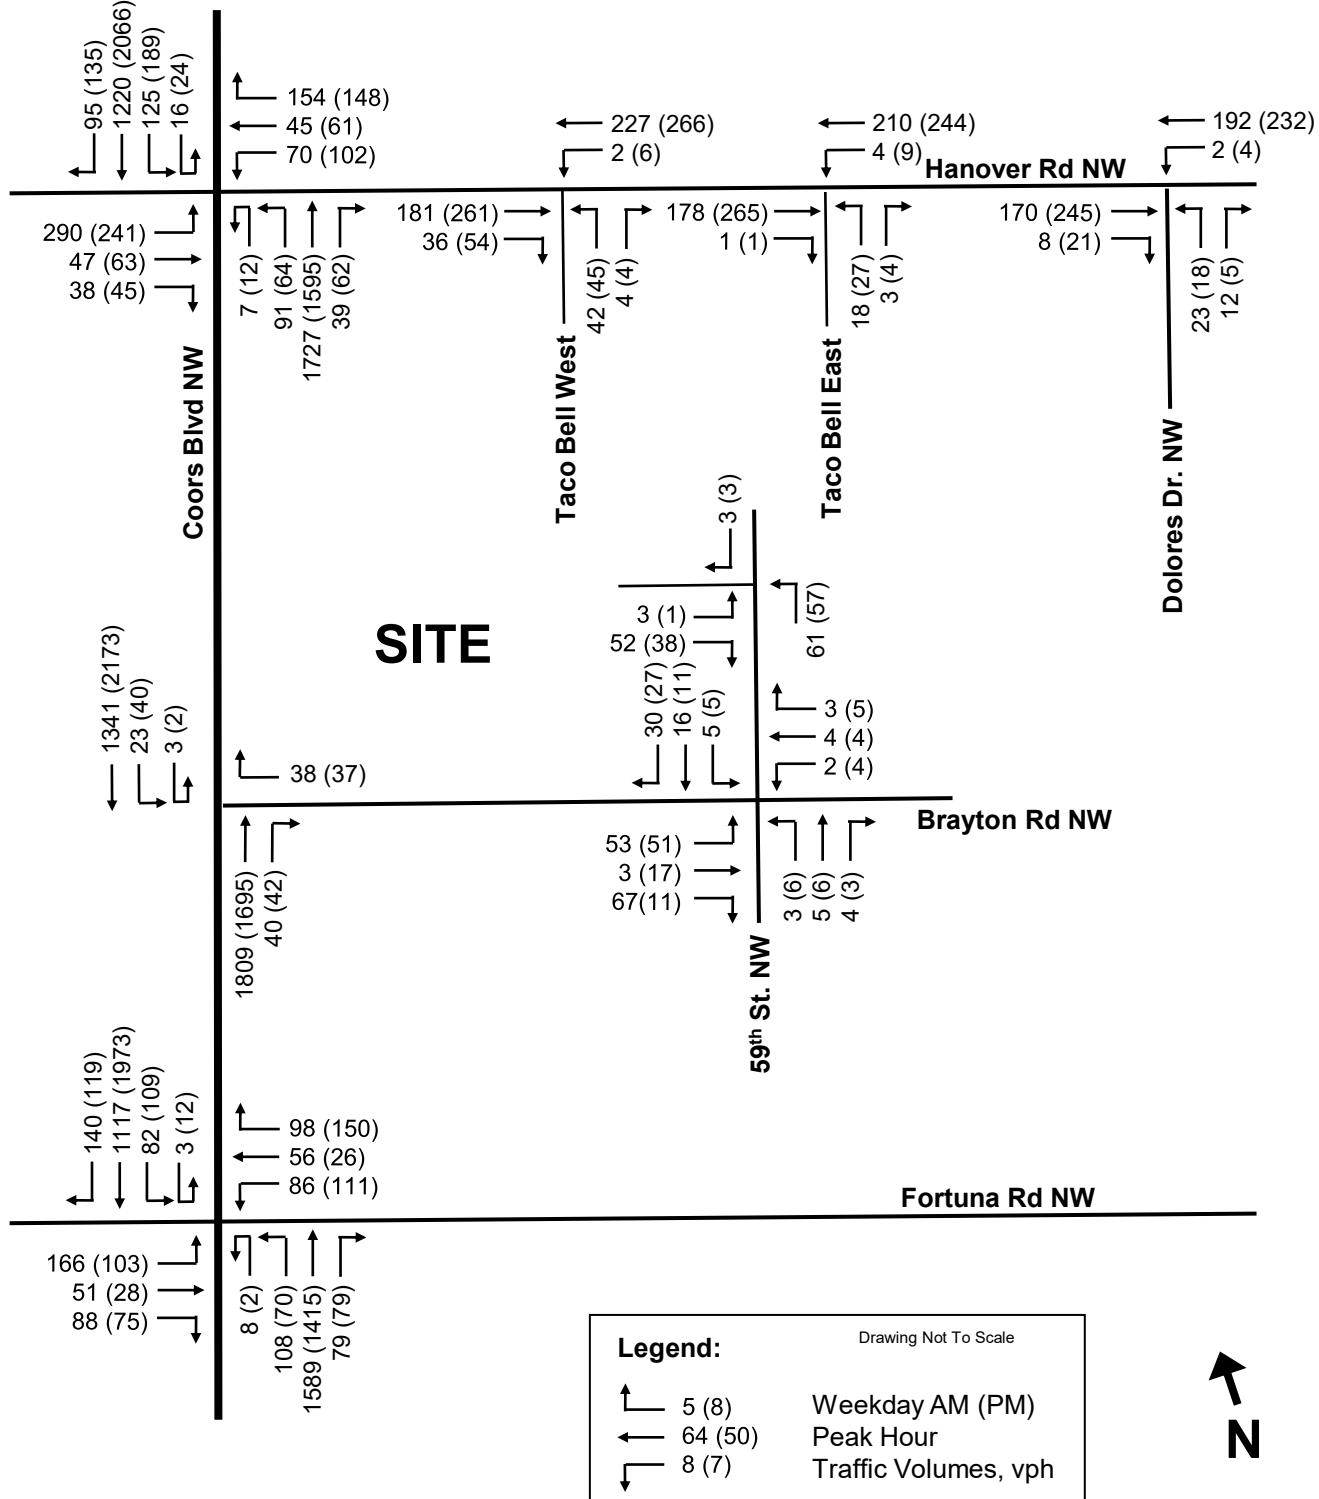

Diversified Real Estate, Albuquerque, NM

2022 Build Traffic Volumes

Figure 11

Diversified Real Estate, Albuquerque, NM

To evaluate the traffic impacts of the proposed development on the study area roadway system, peak hour intersection capacity analyses for build traffic conditions were performed for the 2022 and 2032 analysis horizons at each of the study area intersections.

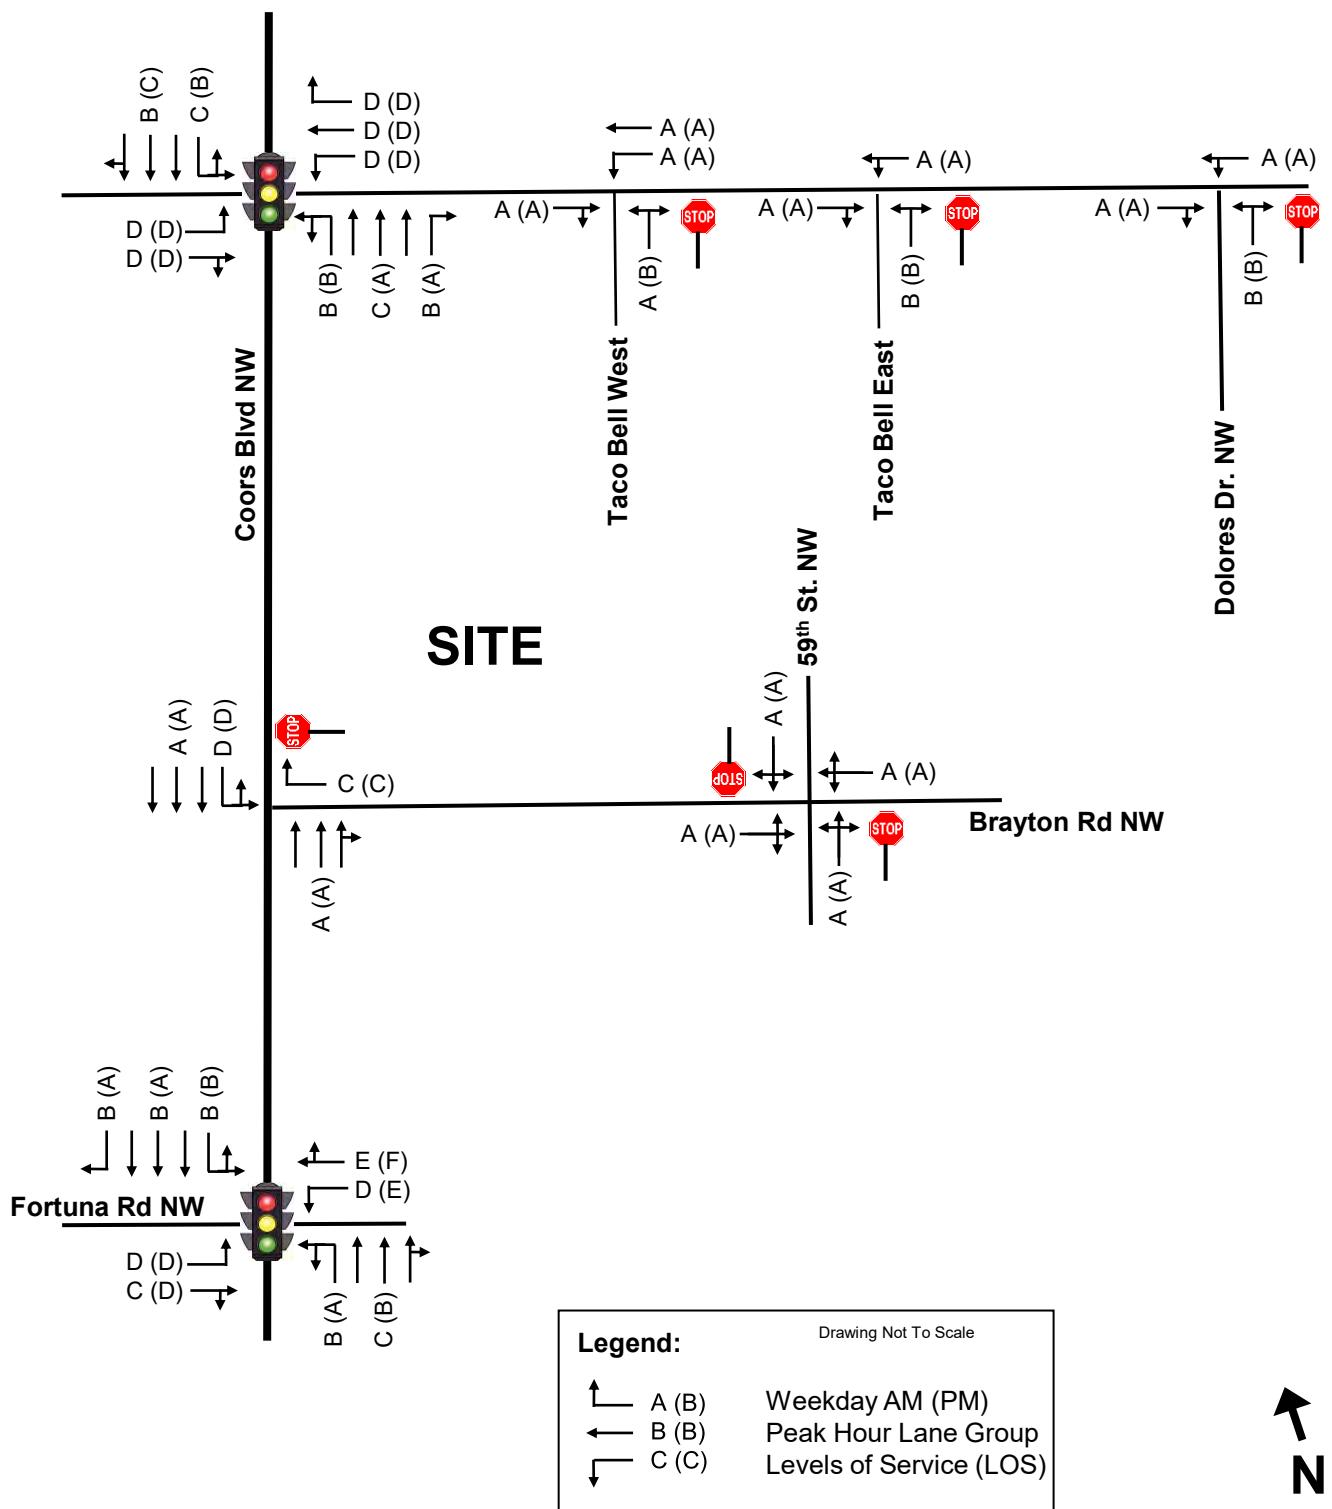

A narrative summary of the analyses and comparison to no-build traffic conditions for the 2022 and 2032 analysis horizons is provided below. The results of the build traffic operational analysis are summarized graphically for the 2022 analysis horizon in Figure 16, and on Figure 17 for the 2032 build scenario. A summary of the results of the intersection capacity analysis is provided in Table 4 and detailed “HCS7” software intersection capacity analysis reports are provided in Appendix “B”. For link analysis, a saturation flow rate of 1,900 vehicles per lane was assumed.

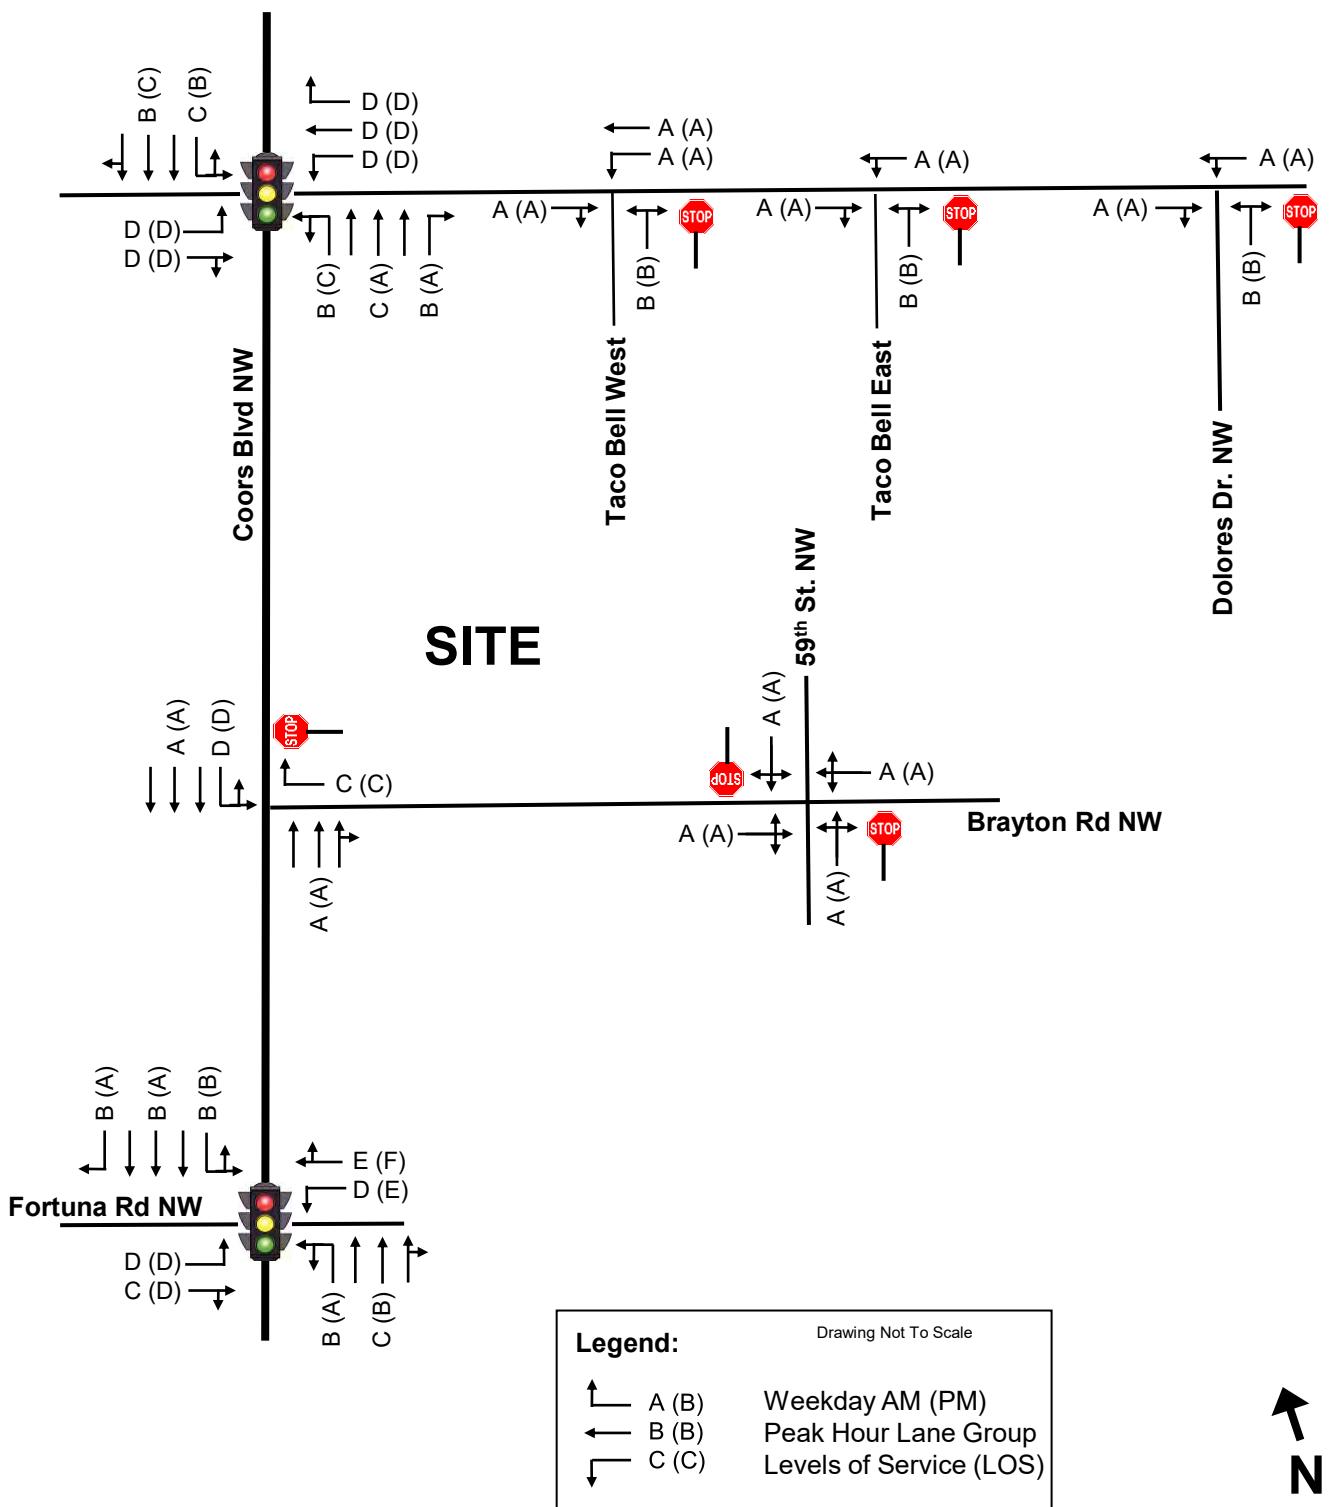

Study Area Intersections – Summary of Results:

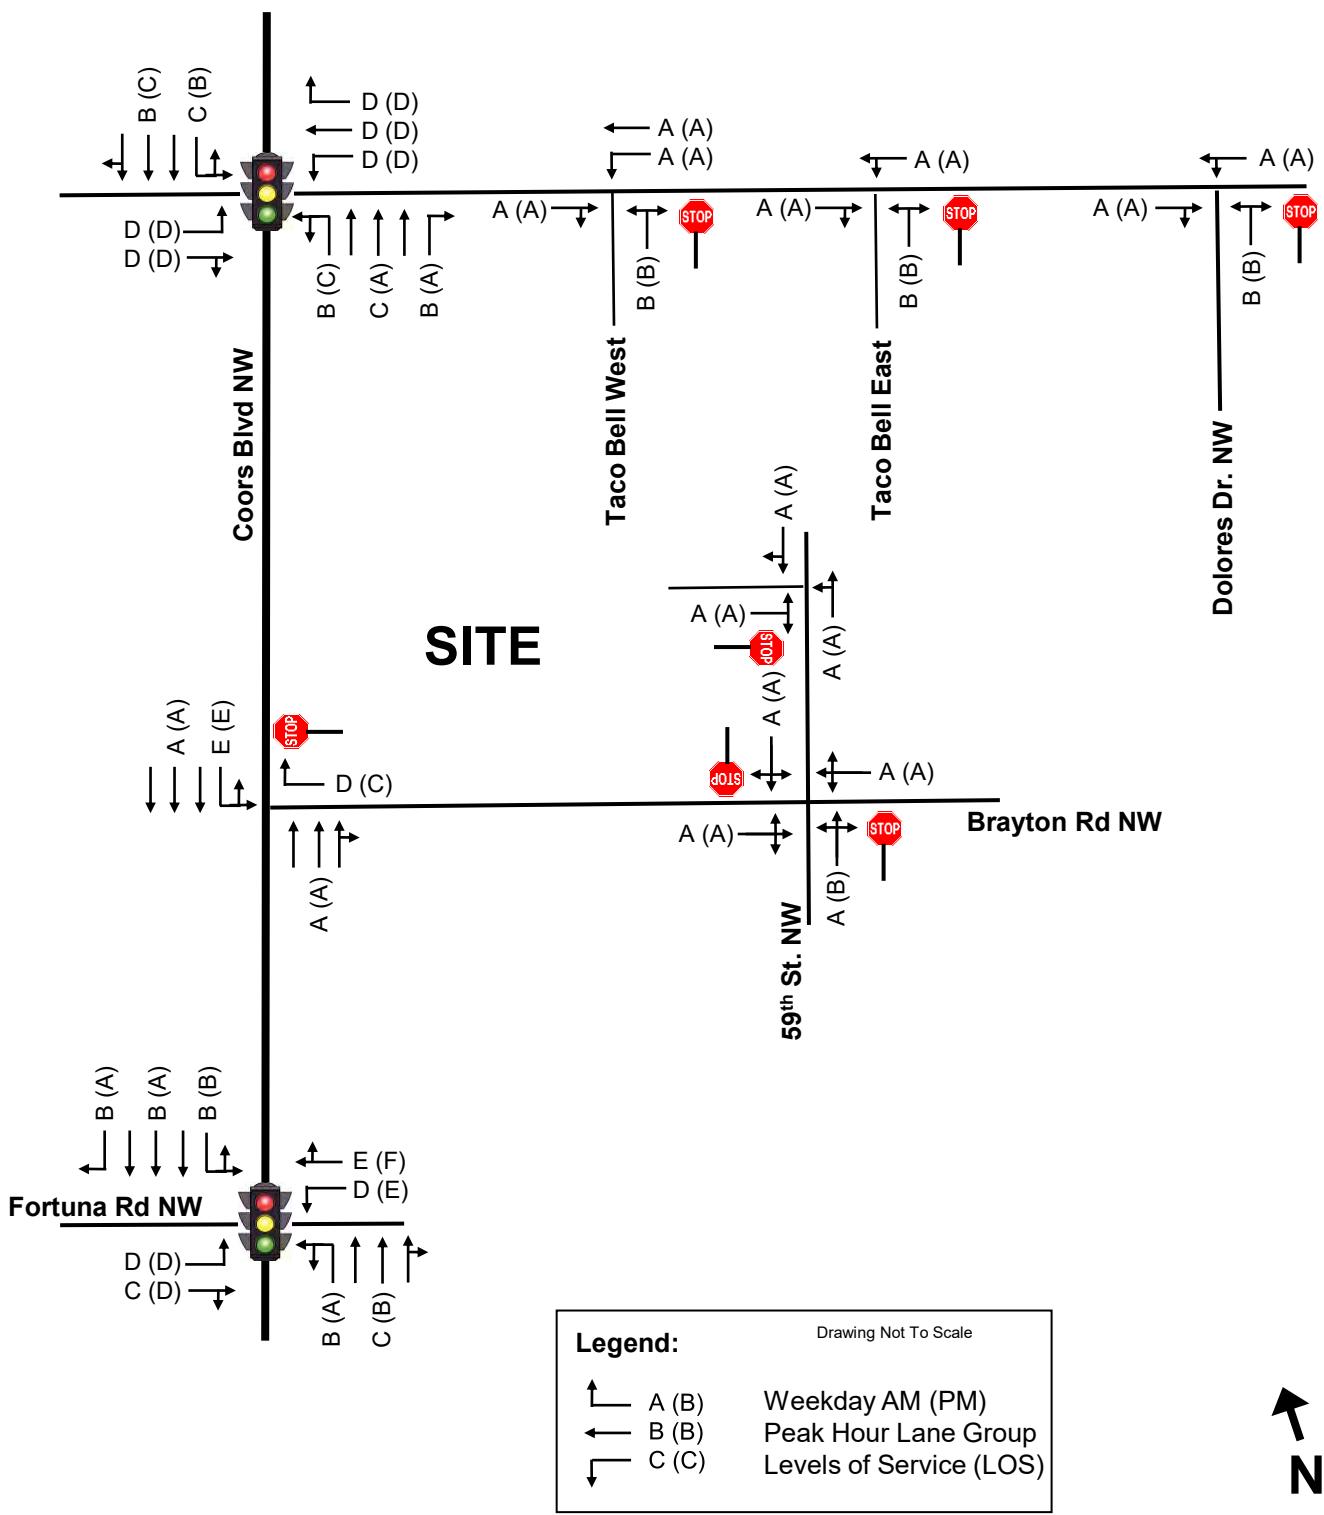

- **Coors Blvd NW / Hanover Rd NW** – Analysis indicates that all movements will continue to operate at acceptable levels in 2022 and 2032 with the addition of background growth and site traffic. The exception is the westbound right turn which is forecast to remain at LOS “E” with site traffic. Since right turns on red are permitted for this movement, actual LOS is likely to be better than LOS “E”.
- **Coors Blvd NW / Brayton Rd NW** – Under all scenarios, analysis indicates the southbound left and westbound right turn movements will operate at acceptable LOS. The exception is in the 2032 build scenario, where the southbound left is forecast to drop to LOS “E”. It should be noted that the HCM methodology for unsignalized intersections does not account for gaps created by adjacent traffic signals. Actual LOS will likely be better than indicated.
- **Coors Blvd NW / Fortuna Rd NW** – Under all scenarios, analysis indicates that the westbound left turn movement operates at LOS “E” in the PM peak hour, the westbound through/right movement operates at LOS “E” during both the AM and PM peak hours. With the additional of site traffic, LOS for all movements will remain unchanged.
- **59th St NW / Brayton Rd NW** – All movements are forecast to operate at LOS “A” or “B” during both AM and PM peak hour conditions under all scenarios, including with site traffic.
- **Hanover Rd NW / Dolores Dr NW** – All movements are forecast to operate at LOS “A” or “B” during both AM and PM peak hour conditions under all scenarios, including with site traffic.
- **Hanover Rd NW / Taco Bell Access Points** – All movements are forecast to operate at LOS “A” or “B” during both AM and PM peak hour conditions under all scenarios, including with site traffic.
- **59th St NW / Site Access Point** – All movements are forecast to operate at LOS “A” during both AM and PM peak hour conditions under the Build scenarios.

B. Queuing Analysis

Queue lengths at the study area intersections were calculated for the 2021 existing, 2022 and 2032 No Build and Build traffic scenarios utilizing the “HCS7” software. For signalized intersection, 50th percentile queues are reported. For “stop” sign-controlled intersection, 95th percentile queues are listed. Table 5 provides a summary of this analysis for each of the study area intersections. All existing turning storage bay lengths appear long enough to handle forecast maximum queue lengths in 2022 and 2032, both with and without the development.

The southbound left turn lane on Coors at Brayton was brought up as a concern by NMDOT. Analysis indicates that even with proposed site traffic, HCS7 analysis indicates that queues are forecast to shorter than the 125 feet of provided storage.

C. Alternative Intersection and Roadway Designs

No alternative intersection or roadway designs are recommended.

D. Signalization Warrant Analysis

No traffic signal warrant analysis was conducted due to their being numerous traffic signals in this area already.

The proposed development will not have a significant effect on signal coordination along Coors Blvd. It does not appear that there is existing detection on the Coors Blvd. thru lanes.

TABLE 5
SUMMARY OF QUEUING ANALYSIS

VII. SITE ACCESS REQUIREMENTS

A. Site Access and Circulation Plan

The proposed site plan is included in Figure 2. There are no sight distance issues at the study area intersection along Coors Blvd.

B. Roadway Improvements

No roadway improvements are needed at the proposed access point or at any study area intersections from a capacity standpoint. Using Table 17.B-2 in the State Access Management Manual (SAMM), a northbound right turn deceleration lane is required on northbound Coors Blvd. at Brayton to handle projected site traffic. A peak of 42 vehicles is projected for this movement and for a 45-mph road and this turning volume, a lane is needed when 110 vehicles per hour will be in the adjacent through lane. The through lane volume will be significantly higher than that.

NMDOT also requires an examination of existing turn (auxiliary) lanes along Coors Blvd at the study area intersection. Using criteria in SAMM Table 18.K-1, a deceleration distance of 400 feet, plus the expected queue length and a 150' taper, is needed for all of the turn lanes along Coors Blvd. The analysis is presented in Table 6. A review indicates that while the lanes are sufficiently long enough to accommodate queue lengths, both with and without the proposed development, all turn lanes do not currently meet the SAMM criteria for deceleration length. Note that there is insufficient distance available in the existing median on Coors Blvd. to lengthen the southbound left turn lane at Brayton or the northbound left turn lane at Hanover to meet the required deceleration distance.

TABLE 6
DECELERATION LANE ANALYSIS

Intersection	Lane	Decel Length	2021 Existing Conditions - Queue Length	2022 Build Conditions - Queue Length	2021 Existing Conditions - Total Length Needed	2022 Build Conditions - Total Length Needed	Existing Length	% Site Traffic on Lane
Coors/Hanover	NB L	400'	23'	30'	423'	430'	175'	8%
	NB R	400'	53'	55'	453'	455'	160'	0%
	SB L	400'	55'	75'	455'	475'	210'	3%
Coors/Brayton	SB L	400'	25'	25'	425'	425'	125'	58%
	NB R	400'	-	25'	-	425'	-	88%
Coors/Fortuna	NB L	400'	25'	26'	425'	426'	225'	0%
	SB L	400'	29'	30'	429'	430'	175'	0%
	SB R	400'	19'	22'	419'	422'	190'	2%

The following road, intersection and traffic control improvements are proposed to fix existing deceleration issues:

- Coors / Fortuna – NMDOT should lengthen the northbound left turn lane and the southbound left and right turn lanes to meet the SAMM deceleration requirements listed in Table 6.

- Coors / Hanover – NMDOT should lengthen the northbound right turn lane and the southbound left turn lane to meet the SAMM deceleration requirements listed in Table 6. The northbound left turn lane should also be lengthened to the maximum possible within the existing median.
- Coors / Brayton – The developer should install a northbound right turn deceleration lane as per SAMM requirements listed in Table 6. Lengthening the southbound left turn lane will not be possible given the need to lengthen the northbound left turn lane at Hanover.

C. Transportation System Management Actions

The recommendations to re-stripe the westbound approach of Coors and Fortuna, lengthen the existing turn lanes, and construct a northbound right turn lane at Brayton are considered Transportation System Management actions.

D. Drive-Thru Queuing Assessment

Several studies have been performed on queuing at drive-thru windows, including those at coffee shops. “Drive-Through Queue Generation”, published in February 2012 by Mike Spack, PE, PTOE, et.al., collected queue data at six coffee shops over a twelve to fourteen-day period. The average maximum queue was 11 vehicles, with an 85th-percentile queue of 14 vehicles. The drive-thru lane in the proposed site plan provides enough space to queue 11 vehicles. Should additional queuing occur, there is plenty of additional stacking space in the proposed internal site roads (20+ vehicles) and would not spill onto 59th Street. There is no site plan available yet for the potential fast-food restaurant.

VII. SUMMARY OF FINDINGS

The proposed 928 sf drive-thru only coffee shop and 2,400 sf fast food restaurant development will not have a significant impact on the adjacent road system. LOS will not change at study area intersections with the addition of traffic from the development. Delay will increase slightly on some intersection movements due to site traffic. The one exception is the southbound left turn movement on Coors Blvd at Brayton. Analysis shows LOS dropping to "E" in the peak hours in 2032 with site traffic. This is not an uncommon situation on major roads and queues will not extend past the available storage. Also, the HCM7 methodology used for unsignalized intersections does not account for gaps created by adjacent traffic signals. Actual LOS should be better than indicated.

VII. RECOMMENDATIONS AND MITIGATION MEASURES

Based on the analyses contained herein, the following recommendations for improvements to the study area intersections are presented in Table 7.

TABLE 7
SUMMARY OF RECOMMENDATIONS

Intersection	Recommendations	Responsible	Timing
Coors / Fortuna	<ul style="list-style-type: none">- Consider adding a separate westbound right turn lane to fix the existing LOS issue- Lengthen the northbound left turn lane and the southbound left and right turn lanes to meet SAMM deceleration requirements	NMDOT	When deemed needed
Coors / Hanover	<ul style="list-style-type: none">- Lengthen the southbound left turn lane to meet SAMM deceleration requirements- Lengthen the northbound left turn lane to maximum extent possible	NMDOT	When deemed needed
Coors / Brayton	<ul style="list-style-type: none">- Construct a northbound right turn deceleration lane 100' long	Developer	By Opening
59 th St / Site Access	<ul style="list-style-type: none">- Install a "stop" sign on the eastbound exiting approach- One lane exiting will be sufficient- No separate left or right turn lanes are needed on 59th Street	Developer	By Opening
