Re: Villa de San Martin

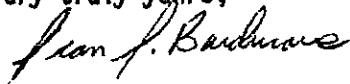

Dear Sir:

Submitted herewith is one copy of the plat, proposed grading plan and drainage computations for Villa de San Martin, aka Martineztown Townhouses. Request is made for a "Foundation Only Permit" for rows one and two. Request was made by the Assistant City Engineer - Hydrology for 100 percent retention on a 24 hour retention basis. Row one will have a discharge of approximately 63 cubic feet and row two will have a zero discharge. The discharge from row one will flow to an underground retention basin as was shown on the rough grading plan.

This request is made due to a very short time frame for construction of the buildings, as the project is involved in an Urban Development Agency area, and a December 1, 1979, closing for homes is their requirement.

Thank you for your consideration in this matter.

Very truly yours,

Jean J. Bordenave, President
