Albuquerque, NM, 87120

**RE: Calvary Church – Gym Building
Grading & Drainage Plan/Report
Engineer's Stamp Date 5-31-2016 (File: J22D027A)**

Dear Mr. Fierro:

Based upon the information provided in your submittal received 6-1-2016, the above referenced Grading and Drainage Plan and Report is approved for Building Permit with the following condition:

- The roof drains will not be allowed to discharge onto the sidewalk surface, flows need to be routed under the sidewalk with a culvert or piping. These improvements will need to be shown on the certification.

Please attach a copy of this approved plan in the construction sets when submitting for a building permit. Prior to Certificate of Occupancy release, Engineer Certification per the DPM checklist will be required.

If you have any questions you can contact me at 924-3986.

Sincerely,

Abiel Carrillo, P.E.
Principal Engineer, Planning Dept.
Development Review Services

INTRODUCTION

Authorization

Calvary Chapel East authorized Fierro & Company, LLC to prepare a Grading & Drainage Plan for the Gymnasium Addition.

Study Area Location

The Gymnasium Addition is proposed at the south parking lot of Calvary Chapel East located at 12820 Indian School Rd., NE Albuquerque, NM 87112. Refer to Sheet C1.

Purpose

The purpose of this drainage report is to 1) determine the existing and proposed runoff conditions for the 100-year, 6-hour storm event, 2) outline the criteria for development of the site, and 3) demonstrate that the downstream basins will not be inversely impacted by this development.

HYDROLOGY

Methodology

Drainage Basin Delineation

A topographic survey with 1-foot contour intervals was obtained in January 2016. This data was used to delineate the existing Basins 101 and 102. These two basins coincide with Basin B of the Panorama Heights Drainage Plan, prepared by ABQ Engineering, Inc. dated June 25, 2007.

Hydrological Method

Hydrologic procedures presented in the Hydrology Section of the DMP, Section 22.2, revised April 7, 1993 were followed. AHYMO-S4 program was used to produce the peak flow and runoff volume values for the 100-year, 6-hour storm event.

Hydrological Characteristics

Precipitation

Rainfall depths for a range of durations were acquired from National Oceanographic and Atmospheric Administration's (NOAA) Precipitation Frequency Data Server (PFDS), Atlas 14, as shown on Table 1. The PFDS requires a location to be entered and Google Earth was used to obtain the site location in latitude and longitude. The location entered into the PFDS is latitude 35.0949° N, longitude 106.5018° W.

Table 1: NOAA Precipitation Depths (in inches)	
Duration	100-year
15-min	1.14
1-hr	1.89
2-hr	2.22
3-hr	2.30
6-hr	2.51
12-hr	2.72
24-hr	3.16

Existing Condition

The site is approximately 2.28 acres, which is encompassed by Basin 101 and Basin 102. A large parking lot is located within Basin 101. The curb's islands in this parking lot are not depressed, but contain landscaping. Basin 101 generally slopes southwest with slopes varying between 2.5% to 9%. 3 - 4" diameter PVC pipes at the southwest corner outlet Basin 101 into a 12" storm drain system, which discharges into the adjoining lot at Bella Vista Assisted Living. The Bella Vista Assisted Living Drainage Plan, prepared by Lorenz Design & Consulting, LLC dated April 2015 states that it receives runoff via 1 - 4" diameter PVC. This is not the case as runoff being discharged into the Bella Vista Assisted Living site is from the said 3- 4" diameter pipes and surface drainage from Basin 102.

Basin 102 is 0.1248 acres and its surface is landscaped. This basin slopes southeast with slopes varying between 0.5% to 1% and surface drainage to the Bella Vista Assisted Living site. Refer to Sheet C4 for the existing condition drainage. Refer to Table 3 below for the hydrologic data and results.

Table 2: Existing Hydrologic Data, Peak Discharge, and Volumetric Runoff							
Basin	Area	Land Treatment Percentage (%)				Q100-year, 6-hour (cfs)	V100-year, 6-hour (ac-ft)
	(acres)	A	B	C	D		
101	2.1590	0	13.3	0	86.7	9.38	0.373
102	0.1248	0	100	0	0	0.34	0.010

Proposed Condition

A gymnasium is proposed at the south parking lot of Calvary Chapel East. This building is 125'x100'. Basin 201 will drain to the existing 3 – 4" diameter PVC pipes. The parking lot ponding has a smaller footprint under the proposed condition as the basin is smaller. The maximum water surface elevation under the 100-year, 6-hour storm event is 5770.02'. The building will have stem walls between 4-7 feet to minimize disturbance of the existing parking lot.

The northern half of the new building will drain to a drainage swale, which discharges into the proposed pond in Basin 202. This pond will retain the 100-year, 6-hour runoff volume. Storms generating a larger runoff volume will discharge through the Pond's spillway. The same drainage pattern will occur in the proposed condition as in the existing. The total discharge entering the Bella Vista Living Assisted Living Site is slightly less under the proposed condition for the 100-year, 6-hour storm.

Table 3: Proposed Hydrologic Data, Peak Discharge, and Volumetric Runoff

Basin	Area	Land Treatment Percentage (%)				Q100-year, 6-hour (cfs)	V100-year, 6-hour (ac-ft)
	(acres)	A	B	C	D		
201	1.9960	0	14	0	86	8.65	0.343
202	0.1248	0	44	0	56	1.21	0.044

90th Percentile Storm

The City of Albuquerque's Drainage Ordinance 14-15-2-12 is met for this new development. The first flush will be routed through and retained in designated landscaping. See Sheet C4 for the landscaping areas intended to capture the first flush. Calculations below show compliance to Ordinance 14-15-2-12.

Basin 201

New Land Treatment D Area = 6,995 sq.ft.

Water Quality Volume Needed = $6,995 \text{ sq. ft. (.34")} * \frac{1 \text{ ft}}{12"} = 198 \text{ ft}^3$

Water Quality Volume Provided = $1,916 \text{ ft}^3 > \text{WQ}_{\text{needed}}$

Basin 202

New Land Treatment D Area = 8,375 sq.ft.

Water Quality Volume Needed = $8,375 \text{ sq. ft. (.34")} * \frac{1 \text{ ft}}{12"} = 237 \text{ ft}^3$

Water Quality Volume Provided = $320 \text{ ft}^3 > \text{WQ}_{\text{needed}}$

CONCLUSION

The proposed development meets the City's drainage and 90th Percentile Storm requirements. This new development does not increase the peak discharge nor runoff volume to the only downstream site being Bella Vista Assisted Living. The Gymnasium addition improvements include depressed landscaping to capture runoff from the new land treatment D areas.

¹ Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

Drainage Narrative

THIS DRAINAGE PLAN IS INTENDED TO IDENTIFY THE EXISTING DRAINAGE CONDITIONS FOR THE EXISTING TRACT L-1 AND M-1 PANORAMA HEIGHTS LOCATED AT INDIAN SCHOOL AND CONSTITUTION. THE PROPERTY IS THE SITE OF THE OLD BLUE CROSS BLUE SHIELD FACILITY. TRACT L-1 IS BEING REPLATTED INTO 3 LOTS. THE MAJORITY OF THE SITE IS CURRENTLY DEVELOPED WITH BUILDING AND PARKING LOT, WITH TRACT M-1 AND THE SOUTH END OF THE PROPERTY CURRENTLY LANDSCAPED (PROPOSED TRACT L-1-C). APPROXIMATELY 50% OF THE SITE CURRENTLY DRAINS TO EAST RIDGE DRIVE, AND THE REMAINING 50% TO CONSTITUTION AVENUE. THERE IS CURRENTLY A PERIMETER WALL ALONG AND A STAND UP CURB ALONG THE WEST SIDE OF THE PROPERTY THAT DIRECTS THE FLOWS TO EASTRIDGE AND CONSTITUTION. THERE IS A DRAINAGE CHANNEL ALONG THE SOUTHWEST CORNER OF THE PROPERTY THAT COLLECTS THE OVERLAND FLOWS AND DIRECTS THEM TO CONSTITUTION THROUGH A SIDEWALK CULVERT. THE CHANNEL HAS A CAPACITY OF 31.80 CFS, AND IS CAPABLE OF ACCEPTING THE EXISTING FLOWS ALONG WITH THE DEVELOPED FLOWS FROM TRACT M-1 AND L-1-C. A FINAL GRADING AND DRAINAGE PLAN WILL NEED TO BE PROVIDED CONCURRENT WITH THE DEVELOPMENT OF TRACT M-1 AND L-1-C.

DRAINAGE PLAN

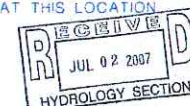

SCALE: 1" = 60'

Engineer's Statement

I, THE ENGINEER OF RECORD CERTIFY THAT I HAVE PERSONALLY VISITED THE SITE AND THE EXISTING GRADES AND CONTOURS DEPICTED ON THIS PLAN MATCH WHAT PRESENTLY EXISTS AT THIS LOCATION.

SCALE: NTS

CONSTRUCTION NOTES

1. WHEN ABUTTING TO VERTICAL WALLS, BENCHES, BUILDINGS, OR CURBS. INSTALL 1/2" BITUMINOUS EXPANSION JOINT. RECESS 1/4" VERTICALLY. INSTALL SIKA-FLEX POLYMER SEALANT OR APPROVED EQUAL.
2. INSTALL CONTRACTION JOINTS @ 6'-0" OC.
3. LIGHT BROOM FINISH CONCRETE SURFACE REQUIRED.

A6 STRAIGHT CURB
SCALE: 1" = 1'

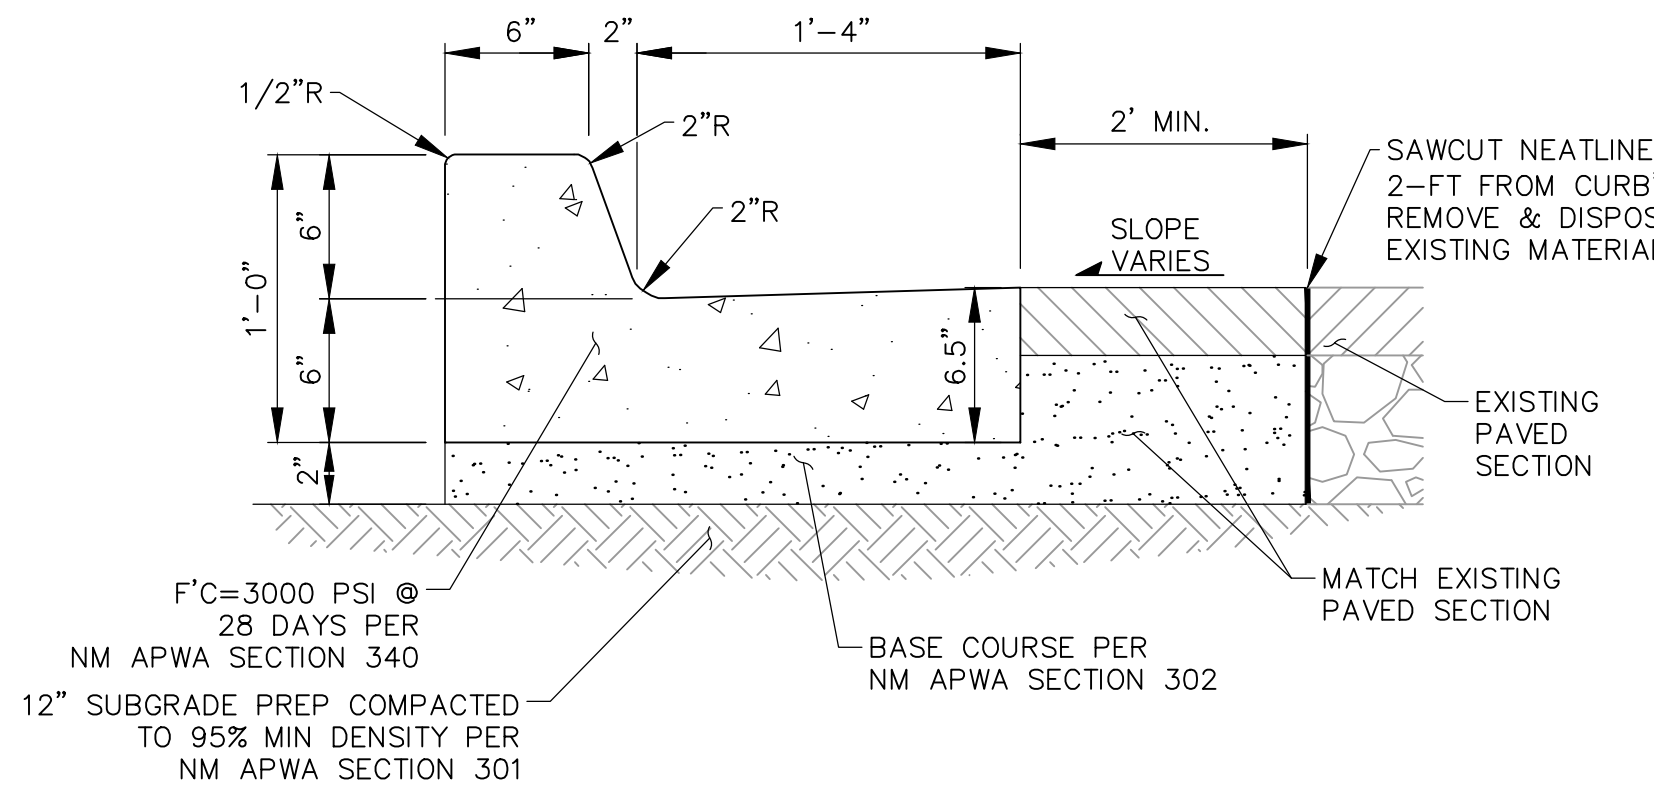

E6 CURB AND GUTTER
SCALE: NTS

CURB AND GUTTER GENERAL NOTES

1. ANY DEVIATIONS FROM THESE STANDARDS SHALL BE SUBMITTED TO THE CITY ENGINEER FOR PRIOR APPROVAL
2. ALL WORK IN PUBLIC RIGHT-OF-WAY SHALL BE CONSTRUCTED BY A LICENSED CONTRACTOR AND REQUIRES PERMIT AND APPROVAL BY THE DEPT OF PUBLIC WORKS.
3. SUBGRADE SHALL BE COMPACTED TO 95% ASTM D 1557, MIN.
4. CURB AND GUTTER SHALL BE PORTLAND CEMENT CONCRETE. PORTLAND CEMENT CONCRETE SHALL BE 3000 PSI @ 28 DAYS w/CLASS F FLY ASH AND 7% +/- 2% AIR ENTRAINMENT. (MAX 20% FLY ASH BY WEIGHT).
5. FOR CONCRETE CURB AND GUTTER CONSTRUCT TRANSVERSE JOINTS AS FOLLOWS:
 - TOOLED CONTRACTION JOINTS AT 5' INTERVALS.
 - 1/2" PRE-MOLDED BITUMINOUS EXPANSION JOINTS AT 15' INTERVALS.
 - SEALED EXPANSION JOINTS AT 90' INTERVALS.
6. DIMENSIONS AT ROUNDED CORNERS MEASURED TO INTERSECTION OF STRAIGHT LINES.

G6 STANDARD CURB AND GUTTER
SCALE: NTS

CURB AND GUTTER GENERAL NOTES

1. ANY DEVIATIONS FROM THESE STANDARDS SHALL BE SUBMITTED TO THE CITY ENGINEER FOR PRIOR APPROVAL
2. ALL WORK IN PUBLIC RIGHT-OF-WAY SHALL BE CONSTRUCTED BY A LICENSED CONTRACTOR AND REQUIRES PERMIT AND APPROVAL BY THE DEPT OF PUBLIC WORKS.
3. SUBGRADE SHALL BE COMPACTED TO 95% ASTM D 1557, MIN.
4. CURB AND GUTTER SHALL BE PORTLAND CEMENT CONCRETE. PORTLAND CEMENT CONCRETE SHALL BE 3000 PSI @ 28 DAYS w/CLASS F FLY ASH AND 7% +/- 2% AIR ENTRAINMENT. (MAX 20% FLY ASH BY WEIGHT).
5. FOR CONCRETE CURB AND GUTTER CONSTRUCT TRANSVERSE JOINTS AS FOLLOWS:
 - TOOLED CONTRACTION JOINTS AT 5' INTERVALS.
 - 1/2" PRE-MOLDED BITUMINOUS EXPANSION JOINTS AT 15' INTERVALS.
 - SEALED EXPANSION JOINTS AT 90' INTERVALS.
6. DIMENSIONS AT ROUNDED CORNERS MEASURED TO INTERSECTION OF STRAIGHT LINES.
