Maverik Store
(Los Volcanes Rd. / Unser Blvd.)
Traffic Impact Study

Executive Summary

The purpose of this study is to evaluate the transportation conditions before and after implementation of the proposed Maverik Store, determine the impact of the development on the adjacent transportation system and recommend mitigation measures where necessary. This study is prepared to meet the requirements of the City of Albuquerque Transportation Dev. Section, Planning Dept. & the New Mexico Department of Transportation (NMDOT) associated with its review of the Maverik Store.

The proposed development is located at the southeast corner of Los Volcanes Rd. / Unser Blvd. The study area includes the intersections of Los Volcanes Rd. / Coors Blvd., Central Ave. / Unser Blvd., Bluewater Rd. / Unser Blvd., Los Volcanes Rd. / Unser Blvd., I-40 N. Ramp / Unser Blvd., I-40 S. Ramp / Unser Blvd., and Los Volcanes Rd. / Silver Creek Rd. as well as the two proposed driveways for the project – one on Los Volcanes Rd. and one on Silver Creek Rd.

The proposed development is to be developed as a Gasoline Station with Convenience Store containing a total of 20 fueling positions for vehicles (14 passenger car fueling positions plus 6 truck fueling positions).

Analysis in this Study complies with the requirements of the City of Albuquerque and the New Mexico Department of Transportation, District 3 Traffic Engineer at the time of the Scoping Meeting. Signalized intersection analyses utilize existing signal timing / phasing.

The development will be accessed via two proposed driveways for this parcel of land, one on Los Volcanes Rd. and one on Silver Creek Rd. Both driveways are proposed to be full access unsignalized driveways. There will also be a future connection via cross-access through the property to the south to a right-in, right-out driveway on Unser Blvd. approximately 980 feet south of Los Volcanes Rd. at such time as the property to the south is fully developed. It is unlikely that a significant volume of Maverik traffic will use the remote driveway in the future and certainly none will use it currently.

Analysis results by analysis year are included in the following tables:

Executive Summary Results Table

Intersection No. / Name	Signalization	Case	2020 Conditions		2030 Conditions	
			AM Peak	PM Peak	AM Peak	PM Peak
1 - Los Volcanes Rd. / Coors Blvd.	Signalized	NO BUILD	A-7.5	A-9.1	A-7.6	B-10.1
		BUILD	A-8.1	A-9.6	A-8.2	B-10.1
2 - Central Ave. / Unser Blvd.	Signalized	NO BUILD	C-28.9	D-41.7	E-57.1	F-83.3

8 - Los Volcanes Rd. / Driveway "A"	Unsignalized	NO BUILD	N/A	N/A	N/A	N/A
		BUILD	E-37.3	D-26.7	E-47.7	D-31.4
9 - Driveway "B" / Silver Creek Rd.	Signalized	NO BUILD	N/A	N/A	N/A	N/A
		BUILD	A-9.2	A-9.1	A-9.2	A-9.2

Note: Mitigated BUILD Condition for Intersection #4 (Los Volcanes Rd. / Unser Blvd.) implements dual southbound left turn lanes on Unser Blvd. and dual eastbound receiving lanes on Los Volcanes Rd. No mitigation measure is recommended for Intersections 1, 2, 3, 5, 6, and 7.

In summary, the proposed development does not have a significant adverse impact to the adjacent transportation system and the minimal impact to the transportation system can be mitigated by the recommended measures described in this report and summarized in the table above. The impact of the proposed Maverik Store is minor on all of the intersections analyzed in this report except for the signalized intersection of Los Volcanes Rd. / Unser Blvd. The recommendations of this study are:

Recommendations:

Design and construction of the proposed Maverik Store shall maintain adequate sight distances at proposed driveways and offsite modified intersections.

Los Volcanes Rd. / Unser Blvd. - Construct dual southbound left turn lanes on Unser Blvd. at Los Volcanes Rd. Dual southbound left turn lanes should be designed and constructed to a minimum length of 185 feet plus transition. Dual eastbound lanes on Los Volcanes will be required for at least 1,000 feet east of Unser Blvd. (1,320 feet preferred).

Proposed driveways associated with this project should be designed with one entering and one exiting lane minimum of sufficient width to accommodate the delivery vehicles' turning movements.

Maverik Store (Los Volcanes Rd. / Unser Blvd.) Traffic Impact Study

Introduction

The purpose of this study is to evaluate the transportation conditions before and after implementation of the proposed Maverik Store and determine the impact of the development on the adjacent transportation system. The recommendations of this study will provide measures to mitigate the impact of the development of the site plan on critical intersections and street segments. This study is prepared to meet requirements of the City of Albuquerque Transportation Development Section, Planning Department, City of Albuquerque and New Mexico Department of Transportation District 3 associated with their review of the Maverik Store as shown on the plan on Page A-3 in the Appendix of this report.

The proposed development is located at the southeast corner of Los Volcanes Rd. / Unser Blvd. in Albuquerque, New Mexico. If the property was to develop in a manner significantly different than the proposed plan considered in this report such that the number of generated trips is significantly greater, then an update to this study may be required.

Following is a vicinity map depicting the location of the proposed project:

Description of Proposed Development

The proposed project is described as a gasoline station with convenience store at the southeast corner of Los Volcanes Rd. / Unser Blvd. The project lies in the city limits of Albuquerque, NM. The project is next to a Regional Principal Arterial Roadway (Unser Blvd.) which is maintained by the City of Albuquerque. The project is also close to the I-40 / Unser Interchange. Therefore, the project will need to comply with City of Albuquerque requirements regarding the overall development and the adjacent transportation system and with the requirements of the New Mexico Department of Transportation regarding transportation issues at I-40 / Unser Blvd.

This study will analyze an implementation year of 2020 and a horizon year of 2030.

The development will be accessed via two proposed driveways for this parcel of land and a future cross-access easement connection to future development to the south. One driveway is proposed as a full access unsignalized driveway on Los Volcanes Rd. and the other driveway is proposed as a full access unsignalized driveway on Silver Creek Rd.

Following is the proposed site development plan depicting driveway (access) locations (also, see Appendix Page A-3 for a more complete version of the proposed site development plan):

Study Area Conditions

A Traffic Impact Study Scoping Meeting was held with the City of Albuquerque Transportation Development Section, Planning Department with staff (Ernest Armijo) and with the New Mexico Department of Transportation staff (Nancy Perea and Margaret Haynes). During the exchange, it was determined that the study area would include the following list of intersections to be analyzed in the Traffic Impact Study:

1. Los Volcanes Rd. / Coors Blvd.
2. Central Ave. / Unser Blvd.
3. Bluewater Rd. / Unser Blvd.
4. Los Volcanes Rd. / Unser Blvd.
5. I-40 N. Ramp / Unser Blvd.
6. I-40 S. Ramp / Unser Blvd.
7. Los Volcanes Rd. / Silver Creek Rd.

In addition, two proposed driveways will be analyzed: a proposed full access unsignalized driveway on Los Volcanes Rd. and a proposed full access unsignalized driveway on Silver Creek Rd. (see Site Plan on Appendix Page A-3)

This scope of study was based on the assumption that the parcel in question would be developed as a gasoline / service station with a convenience store as shown on the proposed site plan.

There are two other known land development projects in the area which need to be incorporated into the background traffic model for this study: Coors Park & Sell (located at the northeast corner of Fortuna Rd. / Coors Blvd.) is a proposed retail commercial development. Adjustments for the West Mesa HS traffic have been included in the background traffic for the Coors Park & Sell development as well. The title of the Traffic Impact Study for the Coors Park & Sell development is "Fortuna / Coors Retail Commercial Development" dated October 19, 2017. The second known development project in the area which needs to be incorporated into the background traffic model for this study is the BEK Development, a proposed regional food distribution center for which the Traffic Impact Study was prepared just prior to this proposed Maverik Store. Thus, the Maverik Store incorporates the BEK Development traffic into its background traffic volumes.

There are no known Transportation Improvement Program projects in the area that need to be considered in the Traffic Impact Study. However, during the Scoping Meeting for the proposed Maverik Store, the City staff mentioned that there was a proposed widening project on Unser Blvd. from Los Volcanes Rd. south to Sarracino Pl. NW wherein Unser Blvd. would be widened to six lanes. Research for the Unser widening project revealed that funds were diverted to

another project and the Unser widening plans were shelved for the time being until funds were in place to construct the project.

This project area is served by public transit services; specifically Routes #54, 66, 92, 94, 96, 155, 198 and 766. These routes run along multiple roads in the vicinity of this project. See Appendix Page A-153a for City of Albuquerque Transit map.

Some roadways in the vicinity are designated on the Futures 2040 Metropolitan Transportation Plan (2040 Long Range Bikeway System) as either Proposed or Existing Bicycle Lanes.

There are pedestrian facilities in the project area – curb & gutter and sidewalks along the roads, as well as raised medians for pedestrians & bicyclists crossing against traffic.

Los Volcanes Rd. and Bluewater Rd. are classified as a Major Collector Roadways on the Mid-Region Council of Government's Futures 2040 Long Range Roadway System Map. They are generally two-lane urban-type roadways with curb, gutter and sidewalks. The posted speed limit along these roads is 25 MPH or 30 MPH.

Unser Blvd. and Coors Blvd. are classified as Regional Principal Arterial Roadways on the Mid-Region Council of Government's Futures 2040 Long Range Roadway System Map. Unser Blvd. is generally a four-lane roadway while Coors Blvd. is generally a six-lane roadway. Both have curb & gutter with sidewalks. The posted speed limit along this section of Unser Blvd. is 35 MPH and along Coors Blvd. is 45 MPH.

Central Ave. is classified as a Community Principal Arterial Roadway on the Mid-Region Council of Government's Futures 2040 Long Range Roadway System Map. Central Ave. is generally a six-lane roadway with raised medians and curb & gutter with sidewalks. The posted speed limit along this section of Central Ave. is 55 MPH.

Ladera Dr. is classified as a Minor Arterial Roadway on the Mid-Region Council of Government's Futures 2040 Long Range Roadway System Map. Ladera Dr. is generally a four-lane roadway with raised medians and curb & gutter with sidewalks. The posted speed limit along this section of Ladera Dr. is 40 MPH.

Analysis of Existing Conditions

The existing analysis of each of the signalized and unsignalized intersection in this Study are summarized in the following table. The results are based on existing signal timing provided by the City of Albuquerque Traffic Engineering Operations Section of the Municipal Development Department. Existing traffic volumes (turning movement counts) were collected at the intersections targeted for analysis in this study in 2017 and 2018 which are included on Appendix Pages A-172 thru A-177. Resulting calculated delay and associated levels-of-service

Highway Capacity Manual Signalized and Unsignalized Intersection Analysis reports are located on Pages A-72 through A-83 in the Appendix of this report.

Intersection: 1 - Los Volcanes Rd. / Coors Blvd. - Signalized

Peak Hour	Eastbound			Westbound			Northbound			Southbound

Analysis of Implementation Year Conditions

Traffic Projections

Background traffic was taken from recent traffic counts (Appendix A-172 thru A-177) conducted for this project. The traffic counts were conducted to collect traffic flow rates.

Projected trips were calculated based on Institute of Transportation Engineers' (ITE) Trip Generation Manual, 10th Edition utilizing equations for ITE Land Use 945 (Gasoline / Service Station w/Convenience Market. Trips for the development were determined based on land use defined on the Conceptual Site Development Plan on Page A-3 in the Appendix of this report. The following table summarized the trip generation rate for the project:

Maverik C-Store (Los Volcanes / Unser Blvd.)
Trip Generation Data (ITE Trip Generation Manual - 10th Edition)

USE (ITE CODE)	24 HOUR TWO-WAY VOLUME	A. M. PEAK HOUR		P. M. PEAK HOUR		
	GROSS	ENTER	EXIT	ENTER	EXIT	
Units						
Gasoline / Service Station w/ Convenience Market (945)	20	4,208	145	139	143	137
Fueling Positions						

Pass-by trips were not applied to this project since there are no proposed driveways on Unser Blvd. See Appendix Page A-7 for more information regarding the trip generation.

The Gravity Model was used to determine trip distribution where primary trips for the commercial land use development were distributed proportionally to the 2020 projected population of citywide subareas. Population data for the years 2012 and 2040 were taken from the 2040 Socioeconomic Forecasts by Subareas for the Mid-Region of New Mexico supplied by the Mid-Region Council of Governments (MRCOG). Population data from the years 2012 and 2040 was interpolated linearly to obtain 2020 population data to utilize for this analysis. Population Subzones were grouped based on the most likely major street(s) or route(s) to the subject development. The trip distribution worksheets and associated map of data analysis subzones are shown in the Appendix on Pages A-8 thru A-15 and in the following graphic:

Maverik Convenience Store

(Los Volcanes Rd. / Unser Blvd.)

Trip Distribution Map (%)

Trip assignments are first made on a percentage basis derived from data established in the trip distribution determination process and logical routing. Those percentages are then applied to the projected trips to determine individual traffic movements. Percentage trip assignments for commercial trips are shown below and in the Appendix on Pages A-14 thru A-15 and in the following displays:

Trip Assignments (% Exiting)

Background traffic growth rates were considered for each individual approach to an intersection that was targeted for analysis based on data from the 2007 through 2016 Traffic Flow maps prepared by the Mid-Region Council of Governments. Most of the Traffic Flow Data for those years taken from the MRCOG Traffic Flow Maps were Standard Data. The data from those years for each approach was plotted on a graph and a linear “regression trend line” calculated using the equation format $y=mx+b$. The growth rate was determined by calculating the average volume increase per year during the time period considered and dividing that volume into the most recent AWDT used in the analysis from which future volumes will be calculated. The rate of growth of that trend line was utilized as the annual growth rate for each approach if that calculated rate appeared feasible. However, in every roadway segment considered in this analysis, the rate indicated either an inconsistent or a negative growth trend; therefore, the growth rate was considered to be a generic 0.5%. Historical Growth Rate Graphs with linear regression trend lines are shown in the Appendix on Pages A-16 thru A-28. The growth rate utilized for each approach to an intersection is printed at the top of the Turning Movement sheets for each intersection (Appendix Pages A-30 thru A-71).

The trip generation, trip distribution and trip assignments were utilized along with the existing 2017 / 2018 background traffic volumes and the historical traffic growth rates to determine the Implementation & Horizon year NO BUILD and BUILD volumes, see Appendix Pages A-30 thru A-71.

Traffic Analysis

Signalized and unsignalized intersection analyses performed in this report utilize the Highway Capacity Manual, 6th Edition methods. Software utilized is Synchro recently released version 10.3.15.0. Initial analysis utilizes existing signal timing and existing geometry of the intersection. Also, queuing analysis utilizes Highway Capacity Manual, 6th Edition methods and equations, again using Synchro 10.3.15.0 software to generate the queuing reports. Calculated queue lengths are 95th percentile confidence level.

A capacity analysis for each intersection using existing traffic signal timing (see Appendix Pages A-84 thru A-117) was conducted for the Implementation Year (2020) NO BUILD and BUILD Conditions and the results are summarized as follows:

Implementation Year Analysis (2020)

#1 – Los Volcanes Rd. / Coors Blvd. - Pages A-84 thru A-115

The results of the 2020 analyses of the full access signalized intersection of Los Volcanes Rd. / Coors Blvd. are summarized in the following tables:

	EB (Los Volcanes Rd.)			NB (Coors Blvd.)			SB (Coors Blvd.)		
	L	T	R	L	T	R	L	T	R
Existing Lane Geometry	2		1	1	3			3>	0
AM Peak Hour									
2020 NO BUILD Conditions Volumes	142		46	67	1,080			718	130
V/C Ratio	0.68		0.29	0.13	0.27			0.23	0.24
Level-of-Service	E		D	A	A			A	A
Control Delay (Seconds)	57.7		50.1	2.3	1.9			4.2	4.4
Intersection LOS	A - 7.5								
2020 BUILD Conditions Volumes	156		55	76	1,080			718	145
V/C Ratio	0.69		0.34	0.15	0.27			0.24	0.24
Level-of-Service	E		D	A	A			A	A
Control Delay (Seconds)	57.9		50.2	2.5	2.0			4.4	4.6
Intersection LOS	A - 8.1								
PM Peak Hour									
2020 NO BUILD Conditions Volumes	188		99	65	1,169			1,692	161
V/C Ratio	0.62		0.47	0.24	0.28			0.48	0.48
Level-of-Service	E		D	A	A			A	A
Control Delay (Seconds)	58.8		53.3	4.4	2.1			6.1	6.7
Intersection LOS	A - 9.1								
2020 BUILD Conditions Volumes	202		108	74	1,169			1,692	176
V/C Ratio	0.63		0.49	0.27	0.28			0.49	0.49
Level-of-Service	E		D	A	A			A	A
Control Delay (Seconds)	58.4		53.1	5.0	2.3			6.4	7.1
Intersection LOS	A - 9.6								

The 2020 analysis of the intersection of Los Volcanes Rd. / Coors Blvd. demonstrates that the overall intersection delays will be acceptable for all conditions analyzed in this report. Also, it is demonstrated that the proposed Maverik Store will have minimal impact on the intersection. The average intersection delay will be increased by 0.6 seconds during the AM Peak Hour and by 0.5 seconds during the PM Peak Hour as a result of implementation of the proposed Maverik Convenience Store. Therefore, no recommendations are made for the intersection of Los Volcanes Rd. / Coors Blvd.

#2 – Central Ave. / Unser Blvd. - Pages A-84 thru A-115

The results of the 2020 analyses of the full access signalized intersection of Central Ave. / Unser Blvd. are summarized in the following tables:

	EB (Central Ave.)			WB (Central Ave.)			NB (Unser Blvd.)			SB (Unser Blvd.)

Control Delay (Seconds)	63.9	28.4	28.5	65.0	27.6	0.0	32.8	56.1	56.1	32.3	37.2	0.0
Intersection LOS	D - 42.7											

The westbound and southbound right turn movements at this intersection are not controlled by the traffic signal. The 2020 analysis of the intersection of Central Ave. / Unser Blvd. demonstrates that the overall intersection delays will be acceptable for all conditions analyzed in this report. Also, the impact of the proposed Maverik Store is that it increases the calculated average intersection delay by 0.5 seconds during the AM Peak Hour and by 1.0 seconds during the PM Peak Hour. The impact of the proposed Maverik Store on the intersection of Central Ave. / Unser Blvd. is minimal. Therefore, no recommendations are made for the intersection of Central Ave. / Unser Blvd.

#3 – Bluewater Rd. / Unser Blvd. - Pages A-84 thru A-115

The results of the 2020 analyses of the signalized intersection of Bluewater Rd. / Unser Blvd. are summarized in the following tables:

	EB (Bluewater Rd.)			WB (Bluewater Rd.)			NB (Unser Blvd.)			SB (Unser Blvd.)

Intersection LOS	C - 25.6											

The northbound and southbound right turn movements at this intersection are not controlled by the traffic signal. The 2020 analysis of the intersection of Bluewater Rd. / Unser Blvd. demonstrates that the level-of-service will be acceptable for the AM Peak Hour and PM Peak Hour NO BUILD and BUILD conditions analyzed in this report. The implementation of the proposed development increases the delay at the intersection by 0.6 seconds during the AM Peak Hour and by 0.9 seconds during the PM Peak Hour. The impact of the proposed Maverik Store is minimal to moderate and, therefore, no operational recommendations are made for the intersection of Bluewater Rd. / Unser Blvd.

#4 – Los Volcanes Rd. / Unser Blvd. - Pages A-84 thru A-115

The results of the 2020 analyses of the full access signalized intersection of Los Volcanes Rd. / Unser Blvd. are summarized in the following tables:

	EB (Los Volcanes Rd.)			WB (Los Volcanes Rd.)			NB (Unser Blvd.)			SB (Unser Blvd.)

Intersection LOS	C - 22.7											

The northbound right turn movement at this intersection is not controlled by the traffic signal. The 2020 analysis of the intersection of Los Volcanes Rd. / Unser Blvd. demonstrates that there is a significant impact to the calculated delays for the intersection, especially during the AM Peak Hour period. Mitigation of the impact of this project consists of implementing dual

southbound left turn lanes on Unser Blvd. at Los Volcanes Rd. This will require that Los Volcanes Rd. be widened to accommodate the dual left turns with two eastbound lanes extending from Unser Blvd. almost to Gallatin Pl. Transition back to one lane eastbound should occur just west of the intersection of Gallatin Pl. Signal re-timing will also be necessary. The southbound left turn movement will be required to operate as a “Protected ONLY” left turn movement.

The existing southbound left turn lane on Unser Blvd. at Los Volcanes Rd. is approximately 150 feet long. Implementing dual left turn lanes will require that the outside left turn lane (which is current striped out) be re-striped for use. The outside left turn lane will be more than 1,000 feet long, which is sufficient to contain the calculated 95th Percentile queuing for the movement (more on that issue in the horizon year analysis section).

#5 – I-40 N. Ramp / Unser Blvd. - Pages A-84 thru A-115

The results of the 2020 analyses of the signalized intersection of I-40 N. Ramp / Unser Blvd. are summarized in the following tables:

	WB (I-40 N. Ramp)			NB (Unser Blvd.)			SB (Unser Blvd.)		
	L	T	R	L	T	R	L	T	R

Control Delay (Seconds)	45.0	0.0	0.0	12.0	13.5	0.0	0.0	18.1	18.7
Intersection LOS	C - 24.9								

The westbound right turn movement at this intersection is not controlled by the traffic signal. The 2020 analysis of the intersection of I-40 N. Ramp / Unser Blvd. demonstrates that the level-

of-service will be acceptable for both the AM Peak Hour and PM Peak Hour NO BUILD and BUILD conditions analyzed in this report. The implementation of the proposed development increases the delay at the intersection by 0.2 seconds during the AM Peak Hour and by 0.0 seconds during the PM Peak Hour. Therefore, no recommendations are made for the intersection of I-40 N. Ramp / Unser Blvd.

#6 –I-40 S. Ramp / Unser Blvd. – Pages A-84 thru A-115

The results of the analysis of the unsignalized intersection of I-40 S. Ramp / Unser Blvd. are summarized in the following table:

	EB (I-40 S. Ramp)			NB (Unser Blvd.)			SB (Unser Blvd.)		
	L	T	R	L	T	R	L	T	R
Existing Lane Geometry	1	0	1	0	2	1	0	2	0

Level-of-Service	F		A						
Control Delay (Seconds)	999		0.0						
Intersection LOS	TWSC								

The northbound right turn movement and the southbound to eastbound left turn movement do not affect the operation of this unsignalized intersection. The 2020 analysis of the intersection of I-40 S. Ramp / Unser Blvd. demonstrates that the delays will be very long for all conditions analyzed in this report. In the previous Traffic Impact Study for the BEK Facility, mitigated analysis took into consideration the impact of upstream / downstream traffic signals (I-40 N. Ramp / Unser and Los Volcanes Rd. / Unser) and considers that there is sufficient room for one vehicle storage in the center of Unser Blvd. to affect a two-stage left turn. A Peak Hour Traffic Signal Warrant was performed in that Study and it showed that a traffic signal is not warranted

at this intersection. The proposed volumes at the I-40 S. Ramp / Unser Blvd. with respect to a traffic signal warrant analysis will not change for this project since the proposed Maverik Store will not generate a single eastbound left turn movement at the intersection. A traffic signal is still not warranted. There is no solution to the long delays for the eastbound left turn movement at this ramp short of major interchange redesign. Also, the proposed Maverik Store does not contribute any traffic to the problematic eastbound left turn movement. Therefore, no recommendations are made for the intersection of I-40 S. Ramp / Unser Blvd.

#7 – Los Volcanes Rd. / Silver Creek Rd. – Pages A-84 thru A-115

The results of the analysis of the full access unsignalized intersection of Los Volcanes Rd. / Silver Creek Rd. are summarized in the following table:

	EB (Los Volcanes Rd.)			WB (Los Volcanes Rd.)			NB (Silver Creek Rd.)		
	L	T	R	L	T	R	L	T	R
Existing Lane Geometry		1>		1	1			<1>	
AM Peak Hour									
2020 BUILD Conditions Volumes		605	53	22	382		22		8
V/C Ratio				0.04			0.14		
Level-of-Service				A	A		C		
Control Delay (Seconds)				9.9	0.0		19.0		
Intersection LOS	TWSC								
PM Peak Hour									
2020 BUILD Conditions Volumes		379	22	8	461		51		22
V/C Ratio				0.01			0.25		
Level-of-Service				A	A		C		
Control Delay (Seconds)				8.5	0.0		17.1		
Intersection LOS	TWSC								

The 2020 analysis of the intersection of Los Volcanes Rd. / Silver Creek Rd. demonstrates that the delays will be acceptable for all conditions analyzed in this report. Therefore, no recommendations are made for the intersection of Los Volcanes Rd. / Silver Creek Rd.

#8 – Los Volcanes Rd. / Driveway “A”. - Pages A-84 thru A-115

Driveway “A” is proposed as an unsignalized full access driveway on Los Volcanes Rd. The results of the 2020 analyses of the intersection of Los Volcanes Rd. / Driveway “A” are summarized in the following tables:

	EB (Los Volcanes Rd.)			WB (Los Volcanes Rd.)			NB (Driveway "A")		
	L	T	R	L	T	R	L	T	R
Proposed Lane Geometry		2>		1	1			<1>	
AM Peak Hour									
2020 BUILD Conditions Volumes		639	105	25	379		100		24
V/C Ratio				0.05			0.61		
Level-of-Service				B	A		E		
Control Delay (Seconds)				10.5	0.0		37.3		
Intersection LOS	TWSC								
PM Peak Hour									
2020 BUILD Conditions Volumes		397	103	24	488		99		23
V/C Ratio				0.04			0.50		
Level-of-Service				A	A		D		
Control Delay (Seconds)				9.1	0.0		26.7		
Intersection LOS	TWSC								

The 2020 analysis of the intersection of Los Volcanes Rd. / Driveway “A” demonstrates that the delays will be acceptable for all conditions analyzed in this report. Therefore, no recommendations are made for the intersection of Los Volcanes Rd. / Driveway “A”.

It is recommended that Driveway “A” be designed and constructed with one entering lane and one exiting lane (minimum) and that adequate sight distances be provided for entering and exiting vehicles at the driveway. Also, Driveway “A” should be designed and constructed to facility delivery trucks as needed.

A conceptual plan for Driveway “A” on Los Volcanes Rd. can be located on Page A-3a in the Appendix of this report demonstrating the proposed location and geometric design of Los Volcanes Rd. near Driveway “A”.

#9 – Driveway “B” / Silver Creek Rd. - Pages A-84 thru A-115

Driveway “B” is proposed as a full access unsignalized intersection on Silver Creek Rd. The results of the 2020 analyses of the intersection of Driveway “B” / Silver Creek Rd. are summarized in the following tables:

	EB (Driveway "B")			NB (Silver Creek Rd.)			SB (Silver Creek Rd.)		
	L	T	R	L	T	R	L	T	R
Proposed Lane Geometry		<1>			<1			1>	
AM Peak Hour									
2020 BUILD Conditions Volumes	15		1	1	15			59	16
V/C Ratio	0.02			0.00					
Level-of-Service	A			A	A				
Control Delay (Seconds)	9.2			7.4	0.0				
Intersection LOS	TWSC								
PM Peak Hour									
2020 BUILD Conditions Volumes	15		1	1	58			14	16
V/C Ratio	0.02			0.00					
Level-of-Service	A			A	A				
Control Delay (Seconds)	9.1			7.3	0.0				
Intersection LOS	TWSC								

The 2020 analysis of the intersection of Driveway “B” / Silver Creek Rd. demonstrates that the delays will be acceptable for all conditions analyzed in this report. Therefore, no recommendations are made for the intersection of Driveway “B” / Silver Creek Rd.

It is recommended that Driveway “B” be designed and constructed with one entering lane and one exiting lane (minimum) and that adequate sight distances be provided for entering and exiting vehicles at the driveway. Also, Driveway “B” should be designed and constructed to facility delivery trucks as needed.

Analysis of Horizon Year (2030) Conditions

#1 – Los Volcanes Rd. / Coors Blvd. - Pages A-116 thru A-147

The results of the 2030 analyses of the full access signalized intersection of Los Volcanes Rd. / Coors Blvd. are summarized in the following tables:

	EB (Los Volcanes Rd.)			NB (Unser Blvd.)			SB (Unser Blvd.)		
	L	T	R	L	T	R	L	T	R

2030 NO BUILD Conditions (Max Queue) - Ft.	155	0	320	18	89	0	0	286	307
2030 BUILD Conditions (Max Queue) - Ft.	165	0	347	24	87	0	0	286	312
Length of Existing Lane	150		150	190	Cont			Cont	0

The 2030 analysis of the intersection of Los Volcanes Rd. / Coors Blvd. demonstrates that the overall intersection delays will be acceptable for all conditions analyzed in this report. Also, the impact of the proposed Maverik Store on the intersection of Los Volcanes Rd. / Coors Blvd. is that it increases the calculated average intersection delay by 0.6 seconds during the AM Peak Hour and 0.0 seconds during the PM Peak Hour. The impact is minimal. Therefore, no recommendations are made for the intersection of Los Volcanes Rd. / Coors Blvd.

The queuing analysis demonstrates that the eastbound approach to this intersection is deficit in queuing storage lanes. Queuing storage is limited by available right-of-way constraints as well as the presence of existing private driveways located approximately 275 feet west of the eastbound stop bar on Los Volcanes. The existing striping for the eastbound approach optimizes the right-of-way and space available for the left and right turn lanes. Therefore, no recommendation is made regarding extending existing lanes.

#2 – Central Ave. / Unser Blvd. - Pages A-116 thru A-147

The results of the 2030 analyses of the full access signalized intersection of Central Ave. / Unser Blvd. are summarized in the following tables:

	EB (Central Ave.)			WB (Central Ave.)			NB (Unser Blvd.)			SB (Unser Blvd.)		
	L	T	R	L	T	R	L	T	R	L	T	R

The westbound and southbound right turn movements at this intersection are not controlled by the traffic signal. The 2030 analysis of the intersection of Central Ave. / Unser Blvd. demonstrates that the overall intersection delays will be marginally acceptable for AM conditions analyzed in this report. The PM conditions show long delays for both the NO BUILD and BUILD

analyses. The impact of the Maverik Store increases the average intersection delay by 4.7 seconds during the AM Peak Hour and reduces delay by 1.8 seconds during the PM Peak Hour. The impact of the proposed Maverik Convenience Store is minimal. Therefore, no recommendations are made for the intersection of Central Ave. / Unser Blvd.

The queuing analysis demonstrates that the existing auxiliary left and right turn lanes are of sufficient length to contain the calculated 95th Percentile queues at the intersection. Therefore, no recommendation is made regarding queuing storage issues.

The northbound and southbound right turn movements at this intersection are not controlled by the traffic signal. The 2030 analysis of the intersection of Bluewater Rd. / Unser Blvd. demonstrates that the level-of-service will be acceptable for the AM Peak Hour and PM Peak Hour NO BUILD and BUILD conditions analyzed in this report. The implementation of the

proposed development increases the delay at the intersection by 0.9 seconds during the AM Peak Hour and by 0.3 seconds during the PM Peak Hour. The impact of the proposed Maverik Store is minimal to moderate and, therefore, no operational recommendations are made for the intersection of Bluewater Rd. / Unser Blvd.

The queuing analysis for this intersection demonstrates that there are deficit storage lanes on the Bluewater eastbound and westbound approaches, but sufficient storage for the calculated 95th percentile queues on Unser Blvd. northbound and southbound. Due to right-of-way constraints and / or driveway issues, no recommendation is made with regard to queuing issues at this intersection.

#4 – Los Volcanes Rd. / Unser Blvd. - Pages A-116 thru A-147

The results of the 2030 analyses of the full access signalized intersection of Los Volcanes Rd. / Unser Blvd. are summarized in the table on the following page.

As expected, the signalized intersection of Los Volcanes Rd. / Unser Blvd. is the intersection that is most impacted by the proposed Maverik Convenience Store at the southeast corner of that intersection. The 2030 analysis of the signalized intersection is very congested and experiencing long delays, especially during the AM Peak Hour NO BUILD and BUILD conditions. The Maverik Convenience Store project is expected to increase the average overall intersection delay by 26 seconds during the AM Peak Hour period and reduce the average overall intersection delay by 3.1 seconds during the PM Peak Hour period.

The excessive delays at this intersection during the 2030 AM Peak Hour period can be mitigated by constructing and implementing dual southbound left turn lanes as recommended in the Implementation Year Analysis section of this report. Implementation of the dual southbound left turn lanes will require that Los Volcanes Rd. be widened to accommodate the dual left turns with two eastbound lanes extending from Unser Blvd. almost to Gallatin Pl. Transition back to one lane eastbound should occur just west of the intersection of Gallatin Pl. Signal re-timing will also be necessary. The southbound left turn movement will be required to operate as a "Protected ONLY" left turn movement.

The queuing analysis in the table at the bottom of the following page assumes that the mitigated geometry will be implemented for the BUILD Conditions. There are deficit queuing storage issues on Los Volcanes Rd., but not on northbound and southbound Unser Blvd. Queuing storage issues eastbound and westbound on Los Volcanes cannot be mitigated due to existing right-of-way issues and / or driveway issues.

Also, the southbound queuing on Unser Blvd. for the left turn movements requires 473 feet of storage (dual lanes) for a total of 946 feet of storage (473×2). In this case, the inside storage lane provides 150 feet of left turn storage and the outside left turn lane will provide more than 1,000 feet of storage for the southbound left turn movement. This report concludes that the 150 foot long inside left turn lane plus the 1,000+ foot long outside left turn lane will provide more than sufficient storage for the southbound left turn movement in 2030. Therefore, the only recommendation of this report is to open up the existing outside southbound left turn lane, thus providing dual southbound left turn lanes on Unser Blvd. at Los Volcanes Rd.

The westbound right turn movement and the southbound right turn movements are not controlled by the traffic signal at this intersection. The 2030 analysis of the intersection of I-40 N. Ramp / Unser Blvd. demonstrates that the level-of-service will be acceptable for both the AM Peak Hour and PM Peak Hour NO BUILD and BUILD conditions analyzed in this report. The

implementation of the proposed development increases the delay at the intersection by 0.1 seconds during the AM Peak Hour and by 0.1 seconds during the PM Peak Hour. Therefore, no recommendations are made for the intersection of I-40 N. Ramp / Unser Blvd.

The queuing analysis demonstrates that the 95th Percentile calculated queueing can be contained within the available storage provided at the intersection. The westbound left turn movement queuing will be store on the two approach lanes (an exclusive left turn lane and a thru / left turn lane) which extend back at least 750 feet east of the westbound stop bar at the end of the ramp. The westbound to northbound right turn movement occurs on a sweeping ramp with an add lane on Unser Blvd. northbound. Therefore, there is no queuing to consider.

Length of Existing Lane	125	N/A	250	0	Cont	750	N/A	Cont	999

The eastbound right turn movement on the I-40 off-ramp eastbound to southbound on Unser Blvd. is facilitated by a sweeping right turn ramp with an add-lane on Unser southbound. The 2030 analysis of the intersection of I-40 S. Ramp / Unser Blvd. demonstrates that the delays will be very long for all conditions analyzed in this report, especially during the 2030 PM Peak Hour

period. There are no solutions to this issue short of a new traffic signal at the intersection. But previous analysis in the previously submitted BEK Development Traffic Impact Study demonstrated that there are insufficient volumes of eastbound left turn traffic at the ramp to warrant a traffic signal based on the Peak Hour Warrant criteria. The proposed Maverik Store does not contribute any traffic to the problematic eastbound left turn movement. Therefore, no recommendations are made for the intersection of I-40 S. Ramp / Unser Blvd.

#7 – Los Volcanes Rd. / Silver Creek Rd. – Pages A-116 thru A-147

The results of the 2030 analyses of the unsignalized intersection of Los Volcanes Rd. / Silver Creek Rd. are summarized in the following tables:

	EB (Los Volcanes Rd.)			WB (Los Volcanes Rd.)			NB (Silver Creek Rd.)		
	L	T	R	L	T	R	L	T	R
Existing Lane Geometry		1>		1	1			<1>	
AM Peak Hour									
95th Percentile Queue (veh)									
2030 BUILD Conditions Volumes		682	55	23	404		23		8
V/C Ratio				0.04			0.16		
Level-of-Service				B	A		C		
Control Delay (Seconds)				10.4	0.0		21.2

Control Delay (Seconds)				8.7	0.0		19.0		
Intersection LOS	TWSC								
95th Percentile Queue (veh)				0.0			1.1		

The 2030 analysis of the intersection of Los Volcanes Rd. / Silver Creek Rd. demonstrates that the delays will be acceptable for all conditions analyzed in this report. Therefore, no recommendations are made for the intersection of Los Volcanes Rd. / Silver Creek Rd.

#8 – Los Volcanes Rd. / Driveway “A” - Pages A-116 thru A-147

Driveway “A” is proposed as an unsignalized full access driveway on Los Volcanes Rd. The results of the 2030 analyses of the intersection of Los Volcanes Rd. / Driveway “A” are summarized in the following tables:

	EB (Los Volcanes Rd.)			WB (Los Volcanes Rd.)			NB (Driveway “A”)		
	L	T	R	L	T	R	L	T	R
Existing Lane Geometry									
AM Peak Hour									
2030 BUILD Conditions Volumes		718	105	25	402		100		24
V/C Ratio				0.05			0.69		
Level-of-Service				B	A		E		
Control Delay (Seconds)				11.0	0.0		47.7		
Intersection LOS	TWSC								
95th Percentile Queue (veh)				0.2			4.5		
PM Peak Hour									
2030 BUILD Conditions Volumes		441	103	24	546		99		23
V/C Ratio				0.04			0.55		
Level-of-Service				A	A		D		
Control Delay (Seconds)				9.3	0.0		31.4		
Intersection LOS	TWSC								
95th Percentile Queue (veh)				0.1			3.1		

The 2030 analysis of the intersection of Los Volcanes Rd. / Driveway “A” demonstrates that the delays will be acceptable for all conditions analyzed in this report. Therefore, no recommendations are made for the intersection of Los Volcanes Rd. / Driveway “A”.

It is recommended that Driveway “A” be designed and constructed with one entering lane and one exiting lane (minimum) and that adequate sight distances be provided for entering and exiting vehicles at the driveway. Also, Driveway “A” should be designed and constructed to facility delivery trucks as needed.

#9 – Driveway “B” / Silver Creek Rd. - Pages A-116 thru A-147

Driveway “B” is proposed as a full access unsignalized intersection on Silver Creek Rd. The results of the 2030 analyses of the intersection of Driveway “B” / Silver Creek Rd. are summarized in the following tables:

	EB (Driveway "B")			NB (Silver Creek Rd.)			SB (Silver Creek Rd.)		
	L	T	R	L	T	R	L	T	R
Existing Lane Geometry									
AM Peak Hour									
95th Percentile Queue (veh)									
2030 BUILD Conditions Volumes	15		1	1	16			62	16
V/C Ratio	0.02			0.00					
Level-of-Service	A			A	A				
Control Delay (Seconds)	9.2			7.4	0.0				
Intersection LOS	TWSC								
95th Percentile Queue (veh)	0.1			0.0					
PM Peak Hour									
2030 BUILD Conditions Volumes	15		1	1	61			15	16
V/C Ratio	0.02			0.00					
Level-of-Service	A			A	A				
Control Delay (Seconds)	9.2			7.3	0.0				
Intersection LOS	TWSC								
95th Percentile Queue (veh)	0.1			0.0					

The 2030 analysis of the intersection of Driveway “B” / Silver Creek Rd. demonstrates that the delays will be acceptable for all conditions analyzed in this report. Therefore, no recommendations are made for the intersection of Driveway “B” / Silver Creek Rd.

It is recommended that Driveway “B” be designed and constructed with one entering lane and one exiting lane (minimum) and that adequate sight distances be provided for entering and exiting vehicles at the driveway. Also, Driveway “B” should be designed and constructed to facility delivery trucks as needed.

Impact Assessment

The proposed Maverik Store development will have minimal adverse impact on the adjacent transportation system except at the intersection of Los Volcanes Rd. / Unser Blvd. All the levels-of-service were determined to be acceptable for the overall intersections or, if the levels-of-service were deemed unacceptable, it was determined that the proposed Maverik Store had an insignificant impact on the intersection.

Access Design Specifications

Sight distances at proposed Driveways “A” and “B” are adequate. There are no vertical or horizontal curves along this portion of Los Volcanes Rd. nor Silver Creek Rd. and there are no structures that are blocking sight distance into and out of the driveway. Sufficient sight distances will be required to be maintained to meet the requirements of the City of Albuquerque.

All of the roadways in the vicinity of this project except Silver Creek Rd. are designated on the Futures 2040 Metropolitan Transportation Plan (2040 Long Range Bikeway System) as Existing or Proposed Bicycle Lanes (see Appendix Page A-5).

Two driveways are proposed for this project. Driveway “A” is a proposed full access unsignalized driveway on Los Volcanes Rd. and Driveway “B” is a proposed full access driveway on Silver Creek Rd. Both driveways should be designed with one entering lane minimum and one exiting lane minimum and should accommodate turning movements for the design vehicles.

Summary of Deficiencies, Anticipated Impacts, and Recommendations

The existing 2020 analysis determined some deficiencies in the adjacent transportation system, most of them associated with both the NO BUILD and the BUILD condition. Additionally, it was demonstrated that the impact of the proposed Maverik Store was insignificant except at the intersection of Los Volcanes Rd. / Unser Blvd. Mitigation of that impact consists of constructing dual southbound left turn lanes on Unser Blvd. at Los Volcanes Rd. Implementation of dual southbound left turn lanes on Unser Blvd. at Los Volcanes Rd. will necessitate widening of Los Volcanes Rd. to provide two eastbound thru lanes from Unser Blvd. for at least 1,000 feet to the east (1,320 feet preferred). Once the dual southbound left turn lanes are implemented, then signal modifications will be required and signal timing will need to be re-programmed to allow for southbound left turn protected movements.

In summary, the impacts of the proposed Maverik Store can be mitigated provided that the following recommendations are implemented:

Recommendations:

Recommendations:

Recommendations of this study are listed at the end of the Executive Summary.

NOTE: The following pages summarize the Lanes / Volumes / LOS associated with each lane group of each intersection in this Study.

2017 Traffic Flows for the Greater Albuquerque Area

Map prepared by the Mid-Region Council of Governments (MRCOG) in cooperation with the New Mexico Department of Transportation, the local governments in the Albuquerque Metropolitan Planning Area, and the U.S. Department of Transportation, Federal Highway Administration. Map prepared September 2018.

An online version of this map with complete and historic traffic count information and additional maps can be found at: www.mrcog-nm.gov

Average Weekday Traffic

Standard Data
9500

Link Volume is based on traffic count data accepted by the NM Department of Transportation Traffic Monitoring System (TMS) as standard in accordance with the New Mexico State Traffic Monitoring Standards (NMSTMS).

Non-Standard Data
9500

Link Volume is based either on traffic count data not in compliance with the NMSTMS or on professional judgement. NMDOT recommends that nonstandard data be used with caution.

Link volumes have been rounded to the nearest 10th, with some count volumes being the average of two shorter segments.

SCOPE OF TRAFFIC IMPACT STUDY (TIS)

TO: Terry Brown

MEETING DATE: July 26, 2018

ATTENDEES: Consultant Team; COA Transportation Development Review; NMDOT

PROJECT: C-Store Los Volcanes and Unser Blvd., Zone Atlas # K-10

REQUESTED CITY ACTION: ☐ Zone Change ☐ Site Development Plan

☐ Subdivision ☒ Building Permit ☐ Sector Plan ☐ Sector Plan Amendment

☐ Curb Cut Permit ☐ Conditional Use ☐ Annexation ☐ Site Plan Amendment

ASSOCIATED APPLICATION: New 20 pump gas convenience market at SE corner of Los Volcanes Rd. and Unser Blvd. 3.06 acre site.

SCOPE OF REPORT:

The Traffic Impact Study should follow the standard report format, which is outlined in the DPM. The following supplemental information is provided for the preparation of this specific study.

1. Trip Generation - Use Trip Generation Manual, 10th Edition.
Local data may be used for certain land use types as determined by staff.
Consultant to provide.

2. Appropriate study area:
Signalized Intersections;
 - a. I-25 and Unser ramps (both sides)
 - b. Unser and Los Volcanes
 - c. Unser and Bluewater
 - d. Coors and Los Volcanes

Unsignalized Intersections;

- a. None

Driveway Intersections: all site drives.

3. Intersection turning movement counts
Study Time – 7-9 a.m. peak hour, 4-6 p.m. peak hour
Consultant to provide for all intersections listed above.

4. Type of intersection progression and factors to be used.
Type III arrival type (see “2016 Highway Capacity Manual” or equivalent as approved by staff). Unless otherwise justified, peak hour factors and % heavy commercial should be taken directly from the MRCOG turning movement data provided or as calculated from current count data by consultant.

5. Boundaries of area to be used for trip distribution.
1.5 mile radius – commercial;

6. Basis for trip distribution.

Residential – Use inverse relationship based upon distance and employment. Use employment data from 2040 Socioeconomic Forecasts, MRCOG – See MRCOG website for most current data.

Office/Industrial - Use inverse relationship based upon distance and population. Use population data from 2040 Socioeconomic Forecasts, MRCOG – See MRCOG website for most current data.

Commercial - Use relationship based upon population. Use population data from 2040 Socioeconomic Forecasts, MRCOG – See MRCOG website for most current data.

Residential - $T_s = (T_t) (Se / D) / (Se / D)$
 T_s = Development to Individual Subarea Trips
 T_t = Total Trips
 Se = Subarea Employment
 D = Distance from Development to Subarea

Office/Industrial - $T_s = (T_t) (Sp / D) / (Sp / D)$
 T_s = Development to Individual Subarea Trips
 T_t = Total Trips
 Sp = Subarea Population
 D = Distance from Development to Subarea

Commercial -
 $T_s = (T_t) (Sp) / (Sp)$
 T_s = Development to Individual Subarea Trips
 T_t = Total Trips
 Sp = Subarea Population

7. Traffic Assignment. Logical routing on the major street system.
8. Method of intersection capacity analysis - planning or operational (see “2016 Highway Capacity Manual” or equivalent [i.e. HCS, Synchro, Teapac, etc.] as approved by staff). Must use latest version of design software and/or current edition of design manual.
Implementation Year:
9. Traffic conditions for analysis:
- Existing analysis __ yes X no - year ();
 - Phase implementation year(s) without proposed development – 2020
 - Phase implementation year(s) with proposed development – 2020
 - Project completion year without proposed development – 2030
 - Project completion year with proposed development – 2030
 - Other –

10. Background traffic growth.

Method: use 10-year historical growth based on standard data from the MRCOG Traffic Flow Maps. Minimum growth rate to be used is 1/2%.

11. Items to be included in the study:

- a. Intersection analysis.
- b. Signal progression - An analysis is required if the driveway analysis indicates a traffic signal is possibly warranted. Analysis Method:
- c. Arterial LOS analysis;
- d. Recommended street, intersection and signal improvements.
- e. Site design features such as turning lanes, median cuts, queuing requirements and site circulation, including driveway signalization and visibility.
- f. Transportation system impacts.
- g. Other mitigating measures.
- h. Accident analyses ☐ yes ☒ no; Location(s):
- i. Weaving analyses ☐ yes ☒ no; Location(s):

12. Other:

SUBMITTAL REQUIREMENTS:

- 1. Number of copies of report required
 - a. 1 paper copy
 - b. 1 digital copy
- 2. Submittal Fee – \$1300 for up to 3 reviews

The Traffic Impact Study for this development proposal, project name, shall be performed in accordance with the above criteria. If there are any questions regarding the above items, please contact me at 924-3633.

Ernest Armijo, P.E.
Senior Engineer for
Transportation Development Section
