Re: Nob Hill Condos, 110 Richmond Ave SE,
Certificate of Occupancy – Transportation Development
Engineer's Stamp dated 08-06-07 (K16-D071)
Certification dated 05-14-09

Dear Mr. Lewis,

Based upon the information provided in your submittal received 05-15-09, the above referenced certification is approved for release of permanent Certificate of Occupancy by Transportation Development.

If you have any questions, you can contact me at 924-3991.

Sincerely,

Kristal D. Metro, P.E.
Traffic Engineer, Planning Dept.
Development and Building Services

Requests for approvals of Site Development Plans and/or Subdivision Plats shall be accompanied by a drainage submittal. The particular nature , location and scope ot the proposed development defines the degree of drainage detail. One or more of the following levels of submittal may be required based on the following:

1. **Conceptual Grading and Drainage Plan:** Required for approval of Site Development Plans greater than five (5) acres and Sector Plans.
2. **Drainage Plans:** Required for building permits, grading permits, paving permits and site plans less than five (5) acres.
3. **Drainage Report:** Required for subdivisions containing more than ten (10) lots or constituting five (5) acres or more.

Re: one ten richmond, 110 Richmond SE 87106

I, James C Lewis, NMRA, of the firm James C. Lewis Architect, Hereby by certify that this project is in substantial compliance with and in accordance with the design intent of the DRB, AA or TCL approved plan dated 1/11/08 (DRB chairpersons signature). The record information edited onto the original design document has been obtained by James C. Lewis, of the firm James C. Lewis Architect. I further certify that I have personally visited the project site on 5/14/09 and have determined by visual observation that the survey data provided is representative of actual site conditions and is true and correct to the best of my knowledge and belief. This certification is submitted in support of a request for Permanent Certificate of Occupancy.

THE RECORD INFORMATION PRESENTED HEREON IS NOT NECESSARILY COMPLETE AND INTENDED ONLY TO VERIFY SUBSTANTIAL COMPLIANCE OF THE TRAFFIC ASPECTS OF THIS PROJECT. THOSE RELYING ON THE RECORD DOCUMENT ARE ADVISED TO OBTAIN INDEPENDENT VERIFICATION OF ITS ACCURACY BEFORE USING IT FOR ANY OTHER PURPOSE.

Minette

Minette: (2.4 - 3.5 HP - 3")

The Minette pump is the next smallest model in the drainage range, but it shares all important features and benefits with the larger models, resulting in the lowest cost per cubic meter pumped. The drainage range of pumps drain water, not your wallet! The revolutionary hydraulic design ensures high wear resistence and dramatically reduces performance drop due to long time wear.

Technical data

Pump type:
Electrical submersible
One-phase and Three-phase
Classification:
Class IP 68
Maximum submersion: 66 feet
Cable:
SUBCAB:
1-phase: 53 ft: 14AWG/3
3-phase: 53 ft: 14AWG/4
Discharge:
3" - hose, ISO-G or NPT
Limitations:
pH 5-8
Maximum liquid temperature: 104°F

Throughlet / Maximum solid size	Ø 0.35"	Ø 0.35"
Weight	71 lbs	71 lbs
Dimensions (diameter / height)	Ø 9.5" / 27"	Ø 9.5" / 27"

sign philosophy facilitates service
d repair

rindex designs all pumps along the same principles, using components that are interchangeable between multiple models. This philosophy ensures design continuity, reduces spare parts and simplifies service.

UNIQUE BUILT-IN PROTECTION ENSURES LONGEVITY

Only Grindex pumps have Air Valves and the SMART system for the most extensive motor protection available.

(1) AIR VALVE

Water is generally used to cool the motor in a submersible pump, however there are times when a pump runs dry, damaging the pump. The Grindex Air Valve allows the pump to run dry without damage to the motor. The impeller acts like a fan and the hot air escapes through the air valve.

(2) SMART™ SYSTEM INCLUDES

PHASEGUARD™

Protects the motor against single phasing. Phase failure can cause extensive damage to a motor. Grindex Phaseguard™ will automatically shut down the pump if this occurs, thus preventing serious motor damage.

ROTASENSE™

Controls phase sequence. Rotasense™ ensures the motor will only run in the correct direction. This unique feature eliminates overloading, low pumping capacity, and abnormal wear.

TEMPERATURE GUARD™

Protects the motor from overheating. Overheating can cause serious damage to a pump motor. Temperature Guard™ automatically shuts down the pump if any stator winding exceeds 266° F (130° C).

QUALITY FOR LONGER LIFE

Grindex pumps are designed to be used for tough applications. The choice of materials for the pump is therefore extremely important. All materials used in Grindex pumps are of the highest quality ensuring durability and dependability.

(3) AQUATITE - DOUBLE MECHANICAL SHAFT SEALS

Two sets of mechanical seals work independently for double security. Furthermore, the new design of the upper seal seat uses the centrifugal force of the oil to ensure that the upper seal is fully lubricated at all times.

(4) OUTER CASING OF CORRUGATED STAINLESS STEEL

The outer casings of all Grindex pumps are made from 316 stainless steel to protect the pump from corrosion. The corrugation of the outer casing adds strength and is more than twice as strong as a plain casing.

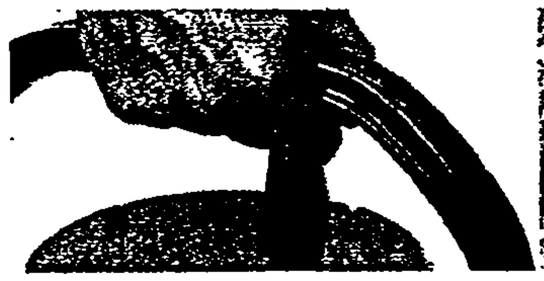
(5) ADJUSTABLE POLYURETHANE DIFFUSERS

Polyurethane diffusers are extremely durable and are highly resistant to abrasive materials. The diffusers are adjustable to maintain optimal pumping performance. Oil-resistant rubber diffusers are available as an option.

(6) HIGH CHROMIUM IMPELLERS

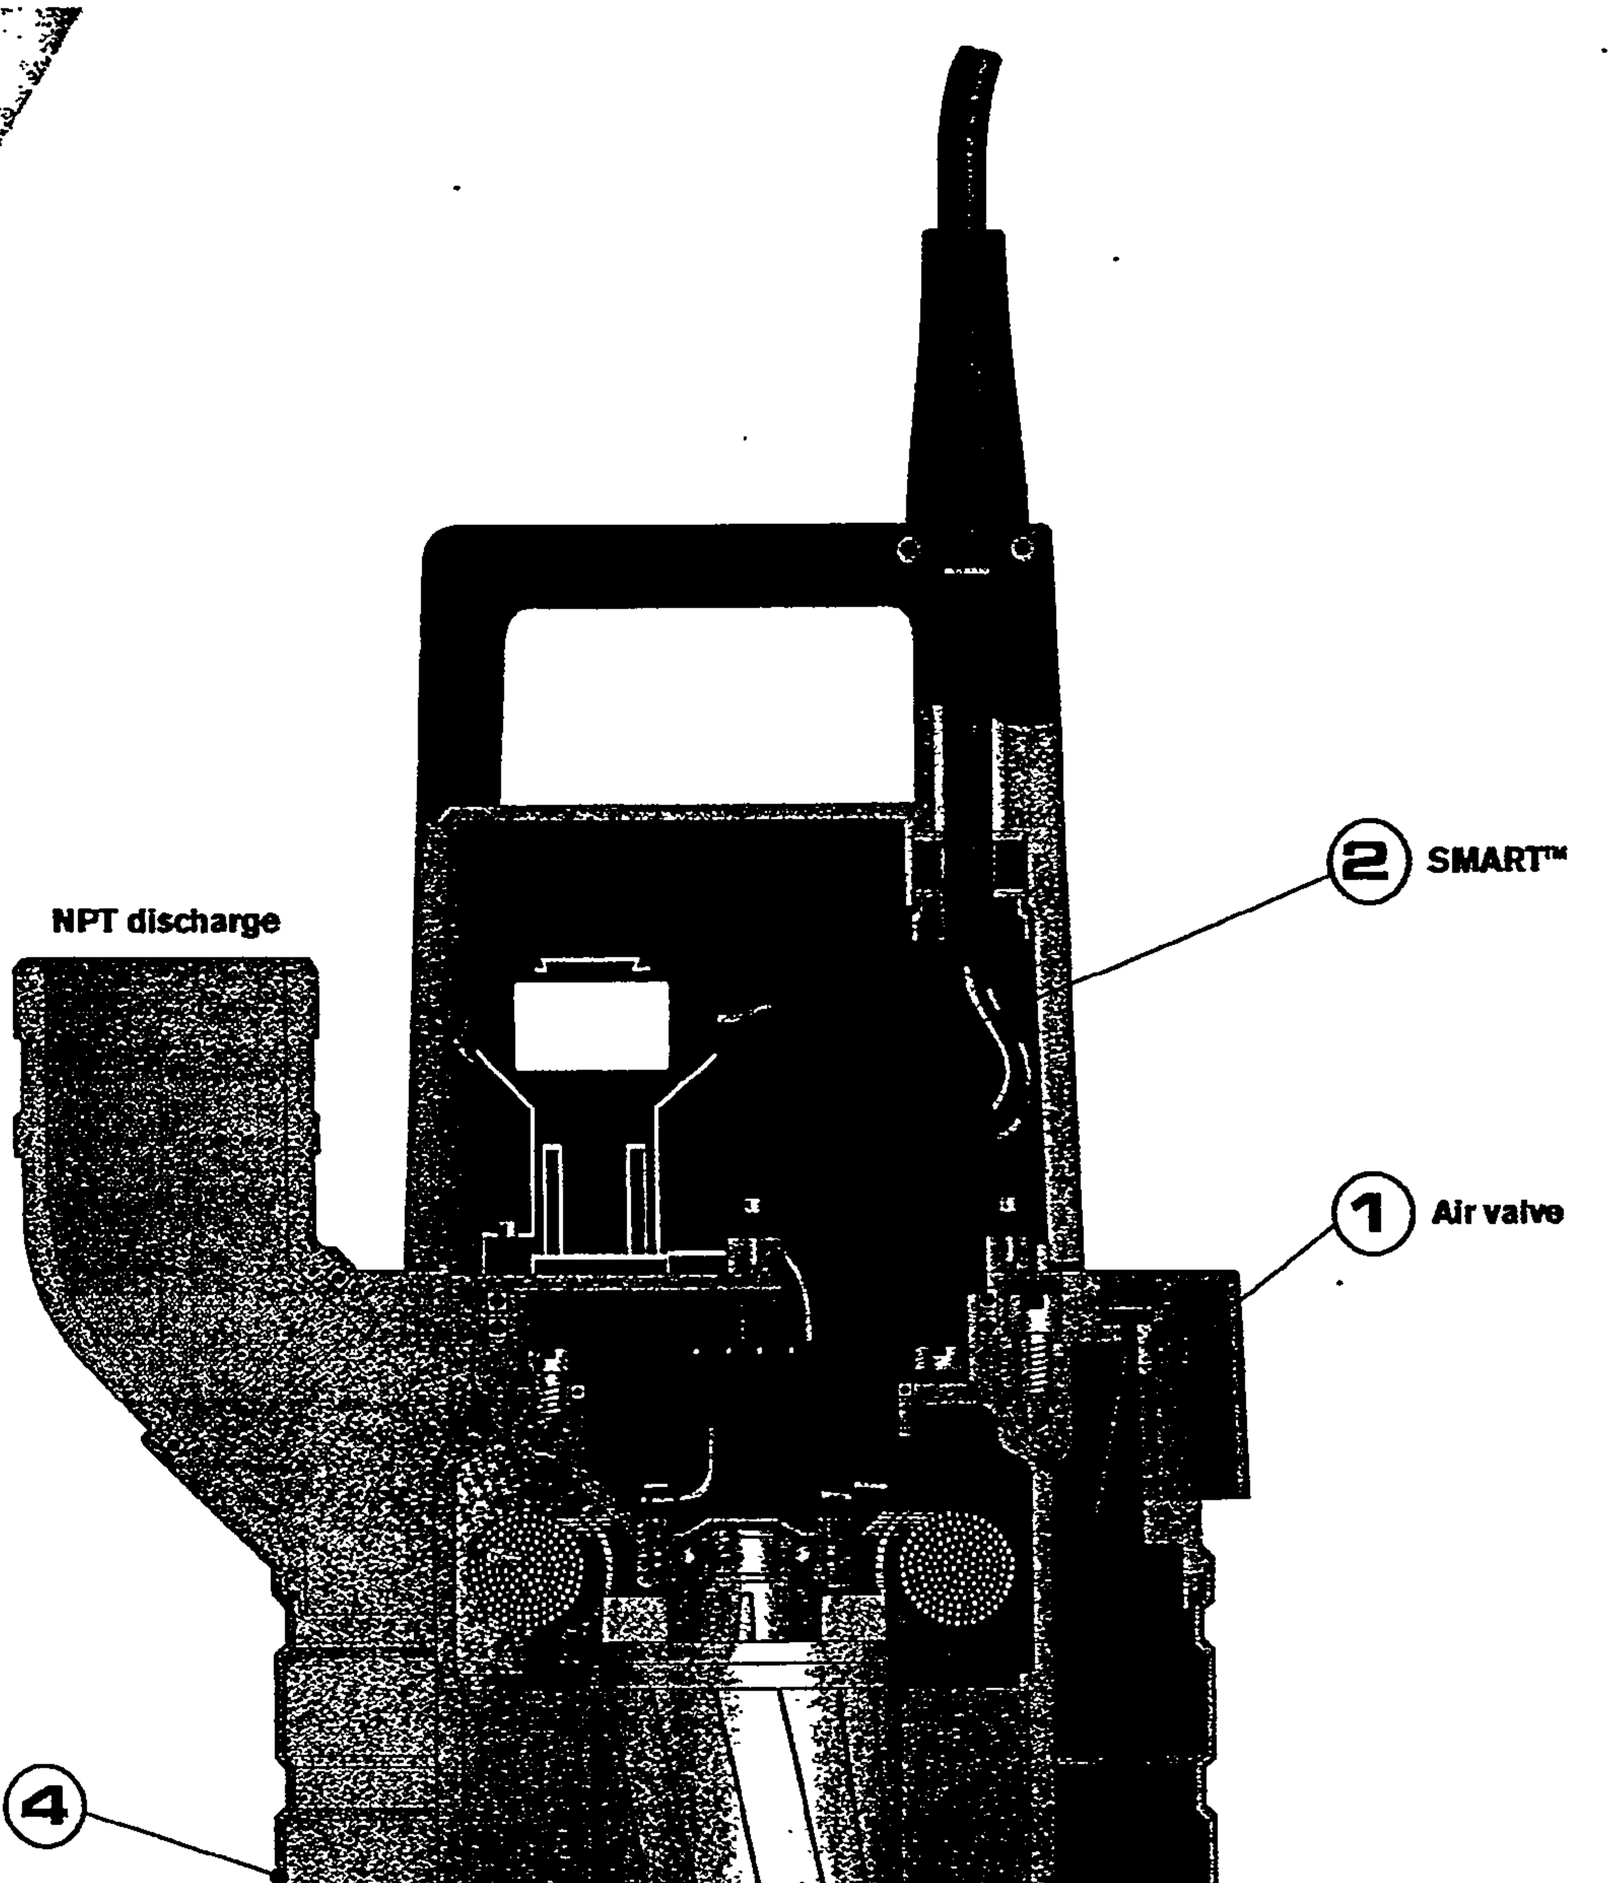
The impellers are made of chromium-alloyed white cast iron and have a hardness of 55 Rc. The impellers are resistant to abrasive materials such as sand, drill cuttings, clay, and grinder cuttings. Stainless steel impellers are available as an option.

NPT Threaded discharge connections. Hose connections also available

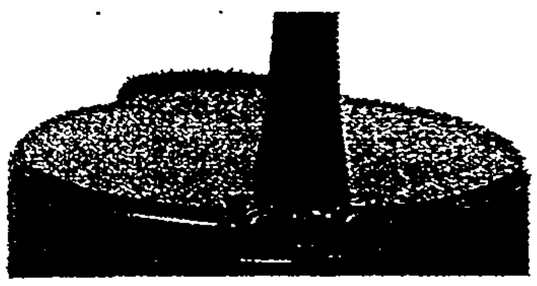


Regardless of size, Grindex pumps are easily moved by carrying handles or eyebolts.

Handy way of restarting the phase shifter switch

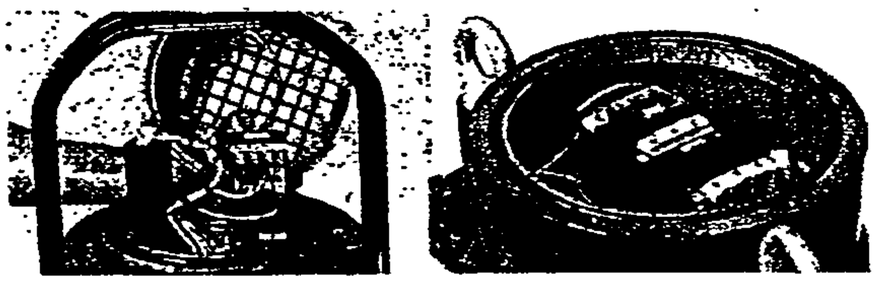


ump by



Cable entry protection sleeve.

Aquatite - the same shaft seal fits all our drainage and sludge pumps.



Functional design with built-in starter and motor protection for enhanced reliability.

John MacKenzie

From: John MacKenzie
Sent: Thursday, April 23, 2009 1:29 PM
To: Curtis Cherne (ccherne@cabq.gov)
Subject: One Ten Richmond (K16/D71)
Attachments: scan0435.pdf; 110sheet2.pdf; 110sheet1.pdf

Curtis,

Briefly, my calculations for the new 18-inch sidewalk culvert at the referenced site (SW corner of the site) that we discussed yesterday are attached. With Manning's it can carry 2.16 cfs and with the weir equation is can accept 1.54 cfs. The approved plan is also attached. In the upper left corner of sheet two it shows that the south part of the roof and the front (west) sidewalk all drain to the street thru that culvert with a developed flow of 1.28 cfs for the 100-year storm. Sheet 1 of the plan shows exactly where the new sidewalk culvert is supposed to be located to receive roof flows from the downspout (it was supposed to be a 24-inch culvert). The 12-inch culvert at the midpoint of the site's frontage onto Richmond is supplemental (the SW corner one can already carry all of this on-site basin's runoff) to help drain nuisance water that falls directly on the sidewalk in front of the condos instead of it draining all along the internal private sidewalk to the SW corner culvert, so there should not be capacity issues if the contractor has replaced the middle 12-inch culvert with two 4-inch pipe thru the curb. If they plug for some reason the flows would just continue south and go out the new 18-inch SW culvert.

Do you want me to formally submit this now, or just include it with my as-builts?

Re: Condos @ 110 Richmond (K-16 / D-71) As-built Certification with New Information

Dear Mr. Cherne:

We have performed a supplemental evaluation of the hydraulic condition along the north side of the on-site portion of the site due to changed conditions relative to the approved plan (dated 12/19/07). This drainage basin area covers all of the north side's private parking spaces, except for those parts of the spaces that are covered by roof. The covered spaces drain through a downspout that discharges directly north into the alley and not to the private parking area. This private parking area was originally designed to be collected in a east-west running trench drain that would outfall to Richmond by gravity. Contrary to the original drainage basin plan, there is also a small additional area within the building that now drains by internal piping to this north-side parking area. During construction it became apparent that the as-built features of the project would preclude gravity discharge of the trench drain directly to the street, so now a sump pump would have to be installed to drain the parking area. I have determined that now the total area draining to the pump is 3,621 SF. I ran AHYMO on this area to find that the discharge during the 100-year storm is 0.43 cfs (see attached), which is also equal to 192 gpm.

TP Pump was consulted and they recommended a Grindex Minette 3 HP submersible sump pump that is readily capable of receiving and grinding waste objects in the runoff water (specs. attached). It can pump up to 230 gpm under the relatively low-head application we have at this site. The pump will discharge into the new 18-inch sidewalk culvert where the trench drain was to originally discharge.

As discussed with you previously, this project will be cared for by an on-the-job maintenance worker who will be constantly monitoring the pumps performance as part of his daily routine.

Please contact me if I can be of further assistance.

Sincerely,

MARK GOODWIN & ASSOCIATES, PA

RE: Drainage Plan for Nob Hill Condos, K16/D71

Dear John MacKenzie, PE:

The drainage plan received on December 19, 2007 the Nob Hill Condos, K16/D71 project is approved. Based upon the information provided in your submittal dated December 19, 2007, the above referenced plan is approved for Building Permit action with the constraint that no roof drainage be directed to a public sidewalk.

This project requires a National Pollutant Discharge Elimination System (NPDES) permit. In addition to submitting an NOI to the EPA and preparing a SWPPP, please send a copy of the SWPPP on a CD in Adobe PDF format to the following address:

Department of Municipal Development

Requests for approvals of Site Development Plans and/or Subdivision Plats shall be accompanied by a drainage submittal. The particular nature , location and scope ot the proposed development defines the degree of drainage detail. One or more of the following levels of submittal may be required based on the following:

1. **Conceptual Grading and Drainage Plan**: Required for approval of Site Development Plans greater than five (5) acres and Sector Plans.
2. **Drainage Plans**: Required for building permits, grading permits, paving permits and site plans less than five (5) acres.
3. **Drainage Report**: Required for subdivisions containing more than ten (10) lots or constituting five (5) acres or more.

PUBLIC UTILITY EASEMENTS

PUBLIC UTILITY EASEMENTS shown on this plat are granted for the common and joint use of:

A. PNM Electric Services for installation, maintenance, and service of underground electrical lines, transformers, and other equipment and related facilities reasonably necessary to provide electrical service.
B. PNM Gas Services for installation, maintenance, and service of natural gas lines, valves and other equipment and facilities reasonably necessary to provide natural gas.
C. Qwest Corporation for the installation, maintenance, and service of such lines, cable, and other related equipment and facilities reasonably necessary to provide communication services, including but not limited to ground pedestals and closures.
D. Comcast Cable for the installation, maintenance, and service of such lines, cable, and other related equipment and facilities reasonably necessary to provide Cable TV service.

Included, is the right to build, rebuild, construct, reconstruct, locate, relocate, change, remove, modify, renew, operate, and maintain facilities for the purposes described above, together with free access to, from, and over said easements, including sufficient working area space for electric transformers, with the right and privilege to trim and remove trees, shrubs or bushes which interfere with the purposes set forth herein. No building, sign, pool (aboveground or subsurface), hot tub, concrete or wood pool decking, or other structure shall be erected or constructed on said easements, nor shall any well be drilled or operated thereon. Property owners shall be solely responsible for correcting any violations of National Electrical Safety Code by construction of pools, decking, or any structures adjacent to or near easements shown on this plat.

Easements for electric transformer/switchgears, as installed, shall extend ten feet (10') in front of transformer/switchgear doors and five feet (5') on each side.

DISCLAIMER

In approving this plat, Public Electric Services and Gas Services (PNM) did not conduct a Title Search of the properties shown hereon. Consequently, PNM does not waive nor release any easement or easement rights to which it may be entitled.

SECTION 14-14-4-7 PROHIBITION ON PRIVATE RESTRICTIONS ON THE INSTALLATION OF SOLAR COLLECTORS

"No property within the area of requested final action shall at any time be subject to a deed restriction, covenant, or binding agreement prohibiting solar collectors from being installed on buildings or erected on the lots or parcels within the area of proposed plat. The foregoing requirement shall be a condition to approval of this plat or site development plan for subdivision"

Re: Nob Hill Condos - 110 Richmond (K-16 / D-71)

Dear Mr. Cherne:

As requested, we have performed a supplemental evaluation of the hydraulic condition within the existing public alley located south and downstream of the referenced project. Based upon a meeting we had in the field on June 13, 2008, you wanted this work done to determine if addition improvements were needed to contain runoff in the alley.

From our meeting it was decided that a couple of addition HEC-RAS sections (03 & 04, see attached) were needed about 75 feet south of the southeast corner of the subject site, behind Lot 7A, University Heights Addition (existing day care business). The attached plan is a modified version of one of the previously submitted grading and drainage plan sheets.

As suspected, our work shows that an additional 3" of paving is needed along the back of Lot 7A adjacent to the alley in order to keep flow contained within the alley during the 6-hour, 100-year storm. Our DRC Work Order Plans have been modified accordingly show this proposed work.

Please contact me if I can be of further assistance.

Sincerely,

MARK GOODWIN & ASSOCIATES, PA

John M. MacKenzie, PE

Curtis,

This morning these documents are being delivered to address your concerns about flow in the alley behind the site, as we discussed in the field on June 13th.

The additional HEC-RAS sections show we do indeed need to add a 3-inch paving section in order to contain 100-year flows in the alley and not let them escape west into the adjoining day care business. Of course typical nuisance flows should not be a problem.

The final DRC for the WO drawings is set for 3:30 on Tuesday. At that time we can discuss it further, if necessary, or call me beforehand if you need to.

Cherne, Curtis

To: John MacKenzie

Subject: RE: One Ten Richmond (K16/D71)

John,
Looks good. I just spoke with the inspector. Just include it with the as-builts.

Curtis

From: John MacKenzie [mailto:John@goodwinengineers.com]
Sent: Thursday, April 23, 2009 1:29 PM
To: Cherne, Curtis
Subject: One Ten Richmond (K16/D71)

Curtis,

Briefly, my calculations for the new 18-inch sidewalk culvert at the referenced site (SW corner of the site) that we discussed yesterday are attached. With Manning's it can carry 2.16 cfs and with the weir equation is can accept 1.54 cfs. The approved plan is also attached. In the upper left corner of sheet two it shows that the south part of the roof and the front (west) sidewalk all drain to the street thru that culvert with a developed flow of 1.28 cfs for the 100-year storm. Sheet 1 of the plan shows exactly where the new sidewalk culvert is supposed to be located to receive roof flows from the downspout (it was supposed to be a 24-inch culvert). The 12-inch culvert at the midpoint of the site's frontage onto Richmond is supplemental (the SW corner one can already carry all of this on-site basin's runoff) to help drain nuisance water that falls directly on the sidewalk in front of the condos instead of it draining all along the internal private sidewalk to the SW corner culvert, so there should not be capacity issues if the contractor has replaced the middle 12-inch culvert with two 4-inch pipe thru the curb. If they plug for some reason the flows would just continue south and go out the new 18-inch SW culvert.

Do you want me to formally submit this now, or just include it with my as-builts?

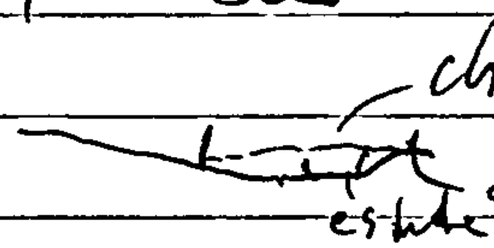
Requests for approvals of Site Development Plans and/or Subdivision Plats shall be accompanied by a drainage submittal. The particular nature , location and scope ot the proposed development defines the degree of drainage detail. Orne or more of the following levels of submittal may be required based on the following:

1. **Conceptual Grading and Drainage Plan**: Required for approval of Site Development Plans greater than five (5) acres and Sector Plans.
2. **Drainage Plans**: Required for building permits, grading permits, paving permits and site plans less than five (5) acres.
3. **Drainage Report**: Required for subdivisions containing more than ten (10) lots or constituting five (5) acres or more.

110 Richmond

1. Calc and mark channel capacity in front of day Care



2. Construct asphalt transition block at NE corner of day care to direct runoff to FL which is east side of asphalt curb

3. Construct estate curb with steeper slope at SE corner of 110 Richmond to key flow on east side of telephone pole.

TABLE OF CONTENTS

I. PROJECT DESCRIPTION

The project covers approximately 0.48 acres of developed property located along the east side of Richmond Drive SE, approximately one-half block south of Central Avenue. The site is also bounded by existing public alleys on its north and east and then an existing office to its south. Its current legal description is "Lots 1-A, 1-B, 2, and 3, Block 40, University Heights Addition." The developer's plan is to demo the existing office building and associated paving, and then replace it with residential condominiums that will occupy virtually all of the subject property. Parking for a majority of the residences will be on the street level and then dwelling units will extend three floors above. The purpose of this report is to present how drainage from the new building will be handled and how existing runoff surrounding the site will be routed around the new building.

II. DRAINAGE DESIGN CRITERIA

The design criteria used in this report was in accordance with Section 22.2 Hydrology of the Development Process Manual. The 100-year, 6-hour storm event for the site was modeled utilizing site runoff rates estimated at P(6 hr) =2.35, obtained from the precipitation graphs in the DPM. The on-site land treatment values for use by AHYMO were estimated primarily as all Type D, but with incidental amounts of Type C up to 20% representing gravel parking on parts of the surrounding property.

III. EXISTING DRAINAGE CONDITION

The property formerly contained an existing building that was entirely surrounded by paved parking. Roof runoff from that building was directed into the adjoining alley on its north or to the west out into Richmond Avenue, while runoff from the on-site paved parking sheet-flowed from NE to SW across the site, also primarily discharging into Richmond. In general, the surrounding local area also slopes form NE to SW. In order to determine both the existing and developed flows affecting the site, AHYMO calculations were performed. Approximately 2.34 cfs of flow from properties east of the east alley (Basin A) are collected and conveyed south in the alley to Silver Avenue. From existing topo and observed field conditions, it appears that runoff from large events may presently exceed the alley's capacity and then enter the subject property (and its southerly neighbor) and continue flowing west across the site to Richmond. Existing buildings fronting Central Avenue between Richmond and Bryn Mawr Avenue to the east (Basin B) all discharge to the south off their south sides into the alley north of the subject site, along with portions of the on-site building, where they combine and then continue west to Richmond with a 100-year flow of 3.39 cfs. Basin C, covering the balance of the building and remaining portions of the on-site parking currently drains toward Richmond Drive with a 100-year flow of 1.57 cfs.

IV. DRAINAGE MANAGEMENT PLAN

Based upon the fact that the site formerly contained entirely impervious surfaces, there is no net increase to the developed flow condition from its existing state. Between on-site and off-site flows the site and its surrounding area was split up into four separate basins as represented on the second sheet of the grading and drainage plan. A 100-year flow of 3.48 cfs from off-site Basins 2 and 3 is routed west around the site, and a 100-year flow of 2.43 cfs from Basin 1 is routed to the south. A 100-year flow of 1.28 cfs will approach Richmond Avenue from basin 4, and 0.10 cfs from Basin IIIA will approach Richmond Avenue via a pipe. On-site discharge is directed both into the alley on its north side and into Richmond on its west side. Off-site flow from the east will continue to be directed into the east alley and then be contained in the alley with the aid of new curb and gutter along its western flank as it flows south toward Silver Avenue. For both of the alleys existing pavement will be removed and replaced with new paving, along with new alley gutter for the north alley. A HEC-RAS model was run on the north alley to show that the relatively low 100-year, 6-hour storm flow is fully contained within alley right-of-way. Since there is no increase in discharge to the east alley, it was not modeled for existing flow.

From the building and a north-side parking space overhang, roof downspouts discharge directly into the adjoining alleys or street. A small area of on-site paving along the north side of the uncovered parking area will drain west through pipes or sidewalk culverts into Richmond.

The AHYMO models for existing and developed conditions, as well as the HEC-RAS model for developed conditions, are included in the Appendix.

V. CONCLUSION

The proposed drainage scheme for the new residential development does not affect the existing off-site flow conditions for the east alley although it does increase flow in the north alley by 0.09 cfs. Flow in the north alley has been checked and it is shown there is sufficient capacity resulting from improved alley conditions so that impact to on and off site properties can be minimized. The on-site flows have been routed into the surrounding alleys and Richmond Avenue. The net impact to the surrounding area is relatively unchanged due to the fact that there is not additional runoff created relative to the pre-existing on-site conditions.

Re: Nob Hill Condos, 110 Richmond Ave SE (K16-D071), Traffic Circulation Layout
Architect's Stamp dated 8-06-07 (K16-D71)

Dear Mr. Lewis,

The TCL submittal received 1-11-08 is approved for Building Permit. The plan is stamped and signed as approved. A copy of this plan will be needed for each of the building permit plans. Please keep the original to be used for certification of the site for final C.O. for Transportation. **Public infrastructure or work done within City Right-of-Way shown on these plans is for information only and is not part of approval. A separate DRC and/or other appropriate permits are required to construct these items.**

If a temporary CO is needed, a copy of the original TCL that was stamped as approved by the City will be needed. This plan must include a statement that identifies the outstanding items that need to be constructed or the items that have not been built in "substantial compliance," as well as the signed and dated stamp of a NM registered architect or engineer. Submit this TCL with a completed Drainage and Transportation Information Sheet to Hydrology at the Development Services Center of Plaza Del Sol Building.

When the site is completed and a final C.O. is requested, use the original City stamped approved TCL for certification. A NM registered architect or engineer must stamp, sign, and date the certification TCL along with indicating that the development was built in "substantial compliance" with the TCL. Submit this certification TCL with a completed Drainage and Transportation Information Sheet to Hydrology at the Development Services Center of Plaza Del Sol Building.

Once verification of certification is completed and approved, notification will be made to Building Safety to issue Final C.O. To confirm that a final C.O. has been issued, call Building Safety at 924-3306.

Sincerely,

Kristal D. Metro, P.E.

DATE SUBMITTED: 1/10/08 BY: _____

Requests for approvals of Site Development Plans and/or Subdivision Plats shall be accompanied by a drainage submittal. The particular nature, location, and scope to the proposed development defines the degree of drainage detail. One or more of the following levels of submittal may be required based on the following:

1. **Conceptual Grading and Drainage Plan:** Required for approval of Site Development Plans greater than five (5) acres and Sector Plans.
2. **Drainage Plans:** Required for building permits, grading permits, paving permits and site plans less than five (5) acres.
3. **Drainage Report:** Required for subdivision containing more than ten (10) lots or constituting five (5) acres or more.

FIRE MARSHAL

(505) 924-3611 Case # 3577-07

THIS WORK WILL REQUIRE A FIRE INSPECTION BY THIS OFFICE.

- All items listed below shall be installed in accordance with applicable fire codes prior to a building (or portion of a building) being occupied.
- All required fire hydrants shall be installed and operable before any building (or portion of the building) is occupied.
- An approved and adequate water supply shall be provided before any combustible materials are delivered to the building site.

Re: TCL Submittal for Building Permit Approval for
110 Richmond [K16 / D071]
Architect Stamp, 08/06/07

Dear Mr. Baker:

The location referenced above, dated December 19, 2007, is not acceptable and requires modification to the Traffic Circulation Layout (TCL) prior to Building Permit release as stated on the attached *Site Plan*, and red-lined TCL markup with comments.

Public infrastructure or work required within City of Albuquerque Right-of-way shown on these plans is for information only and will need a separate DRC work order to construct these items (If applicable).

Please resubmit revised TCL after addressing typed and marked up comments. Submit plan along with checklist and all current and past red-lined, mark-up copies. Contact me at (505)924-3630 if you need any further instruction for resubmittal.

Sincerely,

Nilo Salgado-Fernandez, P.E.

Re: Nob Hill Condos, 110 Richmond Ave SE, Traffic Circulation Layout
Architect's Stamp dated 8-06-07 (K16-D071)

Dear Mr. Lewis,

Based upon the information provided in your submittal received 10-03-07, the above referenced plan cannot be approved for Building Permit until the following comments are addressed:

1. The aisle widths shown at the entrance and exit for the underground parking are very narrow. Please justify these widths. Doors are 8' wide
2. Label all compact spaces with the word "compact."
3. All handicapped spaces must have a striped aisle. One aisle must have a minimum width of 8 feet (to be designated as a "van access aisle"), and the other aisles have a minimum width of 5 feet.
4. Call out all radii values.
5. Define all symbols used in the plan.
6. What is the current status of the alley? To take access off of the alley, the alley must be ~~24~~ feet in width and paved. A work order will be required for the paving. 20' ROW
7. A wall appears to block the access aisle for the handicapped spaces; does the eastern space have a 5 foot minimum aisle?
8. Parking spaces along the alley should be offset a minimum of 2 feet from the alley.
9. All wheelchair ramps located within the City right of way must have truncated domes. - No ramps, dropped per CoA Std
10. A re-plat or cross lot access easement is needed. - in process

If you have any questions, you can contact me at 924-3981.

Re: Nob Hill Condos, Engineer's Stamp Dated 8-10-07, (K16/D71)
Lots 1A, 1B, 2 and 3 of the University Heights Addition

Dear Mr. Mackenzie,

Based upon the information provided in your submittal received on August 9, 2007, there are items that must be revised prior to permit approval. Those items are as follows.

- The scale is mislabeled.
- Remove all references to Silver Tree Park from the AHYMO calculations.
- Will the new sidewalks be constructed per standard drawing 2430? Will the "standup curb and gutter" be built per standard drawing 2415A? Please cite all applicable standard drawings or provide a detail.
- Indicate where the transition(s) from estate to stand up curb will occur.
- What is the floodplain status? Please give this information and specifically reference the appropriate F.I.R.M panel.
- Please provide a copy of the manufacturer's cut sheet for the new sump pump.
- Due to the dedication of additional right-of-way as well as the structure's location on top of existing lot lines, a replatting action is required. Has that process been initiated?
- What are the finished floor elevations for the new structure and the existing structure to the south?
- You call out a new alley entrance at Richmond to be constructed per standard drawing 2425. That detail is for a typical drive pad. Is this correct or was it intended to reference an alley intersection (2428)?
- Where will the roof drains be located and to what point will they discharge? Will they connect to the trench drains?
- What do the three (3) rectangles at the northeast corner and the open rectangle at the northwest corner of the site represent? What does the triangle / pointer at the eastern entrance represent? Please add notes and / or legend entries to clarify.
- Please show the location of the relocated utilities and define the extents of the pavement cuts.

- Will you be providing an opening in the pre-cast wall to allow for easterly drainage or is the intention to drain that area west to Richmond thus requiring a sidewalk culvert? Why does the curb not extend east to the pre-cast wall?
- Arial photographs suggest but are unclear as to the presence of valley gutter within the adjacent alleys. Is that infrastructure present? If not, its construction may be necessary since you will now be draining east and adding flow to the alley instead of draining west Richmond. Please show this on the plan.

If you have any questions, you can contact me at 924-3990.

Sincerely,

Jeremy Hoover, P.E., C.F.M.
