**Re: RETENTION POND CALCULATION FOR LOT 10-A, BLOCK 38, PARKLAND
HILLS ADDITION**

Dear Mr. Biazar:

We have completed hydrologic calculations to determine the required retention pond volume for a 100-year, 10-day storm for Lot 10-A, Block 38, Parkland Hills Addition located at the corner of Parkland Circle and Grandview Drive in southeast Albuquerque. The hydrologic criteria in Section 22 of the City of Albuquerque Development Process Manual (DPM), entitled "Drainage, Flood Control, and Erosion Control," was followed to perform the runoff calculations for the site. The design storm used for both the existing undeveloped and developed conditions of Lot 10-A is the 100-year, 10-day storm event for peak volume computations. The property is located in Zone 2, which has a 100-year, 10-day storm event of 3.95 inches. The property was assigned land treatment values in accordance with Tables A-4 and A-5 of the DPM's section 22.2.

The area of the lot is 0.2534 acre. The total impervious area of the proposed home and driveway to be constructed on the lot is 4,483 square feet. The spreadsheet attached to this letter calculates the 100-year, 10-day volume for proposed conditions to be 1,911 cubic feet. Therefore, the required ponding volume on the property shall be at least 1,911 cubic feet.

If you should have any questions about this calculation, please call me at 271-2199.

Sincerely,

David B. Thompson, P.E.
