Site Location & Project Description: Location of Carlos Rey Elementary School at 1215 Cerrillos Rd SW, the proposed site is on an existing dirt lot and surrounding asphalt walkways. The goal of this project is to provide portables for Pre-K / SPED classes to be held on campus, separate from the elementary school. The project site encompasses approximately 0.16 acres.

Methodology: The AHYMO computer program was used to calculate design flows. This software adheres to Section 22.2 of the City of Albuquerque DPM. The 100-year, 24-hour and 100-year, 6-hour storm event were the design storms computed for the improvements. The site is located in Precipitation Zone 1 as designated in Table A-1 of the DPM. All basins were delineated using AutoCAD software to determine areas.

Existing Conditions: The site is a combination of loamy fine sand, asphalt and concrete. The existing topography slopes generally from the southwest to the northeast with mild slopes. Basin 101 drains to the parking lot to the northwest ultimately surface flowing to the pond on the east edge of campus through a sidewalk culvert. Basin 102 is existing Portable B-27 and surrounding asphalt walkways; it drains to an existing inlet which discharges in the pond to the east.

See Table 1 for existing Hydrologic conditions, and the Grading and Drainage Plan for basin boundaries.

BASIN	AREA			LAND TREATMENT (%)				Q_{100-6}	V_{100-24}
	SF	ACRE	SM	A	B	C	D	(cfs)	(ac-ft)
101	12756	0.292837	0.00045756	0	0	40	60	1.08	0.0442
102	6136	0.140863	0.00022010	0	0	0	100	0.59	0.0277

Table 1: Existing Hydrology

Proposed Conditions: The proposed site will include relocating one portable to on site along with constructing a play area and the adjacent asphalt walkways and spans of retaining wall. Basin boundaries will only change slightly. Both basins will continue to drain in their traditional flow patterns. Due to the increase in Land Treatment Type 'D', there will be an increase of 0.13 cfs and 0.0118 ac-ft for the 100-year, 6-hour and 100-year, 24-hour storm events.

See Table 2 for proposed Hydrologic conditions. See Grading and Drainage Plan for basin boundaries and stormdrain alignment.

BASIN	AREA			LAND TREATMENT (%)				Q_{100-6}	V_{100-24}
	SF	ACRE	SM	A	B	C	D	(cfs)	(ac-ft)
101	12397	0.284596	0.00044468	0	0	5	95	1.17	0.0544
102	6496	0.1491276	0.00023301	0	0	0	100	0.63	0.0293

Table 2: Proposed Hydrology

Conclusion: Project improvements will allow for the Pre-K/SPED students to have separate facilities from the rest of campus. Stormwater will drain in traditional flow patterns with only minor increases in peak discharge and volumetric flows.

SHEET KEY NOTES

1. INSTALL 3'-0"H CHAINLINK FENCE. SEE DETAIL A1/C-501.
2. INSTALL 4'-0"W, 3'-0"H, CHAINLINK PEDESTRIAN GATE.
3. INSTALL RETAINING WALL. SEE SHEET C-401.
4. INSTALL PIER. SEE DETAIL F8/C-501.
5. INSTALL STAIRWELL. SEE SHEET C-402.
6. INSTALL 2" ASPHALT. SEE DETAIL A6/C-501.
7. INSTALL 4" PCC SIDEWALK. SEE DETAIL G8/C-501.
8. INSTALL 30'-0"W, 4'-0"H DOUBLE SWING GATE WITH LOCKABLE LATCH.
9. INSTALL 8'-0"W, 3'-0"H DOUBLE SWING GATE.
10. INSTALL DRIVE PAD, PER STD DWG 2425.
11. INSTALL PLAY AREA WITH OUTER DIMENSIONS OF 43.10'x24.50'. SEE DETAIL A6/C-502.
12. CONNECT TO EXISTING CONCRETE. SEE DETAIL G6/C-502
13. INSTALL 6" PCC. SEE DETAIL C6/C-501

I, MIKE WALLA NMPE 11030, OF THE FIRM WALLA ENGINEERING, LTD. HEREBY CERTIFY THAT THIS PROJECT HAS BEEN GRADED AND WILL DRAIN IN SUBSTANTIAL CONFORMANCE WITH AND IN ACCORDANCE WITH THE DESIGN INTENT OF THE APPROVED PLAN DATED 8-14-08. THE RECORD INFORMATION EDITED ONTO THE ORIGINAL DESIGN DOCUMENT HAS BEEN OBTAINED BY THOMAS D. JOHNSTON NMPLS 14264. I FURTHER CERTIFY THAT I HAVE PERSONALLY VISITED THE PROJECT SITE ON 3-27-08 AND HAVE DETERMINED BY VISUAL INSPECTION THAT THE SURVEY DATA PROVIDED IS REPRESENTATIVE OF ACTUAL SITE CONDITIONS AND IS TRUE AND CORRECT TO THE BEST OF MY KNOWLEDGE AND BELIEF. THIS CERTIFICATION IS SUBMITTED IN SUPPORT OF A REQUEST FOR CERTIFICATION OF OCCUPANCY. THE RECORD INFORMATION PRESENTED HEREON IS NOT NECESSARILY COMPLETE AND INTENDED ONLY TO VERIFY SUBSTANTIAL COMPLIANCE OF THE GRADING AND DRAINAGE ASPECTS OF THE PROJECT. THOSE RELYING ON THIS RECORD DOCUMENT ARE ADVISED TO OBTAIN INDEPENDENT VERIFICATION OF ITS ACCURACY BEFORE USING IT FOR ANY OTHER PURPOSE.

I, MIKE MALLA NMPE 11030, OF THE FIRM MALLA ENGINEERING LTD., HEREBY CERTIFY THAT THIS PROJECT HAS BEEN GRADED AND WILL DRAIN IN SUBSTANTIAL COMPLIANCE WITH AND IN ACCORDANCE WITH THE DESIGN INTENT OF THE APPROVED PLAN DATED 8-14-06. THE RECORD INFORMATION EDITED ONTO THE ORIGINAL DESIGN DOCUMENT HAS BEEN OBTAINED BY THOMAS D. JOHNSTON NMPLS 14264. I FURTHER CERTIFY THAT I HAVE PERSONALLY VISITED THE PROJECT SITE ON 9-27-08 AND HAVE DETERMINED BY VISUAL INSPECTION THAT THE SURVEY DATA PROVIDED IS REPRESENTATIVE OF ACTUAL SITE CONDITIONS AND IS TRUE AND CORRECT TO THE BEST OF MY KNOWLEDGE AND BELIEF. THIS CERTIFICATION IS SUBMITTED IN SUPPORT OF A REQUEST FOR CERTIFICATION OF OCCUPANCY. THE RECORD INFORMATION PRESENTED HEREON IS NOT NECESSARILY COMPLETE AND INTENDED ONLY TO VERIFY SUBSTANTIAL COMPLIANCE OF THE GRADING AND DRAINAGE ASPECTS OF THE PROJECT. THOSE RELYING ON THIS RECORD DOCUMENT ARE ADVISED TO OBTAIN INDEPENDENT VERIFICATION OF ITS ACCURACY BEFORE USING IT FOR ANY OTHER PURPOSE.

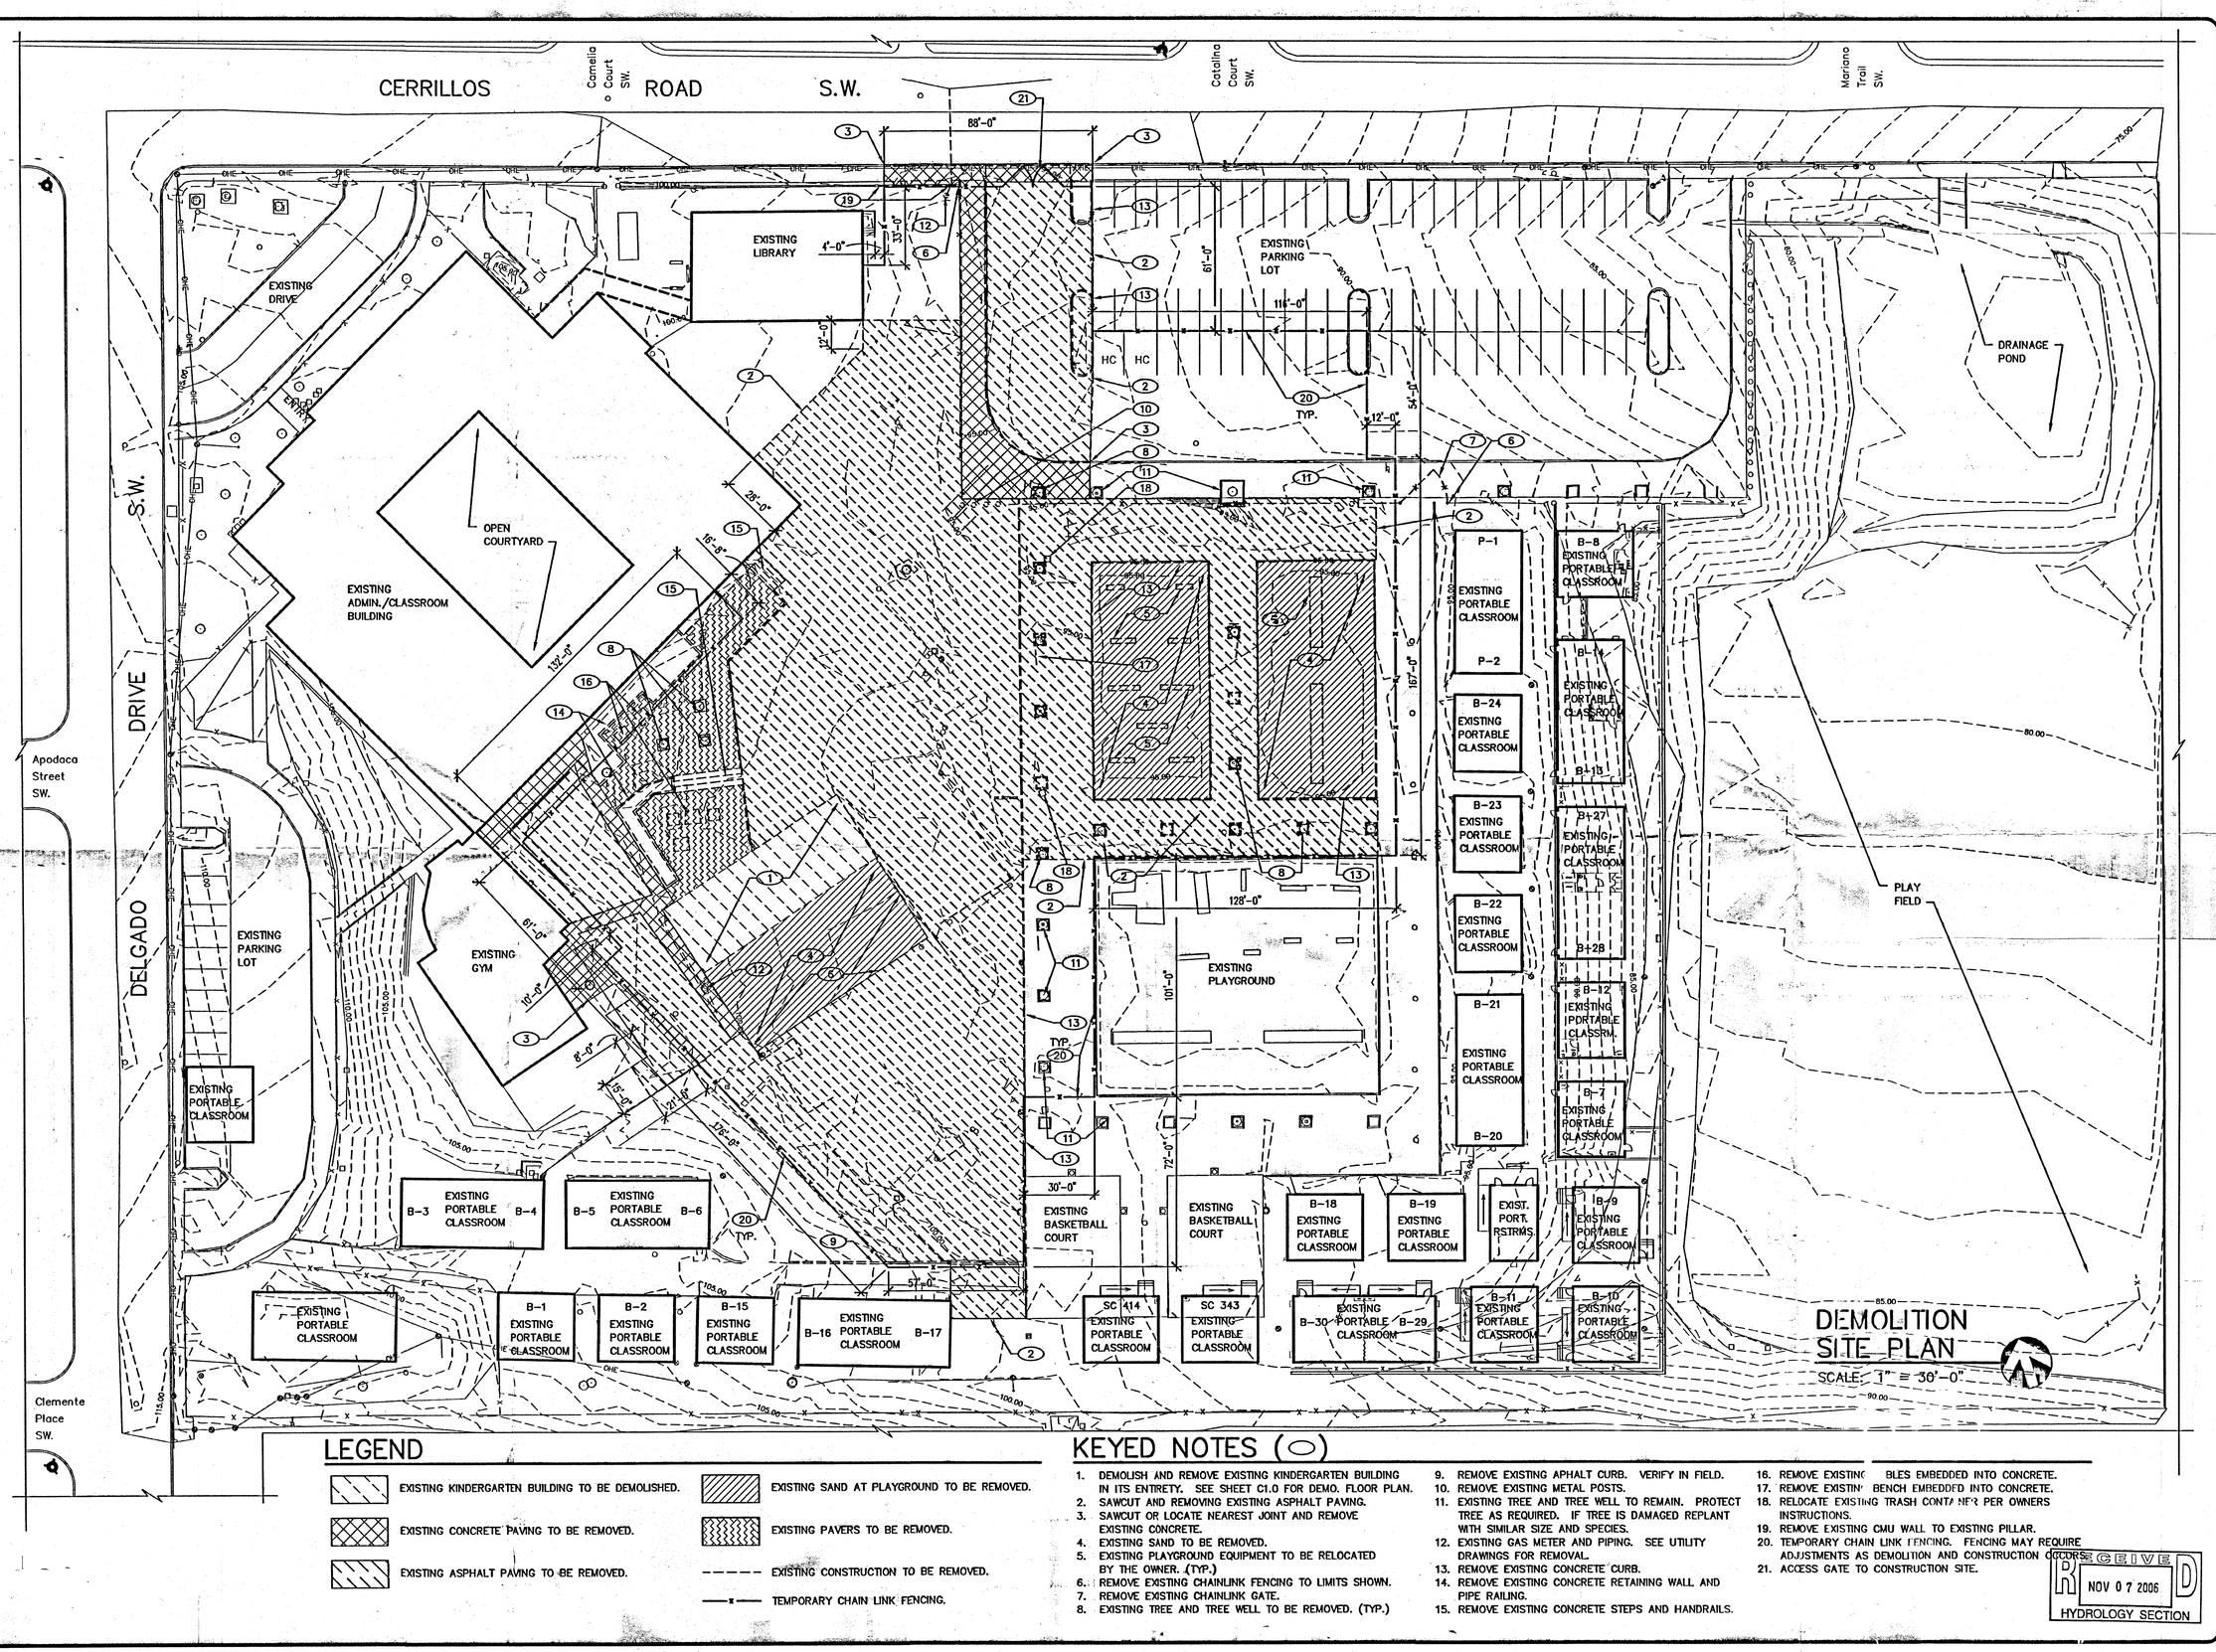
KINDERGARTEN ADDITION AND RENOVATION

1215 CERRILLOS ROAD S.W.
ALBUQUERQUE, NEW MEXICO

MIKE J. MALLA NEW MEXICO 11030 REGISTERED PROFESSIONAL ENGINEER 8-14-06

DATE: 08/14/06
DRAWN: KKG
DESIGNED: MJW
CHECKED: MJW
PROJ. NO.:

SHEET: C3.3



LEGEND

- EXISTING KINDERGARTEN BUILDING TO BE DEMOLISHED.
- EXISTING CONCRETE PAVING TO BE REMOVED.
- EXISTING ASPHALT PAVING TO BE REMOVED.
- EXISTING SAND AT PLAYGROUND TO BE REMOVED.
- EXISTING PAVERS TO BE REMOVED.
- EXISTING CONSTRUCTION TO BE REMOVED.
- TEMPORARY CHAIN LINK FENCING.

KEYED NOTES (○)

1. DEMOLISH AND REMOVE EXISTING KINDERGARTEN BUILDING IN ITS ENTIRETY. SEE SHEET C1.0 FOR DEMO. FLOOR PLAN.
2. SAWCUT AND REMOVING EXISTING ASPHALT PAVING.
3. SAWCUT OR LOCATE NEAREST JOINT AND REMOVE EXISTING CONCRETE.
4. EXISTING SAND TO BE REMOVED.
5. EXISTING PLAYGROUND EQUIPMENT TO BE RELOCATED BY THE OWNER. (TYP.)
6. REMOVE EXISTING CHAINLINK FENCING TO LIMITS SHOWN.
7. REMOVE EXISTING CHAINLINK GATE.
8. EXISTING TREE AND TREE WELL TO BE REMOVED. (TYP.)
9. REMOVE EXISTING APHALT CURB. VERIFY IN FIELD.
10. REMOVE EXISTING METAL POSTS.
11. EXISTING TREE AND TREE WELL TO REMAIN. PROTECT TREE AS REQUIRED. IF TREE IS DAMAGED REPLANT WITH SIMILAR SIZE AND SPECIES.
12. EXISTING GAS METER AND PIPING. SEE UTILITY DRAWINGS FOR REMOVAL.
13. REMOVE EXISTING CONCRETE CURB.
14. REMOVE EXISTING CONCRETE RETAINING WALL AND PIPE RAILING.
15. REMOVE EXISTING CONCRETE STEPS AND HANDRAILS.
16. REMOVE EXISTING [illegible] BLES EMBEDDED INTO CONCRETE.
17. REMOVE EXISTING BENCH EMBEDDED INTO CONCRETE.
18. RELOCATE EXISTING TRASH CONTAINER PER OWNERS INSTRUCTIONS.
19. REMOVE EXISTING CMU WALL TO EXISTING PILLAR.
20. TEMPORARY CHAIN LINK FENCING. FENCING MAY REQUIRE ADJUSTMENTS AS DEMOLITION AND CONSTRUCTION OCCURS.
21. ACCESS GATE TO CONSTRUCTION SITE.

Drainage Plan

The following items concerning the Carlos Rey Elementary School Classroom Addition (Phase II) Grading and Drainage Plan are contained hereon:

1. Vicinity Map
2. Calculations
3. Grading Plan
4. Sections

As shown by the Vicinity Map, the site is located at the southeast corner of the intersection of Cerrillos Rd. S.W. and Delgado Dr. S.W. Cerrillos Rd. S.W. and Delgado Dr. S.W. are fully developed public residential streets with curb and gutter, sidewalks, waterline, and sanitary sewerline. A public storm drain system passes through Carlos Rey Park to the south of the site, however, it is topographically higher and hence not accessible to this site. This site lies within a predominantly residential developed (infill) area.

As shown by Panels 32 and 33 of 55 of the National Flood Insurance Program Flood Insurance Rate Maps published by F.E.M.A. for the City of Albuquerque, New Mexico dated October 14, 1983, this site does not lie within, upstream of, or adjacent to a designated flood hazard zone.

The site is currently developed as an elementary school. The site contains paved parking areas, permanent buildings, portable classroom buildings, and various play areas. The site is bounded on the western and northern sides by Delgado Rd. S.W. and Cerrillos Rd. S.W., respectively. From the western most corner of the site, Delgado Rd. S.W. drains to the intersection of Cerrillos Rd. S.W., where it turns southeasterly to the easternmost corner of the site. The site falls approximately 40 feet between these property corners. A small area drains into Cerrillos Rd. S.W. by sheetflow (Basin "A"), at the northern corner of the site, where Cerrillos Rd. S.W. and Delgado Dr. S.W. intersect. Otherwise, runoff generally drains in an easterly direction across the site (Basin "B"). Once runoff reaches the eastern corner of the site, it discharges into an existing detention pond which is currently under construction per the Phase 1 Grading and Drainage Plan.

Phase II Development of this site outlined hereon is consistent with the scope outlined in the Master Drainage Plan previously submitted by this office with Engineer's stamp dated April 25, 1995. Phase II consists of a new Multipurpose Building with associated paving and drainage facilities. Due to the nature of the site, an inlet has been placed west of the proposed Multi-Purpose Building to insure that runoff is not retained in this area. This runoff is discharged via a bubbler located southeast of the proposed Building. The pipe has been designed to discharge two times the Q-s100-S. An overflow point located south of the proposed Building has been placed to insure that if the storm drain pipes or inlet get clogged that only a minimal amount of runoff would be retained. As shown on the Master Drainage Plan, Basin "B" will continue to drain in its historic pattern to the detention pond. The capacity of this pond is approximately 22,900 cf, which is greater than the required capacity of 21,479 cf for full development of the site, per MDP.

The Calculations which appear hereon analyze both the existing and developed conditions for the 100-year, 6-hour rainfall event. The procedure for the 40-acre and smaller basins, as set forth in the revisions of section 22.2, Hydrology of the Development Process Manual, Volume 2, design criteria, dated January, 1993, has been used to quantify the peak rate of discharge and the volume of runoff generated. As shown by these calculations, a minor increase in runoff is expected which will be detained by the detention pond, which has been designed for the site's fully developed condition.

CALCULATIONS

Site Characteristics

1. Precipitation Zone = 1
2. $P_{6,100} = P_{360} = 2.20$ in.
3. Total Area (A_T) = 9.58 ac.
4. Existing Land Treatment

A. Basin A	36,840/0.85	100
Treatment	Area (sf/ac)	%
B	8,290/0.19	22.5
D	28,550/0.66	77.5
B. Basin B	380,570/8.73	100
Treatment	Area (sf/ac)	%
B	193,510/4.44	50.8
C	63,540/1.46	16.7
D	123,520/2.83	32.5

5. Developed Land Treatment

A. Basin A	36,840/0.85	100
Treatment	Area (sf/ac)	%
B	8,290/0.19	22.5
D	28,550/0.66	77.5
B. Basin B	380,570/8.73	100
Treatment	Area (sf/ac)	%
B	193,510/4.44	50.8
C	56,810/1.30	14.9
D	130,250/2.99	34.3
C. Sub-Basin B-1	25,590/0.59	100
Treatment	Area (sf/ac)	%
B	1,350/0.03	5.3
C	12,680/0.29	49.5
D	11,560/0.27	45.2

Existing Condition

A. Basin A

1. Volume

$E_W = (E_AA_A+E_BA_B+E_CA_C+E_DA_D)/A_T$

$E_W = [(0.67)(0.19)+(1.97)(0.66)]/(0.85) = 1.68$ in.

$V_{100} = (E_W/12)A_T$

$V_{100} = (1.68/12)(0.85) = 0.1190$ ac.ft.; 5,180 cf

2. Peak Discharge

$Q_p = Q_{PA}A_A + Q_{PB}A_B + Q_{PC}A_C + Q_{PD}A_D$

$Q_p = Q_{100} = (2.03)(0.19)+(4.37)(0.66) = 3.3$ cfs

?B. Basin B

1. Volume

$E_W = (E_AA_A+E_BA_B+E_CA_C+E_DA_D)/A_T$

$E_W = [(0.67)(4.44)+(0.99)(1.46)+(1.97)(2.83)]/(8.73) = 1.14$ in.

$V_{100} = (E_W/12)A_T$

$V_{100} = (1.14/12)(8.73) = 0.8294$ ac.ft.; 36,130 cf

2. Peak Discharge

$Q_p = Q_{PA}A_A + Q_{PB}A_B + Q_{PC}A_C + Q_{PD}A_D$

$Q_p = Q_{100} = (2.03)(4.44)+(2.87)(1.46)+(4.37)(2.83) = 25.6$ cfs

Developed Condition

A. Basin A

1. Volume

(No Change)

2. Peak Discharge

(No Change)

B. Basin B

1. Volume

$E_W = (E_AA_A+E_BA_B+E_CA_C+E_DA_D)/A_T$

$E_W = [(0.67)(4.44)+(0.99)(1.30)+(1.97)(2.99)]/(8.73) = 1.16$ in

$V_{100} = (E_W/12)A_T$

$V_{100} = (1.16/12)(8.73) = 0.8460$ ac.ft.; 36,850 cf

2. Peak Discharge

$Q_p = Q_{PA}A_A + Q_{PB}A_B + Q_{PC}A_C + Q_{PD}A_D$

$Q_p = Q_{100} = (2.03)(4.44)+(2.87)(1.30)+(4.37)(2.99) = 25.8$ cfs

Basin 'B' Pond Volume (By Average End Area Method, Per Master Drainage Plan)

Elevation	Area (sf)	Volume (cf)	Σ Volume (cf)
99.0	0		
		4,410	4,410
100.0	8,820		
		11,325	15,735
101.0	13,830		
		7,165	22,900
101.5*	14,830		

*Spillway Elevation

Spillway Capacity (Basin 'B' Pond)

100 Year Storm (Fully Developed)

$Q = CLH^{1.5}$

Let: C = 2.70
L = 10.67 ft
H 1.0 ft

Therefore: Q = 28.8 cfs > Q = 28.4 cfs (Fully Developed from M.D.P.)

Existing Pipe Discharge Capacity (Pressure Condition)

$Q = CA\ (2gh)^{1/2}$ Using Four 8" Storm Drain Lines

Let: C = 0.6
A = 0.3491 sf (per line)
g = 32.2 ft/sec^2
h = 101.50 - 99.0 = 0.33 = 2.17 ft

Therefore: Q = 2.5 cfs/pipe

$Q_{total} = 10.0$ cfs

C. Basin B-1

1. Volume

$E_W = (E_AA_A+E_BA_B+E_CA_C+E_DA_D)/A_T$

$E_W = [(0.67)(0.03)+(0.99)(0.29)+(1.97)(0.27)]/(0.59) = 1.42$ in

$V_{100} = (E_W/12)A_T$

$V_{100} = (1.42/12)(0.59) = 0.0699$ ac.ft.; 3,045 cf

2. Peak Discharge

$Q_p = Q_{PA}A_A + Q_{PB}A_B + Q_{PC}A_C + Q_{PD}A_D$

$Q_p = Q_{100} = (2.03)(0.03)+(2.87)(0.29)+(4.37)(0.27) = 2.1$ cfs

Pipe Capacity for 12" Storm Drain

$Q = 1.49/n\ AR^{2/3}S^{1/2}$
A = 0.7854
R = 0.25
S = 0.0150
n = 0.013
Q = 4.4 cfs

$Q > 2 \times Q_{100}$ (Sub-Basin B-1)

Point of Overflow Capacity

$Q = CLH^{3/2}$

$2.1 = 2.63(3)H^{3/2}$

H = 0.41'

Comparison

A. Basin A

1. ΔV_{100} = No Change
2. ΔQ_{100} = No Change

B. Basin B

1. $\Delta V_{100} = 36,850 - 36,130 = 720$ cf (increase)
2. $\Delta Q_{100} = 10.0 - 10.0 = 0.0$ cfs (No Change)

C. Overall

1. $\Delta V_{100} = 720 + 0 = 720$ cf (increase)
2. $\Delta Q_{100} = 10.0 - 10.0 = 0.0$ cfs (No Change)

CERTIFICATION

As indicated by the as-built information shown hereon, the Carlos Rey Elementary School Multi-Purpose facility has been graded and drained in substantial compliance with the approved Grading and Drainage Plan. In lieu of erosion control blankets on the transitional slope between the parking lot and the building, the slope has been landscaped and stabilized with crusher fines (gravel). The as-built information shown hereon has been obtained by me or under my direct supervision and is true and correct to the best of my knowledge and belief.

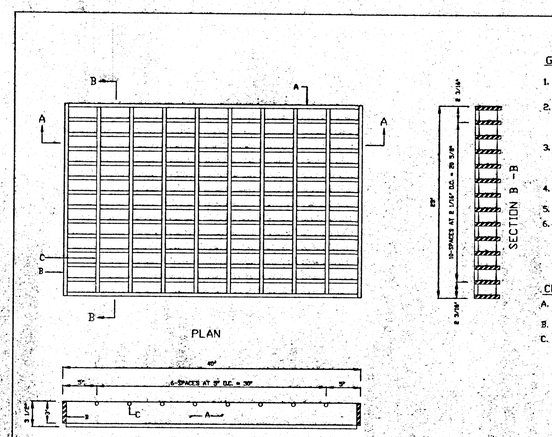
REVISIONS	CITY OF ALBUQUERQUE
12-17-90	DRAINAGE STORM INLET DOUBLE "D" DWG. 2206



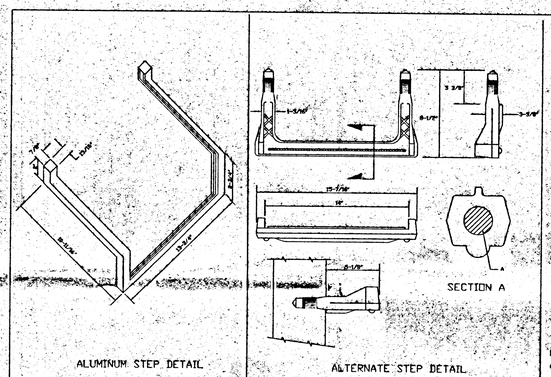
GENERAL NOTES:

1. ALL BARS SHALL BE STRUCTURAL GRADE STEEL, GRADE A36.
2. THE GRATE SHALL BE WELDED WITH 1/8" FILLET WELD AROUND BOTH SIDES OF CROSS BARS. 1/4" FILLET WELD BOTH SIDES OF BEARING BARS TO END BARS.
3. AFTER CLEANING SURFACE OF SCALE, RUST, OILS, ETC., PAINT GRATE WITH ONE SHOP COAT RED OXIDE, TWO FINISH COATS OF ALUMINUM PAINT (AASHTO M 69).
4. TOP OF CROSS BARS SHALL BE FLUSH WITH TOP OF GRATE.
5. GRIND WELDS FLUSH WITH BEARING BARS.
6. WHEN INSTALLED IN FRAME, PUSH TIGHT TO ONE SIDE. OTHER SIDE SHALL HAVE 1/2" MAX. OPENING. SPACERS WELDED TO FRAME MAY BE USED IF REQUIRED TO KEEP 1/2" SPACE OR LESS.

CONSTRUCTION NOTES:

A. BEARING BARS, (13) 1/2" X 3 1/2" X 39".
B. END BARS (2) 1/2" X 3" X 25".
C. CROSS BARS, (7) 1/2" DIA. X 24.

REVISIONS	CITY OF ALBUQUERQUE
08-28-90	DRAINAGE STORM INLET DWG. 2220



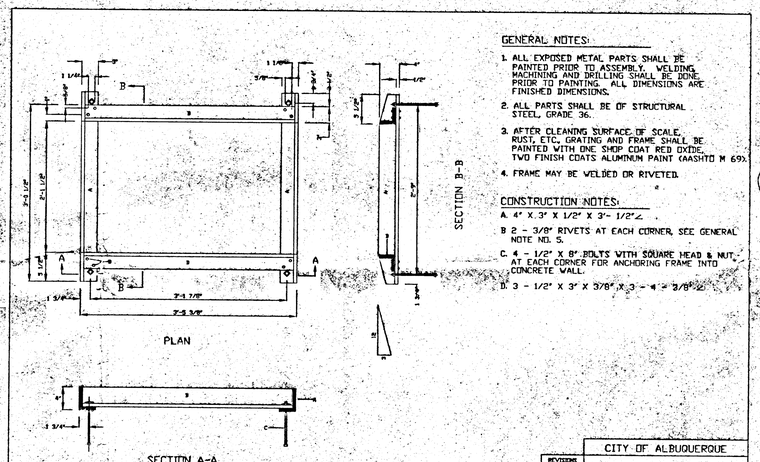
GENERAL NOTES:

1. ALUMINUM STEP, ALCOA NO 12653W OR APPROVED EQUAL.
2. ALTERNATE STEP SHALL BE POLYPROPOLENE - MOLDED OVER 1/2" STEEL REINFORCEMENT MODEL NO. PS-2-PF'S, M.A. INDUSTRIES IN, OR APPROVED EQUAL.
3. STORM INLETS: INLETS GREATER THAN 4' DEEP SHALL HAVE STEPS INSTALLED IN DOWNSTREAM FACE OR INLET WALLS. STEPS SHALL PROTRUDE 7" FROM THE WALL AND BE CENTERED 12" FROM FACE OF CURB. STEPS SHALL BE 12" APART, WITH THE TOP STEP +/- 18" FROM TOP OF FRATE AND THE BOTTOM STEP NO MORE THAN 16" ABOVE THE CONCRETE FILL IN THE BOTTOM OF THE INLET.
4. DRAINAGE CHANNELS: CHANNELS SHALL HAVE STEPS FOR ACCESS AND RESCUE INSTALLED ER DETAILS ON DWG. 2261. STEPS SHALL BE INSTALLED ON BOTH SIDES OF THE CHANNEL AND SHALL BE LOCATED IMMEDIATELY BEFORE THE INLET AND AFTER OUTLET TRANSITIONS FOR CROSSING STRUCTURES OR AS NOTES ON THE PLANS.

CONSTRUCTION NOTES:

A. 1/2" GRATE 60 STEEL REINFORCEMENT.

REVISIONS	CITY OF ALBUQUERQUE
08-28-90	DRAINAGE STEP DETAILS DWG. 2229



GENERAL NOTES:

1. ALL EXPOSED METAL PARTS SHALL BE PAINTED PRIOR TO ASSEMBLY. WELDING, MACHINING AND DRILLING SHALL BE DONE PRIOR TO PAINTING. ALL DIMENSIONS ARE FINISHED DIMENSIONS.
2. ALL PARTS SHALL BE OF STRUCTURAL STEEL, GRADE 36.
3. AFTER CLEANING SURFACE OF SCALE, RUST, ETC., GRATING AND FRAME SHALL BE PAINTED WITH ONE SHOP COAT RED OXIDE, TWO FINISH COATS ALUMINUM PAINT (AASHTO M 69).
4. FRAME MAY BE WELDED OR RIVETED.

CONSTRUCTION NOTES:

A. 4" X 3" X 1/2" X 3'- 1/2"∠
B. 2 - 3/8" RIVETS AT EACH CORNER, SEE GENERAL NOTE NO. 5.

NOTE: A TOPOGRAPHIC SURVEY WAS PERFORMED ON 12-26-96 BY JEFF MORTENSEN & ASSOCIATES, INC. DATUM IS BASED UPON CONTROL POINTS PROVIDED BY THE CITY SURVEYING SECTION. POINT NUMBERS 1 THROUGH 4 CONTAINED IN THE ACAD 12 FILE FOR THIS SURVEY CORRESPOND TO CONTROL POINTS 101 THROUGH 104, RESPECTIVELY, AS FURNISHED BY THE CITY SURVEYING SECTION.

Drainage Plan

The following items concerning the Carlos Rey Elementary School Sports Field Drainage Plan are contained hereon:

1. Vicinity Map
2. Calculations
3. Grading Plan

As shown by the vicinity map, the site is located at the southeast corner of the intersection of Cerrillos Road S.W. and Delgado Drive S.W. Cerrillos Road S.W. and Delgado Drive S.W. are fully developed residential streets with curb and gutter, sidewalks, waterline, and sanitary sewerline. This site lies within a predominantly residential developed (infill) area.

As shown by Panel 317 of 825 of the National Flood Insurance Program Flood Insurance Rate Maps published by F.E.M.A. for Bernalillo County, New Mexico dated September 20, 1996, this site does not lie within, upstream of, or adjacent to a designated flood hazard zone.

The subject area is the eastern portion of the Carlos Rey Elementary School site. Current development is a dirt athletic field and a detention pond. A parking lot, sand play areas, and basketball courts bound the subject area to the West. The northern boundary is Cerrillos Road S.W., while the area is bounded on the East and South by residential neighborhoods and Carlos Rey Park respectively. The site drains to the North and East, as upstream flows discharge into the detention pond near the northeast property corner.

The grading plan shows 1) existing and proposed grades indicated by spot elevations and contours at 1'-0" intervals, 2) the limit and character of existing improvements, 3) the limit and character of proposed improvements, and 4) continuity between existing and proposed grades.

The proposed development outlined hereon is consistent with the scope outlined in the Master Drainage Plan previously submitted by this office with Engineer's stamp dated April 25, 1995. It consists of re-grading and seeding to accommodate a sports field, and construction of drainage facilities to convey nuisance flows from upstream areas to the pond. The capacity of this pond is approximately 25,620 cf., which is greater than the required capacity of 21,479 cf. for full development of the site (refer to the previously submitted Master Drainage Plan). The proposed field development will decrease the volume of runoff from basin 'B' as outlined in the Master Drainage Plan from approximately 42,800 cf. to 40,450 cf., and decrease the peak discharge from 29.8 cfs. to 28.1 cfs. The adequacy of the spillway is demonstrated by the Master Drainage Plan and previous site improvement plans, and hence is not recalculated for this plan.

The calculations which appear hereon analyze both the existing and developed conditions for the 100-year, 6-hour rainfall event. The procedure for 40-acre and smaller basins, as set forth in the Revision of Section 22.2, Hydrology of the Development Process Manual, Volume 2, Design Criteria, dated January, 1993, has been used to quantify the peak rate of discharge and volume of runoff generated. The pond volume is evaluated by the Average End Area Method.

Construction Notes:

1. Two (2) working days prior to any excavation, contractor must contact New Mexico One Call System 260-1990 (Albuquerque Area), 1-800-321-ALERT(2537) (Statewide), for location of existing utilities.
2. Prior to construction, the contractor shall excavate and verify the horizontal and vertical location of all potential obstructions. Should a conflict exist, the contractor shall notify the engineer in writing so that the conflict can be resolved with a minimum amount of delay.
3. All work on this project shall be performed in accordance with applicable federal, state and local laws, rules and regulations concerning construction safety and health.
4. All construction within public right-of-way shall be performed in accordance with applicable City of Albuquerque Standards and Procedures.
5. If any utility lines, pipelines, or underground utility lines are shown on these drawings, they are shown in an approximate manner only, and such lines may exist where none are shown. If any such existing lines are shown, the location is based upon information provided by the owner of said utility, and the information may be incomplete, or may be obsolete by the time construction commences. The engineer has conducted only preliminary investigation of the location, depth, size, or type of existing utility lines, pipelines, or underground utility lines. This investigation is not conclusive, and may not be complete, therefore, makes no representation pertaining thereto, and assumes no responsibility or liability therefor. The contractor shall inform itself of the location of any utility line, pipeline, or underground utility line in or near the area of the work in advance of and during excavation work. The contractor is fully responsible for any and all damage caused by its failure to locate, identify and preserve any and all existing utilities, pipelines, and underground utility lines. In planning and conducting excavation, the contractor shall comply with state statutes, municipal and local ordinances, rules and regulations, if any, pertaining to the location of these lines and facilities.

Erosion Control Measures:

1. The contractor shall ensure that no soil erodes from the site into public right-of-way or onto private property.
2. The contractor shall promptly clean up any material excavated within the public right-of-way so that the excavated material is not susceptible to being washed down the street.
3. The contractor shall secure "Topsoil Disturbance Permit" prior to beginning construction.

CALCULATIONS

Site Characteristics

1. Precipitation Zone = 1
2. $P_{6,100} = P_{360} = 2.20$ in.
3. Total Area (A) = 8.73 ac
4. Existing Land Treatment

Basin B	380,570/8.73	
Treatment	Area (sf/ac)	%
B	3,550/0.08	0.9
C	235,680/5.41	62.0
D	141,100/3.24	37.1

5. Developed Land Treatment

Basin B	380,570/8.73	
Treatment	Area (sf/ac)	%
B	92,100/2.11	23.2
C	147,370/3.38	38.7
D	141,100/3.24	37.1

Existing Condition

1. Volume

$E_W = (E_AA_A+E_BA_B+E_CA_C+E_DA_D)/A_T$

$E_W = [(0.67)(0.08)+(0.99)(5.41)+(1.97)(3.24)]/8.73 = 1.35$ in.

$V_{100} = (E_W/12)A_T$

$V_{100} = (1.35/12)8.73 = 0.9825$ ac.ft.; 42,800 cf

2. Peak Discharge

$Q_p = Q_{PA}A_A + Q_{PB}A_B + Q_{PC}A_C + Q_{PD}A_D$

$Q_p = Q_{100} = (2.03)(0.08)+(2.87)(5.41)+(4.37)(3.24) = 29.8$ cfs

Developed Condition

1. Volume

$E_W = (E_AA_A+E_BA_B+E_CA_C+E_DA_D)/A_T$

$E_W = (0.67)(2.11)+(0.99)(3.38)+(1.97)(3.24)/8.73 = 1.28$ in.

$V_{100} = (E_W/12)A_T$

$V_{100} = (1.28/12)8.73 = 0.9285$ ac.ft.; 40,450 cf

2. Peak Discharge

$Q_p = Q_{PA}A_A + Q_{PB}A_B + Q_{PC}A_C + Q_{PD}A_D$

$Q_p = Q_{100} = (2.03)(2.11)+(2.87)(3.38)+(4.37)(3.24) = 28.1$ cfs

Comparison

1. $\Delta V_{100} = 42,800 - 40,450 = 2,350$ cf (decrease)
2. $\Delta Q_{100} = 29.8 - 28.1 = 1.7$ cfs (decrease)

Pond Volume

1. Existing Conditions

DRAINAGE PLAN

The following items concerning the Carlos Rey Elementary School Master Drainage Plan are contained hereon:

1. Vicinity Map
2. Existing Conditions Plan
3. Developed Conditions Plan
4. Calculations

It is the intent of this plan to: 1) identify and quantify runoff volume and peak discharge rate under existing conditions, 2) calculate changes in runoff volume and peak discharge rate due to the proposed development, and 3) present measures to attain favorable drainage conditions under this development scenario.

As shown by the Vicinity Map, the site is located at the southeast corner of the intersection of Cerrillos Road S.W. and Delgado Drive S.W. Cerrillos Road S.W. and Delgado Drive S.W. are fully developed public residential roadways with curb and gutter, sidewalks, waterline, and sanitary sewerline. A public storm drain system passes through Carlos Rey Park to the south of the site, however, it is topographically higher than the site and hence not accessible to this site. This site lies within a predominantly residential developed (infill) area.

As shown by Panels 32 and 33 of 50 of the National Flood Insurance Program Flood Insurance Rate Maps published by F.E.M.A. for the City of Albuquerque, New Mexico dated October 14, 1983, this site does not lie within, upstream of, or adjacent to a designated flood hazard zone.

Existing Conditions

Sheet 2 of 3 shows the existing site conditions. The site is currently developed as an elementary school. The site contains paved parking areas, permanent buildings, portable classroom buildings, and various play areas. The site is bounded on the western and northern sides by Delgado Road S.W. and Cerrillos Road S.W., respectively. From the west most corner of the site, Delgado Road S.W. drains to the intersection of Cerrillos Road S.W., where it turns southeasterly to the easternmost corner of the site. The site falls approximately 40 feet between these property corners. A small area drains into Cerrillos Road S.W. by sheetflow (Basin 'A'), at the northern corner of the site, where Cerrillos Road S.W. and Delgado Drive S.W. intersect. Otherwise, runoff generally drains in an easterly direction across the site (Basin 'B'). In several areas, small naturally occurring drainage channels have formed. Once runoff reaches the eastern corner of the site, it discharges into an existing parking area with concentrated flow. The existing volume of runoff is quantified to be 36,710 cf with a peak discharge rate of 26.5 cfs.

Developed Conditions

Proposed development of this site consists of large building additions, two reconstructed parking lots, a new playground area, and ballfields. Development for this site will be phased. Phase I development will consist of the construction of the new play areas, reconstruction of two parking areas, and construction of all necessary drainage facilities to accommodate all future development. The building additions will be constructed during future development plans. All Phase I and future development will require separate grading and drainage submittals conforming to this plan.

The development of this site will not alter existing drainage patterns. However, the reconstructed parking area on Delgado Drive S.W. will discharge freely into the roadway, which has been incorporated into Basin 'A'. Otherwise, the site will drain easterly in historic drainage patterns. The reconstructed parking lot along Cerrillos Road S.W. will discharge runoff directly into a new detention pond via a 12" sidewalk culvert. The new detention pond will restrict the maximum discharge rate to 10.0 cfs with the use of four 8" discharge pipes. The four 8" discharge pipes will release up to 10.0 cfs from the pond. the pond has been sized to accommodate a volume of approximately 22,600 cf. In the event that the discharge pipes are plugged or a statistically less frequent storm event occurs, a concrete overflow will be provided to discharge up to 28.4 cfs. Runoff entering Delgado Drive S.W. and Cerrillos Road S.W. from Basin 'A' has been quantified to have a peak discharge rate of 3.3 cfs, so the total peak discharge rate from the developed site would be reduced to 13.3 cfs, which is a reduction from the 27.4 cfs that is released from the site currently. It is based upon the fact that the peak discharge rate from the site will be reduced, the project is a modification to an existing site within an infill area, and that historic drainage patterns allow free discharge into Cerrillos Road S.W., that controlled discharge from the site is appropriate.

The Calculations which appear hereon analyze both the existing and developed conditions for the 100-year, 6-hour rainfall event. The Procedure for 40-acre and Smaller Basins, as set forth in the Revision of Section 22.2, Hydrology of the Development Process Manual, Volume 2, Design Criteria, dated January, 1993, has been used to quantify the peak rate of discharge and volume of runoff generated. A minor increase of runoff volume at 4,600 cf and decrease of peak discharge rate of 13.2 cfs is anticipated with Phase I development. The ultimate development scenario shows an increase of 10,620 cf in runoff volume with a decrease of 13.2 cfs in peak discharge rate.

CALCULATIONS

Site Characteristics

1. Precipitation Zone = 1
2. $P_{6,100} = P_{360} =$ 2.20 in.
3. Total Area (A_T) = 9.58 ac.
4. Existing Land Treatment

A. Basin 'A' (A_A = 22,050 sf/0.51 ac)

Treatment	Area (sf/ac)	%
B	7,690/0.18	34.9
D	14,360/0.33	65.1

B. Basin 'B' (A_B = 365,360 sf/9.07 ac)

Treatment	Area (sf/ac)	%
B	228,500/5.25	57.8
C	77,740/1.78	19.7
D	89,120/2.04	22.6

5. Developed Land Treatment

A. Phase 1

1. Basin 'A' (A_A = 36,840 sf/0.85 ac)

Treatment	Area (sf/ac)	%
B	8,290/0.19	22.5
D	28,550/0.66	77.5

2. Basin 'B' (A_B = 380,570 sf/8.73 ac)

Treatment	Area (sf/ac)	%
B	193,510/4.44	50.8
C	63,540/1.46	16.7
D	123,520/2.83	32.5

B. Fully Developed

1. Basin 'A' (No Change)

2. Basin 'B' (A_B = 38,570 sf/8.73 ac)

Treatment	Area (sf/ac)	%
B	147,810/3.39	38.8
C	54,160/1.24	14.3
D	178,600/4.10	46.9

6. Existing Condition

A. Basin 'A'

1. Volume

$E_w = (E_aA_a+E_bA_b+E_cA_c+E_dA_d)/A_T$
$E_w = (0.67)(0.18)+1.97(0.33))/0.51 = 1.51$ in.
$V_{100} = (E_w/12)A_T$
$V_{100} = (1.51/12)(0.51) = 0.0642$ ac.ft.; 2,800 cf

2. Peak Discharge

$Q_p = Q_{PA}A_A + Q_{PB}A_B + Q_{PC}A_C + Q_{PD}A_D$
$Q_p = Q_{100} = (2.03)(0.18)+(4.37)(0.33) = 1.8$ cfs

B. Basin 'B'

1. Volume

$E_w = (E_aA_a+E_bA_b+E_cA_c+E_dA_d)/A_T$
$E_w = (0.67(5.25)+0.99(1.78)+1.97(2.04))/9.07 = 1.03$ in.
$V_{100} = (E_w/12)A_T$
$V_{100} = (1.03/12)9.07 = 0.7785$ ac.ft.; 33,910 cf

2. Peak Discharge

$Q_p = Q_{PA}A_A + Q_{PB}A_B + Q_{PC}A_C + Q_{PD}A_D$
$Q_p = Q_{100} = 2.03(5.25)+2.87(1.78)+4.37(2.04) = 24.7$ cfs

7. Developed Condition

A. Phase 1

1. Basin 'A'

a. Volume

$E_w = (E_aA_a+E_bA_b+E_cA_c+E_dA_d)/A_T$
$E_w = (0.67(0.19)+1.97(0.66))/0.85 = 1.68$ in.
$V_{100} = (E_w/12)A_T$
$V_{100} = (1.68/12)0.85 = 0.1190$ ac.ft.; 5,180 cf

b. Peak Discharge

$Q_p = Q_{PA}A_A + Q_{PB}A_B + Q_{PC}A_C + Q_{PD}A_D$
$Q_p = Q_{100} = 2.03(0.19)+4.37(0.66) = 3.3$ cfs

2. Basin 'B'

a. Volume

$E_w = (E_aA_a+E_bA_b+E_cA_c+E_dA_d)/A_T$
$E_w = (0.67(4.44)+0.99(1.46)+1.97(2.83))/8.73 = 1.14$ in.
$V_{100} = (E_w/12)A_T$
$V_{100} = (1.14/12)8.73 = 0.8294$ ac.ft.; 36,130 cf

b. Peak Discharge

$Q_p = Q_{PA}A_A + Q_{PB}A_B + Q_{PC}A_C + Q_{PD}A_D$
$Q_p = Q_{100} = 2.03(4.44)+2.87(1.46)+4.37(2.83) = 25.6$ cfs

B. Fully Developed

1. Basin 'A' (No Change)
   a. V_{100} = 5,180 cf
   b. Q_{100} = 3.3 cfs

2. Basin 'B'

a. Volume

$E_w = (E_aA_a+E_bA_b+E_cA_c+E_dA_d)/A_T$
$E_w = (0.67(3.39)+0.99(1.24)+1.97(4.10))/8.73 = 1.33$ in.
$V_{100} = (E_w/12)A_T$
$V_{100} = (1.33/12)8.73 = 0.9676$ ac.ft.; 42,150 cf

b. Peak Discharge

$Q_p = Q_{PA}A_A + Q_{PB}A_B + Q_{PC}A_C + Q_{PD}A_D$
$Q_p = Q_{100} = 2.03(3.39)+2.87(1.24)+4.37(4.10) = 28.4$ cfs

8. Basin 'B' Pond Volume (By Average End Area Method)

Elevation	Area (sf)	Volume (cf)	Σ Volume (cf)
99.0	0		
		4,360	4,360
100.0	8,720		
		11,140	15,500
101.0	13,560		
		7,108	22,608
101.5*	14,870		

*Spillway Elevation

9. Spillway Capacity (Basin 'B' Pond)

100 Year Storm (Fully Developed)
$Q = CLH^{1.5}$
Let: C = 2.70
Q = 28.4 cfs
H = 1.0 ft

Therefore: L = 10.52 ft
Construct 10'- 8" wide spillway

10. Hydrograph Calculations

A. Time to Peak
$t_p = 0.7\ t_c + (1.5 - (A_b/A_T))/12$
t_c = 0.2 hr
A_b = 4.10 ac
A_T = 8.73 ac
t_p = 0.23 hr = 13.9 min

B. Duration of Peak
$t_b = 0.25(A_b/A_T)$
A_b = 4.10 ac
A_T = 8.73 ac
t_b = 0.12 hr = 7.5 min

C. Base Time
$t_B = 2.107\ E(A_T/Q_p) - 0.25(A_b/A_T)$
E = 1.33 in
A_b = 4.10 ac
A_T = 8.73 ac
Q_p = 28.4 cfs
t_B = 0.74 hr = 44.4 min

11. Pipe Discharge Capacity (Pressure Condition)

$Q = CA(2gh)^{1/2}$ Using Four 8" Storm Drain Lines

Let: C = 0.6
A = 0.3491 sf (per line)
g = 32.2 ft/sec²
h = 101.50 - 99.0 - 0.33 = 2.17 ft

Therefore: Q = 2.5 cfs/pipe
Q_{total} = 10.0 cfs

12. Time to Drain Detention Pond

Using Q = 5.0 cfs for Average Release Rate
Time = 22,600 cf*(#/5.0 cf)*(min/60s)*(hour/60 min)
= 1.26 hours << 24 hour limit

13. Comparison

A. Phase 1

1. Basin 'A'
ΔV_{100} = 5,180 - 2,800 = 2,380 cf (increase)
ΔQ_{100} = 3.3 - 1.8 = 1.5 cfs (increase)

2. Basin 'B'
ΔV_{100} = 36,130 - 33,910 = 2,220 cf (increase)
ΔQ_{100} = 24.7 - 10.0 = 14.7 cfs (decrease)

3. Overall
ΔV_{100} = 2,380 + 2,220 = 4,600 cf (increase)
ΔQ_{100} = 14.7 - 1.5 = 13.2 cfs (decrease)

B. Fully Developed

1. Basin 'A' (No Change)
ΔV_{100} = 2,380 (increase)
ΔQ_{100} = 1.5 cfs (increase)

2. Basin 'B'
ΔV_{100} = 42,150 - 33,910 = 8,240 cf (increase)
ΔQ_{100} = 24.7 - 10.0 = 14.7 cfs (decrease)

3. Overall
ΔV_{100} = 8,240 + 2380 = 10,620 cf (increase)
ΔQ_{100} = 14.7 - 1.5 = 13.2 cfs (decrease)

Construction Notes:

1. Two (2) working days prior to any excavation, contractor must contact New Mexico One Call System 260-1990 (Albuquerque Area), 1-800-321-ALERT(2537) (Statewide), for location of existing utilities.
2. Prior to construction, the contractor shall excavate and verify the horizontal and vertical location of all potential obstructions. Should a conflict exist, the contractor shall notify the engineer in writing so that the conflict can be resolved with a minimum amount of delay.
3. All work on this project shall be performed in accordance with applicable federal, state and local laws, rules and regulations concerning construction safety and health.
4. All construction within public right-of-way shall be performed in accordance with applicable City of Albuquerque Standards and Procedures.
5. If any utility lines, pipelines, or underground utility lines are shown on these drawings, they are shown in an approximate manner only, and such lines may exist where none are shown. If any such existing lines are shown, the location is based upon information provided by the owner of said utility, and the information may be incomplete, or may be obsolete by the time construction commences. The engineer has conducted only preliminary investigation of the location, depth, size, or type of existing utility lines, pipelines, or underground utility lines. This investigation is not conclusive, and may not be complete, therefore, makes no representation pertaining thereto, and assumes no responsibility or liability therefor. The contractor shall inform itself of the location of any utility line, pipeline, or underground utility line in or near the area of the work in advance of and during excavation work. The contractor is fully responsible for any and all damage caused by its failure to locate, identify and preserve any and all existing utilities, pipelines, and underground utility lines. In planning and conducting excavation, the contractor shall comply with state statutes, municipal and local ordinances, rules and regulations, if any, pertaining to the location of these lines and facilities.
6. The design of planters and landscaped areas is not part of this plan. All planters and landscaped areas adjacent to the building(s) shall be provided with positive drainage to avoid any ponding adjacent to the structure. For construction details, refer to landscaping plan.
7. Should a conflict exist between these plans and actual field conditions, the Contractor shall promptly notify the Engineer in writing so that the conflict can be resolved with a minimum amount of delay for all parties. The Contractor shall be responsible for all interpretations it makes without first contacting the Engineer as required above.
8. Caution: These drawings do not include necessary components for construction safety which shall remain the responsibility of the Contractor.

Erosion Control Measures:

1. The contractor shall ensure that no soil erodes from the site into public right-of-way or onto private property.
2. The contractor shall promptly clean up any material excavated within the public right-of-way so that the excavated material is not susceptible to being washed down the street.
3. The contractor shall secure "Topsoil Disturbance Permit" prior to beginning construction.
4. Any areas of excess disturbance (traffic access, storage yard, excavated material, regraded area, etc.) shall be stabilized with erosion control blankets (Excelsior or approved substitute) and re-seeded according to C.O.A. Specification 1012 "Native Grass Seeding". This will be considered incidental to construction, therefore no separate payment will be made.

CERTIFICATION

As indicated by the as-built information shown hereon, the Carlos Rey Elementary School Multi-Purpose facility has been graded and drained in substantial compliance with the approved Grading and Drainage Plan. In lieu of erosion control blankets on the transitional slope between the parking lot and the building, the slope has been landscaped and stabilized with crusher fines (gravel). The as-built information shown hereon has been obtained by me or under my direct supervision and is true and correct to the best of my knowledge and belief.

CLASSROOM GRADING PLAN (1)

SCALE: NTS

SCALE: 1"=20'

DRAINAGE PLAN:

THE FOLLOWING ITEMS CONCERNING THE CARLOS REY ELEMENTARY SCHOOL ADDITION DRAINAGE PLAN ARE CONTAINED HEREON:
1. VICINITY MAP
2. CALCULATIONS
3. GRADING PLAN

AS SHOWN BY THE VICINITY MAP, THE SITE IS LOCATED AT THE SOUTHEAST CORNER OF THE INTERSECTION OF CERRILLOS ROAD S.W. AND DELGADO DRIVE S.W. CERRILLOS ROAD S.W. AND DELGADO DRIVE S.W. ARE FULLY DEVELOPED RESIDENTIAL STREETS WITH CURB AND GUTTER, SIDEWALKS, WATERLINE, AND SANITARY SEWERLINE. THIS SITE LIES WITHIN A PREDOMINANTLY RESIDENTIAL DEVELOPED (INFILL) AREA.

AS SHOWN BY PANEL 317 OF 825 OF THE NATIONAL FLOOD INSURANCE PROGRAM FLOOD INSURANCE RATE MAPS PUBLISHED BY F.E.M.A. FOR BERNALILLO COUNTY, NEW MEXICO DATED SEPTEMBER 20, 1996, THIS SITE DOES NOT LIE WITHIN, UPSTREAM OF, OR ADJACENT TO A DESIGNATED FLOOD HAZARD ZONE.

THE SUBJECT AREA IS THE EASTERN PORTION OF THE CARLOS REY ELEMENTARY SCHOOL SITE. CURRENT DEVELOPMENT IS A DIRT ATHLETIC FIELD AND A DETENTION POND. A PARKING LOT, SAND PLAY AREAS, AND BASKETBALL COURTS BOUND THE SUBJECT AREA TO THE WEST. THE NORTHERN BOUNDARY IS CERRILLOS ROAD S.W., WHILE THE AREA IS BOUNDED ON THE EAST AND SOUTH BY RESIDENTIAL NEIGHBORHOODS AND CARLOS REY PARK RESPECTIVELY. THE SITE DRAINS TO THE NORTH AND EAST, AS UPSTREAM FLOWS DISCHARGE INTO THE DETENTION POND NEAR THE NORTHEAST PROPERTY CORNER.

THE GRADING PLAN SHOWS 1) EXISTING AND PROPOSED GRADES INDICATED BY SPOT ELEVATIONS, 2) THE LIMIT AND CHARACTER OF EXISTING IMPROVEMENTS, 3) THE LIMIT AND CHARACTER OF PROPOSED IMPROVEMENTS, AND 4) CONTINUITY BETWEEN EXISTING AND PROPOSED GRADES.

THE PROPOSED DEVELOPMENT OUTLINED HEREON IS CONSISTENT WITH THE SCOPE OUTLINED IN THE MASTER DRAINAGE PLAN PREVIOUSLY SUBMITTED BY JEFF MORTENSEN AND ASSOCIATES WITH ENGINEER'S STAMP DATED APRIL 25, 1995. A SPORTSFIELD WAS DESIGNED IN 1997 AND DEVELOPED IN ACCORDANCE WITH THE MASTER DRAINAGE PLAN. THIS PROJECT CONSISTS OF CONSTRUCTING AN APPROXIMATE 11,000 SF CLASSROOM ADDITION, AND ENLARGING THE POND TO ACCOMMODATE THE ADDED FLOWS. THE CAPACITY OF THIS POND PER THE D.M.P. IS APPROXIMATELY 25,620 CF., WHICH IS LESS THAN THE REQUIRED CAPACITY OF 26,833 CF. FOR FULL DEVELOPMENT OF THE SITE (REFER TO THE PREVIOUSLY SUBMITTED MASTER DRAINAGE PLAN AND SPORTSFIELD DRAINAGE PLAN). AS OUTLINED IN THE M.D.P. THE FULLY DEVELOPED CONDITION FOR BASIN "B" HAS AN APPROXIMEATE VOLUME OF RUNOFF VOLUME OF 42,150 CF. THE SUBSEQUENT SPORTSFIELD PROJECT LOWERED THE RUNOFF VOLUME OF BASIN "B" TO 40,450 CF. THE PROPOSED CLASSROOM FACILITY WILL RESULT IN THE RUNOFF VOLUME OF BASIN "B" TO APPROXIMATELY 41,500 STILL LESS THAN THE VOLUME DEFINED IN THE M.D.P. THE ADEQUACY OF THE SPILLWAY IS DEMONSTRATED BY THE MASTER DRAINAGE PLAN AND PREVIOUS SITE IMPROVEMENT PLANS, AND HENCE IS NOT RECALCULATED FOR THIS PLAN.

THE CALCULATIONS WHICH APPEAR HEREON ANALYZE BOTH THE EXISTING AND DEVELOPED CONDITIONS FOR THE 100-YEAR, 6-HOUR RAINFALL EVENT. THE PROCEDURE FOR 40-ACRE AND SMALLER BASINS, AS SET FORTH IN THE REVISION OF SECTION 22.2, HYDROLOGY OF THE DEVELOPMENT PROCESS MANUAL, VOLUME 2, DESIGN CRITERIA, DATED JANUARY, 1993, HAS BEEN USED TO QUALITY THE PEAK RATE OF DISCHARGE AND VOLUME OF RUNOFF GENERATED. THE POND VOLUME IS EVALUATED BY THE AVERAGE END AREA METHOD.

CONSTRUCTION NOTES:

1. TWO (2) WORKING DAYS PRIOR TO ANY EXCAVATION, CONTRACTOR MUST CONTACT NEW MEXICO ONE CALL SYSTEM 260-1990 (ALBUQUERQUE AREA), 1-800-321-ALERT(2537) (STATEWIDE), FOR LOCATION OF EXISTING UTILITIES.
2. PRIOR TO CONSTRUCTION, THE CONTRACTOR SHALL EXCAVATE AND VERIFY THE HORIZONTAL AND VERTICAL LOCATION OF ALL POTENTIAL OBSTRUCTIONS. SHOULD A CONFLICT EXIST, THE CONTRACTOR SHALL NOTIFY THE ENGINEER IN WRITING SO THAT THE CONFLICT CAN BE RESOLVED WITH A MINIMUM AMOUNT OF DELAY.
3. ALL WORK ON THIS PROJECT SHALL BE PERFORMED IN ACCORDANCE WITH APPLICABLE FEDERAL, STATE AND LOCAL LAWS, RULES AND REGULATIONS CONCERNING CONSTRUCTION SAFETY AND HEALTH.
4. ALL CONSTRUCTION WITHIN PUBLIC RIGHT-OF-WAY SHALL BE PERFORMED IN ACCORDANCE WITH APPLICABLE CITY OF ALBUQUERQUE STANDARDS AND PROCEDURES.
5. IF ANY UTILITY LINES, PIPELINES, OR UNDERGROUND UTILITY LINES ARE SHOWN ON THESE DRAWINGS, THEY ARE SHOWN IN AN APPROXIMATE MANNER ONLY, AND SUCH LINES MAY EXIST WHERE NONE ARE SHOWN. IF ANY SUCH EXISTING LINES ARE SHOWN, THE LOCATION IS BASED UPON INFORMATION PROVIDED BY THE OWNER OF SAID UTILITY, AND THE INFORMATION MAY BE INCOMPLETE, OR MY BE OBSOLETE BY THE TIME CONSTRUCTION COMMENCES. THE ENGINEER HAS CONDUCTED ONLY PRELIMINARY INVESTIGATION OF THE LOCATION, DEPTH, SIZE, OR TYPE OF EXISTING UTILITY LINES, PIPELINES, OR UNDERGROUND UTILITY LINES. THIS INVESTIGATION IS NOT CONCLUSIVE, AND MAY NOT BE COMPLETE, THEREFORE, MAKES NO REPRESENTATION PERTAINING THERETO, AND ASSUMES NO RESPONSIBILITY OR LIABILITY THEREFORE. THE CONTRACTOR SHALL INFORM ITSELF OF THE LOCATION OF ANY UTILITY LINE, PIPELINE, OR UNDERGROUND UTILITY LINE IN OR NEAR THE AREA OF THE WORK IN ADVANCE OF AND DURING EXCAVATION WORK. THE CONTRACTOR IS FULLY RESPONSIBLE FOR ANY AND ALL DAMAGE CAUSED BY ITS FAILURE TO LOCATE, IDENTIFY AND PRESERVE ANY AND ALL EXISTING UTILITIES, PIPELINES, AND UNDERGROUND UTILITY LINES. IN PLANNING AND CONDUCTING EXCAVATION, THE CONTRACTOR SHALL COMPLY WITH STATE STATUTES, MUNICIPAL AND LOCAL ORDINANCES, RULES AND REGULATIONS, IF ANY, PERTAINING TO THE LOCATION OF THESE LINES AND FACILITIES.

EROSION CONTROL MEASURES:
1. THE CONTRACTOR SHALL ENSURE THAT NO SOIL ERODES FROM THE SITE INTO PUBLIC RIGHT-OF-WAY OR ONTO PRIVATE PROPERTY.
2. THE CONTRACTOR SHALL PROMPTLY CLEAN UP ANY MATERIAL EXCAVATED WITHIN THE PUBLIC RIGHT-OF-WAY SO THAT THE EXCAVATED MATERIAL IS NOT SUSCEPTIBLE TO BEING WASHED DOWN THE STREET.
3. THE CONTRACTOR SHALL SECURE "TOPSOIL DISTURBANCE PERMIT" PRIOR TO BEGINNING CONSTRUCTION.

DRAINAGE PLAN

The following items concerning the Carlos Rey Elementary School Phase I Drainage Plan are contained hereon:

1. Vicinity Map
2. Calculations
3. Grading Plan

As shown by the Vicinity Map, the site is located at the southeast corner of the intersection of Cerrillos Road S.W. and Delgado Drive S.W. Cerrillos Road S.W. and Delgado Drive S.W. are fully developed public residential streets with curb and gutter, sidewalks, waterline, and sanitary sewerline. A public storm drain system passes through Carlos Rey Park to the south of the site, however, it is topographically higher and hence not accessible to this site. This site lies within a predominantly residential developed (infill) area.

As shown by Panels 32 and 33 of 50 of the National Flood Insurance Program Flood Insurance Rate Maps published by F.E.M.A. for the City of Albuquerque, New Mexico dated October 14, 1983, this site does not lie within, upstream of, or adjacent to a designated flood hazard zone.

The site is currently developed as an elementary school. The site contains paved parking areas, permanent buildings, portable classroom buildings, and various play areas. The site is bounded on the western and northern sides by Delgado Road S.W. and Cerrillos Road S.W., respectively. From the west most corner of the site, Delgado Road S.W. drains to the intersection of Cerrillos Road S.W., where it turns southeasterly to the easternmost corner of the site. The site falls approximately 40 feet between these property corners. A small area drains into Cerrillos Road S.W. by sheetflow (Basin 'A'), at the northern corner of the site, where Cerrillos Road S.W. and Delgado Drive S.W. intersect. Otherwise, runoff generally drains in an easterly direction across the site (Basin 'B'). In several areas, small naturally occurring drainage channels have formed. Once runoff reaches the eastern corner of the site, it discharges into an existing parking area with concentrated flow. The existing volume of runoff is quantified to be 36,710 cf with a peak discharge rate of 26.5 cfs.

Phase I Development of this site outlined hereon is consistent with the scope outlined in the Master Drainage Plan previously submitted by this office with Engineer's stamp dated April 25, 1995. Phase I consists of a new playground area, reconstruction of two parking areas, and construction of drainage facilities to accommodate all proposed future development of this site. As identified by the Master Drainage Plan, Basin 'A' is being enlarged to include the parking area along Delgado Road S.W., which will freely discharge over a new drivepad. Basin 'B' will continue to drain in its historic pattern to the new detention pond. The capacity of this pond is approximately 22,900 cf, which is greater than the required capacity of 21,479 cf for full development of the site (refer to previously submitted Master Drainage Plan).

Construction of Phase I will increase the volume of runoff by 4,600 cf, however, the peak discharge rate will be reduced to 13.3 cfs due to the construction of the detention pond. This rate is significantly less than the 26.5 cfs which currently free discharges from the site. The controlled discharge of developed runoff from the site is consistent with the Master Drainage Plan for this site and appropriate so as not to cause adverse impact on downstream conditions.

The calculations which appear hereon analyze both the existing and developed conditions for the 100-year, 6-hour rainfall event. The Procedure for 40-acre and Smaller Basins, as set forth in the Revision of Section 22.2, Hydrology of the Development Process Manual, Volume 2, Design Criteria, dated January, 1993, has been used to quantify the peak rate of discharge and volume of runoff generated. A minor increase of runoff volume at 4,600 cf and decrease of peak discharge rate of 13.2 cfs is anticipated with Phase I development. The pond volume is evaluated by the Average End Area Method with pond release calculated using the Orifice Equation.

CALCULATIONS

Site Characteristics

1. Precipitation Zone = 1
2. $P_{6,100} = P_{360}$ = 2.20 in.
3. Total Area (A_T) = 9.58 ac.
4. Existing Land Treatment

2. Peak Discharge

$Q_p = Q_{PA}A_A + Q_{PB}A_B + Q_{PC}A_C + Q_{PD}A_D$
$Q_p = Q_{100} = (2.03)(0.18)+(4.37)(0.33) = 1.8$ cfs

B. Basin 'B'
1. Volume

$E_w = (E_1A_1+E_2A_2+E_3A_3+E_4A_4+E_5A_5)/A_T$
$E_w = (0.67(5.25)+0.99(1.78)+1.97(2.04))/9.07 = 1.03$ in.
$V_{100} = (E_w/12)A_T$
$V_{100} = (1.03/12)9.07 = 0.7785$ ac.ft.; 33,910 cf

2. Peak Discharge

$Q_p = Q_{PA}A_A + Q_{PB}A_B + Q_{PC}A_C + Q_{PD}A_D$
$Q_p = Q_{100} = 2.03(5.25)+2.87(1.78)+4.37(2.04) = 24.7$ cfs

7. Developed Condition

A. Basin 'A'
a. Volume
$E_w = (E_1A_1+E_2A_2+E_3A_3+E_4A_4+E_5A_5)/A_T$
$E_w = (0.67(0.19)+1.97(0.66))/0.85 = 1.68$ in.
$V_{100} = (E_w/12)A_T$
$V_{100} = (1.68/12)0.85 = 0.1190$ ac.ft.; 5,180 cf

b. Peak Discharge

$Q_p = Q_{PA}A_A + Q_{PB}A_B + Q_{PC}A_C + Q_{PD}A_D$
$Q_p = Q_{100} = 2.03(0.19)+4.37(0.66) = 3.3$ cfs

B. Basin 'B'
a. Volume
$E_w = (E_1A_1+E_2A_2+E_3A_3+E_4A_4+E_5A_5)/A_T$
$E_w = (0.67(4.44)+0.99(1.46)+1.97(2.83))/8.73 = 1.14$ in.
$V_{100} = (E_w/12)A_T$
$V_{100} = (1.14/12)8.73 = 0.8294$ ac.ft.; 36,130 cf

b. Peak Discharge

$Q_p = Q_{PA}A_A + Q_{PB}A_B + Q_{PC}A_C + Q_{PD}A_D$
$Q_p = Q_{100} = 2.03(4.44)+2.87(1.46)+4.37(2.83) = 25.6$ cfs

⚠2 8. Basin 'B' Pond Volume (By Average End Area Method)

Elevation	Area (sf)	Volume (cf)	Σ Volume (cf)
99.5	0	1069	1069
100.0	4275	2,348	3,417
101.0	12,260	8,325	11,742
102.0	16,000	11,165	22,907

23,467 > 21,479 cf $V_{REQUIRED}$ (From M.D.P.)

*Spillway Elevation

⚠2 9. Spillway Capacity (Basin 'B' Pond)

100 Year Storm (Fully Developed)
$Q = CLH^{1.5}$
Let: C = 2.70
L = 10.67 ft ✓
H = 1.0 ft ✓

Therefore: ✓Q = 28.8 cfs > Q = 28.4 cfs (Fully Developed from M.D.P.)

⚠2 10. Pipe Discharge Capacity (Pressure Condition)

$Q = CA(2gh)^{\frac{1}{2}}$ Using Four 8" Storm Drain Lines

Let: C = 0.6
A = 0.3491 sf (per line)
g = 32.2 ft/sec²
h = 101.50 - 99.5 - 0.33 = 2.17 ft

Therefore: ✓Q = 2.5 cfs/pipe
✓Q_{total} = 10.0 cfs

11. Comparison

A. Basin 'A'
$\Delta V_{100} = 5,180 - 2,800 = 2,380$ cf (increase)
$\Delta Q_{100} = 3.3 - 1.8 = 1.5$ cfs (increase)

B. Basin 'B'
$\Delta V_{100} = 36,130 - 33,910 = 2,220$ cf (increase)
$\Delta Q_{100} = 24.7 - 10.0 = 14.7$ cfs (decrease)

C. Overall
$\Delta V_{100} = 2,380 + 2,220 = 4,600$ cf (increase)
$\Delta Q_{100} = 14.7 - 1.5 = 13.2$ cfs (decrease)

Construction Notes:

1. Two (2) working days prior to any excavation, contractor must contact New Mexico One Call System 260-1990, for location of existing utilities.
2. Prior to construction, the contractor shall excavate and verify the horizontal and vertical location of all potential obstructions. Should a conflict exist, the contractor shall notify the engineer in writing so that the conflict can be resolved with a minimum amount of delay.
3. All work on this project shall be performed in accordance with applicable federal, state and local laws, rules and regulations concerning construction safety and health.
4. All construction within public right-of-way shall be performed in accordance with applicable City of Albuquerque Standards and Procedures.
5. If any utility lines, pipelines, or underground utility lines are shown on these drawings, they are shown in an approximate manner only, and such lines may exist where none are shown. If any such existing lines are shown, the location is based upon information provided by the owner of said utility, and the information may be incomplete, or may be obsolete by the time construction commences. The engineer has conducted only preliminary investigation of the location, depth, size, or type of existing utility lines, pipelines, or underground utility lines. This investigation is not conclusive, and may not be complete, therefore, makes no representation pertaining thereto, and assumes no responsibility or liability therefor. The contractor shall inform itself of the location of any utility line, pipeline, or underground utility line in or near the area of the work in advance of and during excavation work. The contractor is fully responsible for any and all damage caused by its failure to locate, identify and preserve any and all existing utilities, pipelines, and underground utility lines. In planning and conducting excavation, the contractor shall comply with state statutes, municipal and local ordinances, rules and regulations, if any, pertaining to the location of these lines and facilities
6. An Excavation/Construction Permit will be required before beginning any work within City right-of-way. An approved copy of these plans must be submitted at the time of application for this permit.
7. Backfill compaction shall be according to RESIDENTIAL street use.
8. Maintenance of these facilities shall be the responsibility of the ownre of the property served.
9. The design of planters and landscaped areas is not part of this plan. All planters and landscaped areas adjacent to the building(s) shall be provided with positive drainage to avoid any ponding adjacent to the structure. For construction details, refer to landscaping plan.

Erosion Control Measures:

1. The contractor shall ensure that no soil erodes from the site into public right-of-way or onto private property.
2. The contractor shall promptly clean up any material excavated within the public right-of-way so that the excavated material is not susceptible to being washed down the street.
3. The contractor shall secure "Topsoil Disturbance Permit" prior to beginning construction.
4. Any areas of excess disturbance (traffic access, storage yard excavated material, etc.) shall be re-seeded according to C.O.A. Specification 1012 "Native Grass Seeding". This will be considered incidental to construction, therefore, no separate payment will be made.

PROJECT BENCHMARK

A.C.S. BENCHMARK 1-MB, A "□" CUT IN TOP OF CURB AT THE SSE CURB RETURN OF THE INTERSECTION OF BENEVIDES ROAD S.W. AND CATALINA PLACE S.W.
ELEVATION = 5225.42 FEET (M.S.L.D.)

T.B.M.

STORM DRAIN MANHOLE LOCATED AT THE SOUTHWEST CORNER OF THE INTERSECTION OF DELGADO DRIVE S.W. AND CLEMENTE PLACE S.W.
RIM ELEVATION = 5238.50 (M.S.L.D.)

⚠2 **DRAINAGE CERTIFICATION**

As indicated by the as-built information shown hereon, the Carlos Rey Elementary School Playground and Site Improvements have been constructed in substantial compliance with the approved plan with the following exceptions:

1. The northern parking lot along Cerrillos Road N.W. was constructed topographically higher than the approved plan. The grades were uniformly raised, and do not adversely affect the drainage patterns of the lot as approved.
2. The invert elevations of the discharge pipes from the detention pond were constructed 0.55 feet higher than the approved plan. The contractor has constructed the berm and spillway elevation 0.5 feet higher to compensate for the raised invert elevation and therefore provide the required volume of ponding as approved. Consequently, these adjustments do not adversely affect the drainage patterns, capacity, nor performance of the detention pond.

The information presented hereon has been obtained by me or under my direct supervision and is true and correct to the best of my knowledge and belief. It is based upon this information that acceptance of this project by the City is hereby recommended.
