Sunport ACE Project
(Gibson Blvd. East of Girard Blvd.)
TRAFFIC IMPACT STUDY

STUDY PURPOSE

The study is being conducted in conjunction with a request for approval of a site development plan proposing a new commercial / office / warehouse / manufacturing center as shown in the Appendix (Page A-2) of this report. The purpose of this study is to identify the impact of the Development on the adjacent transportation system, and to make recommendations to mitigate any significant adverse impact on the adjacent transportation system resulting from the implementation of the site development plan. This study is being prepared to meet the requirements of the City of Albuquerque Transportation Development Section. Also see companion report, Sunport ACE Project Access Justification Study dated April 2014.

STUDY PROCEDURES

A scoping meeting was held on January 13, 2014 with City of Albuquerque staff (Tony Loyd and Debbie Bauman) prior to beginning the study to discuss scope and methodology to be utilized within the report. Specific items included format, intersections to be studied, intersection analysis procedures, existing traffic counts, trip distribution methodology, and implementation year definition (2020).

The basic procedure followed is described as follows:

1) Calculate the generated trips for the proposed development consisting of the following described land uses and approximate square footages:
   a) A 10,000 S.F. High Turnover Sit-down Restaurant
   b) A Gas Station w/ convenience market with 20 fueling positions
   c) A 68,000 S.F. Shopping Center
   d) A 20,000 S.F. Variety Store
   e) 218,000 S.F. of Manufacturing
   f) 2 General Office Buildings (39,300 S.F. and 33,000 S.F.)
   g) 3 Warehouse Buildings (2 @ 330,000 S.F. and 91,700 S.F.)
   See Appendix Pages A-6 thru A-16.
2) Calculate trip distribution for the newly generated trips based on the following criteria: *Commercial Development* - based on distribution of 2020 population data within a two mile radius. *Office / Warehouse / Manufacturing Development* – based on citywide distribution of 2020 population data. See Appendix Pages A-17 thru A-20 (commercial) and A-23 thru A-28 (office).
3) Add in trips generated by previously approved development from the UNM Commercial Development at Gibson / University. See Appendix Pages A-45 and A-49.
4) Determine Trip Assignments (for 2020) for the newly generated trips based on the results of the Trip Distribution Analysis and logical routing to and from the site. See Appendix Pages A-21 thru A-22 (commercial) and A-29 thru A-32 (office).

5) Conduct new AM and PM Peak Hour turning movement counts for the intersections of Gibson Blvd. / Louisiana Blvd, Gibson Blvd. / Carlisle Blvd, and Gibson Blvd. / Girard Blvd. A 2011 traffic count will be used for Gibson Blvd / I-25 Ramps. See Appendix Pages A-103 thru A-108.
6) Determine historic traffic growth rate for the area based on a 2015 and 2035 AM and PM Peak Hour link volume data obtained from the Mid-Region Council of Governments' regional transportation model (2035 data set). See Appendix Pages A-33 thru A-35.
7) Determine 2020 NO BUILD turning movement Volumes for the intersections of Gibson Blvd. / Louisiana Blvd, Gibson Blvd. / Carlisle Blvd, Gibson Blvd. / Girard Blvd. and Gibson Blvd / I-25 W. Ramp and Gibson Blvd. / I-25 E. Ramp. See Appendix Pages A-36 thru A-58.
8) Add in data from Trip Assignments Maps and Tables to the 2020 NO BUILD Volumes to obtain 2020 BUILD Volumes for this project. See Appendix Pages A-36 thru A-58.
9) Provide signalized and unsignalized intersection analyses for the following intersections:

INTERSECTION	TYPE CONTROL	NO BUILD	BUILD
1) Gibson Blvd. / Louisiana Blvd	Traffic Signal	2020	2020
2) Gibson Blvd. / Carlisle Blvd.	Traffic Signal	2020	2020
3) Gibson Blvd. / Girard	Traffic Signal	2020	2020
4) Gibson Blvd. / I-25 W. Ramp	Stop Sign	2020	2020
5) Gibson Blvd. / Driveway "A"	Stop Sign	N/A	2020
6) Gibson Blvd. / I-25 E. Ramp	Stop Sign	2020	2020
7) Miles Rd. / Girard Blvd.	Stop Sign		
8) Driveway "C" / Girard Blvd.	Stop Sign	N/A	2020
9) Driveway "D" / Girard Blvd.	Stop Sign	N/A	2020
10) Driveway "E" / Girard Blvd.	Stop Sign	N/A	2020

PREVIOUS RELATED TRAFFIC IMPACT STUDIES

There is one previously approved proposed development that was included in the background traffic volumes for this study – the UNM Commercial Development located at Gibson Blvd. / University Blvd.

GENERAL AREA CHARACTERISTICS

The proposed site development plan is for a property bounded on the north by Gibson Blvd., bounded on the east by Hickman Ave. and bounded on the west by Girard Blvd. as depicted on the Vicinity Map on Page A-1 of the Appendix of this report. The total area of the requested site development plan is approximately 70 acres. The adjacent properties of this site include a mix of Albuquerque Sunport, Kirtland Air Force Base (KAFB), commercial, and residential. More detailed zoning information may be obtained upon inspection of the Vicinity Map on Page A-1 in the Appendix.

AREA STREET NETWORK

Gibson Blvd. is classified as a Limited Access Roadway on the Long Range Roadway System Map for the Albuquerque Metropolitan Planning Area and is generally a six lane paved urban section roadway with curb and gutter on both sides of the street and a raised median east of I-25. The posted speed limit on Gibson Blvd. in the vicinity of this project is 45 MPH.

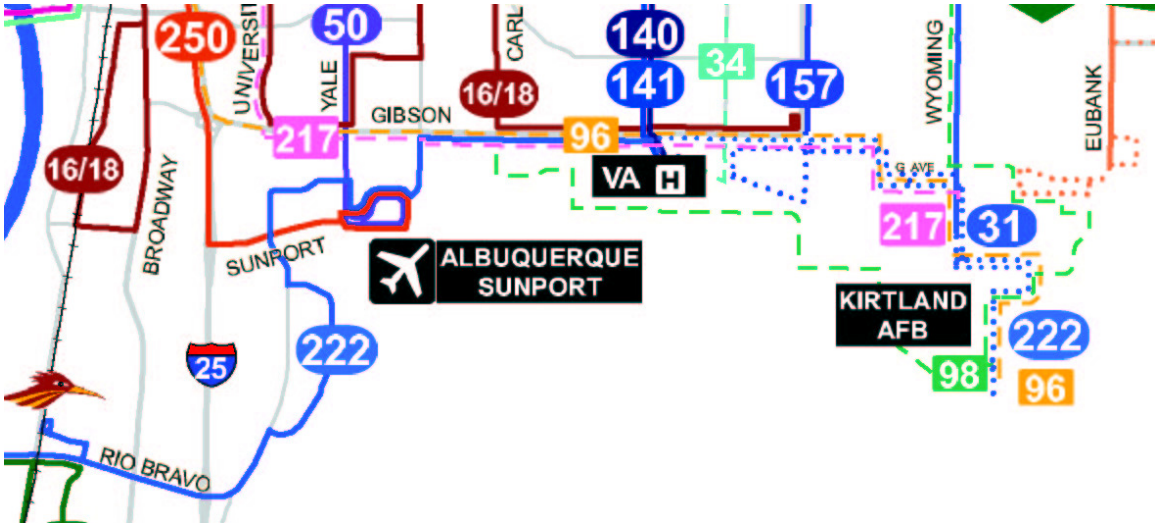
Louisiana Blvd. is classified as an Urban Principal Arterial Roadway on the Long Range Roadway System Map for the Albuquerque Metropolitan Planning Area and is generally a five lane paved urban section roadway with curb and gutter on both sides of the street and a two-way, left-turn lane in the center north of Gibson Blvd. Louisiana Blvd. is generally a two lane roadway section south of Gibson Blvd. with curb and gutter and sidewalk on the west side of the street. The posted speed limit on Louisiana Blvd in the vicinity of this project is 35 MPH.

Carlisle Blvd. is classified as an Urban Minor Arterial Roadway on the Long Range Roadway System Map for the Albuquerque Metropolitan Planning Area and is generally a two lane urban roadway section with sidewalk and curb and gutter on both sides of the street north of Gibson Blvd. Carlisle Blvd. is generally a four lane urban roadway section with sidewalk on the east side of the street and curb and gutter on both sides of the street south of Gibson Blvd. The posted speed limit is 30 MPH.

Girard Blvd. is classified as Collector Roadway on the Long Range Roadway System Map for the Albuquerque Metropolitan Planning Area and is generally a four lane urban roadway section with sidewalk and curb and gutter on both sides of the street north of Gibson Blvd. Girard Blvd. is generally a two lane urban roadway section with a paved trail on the west side of the street and curb and gutter on both sides of the street to Miles Rd. south of Gibson Blvd. The posted speed limit is 30 MPH.

Interstate 25 is a north-south oriented freeway / expressway connecting El Paso, Texas with Denver Colorado that passes through the center of Albuquerque. There are entrance / exit ramps on I-25 at Avenida Caesar Chavez and at Gibson Blvd. near the project area.

There are several ABQ Ride routes that service this area. Route 16/18 accesses the downtown area and Broadway Blvd. before it heads east to University Blvd. and south to Gibson Blvd. It repeats this loop every 45 minutes between 6 AM and 7 PM weekdays and has a shorter weekend schedule. Route 96 (Crosstown Commuter) has varied intervals and limited stops between Unser Blvd. / Cabezon and KAFB. Route 217 (KAFB Limited) has three loops per day with limited stops, starting at the Alvarado Transportation Center downtown then south on University Blvd. to Gibson Blvd. and then to KAFB. Route 222 has two different stop schedules with limited stops and runs from Coors Blvd. / Rio Bravo Blvd. thru the ABQ Sunport, north on Girard Blvd. and east on Gibson Blvd. to either the VA Medical Center or KAFB. (See map below and schedules in the Appendix on Pages A-109 thru A-113.)



In addition, there are bicycle lanes / trails in the vicinity of this project that are shown on the following map.

EXISTING TRAFFIC VOLUMES

2012 Average Weekday Traffic Volumes (AWDT) for major streets in the site plan area are shown on Page A-5 of the Appendix.

Existing AM and PM peak hour turning movement counts for the year 2013 / 2014 obtained by the consulting engineer for the following intersections:

Gibson Blvd. / Louisiana Blvd.
Gibson Blvd. / Carlisle Blvd.
Gibson Blvd. / Girard Blvd.
Gibson Blvd. / I-25 Ramps

The counts are included on Pages A-103 thru A-108 in the Appendix of this report.

EXISTING (2014) LEVELS OF SERVICE

Current levels-of-service for the intersections analyzed in this study are not reported. Most of the offsite intersections analyzed in this study resulted in acceptable levels-of-service for the 2020 AM and PM Peak Hour NO BUILD and BUILD Conditions. Therefore, those intersections, when analyzed for existing conditions, will result in acceptable levels-of-service.

PROPOSED DEVELOPMENT

The subject area of land targeted for the site development plan totals approximately 70 acres. The proposed conceptual site development plan consists of the following approximate land uses:

a) *A 10,000 S.F. High Turnover Sit-down Restaurant*
b) *A Gas Station w/ convenience market with 20 fueling positions*
c) *A 68,000 S.F. Shopping Center*
d) *A 20,000 S.F. Variety Store*
e) *218,000 S.F. of Manufacturing*
f) *2 General Office Buildings (39,300 S.F. and 33,000 S.F.)*
g) *3 Warehouse Buildings (2 @ 330,000 S.F. and 91,700 S.F.)*

See the conceptual site development plan on Page A-2 in the Appendix of this report to acquire more detailed information about the proposed development. This site plan is conceptual at this point in time and is subject to some changes as progress takes place in the design process. The plan should, however, provide a reliable basis upon which to analyze the impact of the development on the adjacent transportation system and provide guidelines for mitigating the impact and establishing access criteria. The conceptual site plan as it is shown in this report proposes one access point on Gibson Blvd. and four access points on Girard Blvd.

Since Gibson Blvd. is classified as a Limited Access Roadway, then the proposed Access on Gibson Blvd. will need to be approved by the Transportation Coordinating Committee (T.C.C.) and reviewed by the Roadway Access Committee (R.A.C.) A companion report, Sunport ACE Project Access Justification Study dated April 2014 for

this project analyzes the benefits and / or impacts of implementing the proposed left-turn-in, right-turn-in, right-turn-out driveway on Gibson Blvd. between Girard Blvd. and Carlisle Blvd.

TRIP GENERATION

Projected trips were calculated from data in the Institute of Transportation Engineers Trip Generation report (9th Edition, 2009). Trips for the development were determined based on land uses defined on the Conceptual Site Development Plan on Page A-2 in the Appendix of this report. No adjustments were made for Pass-by Trips in this study.

The resulting number of trips generated for the proposed development is summarized in the following table:

ACE Sunport Project (Gibson Blvd. / Hickam Ave.)

Trip Generation Data (ITE Trip Generation Manual - 9th Edition)

COMMENT	USE (ITE CODE) DESCRIPTION		24 HR VOL GROSS	A. M. PEAK HR. ENTER	A. M. PEAK HR. EXIT	P. M. PEAK HR. ENTER	P. M. PEAK HR. EXIT
	Summary Sheet	Units

	Subtotal		**16,382**	**856**	**372**	**658**	**1,014**

See Appendix Pages A-7 thru A-16 for individual trip generation worksheets.

TRIP DISTRIBUTION

Primary and Diverted Linked Trips:

Trips were distributed on the following basis:

Commercial

Primary and diverted linked trips for the land use development were distributed proportionally to the 2020 projected population of Data Analysis Subzones within a two-mile radius of the proposed development. Population data for the years 2015 and 2035 were taken from the 2035 Socioeconomic Forecasts by Data Analysis Subzones for the Mid Regional Council of Governments (MRCOG). Population data from the years 2015 and 2035 was interpolated linearly to obtain 2020 population data to utilize for this analysis. Population Subzones were grouped based on the most likely major street(s) or route(s) to the subject development. The trip distribution worksheets and associated map of data analysis subzones is shown in the Appendix on Pages A-17 thru A-20.

Office

Primary and diverted linked trips for the land use development were distributed proportionally to the 2020 projected population of the Subareas citywide. Population data for the years 2015 and 2035 were taken from the 2035 Socioeconomic Forecasts by Data Analysis Subzones for the Mid Regional Council of Governments (MRCOG). Population data from the years 2015 and 2035 was interpolated linearly to obtain 2020 population data to utilize for this analysis. Population Subareas were grouped based on the most likely major street(s) or route(s) to the subject development. The trip distribution worksheets and associated map of subareas is shown in the Appendix on Pages A-23 thru A-28.

TRIP ASSIGNMENT

Trip assignments are first made on a percentage basis derived from data established in the trip distribution determination process and then based on logical routing to and from the site. Those percentages are then applied to the projected trips to determine individual traffic movements. Percentage trip assignments are shown on the Trip Assignments Maps on Pages A-21 thru A-22 for commercial trip assignments and on Pages A-29 thru A-32 for office trip assignments in the Appendix.

BACKGROUND TRAFFIC GROWTH

Background annual traffic growth rates were determined for the study area that was targeted for analysis based on data from the 2035 Regional Transportation Model data set from the Mid-Region Council of Governments. This study will determine the annual growth rate for each of the three or four approaches to each intersection being analyzed.

Forecast link volumes were obtained from the model for the AM and PM Peak Hours for the years 2015 and 2035. Those link volumes were utilized to establish a future growth rate for each leg of the intersection being analyzed in this study. The resulting calculated growth rates from the MRCOG model data were used to grow the existing volumes to the projected 2035 volumes shown at the bottom of the individual intersection spreadsheet in the Turning Movements pages. In some cases, the growth rate was extremely high and a maximum of 5% was substituted. Additionally, in cases of a negative growth rate, a minimum of 1% was used. The growth rate utilized for each approach to an intersection is printed at the top of the Turning Movement sheets for each intersection (See Appendix Pages A-39 thru A-58).

PROJECTED PEAK HOUR TURNING MOVEMENTS FOR 2020 BUILDOUT

The calculated growth rates were applied to the most recent peak hour traffic counts (conducted by the consulting engineer) to establish the 2020 background NO BUILD traffic volumes. Then the previously approved development volumes from the UNM Commercial Development were added to the intersections of Gibson Blvd. / I-25 E. Ramp and Gibson Blvd. / I-25 W. Ramp. To those 2020 NO BUILD Volumes volumes, the generated trips based on implementation of the proposed Sunport ACE Project (100%

development) were added to obtain the 2020 BUILD volumes for the intersection analyses. See Appendix Pages A-36 thru A-58 for further information regarding 2020 turning movement counts.

INTERSECTION CAPACITY ANALYSIS

Intersection capacity analyses were performed in accordance with the procedures for signalized and unsignalized intersections in the Highway Capacity Manual, Special Report 209, Transportation Research Board, 2000, using Synchro 8 software for signalized and unsignalized intersections. For signalized intersections, the operational method of analysis was used for implementation year conditions (NO BUILD and BUILD). There was no Horizon Year Analysis required for this study.

Capacity analyses were performed for the following traffic conditions.

Implementation Year (2020) - NO BUILD
Implementation Year (2020) - BUILD

The results of the implementation year (2020), capacity analyses are summarized in the following sections.

RESULTS OF SIGNALIZED INTERSECTION CAPACITY ANALYSES

IMPLEMENTATION YEAR (2020)

Intersection #1 – Gibson Blvd. / Louisiana Blvd. - Pages A-59 thru A-62

The results of the implementation year analysis of the signalized intersection of Gibson Blvd. / Louisiana Blvd. are summarized in the following table:

Intersection: 1 - GIBSON BLVD. / LOUISIANA BLVD.

		2020 AM Peak Hour BUILD (EXIST. GEOM.)					2020 PM Peak Hour BUILD (EXIST. GEOM.)

Intersection:		***B - 18.0***		***B - 19.0***			***D - 35.5***		***D - 36.4***		

Note: ">" designates a shared right or left turn lane.

Existing southbound geometry actually consists of one left turn lane, one shared left turn/thru lane, and one right turn

The implementation year analysis of the signalized intersection of Gibson Blvd. / Louisiana Blvd. indicates that that the levels-of-service will be acceptable for both the AM Peak Hour and PM Peak Hour NO BUILD and BUILD conditions. The existing southbound geometry at the intersection actually consists of one left turn lane, one shared left turn/thru lane, and one exclusive right turn lane. However, Synchro 8 Software will not analyze a signalized intersection with a shared thru/turn lane, so this analysis was performed using the southbound geometry shown in the table (dual left turn lanes, one thru lane and one exclusive right turn lane) but is closely representative of the actual existing geometry described previously.

The following table summarizes the results of the queuing analysis for this intersection:

Queueing Analysis Summary Sheet

	AM	PM
Cycle Length:	100	100

NOTE: Queue lengths are in feet.

The following table summarizes the recommendations of the queuing analysis for this intersection:

Lane Description	Existing Length (Ft)	NO BUILD Length (Ft)	BUILD Length (Ft)	Lengthen Existing Auxiliary Lane to:
Eastbound Left Turn:	125	650	650	**650' plus transition.**
Eastbound Right Turn:*	150	10	10	No Recommendation
Westbound Left Turn:	50	50	50	No Recommendation
Westbound Right Turn:*	300	150	150	No Recommendation
Northbound Left Turn:	50	75	75	No Recommendation
Northbound Right Turn:*	75	50	50	No Recommendation
Southbound Left Turn:	600	225	225	No Recommendation
Southbound Right Turn:*	600	250	260	No Recommendation

* - Calculated right turn queue lengths have been reduced by 50% to account for right-turns-on red and overlap phases.

The queuing analysis recommends lengthening the eastbound left turn lane from 125 feet plus transition to 650 feet plus transition. This lengthening cannot be accomplished without adversely affecting the adjacent left turn lane for the driveway to the west of the intersection. Therefore no recommendations are made for the queuing at the intersection of Gibson Blvd. / Louisiana Blvd.

Intersection #2 – Gibson Blvd. / Carlisle Blvd. - Pages A-63 thru A-66

The results of the implementation year analysis of the signalized intersection of Gibson Blvd. / Carlisle Blvd. are summarized in the following table:

Intersection: 2 - GIBSON BLVD. / CARLISLE BLVD.

Note: ">" designates a shared right or left turn lane.

The implementation year analysis of the signalized intersection of Gibson Blvd. / Carlisle Blvd. indicates that that the levels-of-service will be acceptable for both the AM Peak Hour NO BUILD and BUILD conditions, except for the southbound right turn movement which will experience excessive delays during the AM Peak Hour BULD condition. The intersection will also experience excessive delays during the PM Peak Hour NO BUILD and BUILD conditions for the eastbound left turn and the northbound left turn, and the southbound right turn movements. This intersection is completely built-out with buildings in close proximity to the roadway at all corners of the intersection. Therefore, no intersection expansion can be done without acquiring right-of-way and demolishing existing buildings. However, based on projected volumes, there is a potential restriping of the north leg of the intersection that would improve its operational levels-of-service. The north leg of the intersection is currently configured with a southbound exclusive left turn lane, a southbound thru lane, and a southbound thru / right turn lane. Converting the southbound thru / right turn lane to an exclusive right turn lane with a right turn overlap arrow indication on the signal will improve operation. It appears that the right turn overlap arrow is already installed on the signal head and is probably operational. Therefore, to effect this new approach plan, the outside southbound lane would need to be clearly marked as a right turn only lane with an arrow on the pavement plus supplemental signage.

The following table summarizes the results of the queuing analysis for this intersection:

Queueing Analysis Summary Sheet

Project: Sunport ACE Project

Intersection: **Gibson Blvd / Carlisle Blvd**

2020

Approach	Left Turns			Thru Movements				Right Turns		
Eastbound	# Lanes	Vol.	Length	# Lanes	Vol.	Length		# Lanes	Vol.	Length

	AM	PM
Cycle Length:	100	130

NOTE: Queue lengths are in feet.

The following table summarizes the recommendations of the queuing analysis for this intersection:

Lane Description	Existing Length (Ft)	NO BUILD Length (Ft)	BUILD Length (Ft)	Lengthen Existing Auxiliary Lane to:
Eastbound Left Turn:	250	275	450	**450' plus transition.**
Eastbound Right Turn:*	550	200	200	No Recommendation
Westbound Left Turn:	325	150	150	No Recommendation
Westbound Right Turn:*	220	110	110	No Recommendation
Northbound Left Turn:	200	700	700	**700' plus transition.**
Northbound Right Turn:*	0	80	80	No Recommendation
Southbound Left Turn:	175	175	175	No Recommendation
Southbound Right Turn:*	0	100	150	No Recommendation

* - Calculated right turn queue lengths have been reduced by 50% to account for right-turns-on red and overlap phases.

The queuing analysis recommends lengthening the eastbound left turn lane from 250 feet plus transition to 450 feet plus transition and lengthening the northbound left turn lane from 200 feet plus transition to 700 feet plus transition. However, this lengthening cannot be accomplished due to the intersection being completely built-out with buildings in close proximity to the roadway at all corners of the intersection, as previously described. Therefore no recommendations are made for the queuing at the intersection of Gibson Blvd. / Carlisle. NOTE: It may be possible to lengthen the northbound left turn lane a slight amount based on sufficient pavement width. It is recommended that an accurate topographic survey of the existing south approach be obtained to determine if the northbound left turn lane can be extended somewhat. The minimum left turn lane width should be 10.5 feet. The left turn lane should not be extended such that the width does not meet that width requirement.

Intersection #3 – Gibson Blvd. / Girard Blvd. - Pages A-67 thru A-72

The results of the implementation year analysis of the signalized intersection of Gibson Blvd. / Girard Blvd. are summarized in the following table:

Note: ">" designates a shared right or left turn lane.

Mitigated northbound geometry actually consists of dual left turn lanes, one thru lane, one shared thru/right turn lane, and one right turn lane.

The implementation year analysis of the signalized intersection of Gibson Blvd. / Girard Blvd. indicates that that some of the delays will be excessive for both the AM Peak Hour and PM Peak Hour NO BUILD conditions and will experience excessive delays for the westbound left turn and northbound right turn movements during the AM Peak Hour BUILD condition. The intersection will also experience excessive delays for the PM Peak Hour BUILD condition for the eastbound left turn and the northbound left and right turn movements. The intersection may be mitigated by constructing northbound dual left turn lanes, two thru lanes, and one exclusive right turn lane. This will require acquiring right-of-way north of Gibson Blvd. in order to widen the median and align the northbound thru lanes through the intersection. As an alternative, if the northbound right turn queuing becomes excessive in the future, the outside northbound thru lane could optionally be reconfigured as a thru / right lane to ease the demand on the exclusive right turn lane. The forecast northbound thru volume is relatively low. The City can make the determination in the future if the alternate geometry is necessary. Synchro 8 Software will not analyze a signalized intersection with a shared thru/turn lane, so this mitigated analysis was performed using the northbound geometry shown in the table, dual left turn lanes, two thru lanes and one exclusive right turn lane, but is closely representative of the proposed mitigated geometry described previously. TEAPAC was also used to analyze this intersection with the existing geometry with the shared thru/right turn lane and is included in the Appendix on Pages A-114 thru A-116. The results do not significantly differ from the Synchro 8 results.

The following table summarizes the results of the queuing analysis for this mitigated intersection:

Queueing Analysis Summary Sheet

	AM	PM
Cycle Length:	130	130

NOTE: Queue lengths are in feet.

The following table summarizes the recommendations of the queuing analysis for this mitigated intersection:

Lane Description	Existing Length (Ft)	NO BUILD Length (Ft)	BUILD Length (Ft)	Lengthen Existing Auxiliary Lane to:
Eastbound Left Turn:	200	200	200	No Recommendation
Eastbound Right Turn:*	200	30	300	**300' plus transition.**
Westbound Left Turn:	340	250	400	**400' plus transition.**
Westbound Right Turn:*	120	110	110	No Recommendation
Northbound Left Turn:	150	25	400	**400' plus transition.**
Northbound Right Turn:*	325	110	230	No Recommendation
Southbound Left Turn:	100	150	225	**225' plus transition.**
Southbound Right Turn:*	350	100	100	No Recommendation

* - Calculated right turn queue lengths have been reduced by 50% to account for right-turns-on red and overlap phases.

The queuing analysis recommends lengthening the eastbound right turn lane from 200 feet plus transition to 300 feet plus transition, lengthening the westbound left turn lane from 340 feet plus transition to 400 feet plus transition, and lengthening the southbound left turn lane from 100 feet plus transition to 225 feet plus transition. The lengthening of the eastbound right turn lane can be accomplished by restriping to reduce the width of the existing excessively wide bike lane to use for the right turn lane. The westbound left turn lane may also be lengthened as recommended. This will require relocation of a street light pole, an electric pull box, meters, and possibly some landscape irrigation lines. The lengthening of the southbound left turn lane cannot be done without adversely affecting the driveway to the north. Therefore, it I not recommended. The queuing analysis also demonstrates that the dual left turn lanes of the mitigated northbound geometry should be 400 feet plus transition and the exclusive right turn lane should be 225 feet plus transition (calculated right turn queuing is reduced by 50% to account for right-turns-on-red and right turn overlap phasing).

RESULTS OF UNSIGNALIZED INTERSECTION CAPACITY ANALYSES

Intersection #4 - Gibson Blvd. / I-25 W. Ramp - Pages A-73 thru A-80

The results of the analysis of the unsignalized intersection of Gibson Blvd. / I-25 W. Ramp are summarized in the following table:

Intersection: 4 - GIBSON BLVD. / I-25 W. RAMP

		2020 AM Peak Hour BUILD (EXIST. GEOM.)				2020 PM Peak Hour BUILD (EXIST. GEOM.)			
		NO BUILD		BUILD		NO BUILD		BUILD	
		Lanes	LOS-Delay	Lanes	LOS-Delay	Lanes	LOS-Delay	Lanes	LOS-Delay
WB	L	1	C - 20.5	1	C - 22.9	1	D - 34.9	1	**F** - 61.2
Intersection:		*u - N/A*		*u - N/A*		*u - N/A*		*u - N/A*	

Note: ">" designates a shared right or left turn lane.

The implementation year analysis of the intersection of Gibson Blvd. / I-25 W. Ramp indicates that that the levels-of-service of the westbound left turn movement will be acceptable for both the AM Peak Hour NO BUILD and BUILD conditions and for the PM Peak Hour NO BUILD condition and will experience excessive delays for the PM Peak HOUR BUILD condition. There is no way to mitigate the intersection without rebuilding the entire interchange due to the placement of the abutments of the I-25 Bridge. Therefore, no recommendation is made for the intersection of Gibson Blvd. / I-25 W. Ramp.

Intersection #5 - Gibson Blvd. / Driveway "A" - Pages A-81 thru A-82

The results of the analysis of the unsignalized intersection of Gibson Blvd. / Driveway "A" are summarized in the following table:

Intersection: 5 - GIBSON BLVD. / DRIVEWAY "A"

		2020 Peak Hour BUILD (EXIST. GEOM.)			
		AM BUILD		PM BUILD	
		Lanes	LOS-Delay	Lanes	LOS-Delay
WB	L	1	B - 14.5	1	B - 14.0
NB	R	1	C - 16.3	1	C - 15.9
Intersection:		*u - N/A*		*u - N/A*	

Note: ">" designates a shared right or left turn lane.

This access is proposed to be a right-in, right-out, left-in only intersection which will serve primarily the northern commercial portion of the proposed development. The HCM 2010 implementation year analysis of Driveway "A" based on Synchro 8 indicates

that that the levels-of-service will be acceptable for both the AM Peak Hour and PM Peak Hour Build conditions. Also, it will be demonstrated that the intersection of Gibson Blvd. / Girard Blvd. will be improved by implementation of Driveway "A" on Gibson Blvd. The westbound left turn lane on Gibson Blvd. at Driveway "A" will serve as a virtual second left turn lane to assist the one that exists on Gibson Blvd. at Girard Blvd. See the companion report, Sunport ACE Project Access Justification Study dated April 2014 for further details. The design of Driveway "A" should incorporate one exiting lane and two entering lanes so that the left and right turns in will not conflict with one another. Also, see Page 24a for a diagram of the recommended geometry for Driveway "A".

The City of Albuquerque's Development Process Manual requires deceleration lanes for driveways generating 60 or more left or right turns. Therefore, Driveway "A" warrants an eastbound right turn deceleration lane as well as a westbound left turn deceleration lane along Gibson Blvd. Both the eastbound right turn deceleration lane and the westbound left turn deceleration lane should be 400 feet long plus 12.5:1 taper per Table 18.K-1 of the State Access Management Manual.

Intersection #6 - Gibson Blvd. / I-25 E. Ramp - Pages A-83 thru A-90

The results of the analysis of the unsignalized intersection of Gibson Blvd. / I-25 E. Ramp are summarized in the following table:

Intersection: 6 - GIBSON BLVD. / I-25 E. RAMP

		2020 AM Peak Hour BUILD					**2020 PM Peak Hour BUILD**				
		(EXIST. GEOM.)					**(EXIST. GEOM.)**				
		NO BUILD		**BUILD**			**NO BUILD**		**BUILD**		
		Lanes	**LOS-Delay**	**Lanes**	**LOS-Delay**		**Lanes**	**LOS-Delay**	**Lanes**	**LOS-Delay**	
NB	L	1	**F** - 1683	1	**F** - 1908	L	1	**F** - 52.8	1	**F** - 56.9	
Intersection:		***u - N/A***		***u - N/A***			***u - N/A***		***u - N/A***		

Note: ">" designates a shared right or left turn lane.

The implementation year analysis of the intersection of Gibson Blvd. / I-25 E. Ramp indicates that that the northbound left turn movement will experience excessive delays for both the AM Peak Hour and PM Peak Hour NO BUILD and BUILD conditions. There is no way to mitigate the already failing condition at the intersection without rebuilding the interchange. Due to the fact that this is a NO BUILD failing situation and based on the type of intersection, this is more likely a regional issue than one caused by any one development in the area. Therefore, this study concludes that there are no recommendations at the intersection of Gibson Blvd. / I-25 E. Ramp.

Intersection #7 – Miles Rd. (Driveway "B") / Girard Blvd. - Pages A-91 thru A-96

The results of the analysis of the unsignalized intersection of Miles Rd. (Driveway "B") / Girard Blvd. are summarized in the following table:

Standard Two-Way Stop Intersection Option

Intersection: 7 - MILES RD. / GIRARD BLVD.

	T	1	A - 7.9	1	C - 20.3
	R	>	A - 7.9	>	C - 20.3
SB	L	>	C - 22.4	>	B - 12.1
	T	1	C - 22.4	1	B - 12.1
	R	1	A - 4.4	1	A - 3.6
Intersection:		***u - 14.7***		***u - 10.2***	

This access will be the extension of an existing tee intersection of Miles Rd. / Girard Blvd. The implementation year analysis of the intersection of Miles Rd. / Girard Blvd. (proposed Driveway "B") indicates that that the intersection will experience excessive delays for the eastbound and westbound movements as a four-legged two-way stop controlled intersection for both the AM Peak Hour and PM Peak Hour BUILD conditions. The intersection may be mitigated as a roundabout with a westbound free right turn and an exclusive southbound right turn lane. Both scenarios are acceptable. No recommendation is made for either option. If the developer opts for the Standard Two-Way Stop Intersection Option, then the intersection should include a southbound right turn lane and a westbound right turn (free right) lane with an add lane.

If the roundabout option is implemented, then the northbound and eastbound approach may be single lane approaches, but the westbound and southbound approaches should include a right turn lane. In the case of the westbound right turn lane, it should be a free right turn with an add lane.

Intersection #8 - Driveway "C" / Girard Blvd. - Pages A-97 thru A-98

The results of the analysis of the unsignalized intersection of Driveway "C" / Girard Blvd. are summarized in the following table:

Intersection: 8 - DRIVEWAY "C" / GIRARD BLVD.

2020 Peak Hour BUILD

		(EXIST. GEOM.)			
		AM BUILD		PM BUILD	
		Lanes	LOS-Delay	Lanes	LOS-Delay
WB	L	1	A - 9.9	>	B - 11.6
	R	>	A - 9.9	>	B - 11.6
SB	L	>	A - 8.1	>	A - 8.0
	T	1	A - 8.1	1	A - 8.0
Intersection:		*u - N/A*		*u - N/A*	

Note: ">" designates a shared right or left turn lane.

This access is proposed to be a full access tee intersection. The implementation year analysis of Driveway "C" indicates that that the levels-of-service will be acceptable for both the AM Peak Hour and PM Peak Hour BUILD conditions. Therefore, this study concludes that the development presents no significant impact to the calculated delays at the intersection of Driveway "C" / Girard Blvd.

Intersection #9 - Driveway "D" / Girard Blvd. - Pages A-99 thru A-100

The results of the analysis of the unsignalized intersection of Driveway "D" / Girard Blvd. are summarized in the following table:

Intersection: 9 - DRIVEWAY "D" / GIRARD BLVD.

2020 Peak Hour BUILD

		(EXIST. GEOM.)			
		AM BUILD		PM BUILD	
		Lanes	LOS-Delay	Lanes	LOS-Delay
WB	L	1	A - 9.0	>	A - 9.8
	R	>	A - 9.0	1	A - 9.8
SB	L	>	A - 7.7	>	A - 7.6
	T	1	A - 7.7	1	A - 7.6
Intersection:		*u - N/A*		*u - N/A*	

Note: ">" designates a shared right or left turn lane.

This access is proposed to be a full access tee intersection. The implementation year analysis of Driveway "D" indicates that that the levels-of-service will be acceptable for both the AM Peak Hour and PM Peak Hour BUILD conditions. Therefore, this study concludes that the development presents no significant impact to the calculated delays at the intersection of Driveway "D" / Girard Blvd.

Intersection #10 - Driveway "E" / Girard Blvd. - Pages A-101 thru A-102

The results of the analysis of the unsignalized intersection of Driveway "E" / Girard Blvd. are summarized in the following table:

Intersection: 10 - DRIVEWAY "E" / GIRARD BLVD.

2020 Peak Hour BUILD

		(EXIST. GEOM.)			
		AM BUILD		PM BUILD	
		Lanes	LOS-Delay	Lanes	LOS-Delay
WB	L	1	A - 8.8	>	A - 9.0
	R	>	A - 8.8	>	A - 9.0
SB	L	>	A - 7.5	>	A - 7.4
	T	1	A - 7.5	1	A - 7.4
Intersection:		*u - N/A*		*u - N/A*	

Note: ">" designates a shared right or left turn lane.

This access is proposed to be a full access tee intersection. The implementation year analysis of Driveway "E" indicates that that the levels-of-service will be acceptable for both the AM Peak Hour and PM Peak Hour BUILD conditions. Therefore, this study concludes that the development presents no significant impact to the calculated delays at the intersection of Driveway "E" / Girard Blvd.

It should be noted that Levels of Service (LOS) for unsignalized intersections cannot be compared directly with Levels of Service for signalized intersections. There are different level-of-service thresholds for signalized and unsignalized intersections. Following are two tables that define the differentiation between the two.

LEVEL-OF-SERVICE CRITERIA FOR SIGNALIZED INTERSECTIONS

Average Delay (secs)	Level-of-Service
≤ 10	A
> 10 and ≤ 20	B
> 20 and ≤ 35	C
> 35 and ≤ 55	D
> 55 and ≤ 80	E
> 80	F

LEVEL-OF-SERVICE CRITERIA FOR UNSIGNALIZED INTERSECTIONS

Average Delay (secs)	Level-of-Service
≤ 10	A
> 10 and ≤ 15	B
> 15 and ≤ 25	C
> 25 and ≤ 35	D
> 35 and ≤ 50	E
> 50	F

Generally speaking, a Level-of-Service D or better is an acceptable parameter for design purposes.

CONCLUSIONS

The results of the analyses of this study demonstrate that the implementation of the Sunport ACE Project as shown on Appendix Page A-2 will have some adverse impact on the adjacent transportation system for the 2020 Implementation Year, specifically near the proposed project site that need to be mitigated as well as regional issues that should be explored and mitigated by a governmental agency. Utilizing projected traffic volumes resulting from the development of this site into a facility such as the one shown on Appendix Page A-2 in conjunction with projected 2020 traffic volumes in this report concludes that impact to the adjacent transportation system can be mitigated, provided that the following recommendations are followed:

RECOMMENDATIONS

- Design of the project should maintain adequate sight distances for traffic approaching, entering, and exiting the site from the proposed driveways.
- All driveways should be constructed utilizing 30 feet minimum radius curb returns or larger if needed to accommodate delivery trucks and buses. The new development should be implemented utilizing one access point on Gibson Blvd. (See companion report, Sunport ACE Project Access Justification Study dated April 2014 for further details) and four access points on Girard Blvd.
    - Driveway "A" (on Gibson Blvd. approximately 685 feet [centerline-to-centerline] east of the Gibson Blvd. / Girard Blvd. intersection) should be constructed as a right-in, right-out, left-in only intersection with two entering lanes and one exiting lane. An eastbound right turn deceleration lane and a westbound left turn deceleration lane are warranted on Gibson Blvd. at Driveway "A". Each should be designed and constructed as described on Pages 18 and 19 of this report. Also, the eastbound right turn movement should be designed with a right turn channelized ramp (approximately 75 feet radius) with an add lane to avoid conflict with entering traffic from the westbound left turn movement.
    - Miles Rd. / Girard Blvd. (Driveway "B") (on Girard Blvd. approximately 690 feet [centerline-to-centerline] south of the Gibson Blvd. / Girard Blvd. intersection) should be constructed either as a roundabout or a standard two-way stop controlled intersection to include one free westbound right turn lane and to comply with the recommendations on Page 20 of this report.
    - Driveway "C" (on Girard Blvd. approximately 1,285 feet [centerline-to-centerline] south of the Gibson Blvd. / Girard Blvd. intersection) should be constructed as a full access tee intersection with one entering lane and one exiting lane.
    - Driveway "D" (on Girard Blvd. approximately 2,500 feet [centerline-to-centerline] south of the Gibson Blvd. / Girard Blvd. intersection) should be constructed as a full access tee intersection with one entering lane and one exiting lane.

- Driveway “E” (on Girard Blvd. approximately 3,500 feet [centerline-to-centerline] south of the Gibson Blvd. / Girard Blvd. intersection) should be constructed as a full access tee intersection with one entering lane and one exiting lane.

- **Gibson Blvd. / Girard Blvd.** - Construct northbound dual left turn lanes (400 feet plus transition), two thru lanes, and one exclusive right turn lane (225 feet plus transition). (This may require acquiring right-of-way north of Gibson Blvd. in order to widen the median and align the northbound thru lanes through the intersection.) Lengthen the eastbound right turn lane from 200 feet plus transition to 300 feet plus transition (This will require restriping to take some of the length and width of the existing bike lane) and the westbound left turn lane from 340 feet plus transition to 400 feet plus transition (This will require relocation of a street light pole, an electric pull box, meters, and possibly some landscape irrigation lines.) It may be necessary to reduce the number of southbound lanes on Girard Blvd. south of Gibson Blvd. to accommodate the northbound recommended geometry. This may be necessary, but is not highly recommended.
- **Gibson Blvd. / Carlisle Blvd.** – designate the outside southbound approach land on Carlisle Blvd. at Gibson Blvd. as a right turn only lane with appropriate pavement markings and supplemental signage. Ensure that the right turn overlap phase arrow is operational. Also, obtain a topographic survey of the south leg of Carlisle Blvd. at Gibson Blvd. for the purpose of determining if the northbound left turn lane can be extended within the pavement taper of Carlisle Blvd. Minimum left turn lane width shall be 10.5 feet.

LEGEND

PROPERTY BOUNDARY LINE

SUNPORT PROPERTY LINE

SITE PLAN FOR SUBDIVISION - REQUIRED INFORMATION

THE SITE:
The Site consists of approximately 70.35 acres. The property is bounded on the west by Girard Boulevard, to the north by Gibson Boulevard, to the east by Kirtland AFB, and Albuquerque International Sunport to the south.

ZONING AND PROPOSED USE:
The Site is zoned SU-1 Airport and Related Facilities and is part of the Sunport Master Plan. Land use includes commercial, retail and office along Gibson Boulevard, and industrial, manufacturing, warehousing, and office uses to the south. The property ownership will remain with City of Albuquerque Aviation Department and individual parcels will be leased to users. No subdivision actions are anticipated for this property. Lot lines shown on the site plan are illustrative.

APPLICABLE PLANS: Albuquerque Sunport Master Development Plan governs this site and the rest of the Sunport property.

PEDESTRIAN AND VEHICULAR INGRESS AND EGRESS:

Vehicular Access: The primary access to the ACE property is from Gibson Boulevard, a limited access arterial, and from Girard Boulevard, an urban collector.

Transit - Transit routes 217 and 96 run along Gibson Boulevard and route 222 runs along Girard Boulevard. A bus stop is located in front of this property along Gibson Boulevard and another one is located across the street along Girard Boulevard.

Bicycle Access - The Gibson Trail, a multi-use, paved trail runs along the north side of Gibson Boulevard and south along Girard Boulevard and bike lanes are within the Gibson right-of-way.

Pedestrian Access - Internal sidewalk and pedestrian facilities will be designed consistent with the design guidelines included in this site plan and future site plans for building permits. Six foot sidewalks shall be constructed adjacent to Gibson Boulevard and Girard Boulevard.

BUILDING HEIGHTS AND SETBACKS: Maximum building height for the commercial area along Gibson Boulevard shall be pursuant to the O-1 Zone. The maximum building height for the southern parcels shall be pursuant to the O-1 Zone and Federal Aviation Administration Airspace Review and Regulations (See Design Standards, Section H. Building and Structure Heights).

MAXIMUM FAR/DENSITY: Maximum F.A.R. is .30

LANDSCAPE PLAN:
Landscape plans shall be submitted with future Site Plans for Building Permit and shall be consistent with the Water Conservation Landscaping and Water Waste Ordinance, Pollen Control Ordinance, and the Design Standards (Sheet 2).

PROJECT NUMBER:
Application Number:

This Plan is consistent with the specific Site Development Plan approved by the Environmental Planning Commission (EPC), dated _____ and the Findings and Conditions in the Official Notification of Decision are satisfied.

Is an Infrastructure List required? ( ) Yes ( ) No If yes, then a set of approved DRC plans with a work order is required for any construction within Public Right-of-Way or for construction of public improvements.

Aerial Map

Existing Proposed

- Facility with HOV Potential
- Limited Access Roadway (see Addendum for additional information)
- Principal Arterial
- Minor Arterial
- Collector

Dashed lines indicate proposed alignments.

- Grade Separation
- Interchange
- *Rainbow* Location Study Corridor (where proposed alignments have not been established but are under consideration)
- Subarea (where street network evaluation is in progress)
- Existing Freeway
- Existing-Not to Freeway Standard

Note: Freeways include I-25, I-40 and Paseo del Norte (Eagle Ranch to Louisiana)

NOTE: Major streets are classified according to their anticipated traffic service function, not by the size of the facility. Facilities shown as "Limited Access" have access limitations greater than normally would be anticipated. Subareas and Corridors are identified for the conduct of intensive systems planning and location studies. Facilities are shown as existing if they are officially platted with some right-of-way dedicated, not necessarily the amount needed. Right-of-way standards for streets classified by this map and more detailed information regarding the items noted above are contained in the "Addendum to the Long Range Roadway System for the Albuquerque Urban Area".
