## **I. INTRODUCTION AND SUMMARY**

---

The Kirtland Air Force Base (KAFB) Enhanced Use Leasing (EUL) project is a redevelopment of existing land within the boundaries of KAFB south of Gibson Boulevard between Carlisle and San Mateo Boulevards. The project proposes to move the fence boundary of KAFB south to allow public access to a significant portion of the EUL site. The project area will be a mix of office and flex-space uses along with hotel, restaurant, office, and retail uses that are expected to primarily serve the development. Mixed use residential development will be located above select retail buildings.

A vicinity map is shown in Figure 1 and a conceptual site plan is shown in Figure 2. Final land uses assumptions are not known at this time and the assumptions used in this report are considered conservative approximations of the land uses to be expected on the site.

### **A. STUDY PURPOSE**

The purpose of the traffic study is to determine the impacts of the proposed development on the surrounding roadway network, evaluate the operation of proposed site entrances, and to recommend any mitigation measures that may be necessary to support the additional traffic generated by the proposed development.

### **B. EXECUTIVE SUMMARY**

#### **1. SITE LOCATION AND STUDY AREA**

The study will include analysis of the following intersections:

- Gibson & Carlisle Boulevard (existing signalized intersection)
- Gibson & Maxwell Street (existing signalized intersection)
- Gibson & Quincy Street (existing unsignalized intersection)
- Gibson & Jackson Street (existing unsignalized intersection)
- Gibson & Truman Street (existing signalized intersection)
- Gibson & San Mateo Boulevard (existing signalized intersection)
- 2 Future right-in/right-out only driveways onto Gibson
- 1 Future right-in/right-out only driveway onto Carlisle
- 1 Future right-in only driveway onto Truman

The intersection evaluations include analysis for the AM and PM peak hours for the following traffic conditions:

- Existing traffic (2019)
- 2030 No Build (traffic without proposed development or future road network)
- 2030 Build (traffic with proposed development and future road network)

## 2. PRINCIPAL FINDINGS

The traffic analysis shows that 2 intersections do not operate at acceptable levels of service under existing 2019, 2030 No Build, and 2030 Build, particularly in the PM peak hour.

In the existing condition, the signalized intersections operate at acceptable levels of service with the exception of the Gibson and Truman intersection which operates at LOS F in the PM peak hour. Most intersections also have movements that operate at LOS E in the PM peak hour. It is evident the large employers of the area such as Albuquerque Sunport, KAFB, and Sandia National Laboratories have a tremendous impact on traffic operations.

In the No Build condition, the signalized intersections will continue to operate at acceptable levels of service, except the two intersections of Gibson and Truman and Gibson and Carlisle. Both unsignalized intersections have movements that are expected to degrade from LOS E to LOS F in the PM peak hour.

In the Build condition, the signalized intersections will continue to operate at acceptable levels of service, except the intersections of Gibson and Truman and Gibson and Carlisle. The northbound right movements onto Gibson for traffic exiting the site are generally expected to operate at a poor LOS due to the high level of eastbound through traffic. This is particularly true in the AM peak hour when traffic to KAFB and SNL is in the adjacent eastbound lanes.

Geometric improvements add turn lanes

Traffic operational issues identified at the following signalized intersections are explained in greater detail below.

### a) Maxwell and Gibson

Given the acceptable performance of the Maxwell and Gibson signalized intersection, trips may be diverted from other driveways exiting the site in favor on the Maxwell driveway. This may improve overall operation of other driveways but worsen the operation of the Maxwell driveway. This analysis did not make these adjustment to be consistent with the developed trip distribution and assignments.

b) *Jackson and Gibson*

The Jackson and Gibson unsignalized intersection is proposed to have restricted access with a right in/right out driveway to the proposed development. An eastbound left turn lane may also be considered. Under existing conditions, few vehicles are performing southbound left turns (just six vehicles in the six hours of the count). This is likely due to the large volume of traffic on Gibson, and the availability of alternate routes for those destined to the east.

c) *Truman and Gibson*

The Truman and Gibson signalized intersection operates at a poor LOS in all analysis years due to the available laneage for the trips exiting the KAFB in the PM peak hour. Northbound Truman has a combined through/left lane and a dedicated right turn lane, which requires all northbound through movements to wait behind traffic turning left. To create separate left and through lanes right-of-way acquisition would be required along the northeast block of Truman and Gibson. The resulting impact to business access (Taco Bell/KFC) maybe excessive due to site circulation for those parcels.

3. **RECOMMENDATIONS**

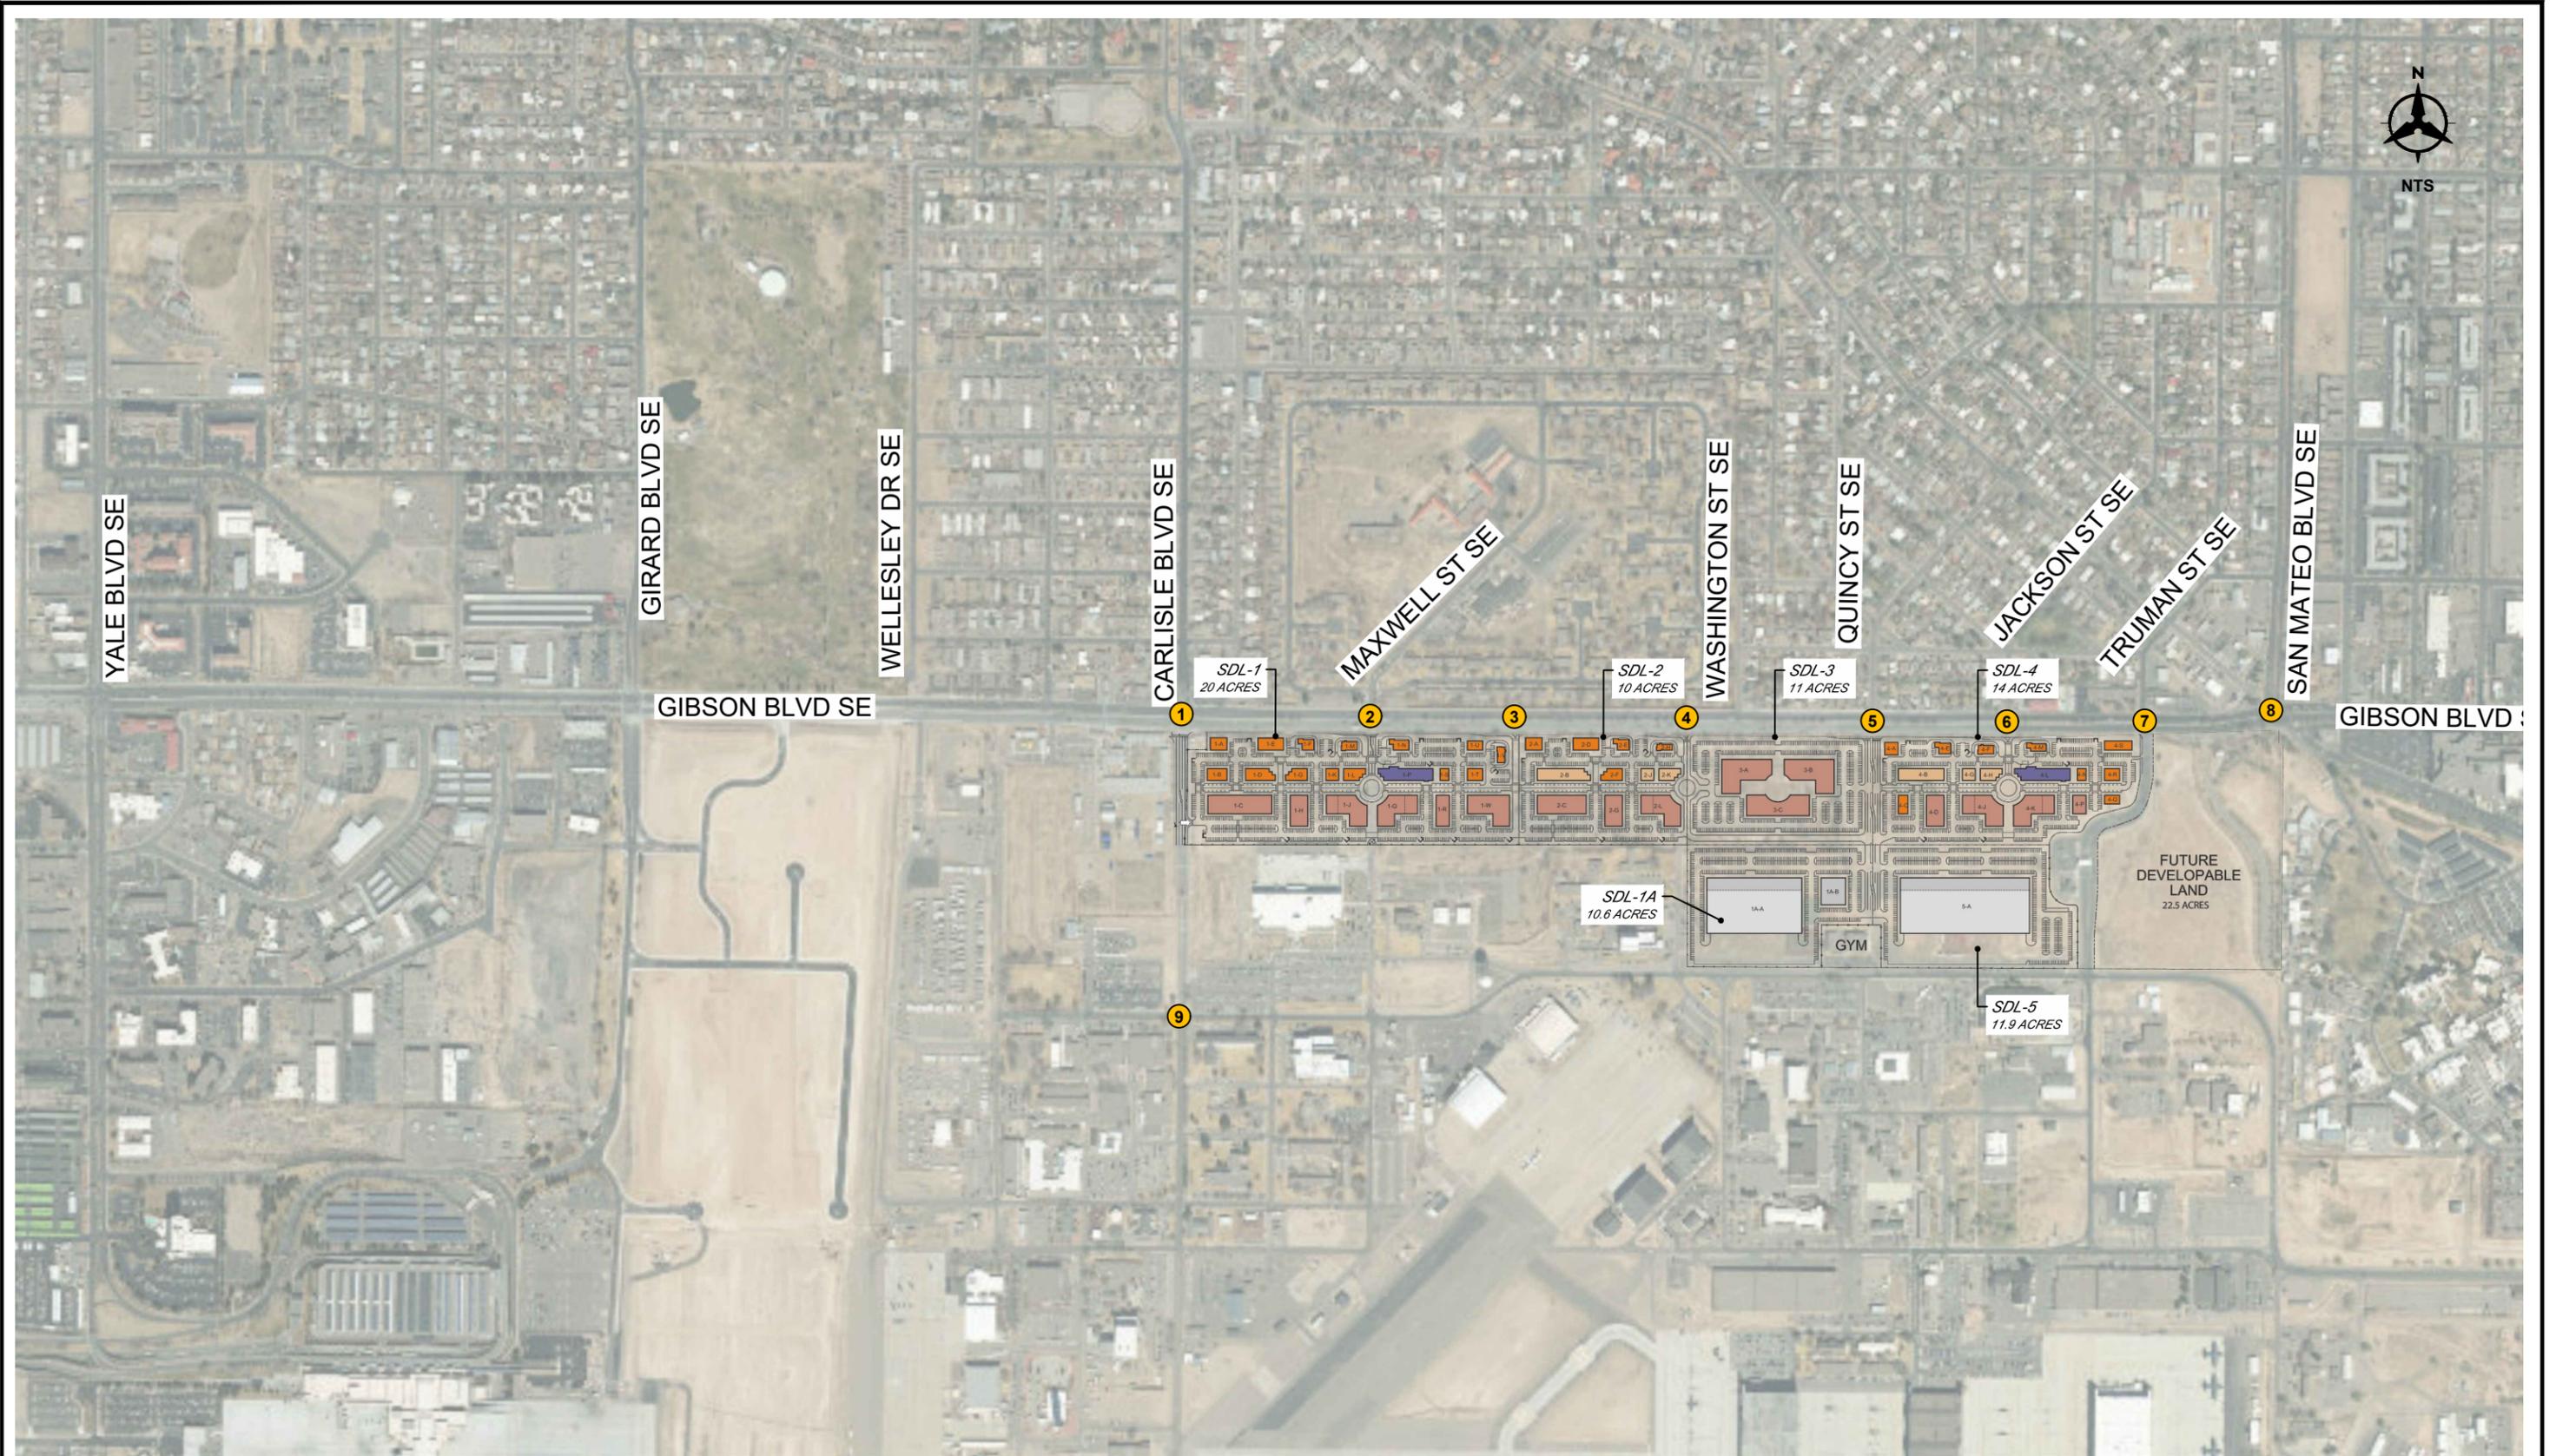

a) *Dedicated Right Turn Lanes*

The addition of dedicated eastbound right turn lanes entering the site is recommended. The City of Albuquerque Development Process Manual indicates a dedicated right turn lane is warranted on roadways with a design speed of 30-40 MPH and turning volume of 50 vehicles per hour.

b) *Quincy and Gibson*

As identified by the site plan, Quincy and Gibson is expected to become a signalized intersection and was evaluated with a signal in the build analysis. The analysis found that peak hour traffic volumes signal warrant is satisfied in AM and PM peak hour for the Quincy intersection. Dual northbound left turn lanes are recommended at the intersection of Quincy and Gibson.

## **II. PROPOSED DEVELOPMENT**

---

### **A. LAND USE AND INTENSITY**

The proposed development will include Retail (high-turnover restaurant, fast food drive-thru, and specialty retail), Employment (office, industrial/manufacturing), Residential (apartments/corporate stay), and Hotel.

The immediately surrounding land uses include the Kirtland Air Force Base and Albuquerque International Sunport to the south, Kirtland Elementary School to the west, Maxwell Family Housing and residential to the north, hospital and clinic uses to the east, and retail throughout.

### **B. DEVELOPMENT PHASING AND TIMING**

Development areas SDL 1, 1A, 2, 3, 4, and 5 are expected to be constructed by the year 2030. The development areas are identified in the site plan shown in Figure 2. Future development land totals 22.5 acres east of Truman. Land use for this area is not identified at this time.

### **C. FUTURE ROADWAY PROJECTS**

The NMDOT Electronic Statewide Transportation Improvement Program (eSTIP) does not indicate any future projects within the vicinity of the project area.

### **III. STUDY AREA CONDITIONS**

---

#### **A. STUDY AREA**

The study will include analysis of the following intersections:

- Gibson & Carlisle Boulevard (existing signalized intersection)
- Gibson & Maxwell Street (existing signalized intersection)
- Gibson & Quincy Street (existing unsignalized intersection)
- Gibson & Jackson Street (existing unsignalized intersection)
- Gibson & Truman Street (existing signalized intersection)
- Gibson & San Mateo Boulevard (existing signalized intersection)
- 2 Future right-in/right-out only driveways onto Gibson
- 1 Future left-in/right-in/right-out only driveway onto Carlisle
- 1 Future right-in only driveway onto Truman

#### **B. SITE ACCESSIBILITY**

The vehicular entrances to the site will be via Maxwell Drive, Quincy Street, and Jackson Street from Gibson Boulevard. Two proposed site entrances will be located on Gibson Boulevard, one proposed site entrance will be located on Carlisle Boulevard, and one proposed entrance will be located on Truman Street.

#### **C. DATA SOURCES**

The data used in this report consist of the traffic counts described below, aerial photography, 2040 Socioeconomic Forecasts from MRCOG, and mapping from Google Earth®.

## **IV. ANALYSIS OF EXISTING CONDITIONS**

---

The site is located south of Gibson Boulevard between Carlisle Boulevard and San Mateo Boulevard. The site is currently a mix of vacant land and a sports complex. The surrounding area consists of Kirtland Air Force Base facilities and the Albuquerque Sunport. North of the site is residential, on the west is Kirtland Elementary School and on the east is the Veteran's Administration Medical Center.

### **A. BACKGROUND**

Roadway federal classification is updated approximately every four years. The classification process involves local governments, the Mid Region Council of Governments (MRCOG), New Mexico Department of Transportation (NMDOT), and the Federal Highway Administration (FHWA). The 2016 MRCOG Roadway Functional Classification Map classifies roadways based on their function. Roadways are subject to design guidance based on their functional classification, design speed, or based on Comprehensive Plan corridor designations.

- Gibson Boulevard is a 6-lane limited access principal arterial providing access to Interstate 25 (I-25) to the west of the site. Gibson ends at Louisiana as an entrance to the Kirtland Air Force Base. Gibson is anticipated to carry the bulk of traffic entering the site, with the largest percentage expected to come via I-25. Gibson is identified as a Commuter Corridor in the Albuquerque/Bernalillo County Comprehensive Plan (2017), which requires the road to “maintain a high level of service for automobiles so they can make long distance trips to regional destinations.”
- Carlisle Boulevard is a 2-lane minor arterial that provides access north of the site to Interstate 40 (I-40). Carlisle is also an entrance to KAFB.
- San Mateo Boulevard is a 4-lane limited access principal arterial that provides access to I-40 on the north and the Veteran's Hospital facility on the south. North of Zuni Road, San Mateo is a six-lane facility.
- Maxwell Avenue, Quincy Street, Jackson Street, and Truman Street are residential streets north of Gibson. Of the four, only Truman currently extends south of Gibson to access KAFB. This project proposes to provide full access to the EUL site via the Maxwell and Quincy intersections and entering from Truman. Maxwell and Truman are currently signalized intersections and the

development levels warrant a traffic signal at the proposed Quincy Street entrance.

**B. EXISTING TRAFFIC CONDITIONS**

Public may not have been in session on May 29th

Traffic counts for the intersections analyzed in the study area were collected on May 29, 2019. All counts were conducted while school was in session. Traffic counts were recorded from 6:00 to 9:00 AM and 4:00 to 7:00 PM. Figure 3 is a summary of the existing peak hour traffic volumes, existing laneage, turning movements, and intersection level of service. Existing traffic counts are included in Appendix A.

The traffic counts included counts for heavy vehicles, pedestrians, and bicyclists.

The *Sixth Edition of the Highway Capacity Manual (HCM)* defines Level of Service (LOS) for un-signalized intersections is as follows:

| Table 1 – LOS Definitions |                                       |                      |                        |
|---------------------------|---------------------------------------|----------------------|------------------------|
| Level of Service          | Definition                            | Signalized (sec/veh) | Unsignalized (sec/veh) |
| A                         | Most vehicles do not stop.            | <10                  | <10                    |
| B                         | Some vehicles stop.                   | >10 and <20          | >10 and <15            |
| C                         | Significant numbers of vehicles stop. | >20 and <35          | >15 and <25            |
| D                         | Many vehicles stop.                   | >35 and <55          | >25 and <35            |
| E                         | Limit of acceptable delay.            | >55 and <80          | >35 and <50            |
| F                         | Unacceptable delay.                   | >80                  | >50                    |

The City of Albuquerque has established LOS D as the generally acceptable level of service in urban areas and when intersections operate below this level, improvements are generally considered, where feasible.

Existing intersection traffic volumes were analyzed using the Synchro version 10 software, that uses the signalized and unsignalized intersection methodology from the Sixth Edition of HCM. The intersections were evaluated as actuated-coordinated traffic signal system with Synchro determining the optimal cycle length (with a maximum of 130 seconds), splits, and offsets. Individual intersection output for the existing conditions analysis is included in Appendix C.

The results are summarized in Table 2 and Table 3, and shown graphically in Figure 3 and Figure 4.

Inquire with Traffic Ops if optimized or actual timing should be used

Results indicate the signalized intersections operate at an overall acceptable LOS which the exception of Gibson and Truman in the PM peak hour. This is due to the large

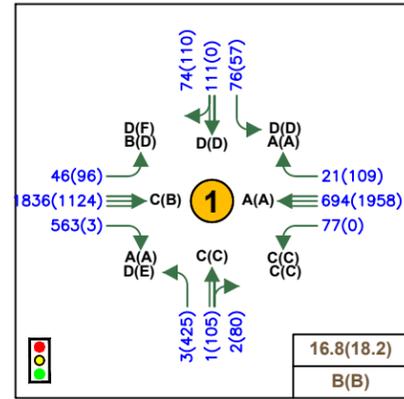

number of trips experiencing delay while exiting northbound. Existing northbound left turn volume exceeds 500 vehicles, well above the level generally considered for dual left turn lanes. Reconstruction of this gate would require realignment of the intersection and right-of-way acquisition.

| <b>Table 2 – 2019 Existing Signalized Intersection Capacity Analysis Results</b> |                     |                |            |                     |                |            |

| Gibson & San Mateo   | 29.8                | 0.99           | C*         | 27.8                | 0.89           | C*         |
| *-movement LOS E<br>**-movement LOS F  |                     |                |            |                     |                |            |

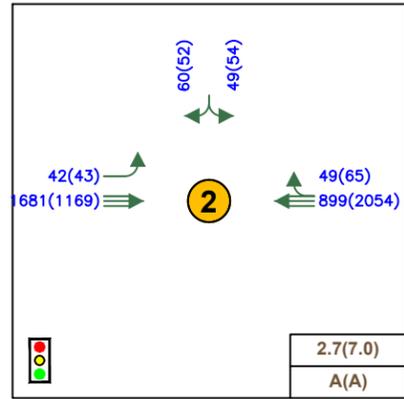

The existing unsignalized intersections operate at an overall acceptable LOS. However, left turn movements in the PM peak hour do not perform well due to the large traffic volumes on Gibson Boulevard.

| <b>Table 3 – 2019 Existing Unsignalized Intersection Results</b>            |                     |            |                    |            |                     |            |                    |            |

## V. PROJECTED TRAFFIC

---

### A. SITE TRAFFIC FORECASTING

#### 1. TRIP GENERATION

Generated trips are broken down into three types; 1) primary, 2) pass-by trips, and 3) diverted link. The Trip Generation report defines these trips as follows:

- **Primary Trips** – These trips are made for the specific purpose of visiting the generator. The stop at that generator is the primary reason for the trip. For example, a home to shopping to home combination of trips is a primary trip set.
- **Pass-by Trips** – These trips are made as intermediate stops on the way from an origin to a primary trip generation. Pass-by trips are attracted from the traffic passing the site on an adjacent street that contains direct access to the generator site. These trips do not require a diversion from another roadway. For example, stopping at the store on the way home from work is an example of a pass-by trip. As the site has a large amount of uses that will be open in the AM peak hour and attract pass-by trips, a pass-by trip reduction of 49% in the AM peak hour and 45% in the PM peak hour was assumed in this analysis to account for non-developed use. These are consistent with guidance in the *Trip Generation Handbook*, 3<sup>rd</sup> Edition,
- **Diverted Linked Trips** – These trips are attracted from the traffic volume on the roadway within the vicinity of the generator, but which require a diversion from that roadway to another roadway to gain access to the site. The roadways could include streets or freeways adjacent to the generator, but without access to the generator. For this study, the diverted link trips have been included in with the primary trips.

This study included primary trips and pass-by trips.

*The Institute of Transportation Engineers Trip Generation Manual, 10<sup>th</sup> Edition* was used to estimate the trips generated by the site. The peak hour of adjacent street rate was used to determine trip generation for this study, which results in slightly more trips than the peak hour of adjacent street equation.

| Table 4 – Trip Generation |         |                               |               |              |            |            |              |
|---------------------------|---------|-------------------------------|---------------|--------------|------------|------------|--------------|
| Land Use                  | Size    | ITE Land Use Type Assumed     | Daily         | AM Enter     | AM Exit    | PM Enter   | PM Exit      |

2. TRIP REDUCTIONS

check entrance throat depth.  
Depth is approx. 225 feet and comply with the DPM. OK

a) Internal Capture

The Transportation Research Board (TRB) National Cooperative Highway Research Program (NCHRP) Report 684 defines methodology for estimating internal trip capture within developments with multiple land uses, such as this project.

A multi-use development, as defined by the ITE *Trip Generation Handbook*, is a single real-estate project that consists of two or more ITE land use classifications between which trips can be made without using the off-site road system.

These internal capture trips are assumed to be completed on the internal street system as vehicular or pedestrian trips. Therefore, these internal trips are not included in those shown in Figure 15 on page 31. These internal trips total 178 in the AM peak hour and 264 in the PM peak hour.

The NCHRP Report 684 spreadsheet model is contained in Appendix C.

b) Pass-by

As described in Section V.A.1, a pass-by trip is made as an intermediate stop on the way from an origin to a primary destination without a route diversion.

The *Trip Generation Handbook* defines the 'Average Pass-by Trip Percentage' by land use type in the Handbook's Appendix E: Database on Pass-by, Diverted, and Primary Trips. The database reports percentages for 25 land uses to derive pass-by estimates. For the purposes of this study, the pass-by percentage obtained from the *Trip Generation Handbook* for retail development is 34%, the pass-by percentage for restaurant development is 43%, and the pass-by percentage for fast food development is 50%.

c) *Transit*

To account for individuals traveling to the site via public transit, 2% of the total new trips were reduced from Residential and Employment land uses.

3. TRIP DISTRIBUTION AND ASSIGNMENT

Trip distribution and assignment was based on standard gravity model methodology using logical trip routing for each land use type. The gravity model utilized socioeconomic data obtained from the Mid-Region Council of Governments, which included population and employment estimates for each subarea within the Albuquerque Metropolitan Planning Area to develop the trip distribution.

The list below

- The hotel distribution assumed all traffic originated from or was destined to I-25. Hotel trips were assigned to enter and exit the site using Maxwell and Quincy driveways.
- The retail distribution used a 2-mile radius around the development site based on population. Retail trips were assigned to enter and exit the site using driveways serving SDL 1, 2, and 4.
- The residential distribution used an inverse relationship to distance and were based on region-wide employment locations by subarea. Residential trips were assigned to enter the site using driveways serving SDL 2 and 4 and exit the site at signalized intersections.
- The employment trips used an inverse relationship to distance and were based on region-wide population locations by subarea. Employment trips were assigned to enter and exit the site using driveways serving SDL 1, 2, 3, 1A, and 4.
- Pass-by trips were assigned driveways serving SDL 1, 2, and 4.

The socioeconomic data for the year 2030 was estimated by interpolating between the 2016 and 2040 socioeconomic data available for MRCOG.

The maps and spreadsheet used to create the modified gravity model is included in Appendix C.

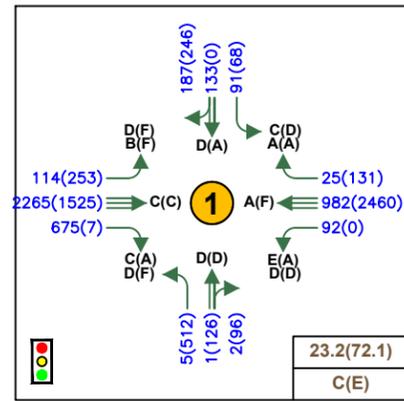

Spreadsheets showing the development of the trips at each intersection for the build scenario are also included in Appendix C. The trip distribution percentages and assigned traffic volumes for the Build analysis is shown in Figure 4 through Figure 13.

#### 4. NO BUILD TRAFFIC PROJECTIONS

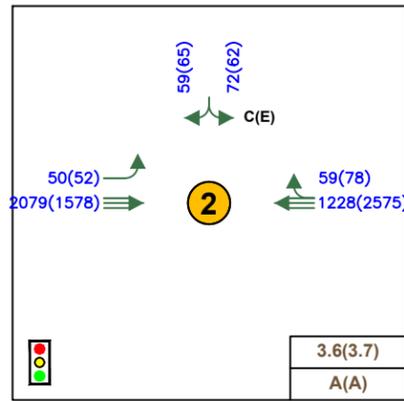

The annual growth was calculated using traffic counts for the years of 2013-2017 from the MRCOG Average Weekday Traffic Map. This analysis found a negative growth rate. To estimate future traffic growth, 1.8% annual growth was applied to the existing turning movements to provide an estimate of potential future growth of traffic on the roadway network. The data and calculations are summarized in spreadsheets included in Appendix C.

Figure 14 on page 28 shows the 2030 No Build Traffic Volumes, number of lanes, and level of service.

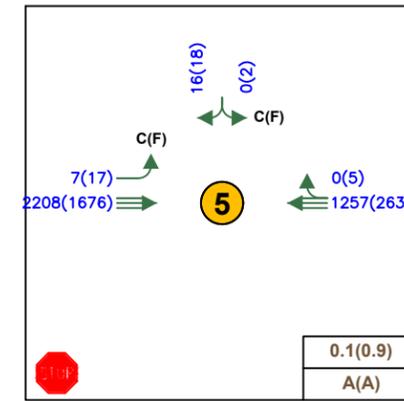

The No Build analysis assumes that the proposed project is not completed.

**VI. TRAFFIC AND IMPROVEMENT ANALYSIS**

The following section will discuss the results of the future year traffic analysis.

**A. LEVEL OF SERVICE ANALYSIS**

**1. 2030 NO BUILD INTERSECTION CAPACITY ANALYSIS**

The No Build analysis assumes the development is not constructed.

For the 2030 No Build scenario, the intersections were analyzed using Synchro 10.

Table 5 and Table 6 shows the 2030 No Build analysis results for signalized and unsignalized intersections respectively. The results are shown graphically in Figure 14. Synchro output is included in Appendix D. The analysis indicates that most signalized intersections will continue to operate as they do currently.

Results indicate that signalized intersections will operate at an overall acceptable LOS with the exception of Truman. Carlisle is expected to degrade to LOS E in the PM peak hour. Several intersections operate at acceptable LOS overall however several have movements that operate at LOS F.

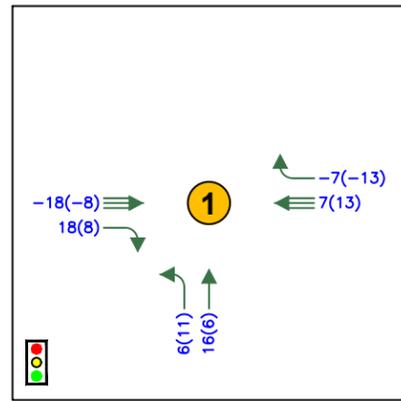

| <b>Table 5 – 2030 No Build Signalized Intersection Capacity Analysis Results</b> |                     |                |            |                     |                |            |
|--|---------------------|----------------|------------|---------------------|----------------|------------|
|  | <b>2030 AM Peak</b> |                |            | <b>2030 PM Peak</b> |                |            |
| <b>Signalized Intersections</b>  | <b>Delay (sec)</b>  | <b>Max V/C</b> | <b>LOS</b> | <b>Delay (sec)</b>  | <b>Max V/C</b> | <b>LOS</b> |
| Gibson & Carlisle  | 23.0                | 0.88           | C*         | 71.1                | 1.37           | E**        |
| Gibson & Maxwell   | 3.6                 | 0.57           | A          | 3.7                 | 0.68           | A          |
| Gibson & Truman  | 21.8                | 0.93           | C**        | 123.4               | 2.42           | F**        |
| Gibson & San Mateo   | 38.2                | 1.08           | D**        | 33.3                | 0.93           | C**        |
| *-movement LOS E<br>**-movement LOS F  |                     |                |            |                     |                |            |

The analysis indicates that most unsignalized intersections will continue to operate as they do currently. The left turn movements are expected to degrade from LOS E to LOS F due to the large traffic volumes on Gibson Boulevard.

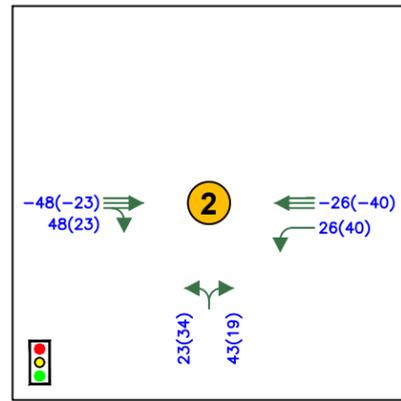

| Table 6 – 2030 No Build Unsignalized Intersection Results                      |              |      |             |     |              |      |             |     |  |

**2. 2030 BUILD INTERSECTION CAPACITY ANALYSIS**

The trips generated by the site (Table 4) were assigned to the intersections using the trip percentages and volumes assigned at each intersection shown in Figure 4 through Figure 13. These trips were added to the 2030 No Build traffic projections in Figure 14.

Figure 15 is a summary of the 2030 Build Peak hour traffic projections, lane geometry, and movement and intersection level of service for the 2030 Build analysis. Table 7 and Table 8 show the 2030 Build analysis results for signalized and unsignalized intersections. Individual intersection output is included in Appendix E.

**Results indicate the signalized intersections will continue to operate as they do in the No Build condition.**

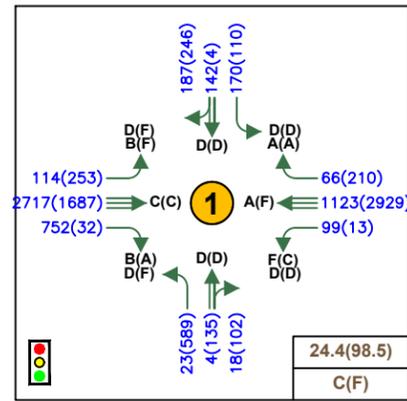

Due to the addition of a northbound leg at the intersection of Quincy and Gibson, a signal warrant analysis was performed. The analysis found that peak hour traffic volumes signal warrant is satisfied in AM and PM peak hour for the Quincy intersection and is expected to operate at an overall acceptable LOS. See the Section VII for further recommendations regarding the Quincy and Gibson intersection. The traffic volume signal warrant analysis is included in Appendix C.

| <b>Table 7 – 2030 Build Signalized Intersection Capacity Analysis Results</b> |                     |                |            |                     |                |            |
|---|---------------------|----------------|------------|---------------------|----------------|------------|
| <b>Signalized Intersections</b>   | <b>2030 AM Peak</b> |                |            | <b>2030 PM Peak</b> |                |            |
|   | <b>Delay (sec)</b>  | <b>Max V/C</b> | <b>LOS</b> | <b>Delay (sec)</b>  | <b>Max V/C</b> | <b>LOS</b> |
| Gibson & Carlisle   | 24.4                | 0.95           | C**        | 98.5                | 1.53           | F**        |
| Gibson & Maxwell  | 4.9                 | 0.67           | A*         | 10.7                | 0.91           | B*         |
| Gibson & Quincy   | 5.2                 | 0.85           | A*         | 18.4                | 0.82           | B*         |
| Gibson & Truman   | 9.8                 | 0.90           | C*         | 158.6               | 2.91           | F**        |
| Gibson & San Mateo  | 44.1                | 1.32           | D**        | 45.4                | 1.07           | D**        |
| *-movement LOS E<br>**-movement LOS F   |                     |                |            |                     |                |            |

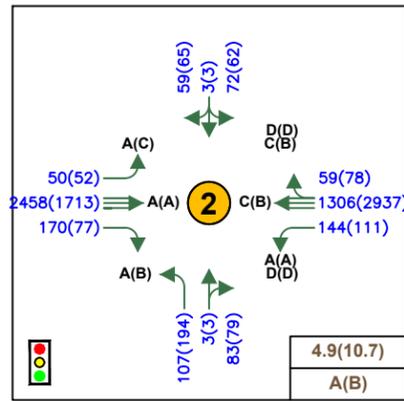

The results indicate that unsignalized intersections are generally expected to operate at acceptable levels of service. The two proposed driveways onto Gibson are expected operate at LOS F for the northbound right movements due to the large traffic volumes on Gibson Boulevard. Queues for these movements are not expected to exceed 4 vehicles.

| <b>Table 8 – 2030 Build Unsignalized Intersection Results</b> |                     |            |                    |            |                     |            |                    |            |
|---|---------------------|------------|--------------------|------------|---------------------|------------|--------------------|------------|

## VII. CONCLUSIONS AND RECOMMENDATIONS

### A. CONCLUSIONS

The traffic analysis shows that 2 intersections do not operate at acceptable levels of service under existing 2019, 2030 No Build, and 2030 Build, particularly in the PM peak hour.

In the existing condition, the signalized intersections operate at acceptable levels of service with the exception of the Gibson and Truman intersection which operates at LOS F in the PM peak hour. Most intersections also have movements that operate at LOS E in the PM peak hour. It is evident the large employers of the area such as Albuquerque Sunport, KAFB, and Sandia National Laboratories have a tremendous impact on traffic operations.

In the No Build condition, the signalized intersections will continue to operate at acceptable levels of service, except the two intersections of Gibson and Truman and Gibson and Carlisle. Both unsignalized intersections have movements that are expected to degrade from LOS E to LOS F in the PM peak hour. Truman and Carlisle have traffic signals

In the Build condition, the signalized intersections will continue to operate at acceptable levels of service, except the intersections of Gibson and Truman and Gibson and Carlisle. The northbound right movements onto Gibson for traffic exiting the site are generally expected to operate at a poor LOS due to the high level of eastbound through traffic. This is particularly true in the AM peak hour when traffic to KAFB and SNL is in the adjacent eastbound lanes.

Traffic operational issues identified at the following signalized intersections are explained in greater detail below.

#### a) Maxwell and Gibson

Given the acceptable performance of the Maxwell and Gibson signalized intersection, trips may be diverted from other driveways exiting the site in favor on the Maxwell driveway. This may improve overall operation of other driveways but worsen the operation of the Maxwell driveway. This analysis did not make these adjustments to be consistent with the developed trip distribution and assignments.

#### b) Jackson and Gibson

The Jackson and Gibson unsignalized intersection is proposed to have restricted access with a right in/right out driveway to the proposed development. An eastbound left

turn lane may also be considered, as this movement has an existing turn lane and has reasonable use, with over 60 vehicles performing this left during the 6-hour traffic count.

Under existing conditions, few vehicles are performing southbound left turns (just six vehicles in the six hours of the count). This is likely due to the large volume of traffic on Gibson, and the availability of alternate routes for those destined to the east.

c) *Truman and Gibson*

The Truman and Gibson signalized intersection operates at a poor LOS in all analysis years due to the available laneage for the trips exiting the KAFB in the PM peak hour. Northbound Truman has a combined through/left lane and a dedicated right turn lane, which requires all northbound through movements to wait behind traffic turning left. To create separate left and through lanes right-of-way acquisition would be required along the northeast block of Truman and Gibson. The resulting impact to business access and site circulation (Taco Bell/KFC) maybe excessive due to the present site circulation for those parcels.

No impacts to the business on the north side,

Reconfigure Truman to be 2-lane SB, 1-thru/right NB, 1-thru NB, dual left NB. (total of 5 lane), Sidewalk on west side only. Section width 65 to 70 feet.

Improve the accesses on Carlisle and Truman into and out of development.

2. **RECOMMENDATIONS**

a) *Dedicated Right Turn Lanes*

The addition of dedicated eastbound right turn lanes entering the site is recommended. The City of Albuquerque Development Process Manual indicates a dedicated right turn lane is warranted on roadways with a design speed of 30-40 MPH and turning volume of 50 vehicles per hour.

b) *Quincy and Gibson*

As identified by the site plan, Quincy and Gibson is expected to become a signalized intersection and was evaluated with a signal in the build analysis. The analysis found that peak hour traffic volumes signal warrant is satisfied in AM and PM peak hour for the Quincy intersection. Dual northbound left turn lanes are recommended at the intersection of Quincy and Gibson.

| Residential  | 8%             | 23%           |
| Hotel  | 4%             | 55%           |

<sup>1</sup>Land Use Codes (LUCs) from *Trip Generation Informational Report*, published by the Institute of Transportation Engineers.

<sup>2</sup>Total estimate for all other land uses at mixed-use development site-not subject to internal trip capture computations in this estimator

<sup>3</sup>Vehicle-trips computed using the mode split and vehicle occupancy values provided in Table 2-A

<sup>4</sup>Person-Trips

\*Indicates computation that has been rounded to the nearest whole number.

Estimation Tool Developed by the Texas Transportation Institute

## MAX Q Growth Rate Determination

AWDT on Carlisle  
(N of Gibson)

| Year | AWDT  |
|------|-------|
| 2013 | 5,933 |
| 2014 | 5,298 |
| 2015 | 5,319 |
| 2016 | 5,335 |
| 2017 | 5,921 |

$$\text{Linear Growth Rate} = \frac{[(5,921 - 5,933)/4]}{5,921} \times 100 = -0.05\%$$

| <i>Regression Output</i> |          |
|--------------------------|----------|
| R Square                 | 0.00     |
| Standard Error           | 3.86E+02 |
| Observations             | 5        |
| Intercept                | 2,942    |
| Std Err of Intercept     | 2.E+05   |
| Coefficient              | 1.30     |
| Std Err of Coefficient   | 122      |

| <u>Projected AWDT</u> |       |
|-----------------------|-------|
| 2013                  | 5,559 |
| 2014                  | 5,560 |
| 2015                  | 5,561 |
| 2016                  | 5,563 |
| 2017                  | 5,564 |
| 2018                  | 5,565 |
| 2019                  | 5,566 |
| 2020                  | 5,568 |
| 2021                  | 5,569 |
| 2022                  | 5,570 |

Regression Equation

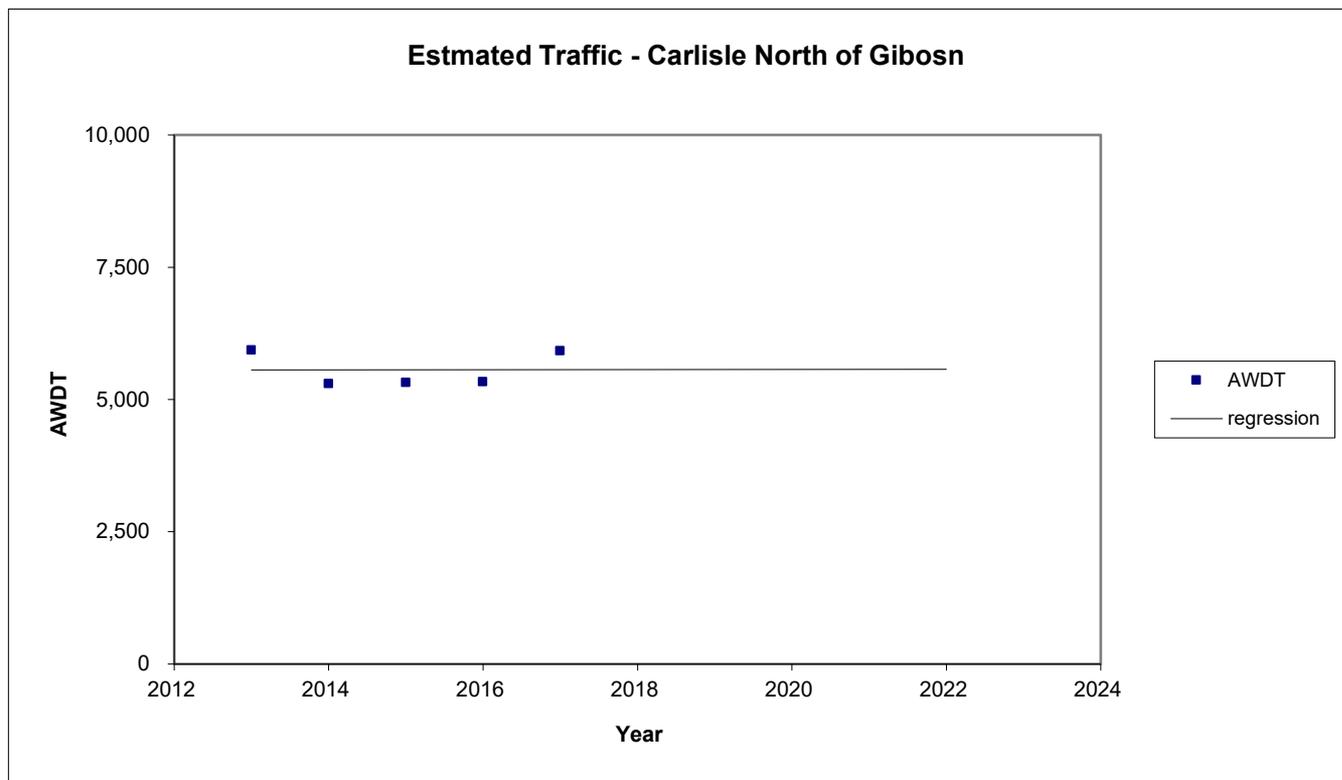

$$\text{AWDT} = 1.30 \times \text{Year} + 2,942$$

Coefficient Growth Rate 0.02%

Estimated Annual Growth Rate

$$\frac{[(5,570 - 5,921)/5,921] \times 100\%}{5} = -5.92\%$$

$$-5.92\% / 5 = -1.18\%$$

## MAX Q Growth Rate Determination

AWDT on Gibson  
(Between Carlisle and an Mateo)

| Year | AWDT   |
|------|--------|
| 2013 | 31,881 |
| 2014 | 30,915 |
| 2015 | 31,038 |
| 2016 | 31,131 |
| 2017 | 35,133 |

Linear Growth Rate =  $\frac{(35,133 - 31,881)/4}{35,133} \times 100 = 2.31\%$

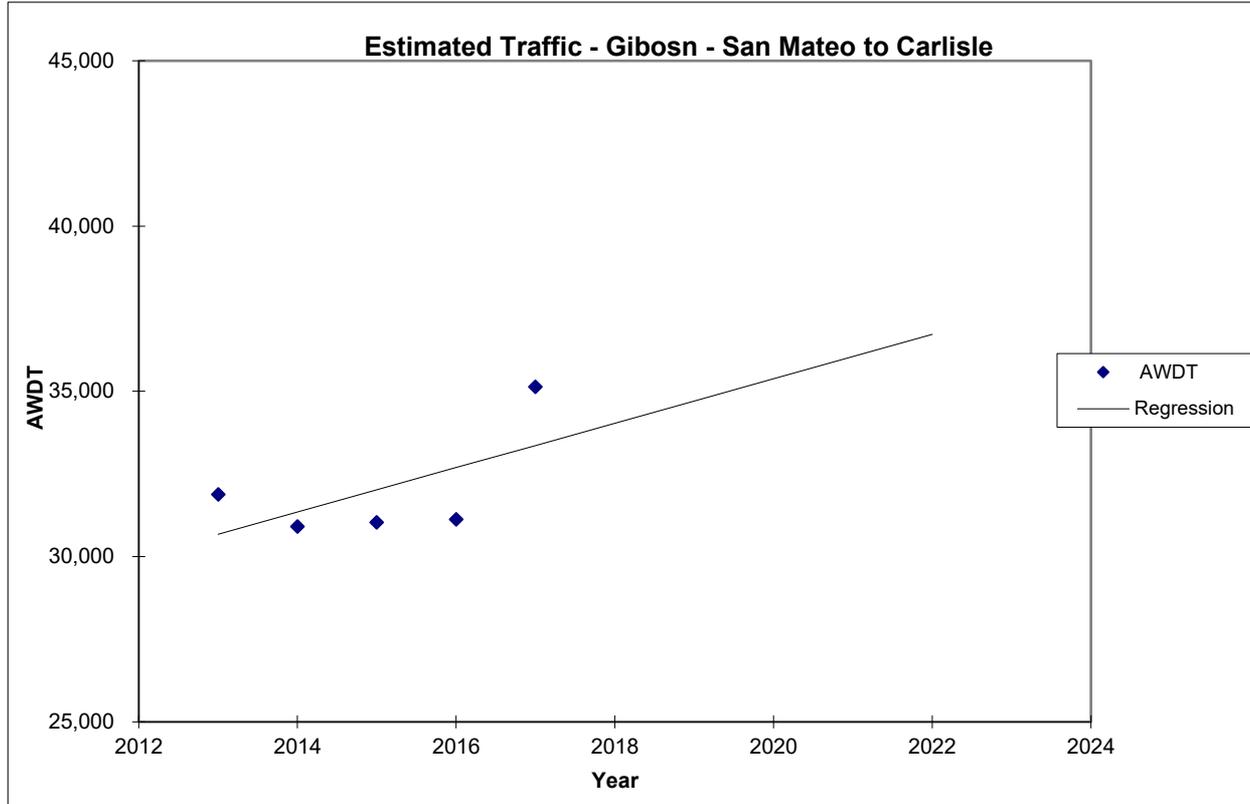

| Regression Output      |            |
|------------------------|------------|
| R Square               | 0.356      |
| Standard Error         | 1.65E+03   |
| Observations           | 5          |
| Intercept              | -1,322,060 |
| Std Err of Intercept   | 1.05E+06   |
| Coefficient            | 672        |
| Std Err of Coefficient | 522        |

| Projected AWDT |        |
|----------------|--------|
| 2013           | 30,676 |
| 2014           | 31,348 |
| 2015           | 32,020 |
| 2016           | 32,692 |
| 2017           | 33,364 |
| 2018           | 34,036 |
| 2019           | 34,708 |
| 2020           | 35,380 |
| 2021           | 36,052 |
| 2022           | 36,724 |

Regression Equation  
AWDT = 672 x Year - 1,322,060

Coefficient Growth Rate 1.91%

Estimated Annual Growth Rate  
 $\frac{((36,724 - 35,133))}{35,133} \times 100\% = 4.53\%$   
 $4.53\% / 5 = 0.91\%$

## MAX Q Growth Rate Determination

AWDT on San Mateo  
(N of Gibson)

| Year | AWDT   |
|------|--------|
| 2013 | 13,154 |
| 2014 | 13,101 |
| 2015 | 13,153 |
| 2016 | 14,105 |
| 2017 | 14,204 |

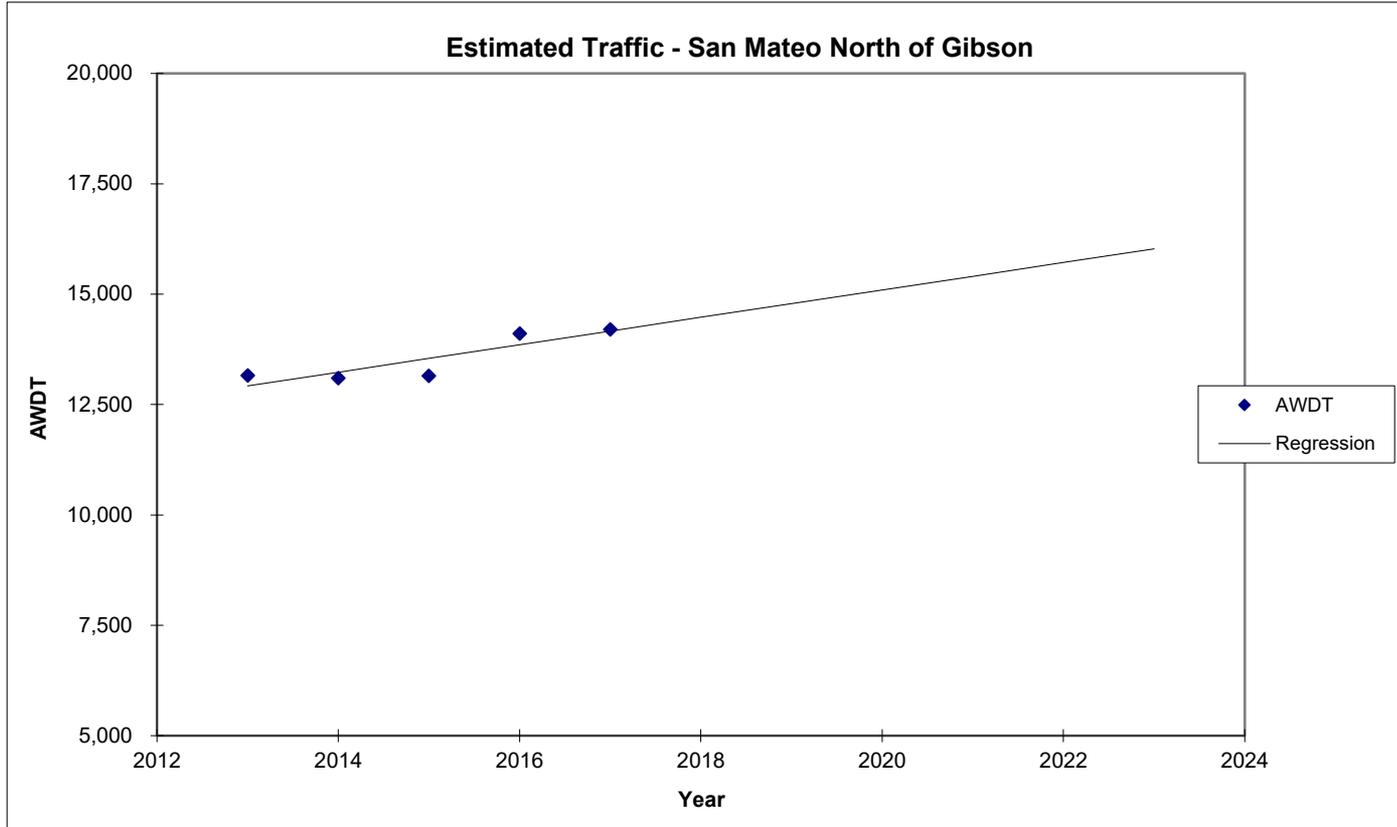

$$\text{Linear Growth Rate} = \frac{(14,204 - 13,154) / 4}{14,204} \times 100 = 1.85\%$$

| <i>Regression Output</i> |          |
|--------------------------|----------|
| R Square                 | 0.77     |
| Standard Error           | 3.10E+02 |
| Observations             | 5        |
| Intercept                | -611,913 |
| Std Err of Intercept     | 197,452  |
| Coefficient              | 310      |
| Std Err of Coefficient   | 9.80E+01 |

| <u>Projected AWDT</u> |        |
|-----------------------|--------|
| 2013                  | 12,923 |
| 2014                  | 13,233 |
| 2015                  | 13,543 |
| 2016                  | 13,854 |
| 2017                  | 14,164 |
| 2018                  | 14,475 |
| 2019                  | 14,785 |
| 2020                  | 15,095 |
| 2021                  | 15,406 |
| 2022                  | 15,716 |
| 2023                  | 16,027 |

Regression Equation  
 $\text{AWDT} = 310 \times \text{Year} - 611,913$       Coefficient Growth Rate 2.19%

Estimated Annual Growth Rate  
 $\frac{(16,027 - 14,204) / 14,204}{5} \times 100\% = 2.57\%$

## MAX Q Growth Rate Determination

AWDT  
ALL

| Year | AWDT   |
|------|--------|
| 2013 | 50,968 |
| 2014 | 49,314 |
| 2015 | 49,510 |
| 2016 | 50,571 |
| 2017 | 55,258 |

Linear Growth Rate =  $\{(55,258-50,968)/4\}/55,258 \times 100 = 1.94\%$

| <i>Regression Output</i> |            |
|--------------------------|------------|
| R Square                 | 0.42       |
| Standard Error           | 2.13E+03   |
| Observations             | 5          |
| Intercept                | -1,931,031 |
| Std Err of Intercept     | 1,357,924  |
| Coefficient              | 984        |
| Std Err of Coefficient   | 6.74E+02   |

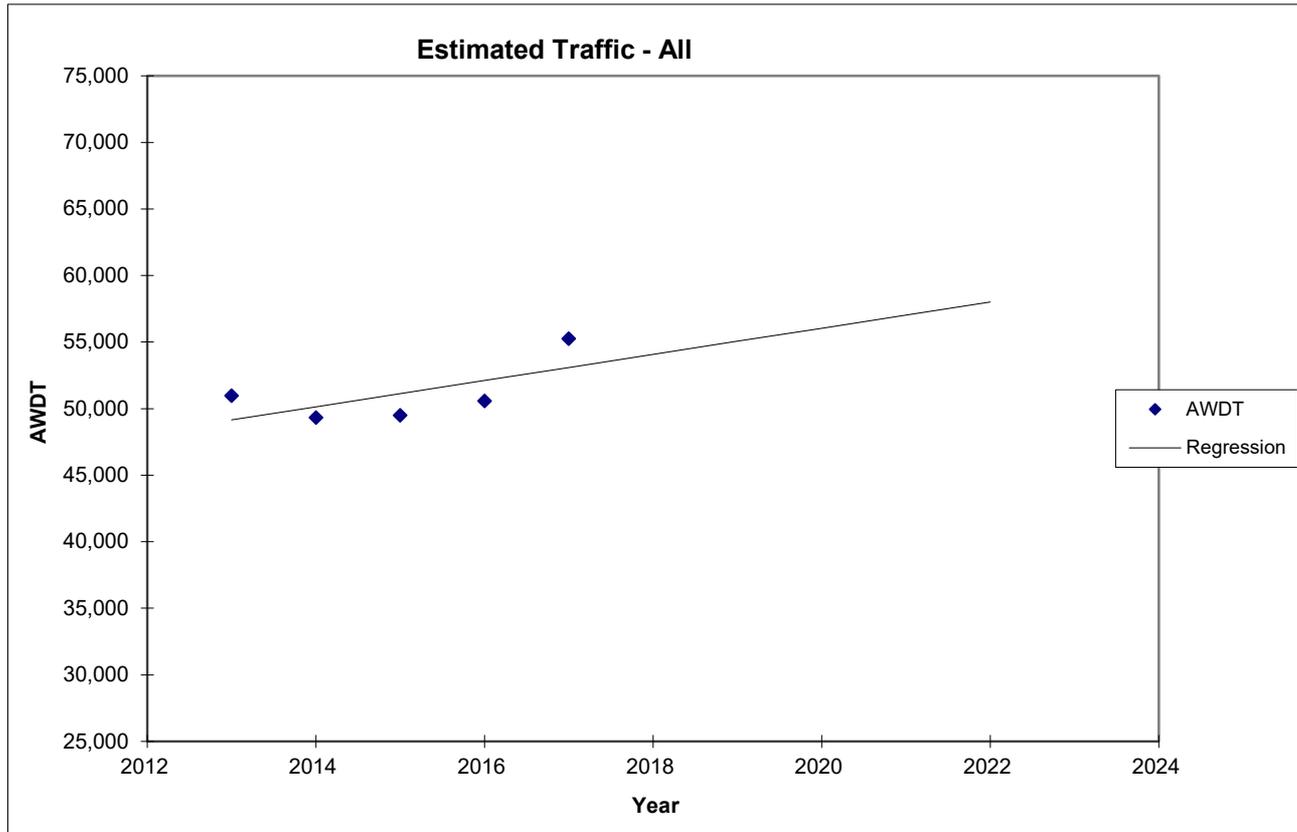

Projected AWDT

|      |        |
|------|--------|
| 2013 | 49,157 |
| 2014 | 50,141 |
| 2015 | 51,124 |
| 2016 | 52,108 |
| 2017 | 53,092 |
| 2018 | 54,075 |
| 2019 | 55,059 |
| 2020 | 56,043 |
| 2021 | 57,026 |
| 2022 | 58,010 |

Regression Equation  
AWDT = 984 x Year - 1,931,031

**USE**  
**Coefficient Growth Rate 1.78%**

Estimated Annual Growth Rate  
 $\{(58,010 - 55,258)/55,258\} \times 100\% = 4.98\%$   
 $4.98\%/4 = 1.00\%$

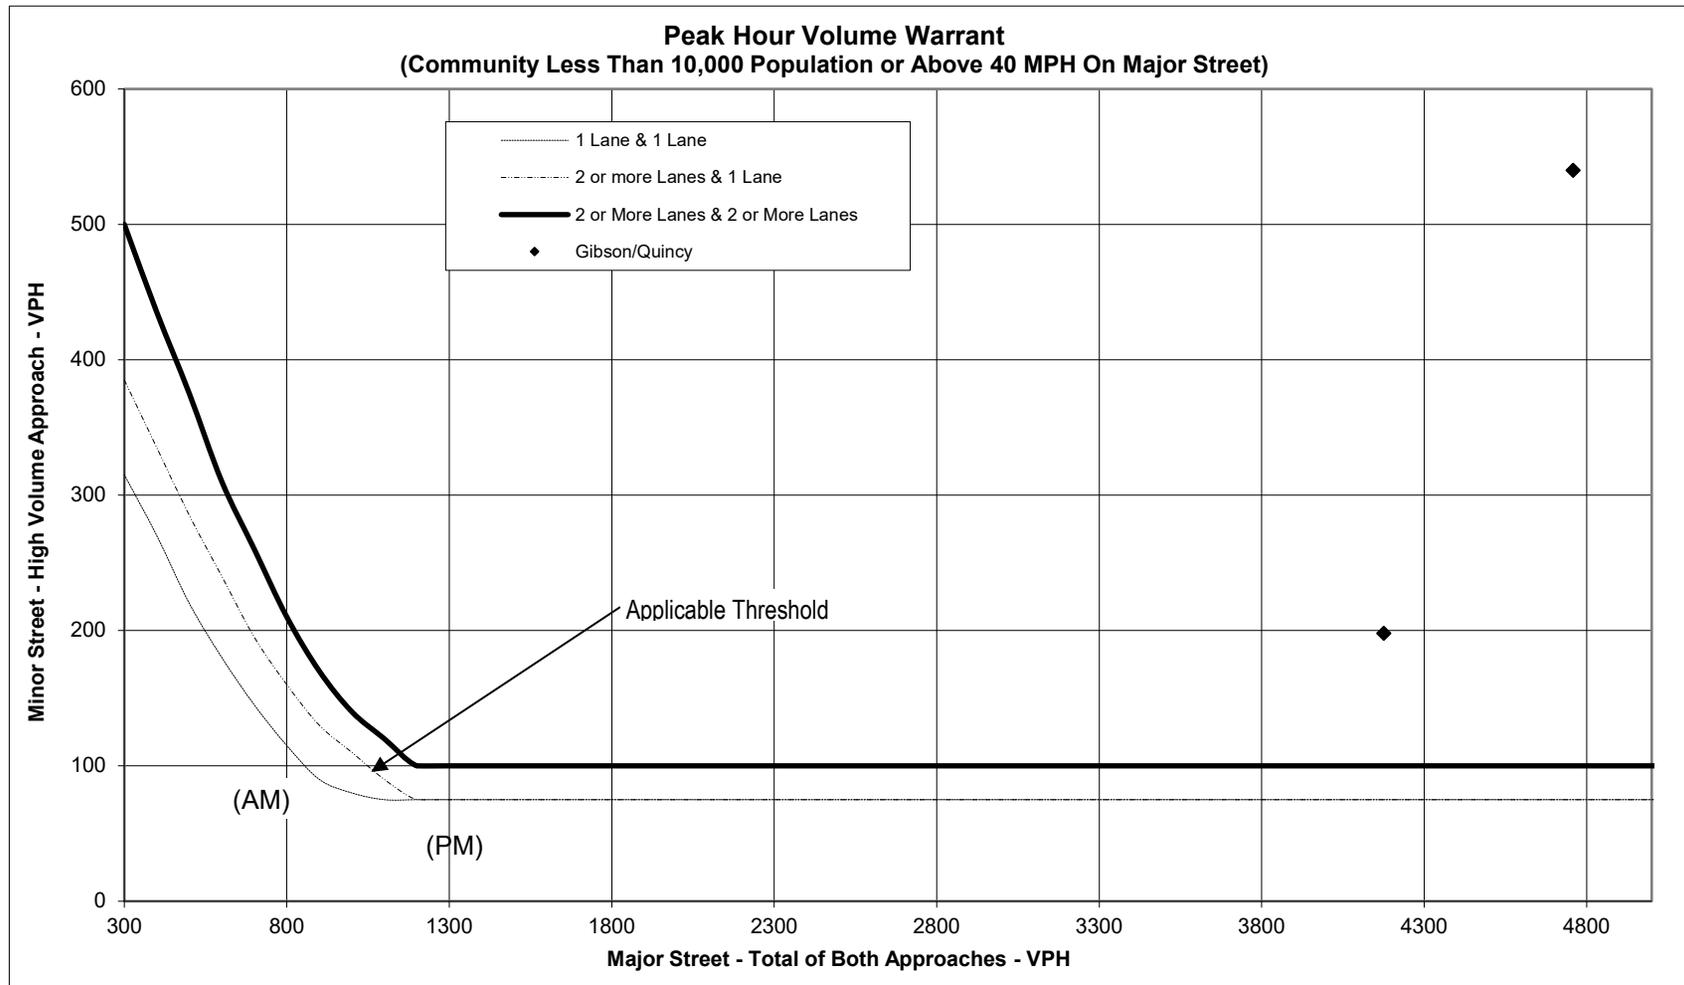

## PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Build Phase 1/2  
 Intersection: Gibson/Quincy  
 Type: 2 or more Lane/1 Lane  
 Major Street (Orientation): Gibson (E/W)  
 Minor Street (Orientation): Quincy (N/S)

| Time    | Minor Street Approach Volume |    |                   | Major Street Approach Volume |       |         | Satisfies Warrant 11? |
|---------|------------------------------|----|-------------------|------------------------------|-------|---------|-----------------------|
|         | NB                           | SB | High Vol Approach | EB                           | WB    | EB + WB |                       |
| AM Peak | 198                          | 16 | 198               | 2,639                        | 1,537 | 4,176   | YES                   |
| PM Peak | 540                          | 20 | 540               | 1,952                        | 2,806 | 4,758   | YES                   |

Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

Intersection Summary

|                    |      |
|--------------------|------|
| HCM 6th Ctrl Delay | 38.2 |
| HCM 6th LOS        | D    |

Notes

User approved volume balancing among the lanes for turning movement.  
 Unsignalized Delay for [NBR] is excluded from calculations of the approach delay and intersection delay.

| HCM 6th Ctrl Delay | 42.3 |
| HCM 6th LOS        | D    |

Notes

User approved volume balancing among the lanes for turning movement.  
 Unsignalized Delay for [NBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

|                    |      |
|--------------------|------|
| HCM 6th Ctrl Delay | 45.4 |
| HCM 6th LOS        | D    |

Notes

User approved volume balancing among the lanes for turning movement.  
 Unsignalized Delay for [NBR] is excluded from calculations of the approach delay and intersection delay.
