RE: Juan Tabo Hills Estates
Drainage Report- Onsite Drainage Analysis, Volume 1 of 3, Addendum 1 (HGL)
Stamp Date: 3/8/2017
Hydrology File- M21D018; DRB# 1005278; CoA Project# 654887

Dear Mr. Hughes:

Based upon the information provided in your submittal received 3/16/17, the Drainage Report cannot be approved for Work Order for construction of the subdivision public improvements as shown in Project# 654887 until the following comments are addressed:

1. The outfall structure from the storm water quality pond into the Tijeras Arroyo needs to be designed and reflected in this report. This outfall will need to include a water quality feature to trap floatables in the pond and comply with AMAFCA's requirements to be protective of the shotcrete scour wall. The current design, as stated in section 4.1 does not explain how floatables are trapped. Plans for this structure may be included in the Work order Set for either Project# 654886 or 654887.

2. Include clarifying language that the berm for the storm water quality pond does not meet the NMOSE's minimum height and storage criteria to be considered a jurisdictional dam.

3. In Section 5, the HGL is stated to be belowground everywhere, however the plans appear to have two areas where the HGL daylights:
   a. The first is at the hammerhead at the south terminus of Cougar Run (SDMH-29). Surcharging here will require a pressure manhole and confirmation that the lowest adjacent house remains 1 foot above the HGL.
   b. The second area is in the open space between Blue Ribbon and Sandia Sunset. Several grates appear to surcharge (Inlets 68, 73, and 72). These should be tack welded to prevent theft; this will also resolve surcharging concerns.

   Please verify the HGL against the proposed grades as shown in plans and update Section 5 and the design accordingly.

Orig: Drainage File

CITY OF ALBUQUERQUE

Richard J. Berry, Mayor

4. The HGL's, velocities, and storm drain slopes (Appendixes 2-11) do not match those reported on the work order plans (Project# 654887). This was noted along the main trunk under Sandia Sunset, but is also apparent in other areas. Resolve these discrepancies to reflect the correct design.

Since the submittal of this Drainage Report on 3/16/17, the following actions have been taken:

- FEMA has approved the CLOMR
- The ESC has been submitted and approved
- The Floodplain Permit has been submitted and approved
- USACE has concurred that the project (within their jurisdiction) is allowed to proceed
- The Grading and Drainage Plan has been approved for Preliminary Plat and Grading Permit.
- Work Order Sets for the bank protection features (Project# 654886) and the subdivision public improvements (Project# 654887) are in DRC, but are not yet approved.

Please inform Mr. Rudy Rael at 924-3977 prior to commencing work in the floodplain. If you have any questions, you can contact me at 924-3695.

1. Purpose & Scope of Report

The purpose of this addendum is to provide detailed hydraulic design calculations of the storm drain for the Infrastructure Plan approval of the Juan Tabo Hills Estates subdivision. The Juan Tabo Hills Estates Onsite Drainage Report Volume 1 of 3 with engineer's stamp dated 2-10-2016 was approved by City Hydrology in a letter written on Feb. 24, 2016. At that time the preliminary storm drain pipe sizes were based on Manning's equation and the pipe slope. The final storm drain pipe sizes as determined by the calculations in this addendum are based on detailed hydraulic analysis. The HGL is shown on the construction plan and profile sheets as it has been calculated using the WSPGW software. See Volume 1 for hydrology, street, and inlet design calculations. The capacities of streets and interception of inlets on grade were included in Volume 1 and have not changed. This addendum also provides the depth of ponding calculations for sump inlets.

2. Other Reports and Approvals

The Juan Tabo Hills Estates project site covers an area of 78 acres. The site was annexed into the City of Albuquerque (COA) in 2007. The Preliminary Plat was approved by the City of Albuquerque Development Review Board on Feb. 24, 2016 and was granted a one year extension by the DRB on Jan 25, 2017.The approved preliminary plat shows the proposed development of about 350 single family residential lots with all public streets and several HOA tracts for landscaping and trails. An Amended G&D plan with engineer's stamp dated Jan. 26, 2017 shows the same streets and storm drain but shows fewer lots. The city hydrology department approved the Amended G&D Plan in a letter that was written on Feb 23, 2017 with the condition that these detailed calculations be provided prior to construction plan approval.

Due to the nature of this site, the project also requires bank protection of the Tijeras Arroyo, a CLOMR and a 404 Permit. These are addressed in separate volumes of this Drainage Analysis Report as listed below:

- *Volume 2: Bank Protection.* This volume addresses the bank protection to prevent lateral migration of the Tijeras Arroyo. A one sheet Preliminary Tijeras Arroyo Bank Protection plan with engineer's stamp dated 3-24-2016 was distributed at the time of preliminary plat approval and contains the scour depth calculations and other design parameters used for the final design of the shotcrete bank protection.
- *Volume 3: CLOMR.* This volume addresses the fill to remove the FEMA floodplain from within the development. The CLOMR was written by FEMA on Nov. 14, 2016 Case No. 16-06-2447R.
- A Pre-Construction Notification was turned into the USACE and the NMED on June 21, 2016 for use of NWPs 7 and 13 (Outfall Structures and Bank Stabilization) as authorized under sections 404 and 401 of the Clean Water Act. The USACE letter dated July 22, 2016 verified that the activities are authorized and assigned Action No. SPA-2012-00299-ABQ.

3. Vicinity Map & Legal Description

Figure 1 below shows the location of the project site. The site is located on Zone Atlas Map M-21.

Legal Description: *Tract of land situated within Sections 33 and 34, Township 10 North, Range 4 East, New Mexico Principal Meridian, City of Albuquerque, Bernalillo County, New Mexico being all of TRACT A, JUAN TABO HILLS WEST, as the same is shown and designated on said plat filed for record in the office of the County Clerk of Bernalillo County, New Mexico on June 14, 2007 in Book 2007C, Page 161 and TRACT 1-A-1, JUAN TABO HILLS, UNIT 2, as the same is shown and designated on said plat filed for record in the office of County Clerk of Bernalillo County, New Mexico on February 20, 2008 in Book 2008C, Page 30.*

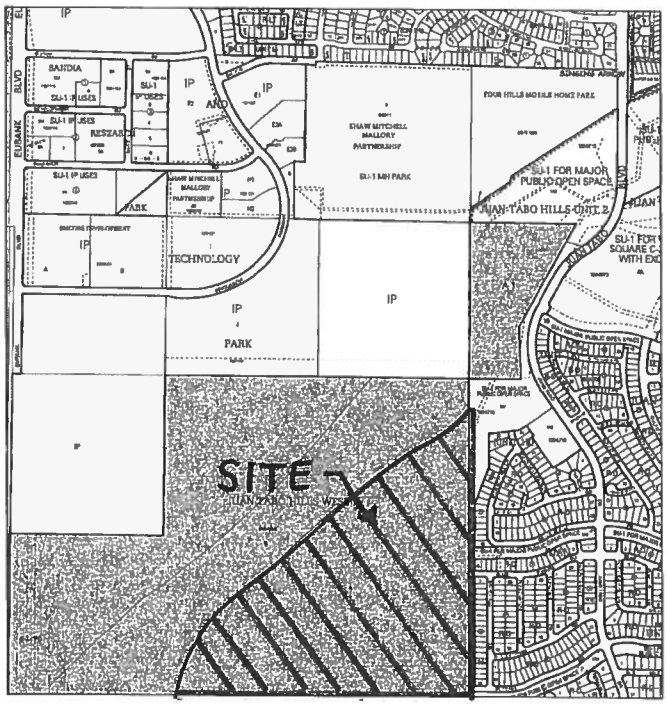

Figure 1: Vicinity Map

4. Storm Drain Changes

The storm drains were changed in three places because of these more detailed design considerations.

1. The outfall pipe from the SWQ pond at the south end of the project changed from 48" to 72" RCP.
2. The outfall pipe just north of Sandia Sunset Ave. changed from a single 96" to double 84" RCP.
3. The storm drain in Rocky Top Drive has been moved farther away from the trunk SAS in response to DRC comments from ABCWUA.

4.1 Cougar Run Outfall

Originally it looked like there was a lot of fall from Cougar Run to the Tijeras Arroyo so it had been anticipated that the first flush volume would be split at SD-MH 31 and discharged into the SWQ pond and then when the pond filled up the pond backwater would cause the peak 100-year flow to bypass the first flush diversion and continue in the 48" pipe to the Tijeras Arroyo outfall. There is not as much fall as originally thought so now all the flow, both first flush and 100-year peak flow rate, will go into the pond in the 48" storm drain from SD-MH 31 and it will pond to the SWQ elevation = 5391.25. A 10' x 10' outlet box will provide a 36' long weir with a crest elevation = 5391.30 and the peak 100-year stage in the pond is determined by the weir equation as follows.

$Q=3.0 \times 36' \times h^{3/2}$

Where $Q_{100}=198.21$ cfs

H=1.50'

So, the peak 100-year stage is 5392.80.

It is customary to provide an emergency overflow spillway sized to discharge the 100-year peak rate of flow entering the pond, and since this 10' x 10' box is sized for that flow rate, an additional spillway is not provided. The Dam top elevation is 5395.00 thus allowing 2.2' of freeboard.

The hydraulic capacity of the 72" pipe is checked using "Headwater Depth for Concrete Pipe Culverts with Inlet Control" nomograph (See Appendix 1) to make sure that it does not cause a headwater elevation higher than the weir equation above.

From the nomograph HW/D= 0.93 for "Groove end with headwall"

so HW= 6' x 0.93 = 5.58'

Where the invert of the pipe out of the box is 5385.0, the HGL at the upstream end of the 72" RCP is 5390.58, well below the weir crest. So, the 72" RCP is more than adequate to handle the 100-year peak rate of flow.

4.2 Sandia Sunset Outfall & Junction Box

The Junction Box on the 84" storm drain located north of Sandia Sunset is designed to divert the First Flush flow rate of 35.37 cfs south in the 30" RCP without overtopping the weir/wall inside the box. The top of wall elevation was set equal to the Headwater elevation as determined by the "Headwater Depth for Concrete Pipe Culverts with Inlet Control" nomograph (See Appendix 1)

From the nomograph HW/D= 1.4 for "Groove end with headwall"

so HW= 2.5' x 1.40 = 3.50'

Where the invert of the 30" RCP is 5405.50, the headwater elevation is 5409.00 and the top of the wall elevation is 5409.10. The wall is 30.5' long and forms a weir that is modeled in the WSPGW software. The reason that the outfall had to be changed to double 84" RCPs is that there is not enough fall through the Junction box to reaccelerate the flow after the incoming

velocity of 30 fps is slowed down by the weir to 7 fps. The pipe flow velocity of 1060.85 cfs is 21 fps in a 96" RCP and 14 fps in the double 84" RCP, a difference of about 4' velocity head, and there is not enough fall to accommodate that loss.
The 30" RCP diversion pipe cannot handle much more flow than the 35.37 cfs First Flush flow rate so that is the flow used in the HGL calculations for the storm drain between the Junction Box and the SWQ pond. The nomograph in appendix 1 was used to check the maximum flow that could be expected in the 30" RCP based on the 100-year HGL of the Sandia Sunset storm drain (5416.59) and inlet control at the 30" RCP the maximum flow would be 85 cfs, but the more limiting condition is backwater in the downstream pipe as given by manning's and the pipe slope as 72 cfs.

5. HGL Calculations

The hydraulic grade line is shown on profile view of the construction plan and profile sheets in Appendix 13, where it may be easily observed that the HGL is below finished grade everywhere. The WSPGW output files are in Appendixes 2 thru 11, and a map showing the stations used in the WSPGW models is in appendix 12.

6. Rip-Rap Design

Plate 3.18-3 in Appendix 13 is used to determine Rip-rap size. Two rip-rap stilling basins are to be constructed at the outlet of the two pipe penetrations. The length and width of the basins is typically equal to 4 times the pipe diameter and the depression of the basins is equal to half the pipe diameter.

Location	Q_{100} (cfs)	D (in)	W & L (ft)	B (ft)	D_{50} (ft)	Rip-rap Type
Sandia Sunset Ave	530 x 2	84	28	3.5	1.5	H
Cougar Run St	190	72	16	2	1.5	H

7. Sump Inlet Calculations

The following table summarizes the sump inlet calculations. All the sump inlets are provided with an emergency overflow, either by overtopping a street water block or by overtopping the curb and draining thru the HOA park to the arroyo. So, the inlets are sized to pass the peak 100-year flow rate while containing the ponding water in the right of way. Note that the lowest right of way elevation is typically 0.2' or more above the top of curb.

Inlet Summary Table

Inlet #	Street Name	Type	Grate Area (SF)	Grate Perimeter (FT)	Q100 (CFS)	Orifice depth[1] (FT)	Weir Depth[2] (FT)	Top of Curb Elevation	100-YR Water Surface Elev. at Sump[3],[4]	Overflow Crest Elevation	Emergency Overflow Depth	Emergency Overflow Elevation	Lowest Adjacent Pad Elevation

30	Cougar Run	5'x5' NMDOT	18.88	20.00	19.61	0.05	0.47	5396.82	5396.75	5396.82			

1) Orifice Equation $Q = 0.6\ A\ (2gh)^{0.5}$ so $h=(Q/.6/A)^2/2/g$

2) Weir Equation $Q = 3\ L\ h^{3/2}$ so $h= (Q/3/L)^{2/3}$

3) The orifice equation is used in accordance with FHA HEC-22, and the height is added to the center of the grate elevation which is 0.72' below the top of curb elevation.

4) The weir equation uses the length and height at the lip of gutter.The lip of gutter elevation is 0.54' below the top of curb and the effective length is = 2 x (Width of Grate) + (Length of curb opening)

5) The Area is calculated by "Hydraulic Tool Box 4.2" in accordance with Federal Highway Administration HEC-22 3rd eddition, Rev Aug., 2013 The effective length is more conservatively calculated.

6) Inlets 45, 46, S6, S7, 23, 24 & 30 have emergency overflow paths over the top of curb and thru the adjacent HOA Tract to the Tijeras Arroyo. Depth is calculated as a 50' wide weir with 3.0 coeficient.

7) The 100 year flow rate at inlets 18 and 19 is doubled because the inlets do not have an overflow path.

8) The rest of the sump inlets have emergency overflow path thru the waterblock at the adjacent intersection and contunue down the public street. Critical depth is assumed.

GRADING NOTES:

1. THE CONTRACTOR(S) MUST COMPLY WITH NPDES TEMPORARY CONSTRUCTION REQUIREMENTS AND OBTAIN A PERMIT. CONTRACTOR SHALL ALSO PROVIDE A COPY OF THE APPLICATION FOR PERMIT AND NOTICE OF TERMINATION TO THE OWNER.
2. THE CONTRACTOR(S) IS RESPONSIBLE FOR PREPARING AND MAINTAINING A SWPPP FOR THE DURATION OF INFRASTRUCTURE CONSTRUCTION AND UNTIL THE CITY OF ALBUQUERQUE ACCEPTS THE PUBLIC INFRASTRUCTURE. CONTRACTOR SHALL PROVIDE THE OWNER WITH A COPY OF THE SWPPP AT THE BEGINNING OF THE PROJECT AND AT THE TIME OF NOTICE OF TERMINATION.
3. THE CONTRACTOR(S) IS RESPONSIBLE FOR CONSTRUCTING AND MAINTAINING EROSION CONTROLS FOR THE DURATION OF THE CONSTRUCTION OF THE PUBLIC INFRASTRUCTURE AND FOR THE REMOVAL OF THE EROSION CONTROLS WHERE DIRECTED TO DO SO BY THE OWNER AT THE TIME OF NOTICE OF TERMINATION.
4. THE CONTRACTOR IS RESPONSIBLE FOR CONSTRUCTION STAKING AND IS TO PROVIDE AN AS-BUILT SURVEY CERTIFIED BY A REGISTERED PROFESSIONAL SURVEYOR TO THE OWNER UPON COMPLETION OF THE CONSTRUCTION. THE EARTHWORK CONTRACTOR IS TO PROVIDE EARTHWORK SURVEY, AND THE WALL BUILDER IS TO PROVIDE WALL SURVEY.
5. EARTHWORK CONTRACTOR SHALL PREPARE ROUGH SUBGRADE FOR THE RETAINING WALL CONSTRUCTION AND PROVIDE SUFFICIENT BACKFILL MATERIAL STOCKPILED ON THE HIGH SIDE OF EACH WALL FOR THE WALL BUILDER TO COMPLETELY BACKFILL THE WALLS.
6. RETAINING WALLS ARE SHOWN FOR GRADING PURPOSES ONLY. RETAINING WALL DESIGN IS TO BE PERFORMED BY OTHERS, AND SHALL BE SUBMITTED TO THE CITY OF ALBUQUERQUE FOR REVIEW, APPROVAL, PERMIT, AND INSPECTION
7. EARTHWORK CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE GEOTECHNICAL INVESTIGATION BY GEOTEST, INC. DATED JUNE 29, 2012.
8. TOPOGRAPHIC AND BOUNDARY SURVEY ARE BY ALDRICH LAND SURVEYING NOVEMBER 2011.
9. BENCHMARK USED IS AGRS BRASS CAP STAMPED "7-M21" HAVING AN ELEVATION OF 5498.07 (NGVD29).
10. FEMA SPECIAL FLOOD HAZARD ZONE ON THIS PROPERTY AS SHOWN ON LOMR CASE NO. 13-06-1053P EFFECTIVE JUNE 17, 2013.

INDEX TO DRAWINGS

SHEET NO.

THE SUBJECT PROPERTY IS LOCATED NEAR A FORMER LANDFILL. DUE TO THE SUBJECT PROPERTY BEING NEAR A FORMER LANDFILL CERTAIN PRECAUTIONARY MEASURES MAY NEED TO BE TAKEN TO ENSURE THE HEALTH AND SAFETY OF THE PUBLIC. RECOMMENDATIONS MADE BY A PROFESSIONAL ENGINEER WITH EXPERTISE IN LANDFILLS AND LANDFILL GAS ISSUES (AS REQUIRED BY THE MOST CURRENT VERSION OF THE INTERIM GUIDELINES FOR DEVELOPMENT WITHIN CITY. DESIGNATED LANDFILL BUFFER ZONES) SHALL BE CONSULTED PRIOR TO DEVELOPMENT OF THE SITE.

VICINITY MAP ZONE ATLAS M-21-Z SCALE: NONE

GENERAL NOTES

NOTICE TO CONTRACTORS

1. AN EXCAVATION/CONSTRUCTION PERMIT WILL BE REQUIRED BEFORE BEGINNING ANY WORK WITHIN THE CITY RIGHT-OF-WAY.
2. ALL WORK DETAILED ON THESE PLANS TO BE PERFORMED UNDER CONTRACT SHALL, EXCEPT AS OTHERWISE STATED OR PROVIDED FOR HEREON, BE CONSTRUCTED IN ACCORDANCE WITH THE CITY OF ALBUQUERQUE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, 1986 EDITION AS REVISED THROUGH UPDATE 9.
3. TWO WORKING DAYS PRIOR TO ANY EXCAVATION, THE CONTRACTOR MUST CONTACT NEW MEXICO ONE CALL SYSTEM (260–1990) FOR LOCATION OF EXISTING UTILITIES.
4. PRIOR TO CONSTRUCTION, THE CONTRACTOR SHALL EXCAVATE AND VERIFY THE HORIZONTAL AND VERTICAL LOCATIONS OF ALL OBSTRUCTIONS. SHOULD A CONFLICT EXIST, THE CONTRACTOR SHALL NOTIFY THE ENGINEER IMMEDIATELY SO THAT THE CONFLICT CAN BE RESOLVED WITH A MINIMUM AMOUNT OF DELAY.
5. SEVEN (7) WORKING DAYS PRIOR TO BEGINNING OF CONSTRUCTION, THE CONTRACTOR SHALL SUBMIT TO CONSTRUCTION COORDINATION DIVISION A DETAILED CONSTRUCTION SCHEDULE. TWO (2) WORKING DAYS PRIOR TO THE START OF CONSTRUCTION, THE CONTRACTOR SHALL OBTAIN A BARRICADING PERMIT FROM THE CONSTRUCTION COORDINATION DIVISION. CONTRACTOR SHALL NOTIFY THE CONSTRUCTION COORDINATION ENGINEER (924–3400) PRIOR TO OCCUPYING AN INTERSECTION. REFER TO SECTION 19 OF THE GENERAL CONDITIONS OF THE STANDARD SPECIFICATIONS.
6. ALL WORK AFFECTING ARTERIAL ROADWAYS REQUIRES TWENTY-FOUR HOUR CONSTRUCTION.
7. ALL STREET STRIPING ALTERED OR DESTROYED SHALL BE REPLACED WITH PLASTIC REFLECTORIZED PAVEMENT MARKING BY CONTRACTOR TO THE SAME LOCATION AS WAS EXISTING, OR AS INDICATED BY THIS PLAN SET.
8. CONTRACTOR SHALL NOTIFY THE ENGINEER NOT LESS THAN SEVEN (7) DAYS PRIOR TO STARTING WORK IN ORDER THAT THE CITY SURVEYOR MAY TAKE NECESSARY MEASURES TO ENSURE THE PRESERVATION OF SURVEY MONUMENTS. CONTRACTOR SHALL NOT DISTURB PERMANENT SURVEY MONUMENTS WITHOUT THE CONSENT OF THE CITY SURVEYOR AND SHALL NOTIFY THE CITY SURVEYOR AND BEAR THE EXPENSE OF REPLACING ANY THAT MAY BE DISTURBED WITHOUT PERMISSION. REPLACEMENT SHALL BE DONE ONLY BY THE CITY SURVEYOR. WHEN A CHANGE IS MADE IN THE FINISHED ELEVATIONS OF THE PAVEMENT OF ANY ROADWAY IN WHICH A PERMANENT SURVEY MONUMENT IS LOCATED, CONTRACTOR SHALL, AT HIS OWN EXPENSE, ADJUST THE MONUMENT COVER TO THE NEW GRADE UNLESS OTHERWISE SPECIFIED. REFER TO SECTION 4.4 OF THE GENERAL CONDITIONS OF THE STANDARD SPECIFICATIONS.
9. CONTRACTOR SHALL RECORD DATA ON ALL UTILITY LINES AND ACCESSORIES AS REQUIRED BY THE CITY OF ALBUQUERQUE FOR THE PREPARATION OF "AS CONSTRUCTED" DRAWINGS. CONTRACTOR SHALL NOT COVER UTILITY LINES AND ACCESSORIES UNTIL ALL DATA HAVE BEEN RECORDED.
10. CONTRACTOR SHALL MAINTAIN A GRAFFITI-FREE WORK SITE. CONTRACTOR SHALL PROMPTLY REMOVE ANY GRAFFITI FROM ALL EQUIPMENT, WHETHER PERMANENT OR TEMPORARY.
11. THE CONTRACTOR SHALL COORDINATE WITH THE WATER AUTHORITY SEVEN (7) DAYS IN ADVANCE OF PERFORMING WORK THAT WILL AFFECT THE PUBLIC WATER OR SANITARY SEWER INFRASTRUCTURE. WORK REQUIRING SHUTOFF OF WELL COLLECTORS, TRANSMISSION LINES, OR FACILITIES DESIGNATED AS MASTER PLAN FACILITIES MUST BE COORDINATED WITH THE WATER AUTHORITY 14 DAYS IN ADVANCE OF PERFORMING SUCH WORK. ONLY WATER AUTHORITY CREWS ARE AUTHORIZED TO OPERATE PUBLIC VALVES. SHUTOFF REQUESTS MUST BE MADE ONLINE AT http://www.abcwua.org/Water_Shut_off_and_Turn_on_Procedures.aspx
12. RCP SHALL BE INSTALLED SO THAT THE JOINT GAP AT THE HOME POSITION SHALL CONFORM TO THE APPROVED MANUFACTURER'S RECOMMENDATIONS. MANUFACTURER'S RECOMMENDED JOINT GAP TOLERANCES FOR EACH PIPE SIZE AND TYPE SHALL BE SUBMITTED TO THE ENGINEER FOR FOR APPROVAL PRIOR TO PLACEMENT OF PIPE. RCP JOINTS SHALL NOT BE GROUTED UNLESS DIRECTED BY THE ENGINEER AFTER CITY APPROVAL.
13. ALL EXCAVATION, TRENCHING, AND SHORING ACTIVITIES MUST BE CARRIED-OUT IN ACCORDANCE WITH OSHA 29 CFR 1926.650 SUBPART P.
14. ELECTRONIC MARKER DEVICE (EMD) WILL BE PLACED ACCORDING TO SECTION 170 OF THE CITY OF ALBUQUERQUE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, 1986 EDITION AS REVISED THROUGH UPDATE AMENDMENT #9.
15. PRIVATE STREETS REQUIRE STREET NAME SIGNS, STOP SIGNS, AND ANY NECESSARY STRIPING (DEVELOPER'S RESPONSIBILITY).
16. CONTRACTOR SHALL ASSUME RESPONSIBILITY FOR ANY DAMAGE TO EXISTING PAVEMENT, PAVEMENT MARKINGS, CURB & GUTTER, SIGNAGE, HANDICAP RAMPS AND SIDEWALK DURING CONSTRUCTION PART FROM THOSE SECTIONS INDICATED FOR REMOVAL ON THE PLANS AND SHALL REPAIR OR REPLACE, PER CITY OF ALBUQUERQUE STANDARDS, AT HIS OWN EXPENSE.

THE FOLLOWING NOTES ALSO APPLY WHEN CHECKED

- [x] ALL UTILITIES AND UTILITY SERVICE LINES SHALL BE INSTALLED PRIOR TO PAVING.
- [x] BACKFILL COMPACTION SHALL BE ACCORDING TO SPECIFIED STREET USE.
- [ ] TACK COAT REQUIREMENTS SHALL BE DETERMINED BY THE ENGINEER.
- [x] SIDEWALK AND WHEELCHAIR RAMPS WITHIN THE CURB RETURNS SHALL BE CONSTRUCTED WHEREVER A NEW CURB RETURN IS CONSTRUCTED.
- [ ] IF CURB IS DEPRESSED FOR A DRIVEPAD, THE DRIVEPAD SHALL BE CONSTRUCTED PRIOR TO ACCEPTANCE OF CURB AND GUTTER.
- [x] ALL STORM DRAINAGE FACILITIES SHALL BE COMPLETED PRIOR TO FINAL ACCEPTANCE.

NOTE:
CONTRACTOR SHALL PROVIDE AND MAINTAIN ALL CONSTRUCTION SIGNING UNTIL PROJECT HAS BEEN ACCEPTED BY THE CITY OF ALBUQUERQUE.

CAUTION:
NOTE THAT ALL EXISTING UTILITIES MAY NOT BE SHOWN. ALL EXISTING SERVICE CONNECTIONS ARE NOT SHOWN. ANY EXISTING UTILITIES THAT ARE SHOWN ARE APPROXIMATE LOCATION ONLY. IT SHALL BE THE SOLE RESPONSIBILITY OF THE CONTRACTOR TO CONTACT ALL THE UTILITY OWNERS AND TO CONDUCT ALL NECESSARY FIELD INVESTIGATIONS PRIOR TO ANY EXCAVATIONS TO DETERMINE THE ACTUAL LOCATION OF UTILITIES AND OTHER IMPROVEMENTS. DISTURBANCE OF EXISTING UTILITIES SHALL BE REPLACED AT THE CONTRACTOR'S EXPENSE.

NOTES

1. THIS PROJECT SITE LIES WITHIN THE 2NR ZONE FOR PADS BETWEEN ELEVATIONS 5065.7 AND 5142.7
2. ALL FIRE HYDRANTS ARE ABCWUA STD. DWG 2340 AND 4' BURY UNLESS OTHERWISE SPECIFIED.
3. ALL METER BOXES ADJACENT TO MOUNTABLE CURB SHALL HAVE DUCTILE IRON METER BOX COVER & LID PER ABCWUA STD. DWG 2368. WATER METER BOX PER ABCWUA STD. DWG #2366. WATER SERVICE PER ABCWUA STD. DWG #2362.
4. ALL FIRE HYDRANTS TO HAVE A 6" GATE VALVE & BOX PER ABCWUA STD. DWG #2326.
5. CONTRACTOR TO USE POLY COATED CMP FOR VALVE BOXES.
6. CONTRACTOR IS NOT TO INSTALL THE STEPS IN THE SAS MANHOLES.
7. ALL SANITARY SEWER MANHOLES PER ABCWUA STD. DWG #2101, #2107 AND #2109.
8. ALL WATER LINES SHALL BE C-900, DR-18, PVC.
9. ALL SEWER LINES SHALL BE SDR-35, PVC.
10. ALL GATE VALVES & VALVES BOXES PER DWG 2326.
11. ALL SEWER SERVICES PER DWG 2125.
12. ALL MAN HOLES SHALL BE PER DWG 2101 FOR TYPE C AND 2102 FOR TYPE E
13. ALL WATER AND SEWER MAINS AND SERVICE LINES SHALL HAVE TRACER WIRE OVER THE TOP OF PIPE.

NOTES

1. THIS PROJECT SITE LIES WITHIN THE 2NR ZONE FOR PADS BETWEEN ELEVATIONS 5065.7 AND 5142.7
2. ALL FIRE HYDRANTS ARE ABCWUA STD. DWG 2140 AND 4' BURY UNLESS OTHERWISE SPECIFIED.
3. ALL METER BOXES ADJACENT TO MOUNTABLE CURB SHALL HAVE DUCTILE IRON METER BOX COVER & LID PER ABCWUA STD. DWG 2368. WATER METER BOX PER ABCWUA STD. DWG #2366; WATER SERVICE PER ABCWUA STD. DWG #2362.
4. ALL FIRE HYDRANTS TO HAVE A 6" GATE VALVE & BOX PER ABCWUA STD. DWG #2329.
5. CONTRACTOR TO USE POLY COATED CMP FOR VALVE BOXES.
6. CONTRACTOR IS NOT TO INSTALL THE STEPS IN THE SAS MANHOLES.
7. ALL SANITARY SEWER MANHOLES PER ABCWUA STD. DWG #2101, #2107 AND #2108.
8. ALL WATER LINES SHALL BE C-900, DR-18, PVC.
9. ALL SEWER LINES SHALL BE SDR-35, PVC.
10. ALL GATE VALVES & VALVES BOXES PER DWG 2326.
11. ALL SEWER SERVICES PER DWG 2125.
12. ALL MAN HOLES SHALL BE PER DWG 2101 FOR TYPE C AND 2102 FOR TYPE E.
13. ALL WATER AND SEWER MAINS AND SERVICE LINES SHALL HAVE TRACER WIRE OVER THE TOP OF PIPE.

NOTES

1. THIS PROJECT SITE LIES WITHIN THE 2WR ZONE FOR PADS BETWEEN ELEVATIONS 5065.7 AND 5142.7
2. ALL FIRE HYDRANTS ARE ABCWUA STD. DWG 2340 AND 4' BURY UNLESS OTHERWISE SPECIFIED.
3. ALL METER BOXES ADJACENT TO MOUNTABLE CURB SHALL HAVE DUCTILE IRON METER BOX COVER & LID PER ABCWUA STD. DWG 2364. WATER METER BOX PER ABCWUA STD. DWG #2366; WATER SERVICE PER ABCWUA STD. DWG #2362.
4. ALL FIRE HYDRANTS TO HAVE A 6" GATE VALVE & BOX PER ABCWUA STD. DWG #2326.
5. CONTRACTOR TO USE POLY COATED CAP FOR VALVE BOXES.
6. CONTRACTOR IS NOT TO INSTALL THE STEPS IN THE SAS MANHOLES
7. ALL SANITARY SEWER MANHOLES PER ABCWUA STD. DWG #2101, #2107 AND #2105.
8. ALL WATER LINES SHALL BE C-900, DR-18, PVC.
9. ALL SEWER LINES SHALL BE SDR-35, PVC.
10. ALL GATE VALVES & VALVES BOXES PER DWG 2326.
11. ALL SEWER SERVICES PER DWG 2125.
12. ALL MAN HOLES SHALL BE PER DWG 2101 FOR TYPE C AND 2102 FOR TYPE E.
13. ALL WATER AND SEWER MAINS AND SERVICE LINES SHALL HAVE TRACER WIRE OVER THE TOP OF PIPE.

GENERAL STRUCTURAL NOTES

1. CODES AND MANUALS:
   International Building Code, 2012 Edition
   ACI 318-05
2. DESIGN LOADS:
   A. Equivalent Fluid Pressure = 32 pcf
   B. Maximum allowable soil bearing pressure: 2,000 psf.
3. GENERAL:
   A. The Contractor shall verify all dimensions in the field.
   B. The Contractor shall be responsible for providing safe and adequate shoring for all parts of the structure during construction.
4. MATERIALS:
   A. Cast-in-place Concrete:
      1. Hardrock Concrete (Unit Wt.=150 pcf)
         a. 4,000 psi @ 28 days (air entrained)
      2. Provide 3/4" chamfer at all exposed edges.
   B. Reinforcing Steel:
      1. All reinforcing steel shall conform to ASTM A615 Grade 60.
      2. Reinforcing steel shall be fabricated and placed in accordance with the Building Code Requirements for Reinforced Concrete ACI 318 and the Standard Manual ACI 315.
      3. Where lapped splices in reinforcing occur, the minimum lap shall be made as follows:
         a. Vertical reinforcing: 30 bar dia. or 18" minimum.
         b. Horizontal reinforcing: 30 bar dia. or 18" minimum.
         c. Horizontal corner bars: 30 bar dia. or 18" minimum.
      4. Concrete cover for reinforcing shall be as follows:
         a. Concrete cast against and permanently exposed to earth ..... 3"
         b. Concrete exposed to earth or weather
            1. Bars larger than No. 5 ..... 2"
            2. Bars No. 5 or smaller ..... 1 1/2"
      5. All horizontal reinforcing in footings, walls and beams shall be continuous around corners or have corner bars of the same size and spacing as the horizontal bars and lap a minimum of 30 bar diameters or 24" minimum.
5. SITE GRADING AND EARTHWORK
   A. Foundation Preparation:
      Building areas shall be completely stripped of vegetation, pavement, existing construction and debris, and soft or muddy areas.
   B. Foundations:
      Overexcavate beneath bottom elevation of all foundations a minimum of one foot. The excavation shall extend a minimum of two feet laterally beyond the edge of all foundations. The exposed bottoms of excavations shall be scarified to a depth of 8", moistened within optimum moisture +/-3%, and compacted to a minimum of 95% of maximum density as determined by ASTM D-1557. The structural fill shall be brought to subgrade within optimum moisture +/-3%, placed in uniform horizontal lifts, 8" max. loose depth, and compacted to a minimum of 95% of maximum density as determined by ASTM D-1557.
   C. Backfill:
      All backfill should be thoroughly mixed within optimum moisture +/-3%, placed in uniform horizontal lifts, 8" max. loose depth, and compacted to a minimum of 95% of maximum density as determined by ASTM D-1557.
   D. Site Drainage:
      Provide positive surface drainage away from foundation excavations during construction.
