1 INTRODUCTION

This Conditional Letter of Map Revision (CLOMR) request is being submitted to communicate proposed modifications to the existing Special Flood Hazard Area (SFHA) along the Sacate Blanco Arroyo within a proposed residential development.

The Sacate Blanco Arroyo flows across the proposed Subdivision by Titan Development (Titan), as shown in Figure 1. Titan is proposing a residential development located south of Amole Mesa Avenue between 98th Street and Unser Boulevard in Southwest Albuquerque, New Mexico. To protect the development from flood waters, a storm drain system consisting of inlets, manholes, and storm drain pipe will be installed and connected to a new detention pond. Within the subdivision site, the Sacate Blanco Arroyo Tributary 3 and Sacate Blanco Diversion Channel are delineated as Federal Emergency Management Agency (FEMA) Zone A Special Flood Hazard Areas (SFHAs) per the FEMA Flood Insurance Rate Map (FIRM) panels 35001C0336H and 35001C0338H, effective August 16, 2012. Development of the site will involve containment of the 1-percent annual chance (100-year) flood discharge within a pipe system and will cause the FIRM panels to be altered. The proposed storm drain system was analyzed using Stormwater Studio software.

This CLOMR is being requested by Bohannan Huston, Inc. (BHI) on behalf of Titan to conditionally revise the FIRM for the City of Albuquerque, Bernalillo County, New Mexico, to reflect the proposed future conditions and show the tie into the downstream effective floodplain. A Letter of Map Revision (LOMR) will be prepared once the project is constructed and record drawings documenting as-built conditions post project are prepared and available to include in the LOMR submittal.

FIGURE 1
VICINITY MAP
TA LANDS SUBDIVISION

DRAWN BY:	DATE: 12/5/2025	
CHECKED BY:	BHI PROJECT NO. 20250012	SHEET NO. 1 OF 1

2 EXPLANATION OF FEMA MT-2 FORMS

FEMA MT-2 forms associated with the CLOMR application are attached (Appendix A). Explanations associated with components of each form are provided below.

2.1 FORM 1

2.1.1 ITEM B.6

Documentation of Endangered Species Act (ESA) compliance is provided by the Phase I Environmental Site Assessment, TA LAND, A +148 Acre Single-Family Residential Development prepared by GeoTek Residential, LLC (Appendix B): "Based on the investigation, this Phase I Environmental Site Assessment has not revealed evidence of a recognized environmental condition in connection with the subject Site. No further investigation is recommended at this time."

2.2 FORM 2 – HYDROLOGY

The effective 100-year discharge for the Sacate Blanco is 238 cubic feet per second (cfs), at the confluence with the Hubbell Channel per the Flood Insurance Study (FIS) for Bernalillo County, New Mexico and Incorporated Areas (revised November 4, 2016). An excerpt from the FIS is attached (Appendix C).

Proposed 100-year discharge rates reaching the storm drain and eventually reaching the pond were calculated using HEC-HMS, version 4.12. Calculations are included in the Drainage Report for the subdivision (Appendix D).

2.3 FORM 2 – HYDRAULICS

2.3.1 ITEM B.1 - REACH TO BE REVISED

All of the effective SFHAs within the subdivision site will be removed because the 100-year flood discharge will be contained within the proposed storm drain. Proposed SFHAs will be added for the ponds, as shown on Figure 2 – Annotated FIRM and Figure 3 – Annotated FIRM.

2.4 FORM 2 – COMMON REGULATORY REQUIREMENTS

2.4.1 ITEM D.1 – PROPERTY OWNER NOTIFICATION

TA Lands is the property owner and CLOMR Requestor for the subject site where there will be increases in Base Floor Elevations (BFEs) (A Zones and X Zones revised to AE Zones for the ponds). Therefore, property owner notification is not necessary.

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study Report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction, and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures in this jurisdiction.

The **projection** used in the preparation of this map was New Mexico State Plane, Central Zone (FIPS 3002). The **horizontal datum** was NAD83, GRS80 spheroid. Differences in datum, spheroid, projection or State Plane zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, N/NGS12
National Geodetic Survey, SSMC-3, #9202
1315 East-West Highway
Silver Spring, Maryland 20910-3282
(301) 713-3242

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at **(301) 713-3242**, or visit their website at http://www.ngs.noaa.gov/.

Base map information shown on this FIRM was provided in digital format by City of Albuquerque, 2010, Bernalillo County, 2004, and 2010, Bureau of Land Management, 2003, National Geodetic Survey, 2003, and United States Geological Survey (USGS), 1999. Additional information was photogrammetrically compiled at a scale of 1:12,000 from U.S. Department of Agriculture aerial photography dated 2009 and Bernalillo County aerial photography dated 1999.

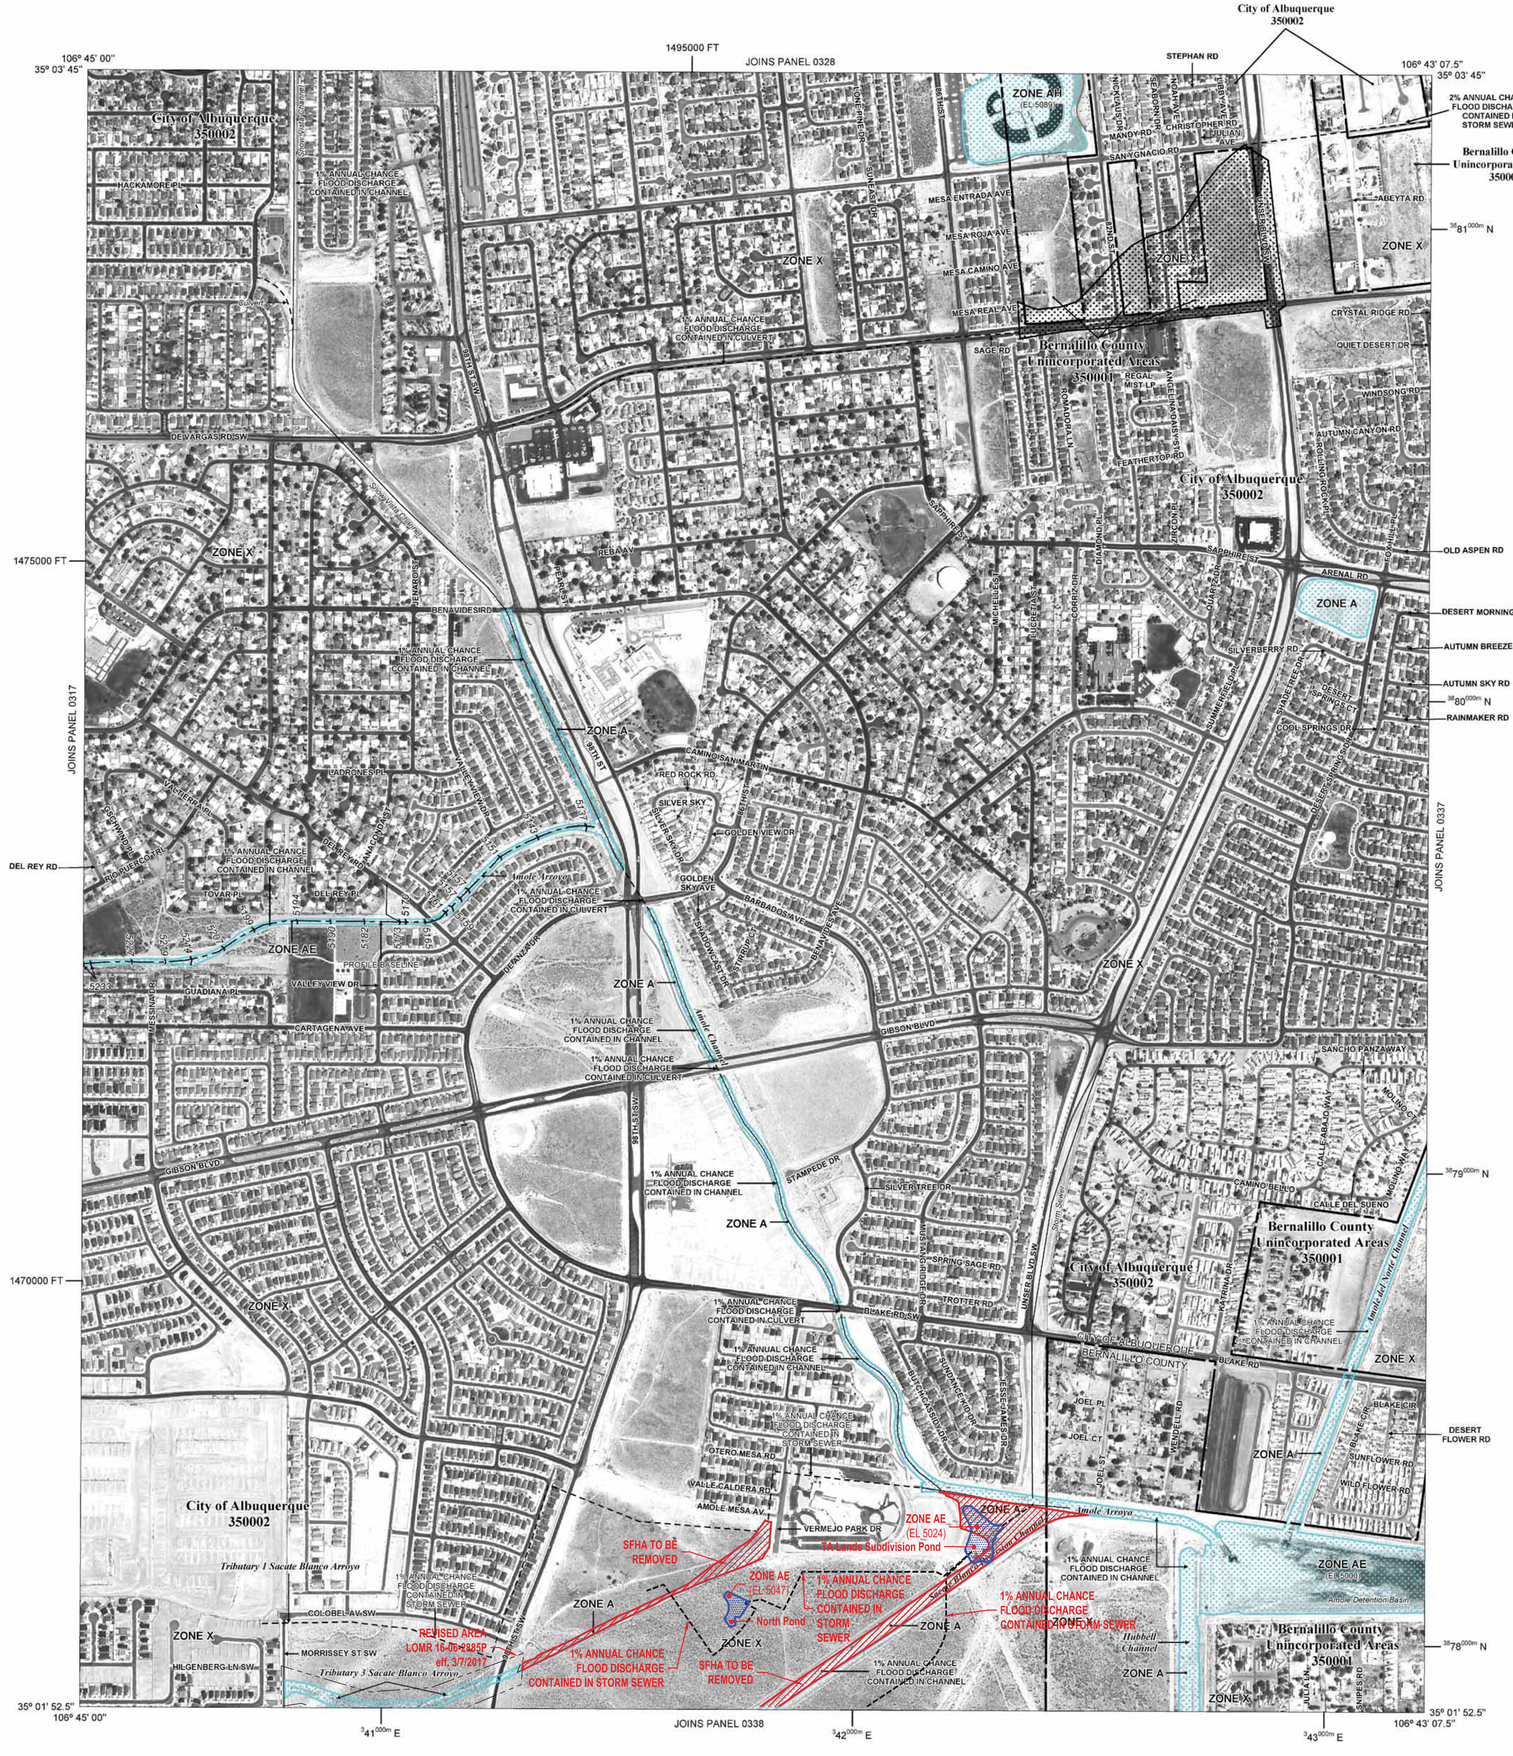
This map reflects more detailed and up-to-date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

For information on available products associated with this FIRM visit the **Map Service Center (MSC)** website at http://msc.fema.gov. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. Many of these products can be ordered or obtained directly from the MSC website.

If you have **questions about this map**, how to order products or the National Flood Insurance Program in general, please call the **FEMA Map Information eXchange (FMIX)** at **1-877-FEMA-MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov/business/nfip.



LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE A	No Base Flood Elevations determined.
ZONE AE	Base Flood Elevations determined.
ZONE AH	Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
ZONE AO	Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
ZONE AR	Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
ZONE A99	Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
ZONE VE	Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X	Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X ZONE D	Areas determined to be outside the 0.2% annual chance floodplain. Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

- 1% annual chance floodplain boundary
- 0.2% annual chance floodplain boundary
- Floodway boundary
- Zone D Boundary
- CBRS and OPA Boundary
- Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.
- 513 — Base Flood Elevation line and value; elevation in feet*
- (EL 987) — Base Flood Elevation value where uniform within zone; elevation in feet*

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study Report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction, and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures in this jurisdiction.

The **projection** used in the preparation of this map was New Mexico State Plane, Central Zone (FIPS 3002). The **horizontal datum** was NAD83, GRS80 spheroid. Differences in datum, spheroid, projection or State Plane zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, N/NGS12
National Geodetic Survey, SSMC-3, #9202
1315 East-West Highway
Silver Spring, Maryland 20910-3282
(301) 713-3242

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at **(301) 713-3242**, or visit their website at http://www.ngs.noaa.gov/.

Base map information shown on this FIRM was provided in digital format by City of Albuquerque, 2010, Bernalillo County, 2004, and 2010, Bureau of Land Management, 2003, National Geodetic Survey, 2003, and United States Geological Survey (USGS), 1999. Additional information was photogrammetrically compiled at a scale of 1:12,000 from U.S. Department of Agriculture aerial photography dated 2009.

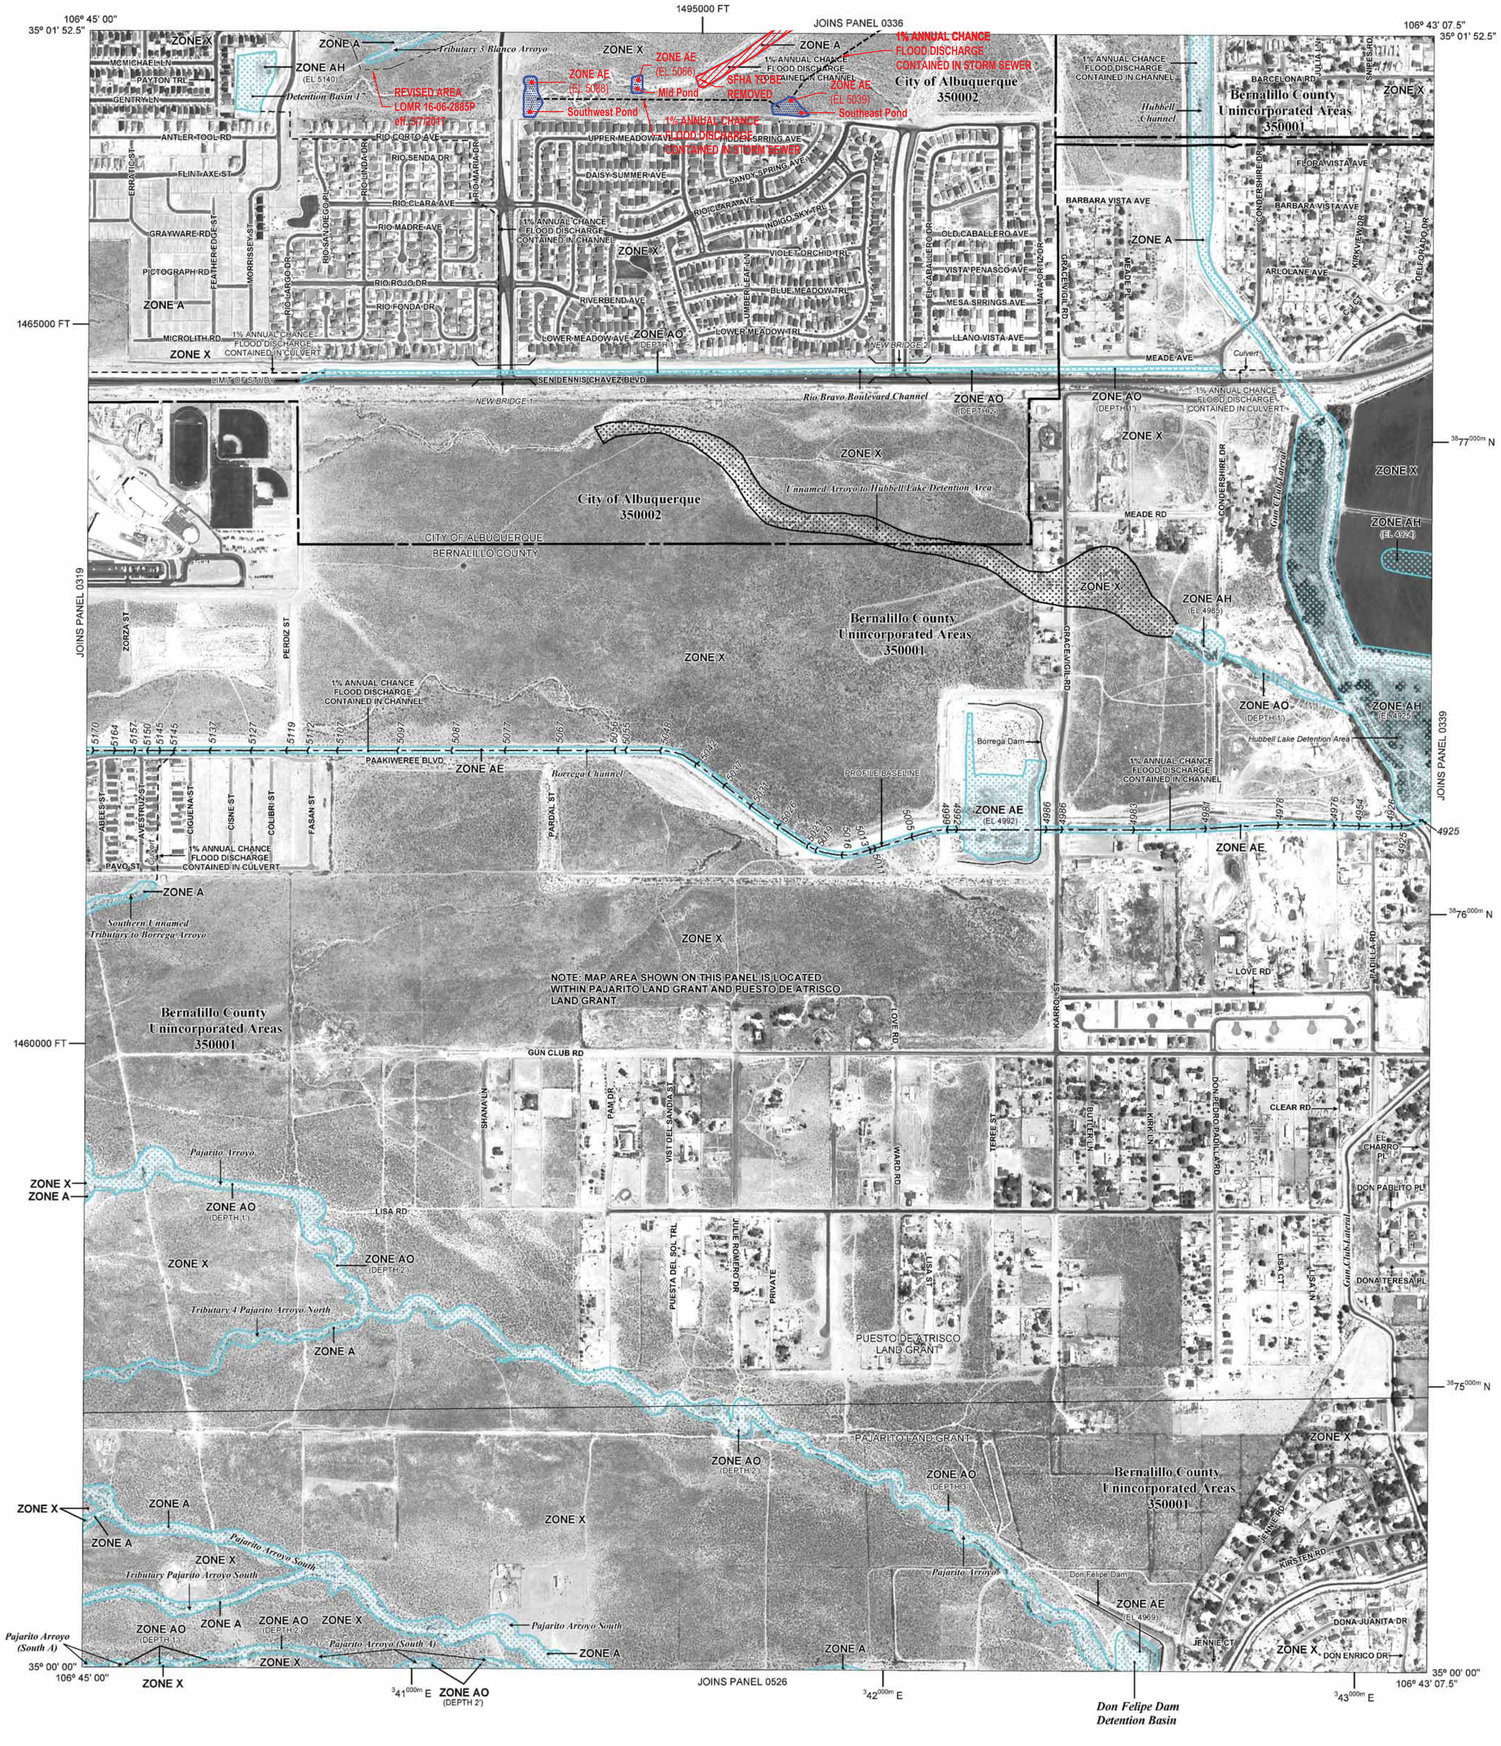
This map reflects more detailed and up-to-date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

For information on available products associated with this FIRM visit the **Map Service Center (MSC)** website at http://msc.fema.gov. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. Many of these products can be ordered or obtained directly from the MSC website.

If you have **questions about this map**, how to order products or the National Flood Insurance Program in general, please call the **FEMA Map Information eXchange (FMIX)** at **1-877-FEMA-MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov/business/nfip.



LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE A	No Base Flood Elevations determined.
ZONE AE	Base Flood Elevations determined.
ZONE AH	Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
ZONE AO	Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
ZONE AR	Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
ZONE A99	Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
ZONE VE	Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X — Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X — Areas determined to be outside the 0.2% annual chance floodplain.
ZONE D — Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

- 1% annual chance floodplain boundary
- 0.2% annual chance floodplain boundary
- Floodway boundary
- Zone D Boundary
- CBRS and OPA Boundary
- Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.

MAP REVISED
AUGUST 16, 2012

Federal Emergency Management Agency

2.4.2 ITEM B.4 - MODELS SUBMITTED

Post-Project Conditions Model – A post-project (or proposed) conditions Stormwater Studio model of the storm drain system is provided.

2.5 FORM 3

2.5.1 ITEM B.4

A sediment transport analysis was not completed because the site will be largely impervious in the post-project condition.

3 HYDRAULIC ANALYSIS RESULTS

The Results from the proposed conditions models are included as Appendix D. The Topographic map and easement information is attached as Figure 4. The revised SFHAs are shown on Figure 2 – Annotated FIRM and Figure 3 – Annotated FIRM.

3.1 STORM DRAIN AND POND DESIGN

The proposed storm drain improvements and pond design are shown on the Preliminary Plans (BHI, October 2025) (Appendix E).

4 CONCLUSION

A CLOMR is sought based on the proposed storm drain design described herein. The proposed storm drain and ponds have been designed in accordance with applicable AMAFCA and COA codes and standards. Impacts to existing floodplain are summarized and the tie into the downstream effective floodplain is shown. A LOMR will be requested from FEMA after construction is complete.

PAPERWORK BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 1 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing, reviewing, and submitting the form. You are not required to respond to this collection of information unless it displays a valid OMB control number. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden to: Information Collections Management, Department of Homeland Security, Federal Emergency Management Agency, 500 C Street, SW, Washington, DC 20472 , Paperwork Reduction Project (1660-0016). Submission of the form is required to obtain or retain benefits under the National Flood Insurance Program. **Please do not send your completed survey to the above address.**

PRIVACY ACT STATEMENT

AUTHORITY: The National Flood Insurance Act of 1968, Public Law 90-448, as amended by the Flood Disaster Protection Act of 1973, Public Law 93-234.
PRINCIPAL PURPOSE(S): This information is being collected for the purpose of determining an applicant's eligibility to request changes to National Flood Insurance Program (NFIP) Flood Insurance Rate Maps (FIRM).
ROUTINE USE(S): The information on this form may be disclosed as generally permitted under 5 U.S.C § 552a(b) of the Privacy Act of 1974, as amended. This includes using this information as necessary and authorized by the routine uses published in DHS/FEMA/NFIP/LOMA-1 National Flood Insurance Program (NFIP); Letter of Map Amendment (LOMA) February 15, 2006, 71 FR 7990.
DISCLOSURE: The disclosure of information on this form is voluntary; however, failure to provide the information requested may delay or prevent FEMA from processing a determination regarding a requested change to a (NFIP) Flood Insurance Rate Maps (FIRM).

A. REQUESTED RESPONSE FROM DHS-FEMA

This request is for a (check one):

☒ CLOMR: A letter from DHS-FEMA commenting on whether a proposed project, if built as proposed, would justify a map revision, or proposed hydrology changes (See 44 CFR Ch. 1, Parts 60, 65 & 72). All CLOMRs require documentation of compliance with the Endangered Species Act. Refer to the Instructions for details.

☐ LOMR: A letter from DHS-FEMA officially revising the current NFIP map to show the changes to floodplains, regulatory floodway or flood elevations. (See 44 CFR Ch. 1, Parts 60, 65 & 72).

B. OVERVIEW

1. The NFIP map panel(s) affected for all impacted communities is (are):

Community No.	Community Name	State	Map No.	Panel No.	Effective Date
350002	City of Albuquerque	NM	35001C	0336H	08/16/2012
350002	City of Albuquerque	NM	35001C	0338H	08/16/2012

2. a. Flooding Source: Tributary 3 Sacate Blanco Arroyo, Sacate Blanco Diversion Channel

b. Types of Flooding: ☒ Riverine ☐ Coastal ☐ Shallow Flooding (e.g., Zones AO and AH) ☐ Alluvial Fan ☐ Lakes ☐ Other (Attach Description)

3. Project Name/Identifier: Tracts 13-D-1 and A-1-C Salazar Family Trust

4. FEMA zone designations (choices: A, AH, AO, A1-A30, A99, AE, AR, V, V1-V30, VE, B, C, D, X)

a. Effective: A

b. Revised: X, AE

5. Basis for Request and Type of Revision:

a. The basis for this revision request is (check all that apply)

☒ Physical Change	☐ Improved Methodology/Data	☐ Regulatory Floodway Revision	☐ Base Map Changes
☐ Coastal Analysis	☒ Hydraulic Analysis	☒ Hydrologic Analysis	☐ Corrections
☐ Weir-Dam Changes	☐ Levee Certification	☐ Alluvial Fan Analysis	☐ Natural Changes
☒ New Topographic Data	☐ Other (Attach Description)		

Note: A photograph and narrative description of the area of concern is not required, but is very helpful during review.

b. The area of revision encompasses the following structures (check all that apply)

Structures: ☒ Channelization	☐ Levee/Floodwall	☐ Bridge/Culvert	
☒ Dam	☐ Fill	☐ Other (Attach Description)	

6. ☒ Documentation of ESA compliance is submitted (required to initiate CLOMR review). Please refer to the instructions for more information.

C. REVIEW FEE

Has the review fee for the appropriate request category been included? ☒ Yes Fee amount: $ 7,000

☐ No, Attach Explanation

- **Please see the DHS-FEMA Web site at http://www.fema.gov/forms-documents-and-software/flood-map-related-fees for Fee Amounts and Exemptions.**

D. SIGNATURES

1. REQUESTOR'S SIGNATURE

All documents submitted in support of this request are correct to the best of my knowledge. I understand that any false statement may be punishable by fine or imprisonment under Title 18 of the United States Code, Section 1001.

Name: Brian Patterson	Company: Titan Development	
Mailing Address: 6300 Riverside Plz Ln NW # 200 Albuquerque NM 87120-2617	Daytime Telephone: (505) 998-0163	Fax No.:
	E-mail Address: bpatterson@titan-development.com	
	Date:	

Signature of Requestor (required):

2. COMMUNITY CONCURRENCE

As the community official responsible for floodplain management, I hereby acknowledge that we have received and reviewed this Letter of Map Revision (LOMR) or conditional LOMR request. Based upon the community's review, we find the completed or proposed project meets or is designed to meet all of the community floodplain management requirements, including the requirements for when fill is placed in the regulatory floodway, and that all necessary Federal, State, and local permits have been, or in the case of a conditional LOMR, will be obtained. For Conditional LOMR requests, the applicant has documented Endangered Species Act (ESA) compliance to FEMA prior to FEMA's review of the Conditional LOMR application. For LOMR requests, I acknowledge that compliance with Sections 9 and 10 of the ESA has been achieved independently of FEMA's process. For actions authorized, funded, or being carried out by Federal or State agencies, documentation from the agency showing its compliance with Section 7(a)(2) of the ESA will be submitted. In addition, we have determined that the land and any existing or proposed structures to be removed from the SFHA are or will be reasonably safe from flooding as defined in 44CFR 65.2(c), and that we have available upon request by FEMA, all analyses and documentation used to make this determination.

Community Official's Name and Title: Tiequan Chen, Floodplain Administrator

Mailing Address: 600 Second NW Albuquerque, NM 87102	Community Name: City of Albuquerque	
	Daytime Telephone: 505-924-3695	Fax No.:
	E-mail Address: tchen@cabq.gov	

Community Official's Signature (required):	Date:

3. CERTIFICATION BY REGISTERED PROFESSIONAL ENGINEER AND/OR LAND SURVEYOR

This certification is to be signed and sealed by a licensed land surveyor, registered professional engineer, or architect authorized by law to certify elevation information data, hydrologic and hydraulic analysis, and any other supporting information as per NFIP regulations paragraph 65.2(b) and as described in the MT-2 Forms Instructions. All documents submitted in support of this request are correct to the best of my knowledge. I understand that any false statement may be punishable by fine or imprisonment under Title 18 of the United States Code, Section 1001.

Certifier's Name: Anna Caffrey	License No.: 18095	Expiration Date: 12/31/2025
Company Name: Bohannan Huston, Inc	Mailing Address: 7500 Jefferson St NE Albuquerque, NM 87109	
Telephone No.: 505-259-3204 Fax No.:		
E-mail Address: acaffrey@bhinc.com		
Signature: Anna Q. Caffrey		Date: 12.5.2025

Ensure the forms that are appropriate to your revision request are included in your submittal.

Form Name and (Number)	Required if …
☒ Riverine Hydrology and Hydraulics Form (Form 2)	New or revised discharges or water-surface elevations
☒ Riverine Structures Form (Form 3)	Channel is modified, addition/revision of bridge/culverts, addition/revision of levee/floodwall, addition/revision of dam
☐ Coastal Analysis Form (Form 4)	New or revised coastal elevations
☐ Coastal Structures Form (Form 5)	Addition/revision of coastal structure
☐ Alluvial Fan Flooding Form (Form 6)	Flood control measures on alluvial fans

Seal (Optional)

Federal Emergency Management Agency

RIVERINE HYDROLOGY & HYDRAULICS FORM (FORM 2)

OMB Control Number: 1660-0016
Expiration: 1/31/2024

PAPERWORK BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 3.5 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing, reviewing, and submitting the form. You are not required to respond to this collection of information unless it displays a valid OMB control number. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden to: Information Collections Management, Department of Homeland Security, Federal Emergency Management Agency, 500 C Street, SW, Washington, DC 20472 , Paperwork Reduction Project (1660-0016). Submission of the form is required to obtain or retain benefits under the National Flood Insurance Program. **Please do not send your completed survey to the above address.**

PRIVACY ACT STATEMENT

AUTHORITY: The National Flood Insurance Act of 1968, Public Law 90-448, as amended by the Flood Disaster Protection Act of 1973, Public Law 93-234.
PRINCIPAL PURPOSE(S): This information is being collected for the purpose of determining an applicant's eligibility to request changes to National Flood Insurance Program (NFIP) Flood Insurance Rate Maps (FIRM).
ROUTINE USE(S): The information on this form may be disclosed as generally permitted under 5 U.S.C § 552a(b) of the Privacy Act of 1974, as amended. This includes using this information as necessary and authorized by the routine uses published in DHS/FEMA/NFIP/LOMA-1 National Flood Insurance Program (NFIP); Letter of Map Amendment (LOMA) February 15, 2006, 71 FR 7990.
DISCLOSURE: The disclosure of information on this form is voluntary; however, failure to provide the information requested may delay or prevent FEMA from processing a determination regarding a requested change to a (NFIP) Flood Insurance Rate Maps (FIRM).

Flooding Source: Tributary 3 Sacate Blanco Arroyo

Note: Fill out one form for each flooding source studied

A. HYDROLOGY

1. Reason for New Hydrologic Analysis (check all that apply):

☐ Not revised (skip to section B) ☒ No existing analysis ☐ Improved data
☐ Alternative methodology ☒ Proposed Conditions (CLOMR) ☐ Changed physical condition of watershed

2. Comparison of Representative 1%-Annual-Chance Discharges

Location	Drainage Area (Sq. Mi.)	Effective/FIS (cfs)	Revised (cfs)
N/A	N/A	N/A	0

3. Methodology for New Hydrologic Analysis (check all that apply)

☒ Precipitation/Runoff Model → Specify Model: HEC-HMS Duration: 24-hour Rainfall Amount: 2.59

☐ Statistical Analysis of Gage Records

☐ Regional Regression Equations ☐ Other (please attach description)

Please enclose all relevant models in digital format, maps, computations (including computation of parameters), and documentation to support the new analysis.

4. Review/Approval of Analysis

If your community requires a regional, state, or federal agency to review the hydrologic analysis, please attach evidence of approval/review. 4. HEC-RAS File Description**:

5. Impacts of Sediment Transport on Hydrology

Is the hydrology for the revised flooding source(s) affected by sediment transport? ☐ Yes ☒ No

If yes, then fill out Section F (Sediment Transport) of Form 3. If No, then attach your explanation.

B. HYDRAULICS

1. Reach to be Revised

	Description	Cross Section	Water-Surface Elevation (ft.)	
			Effective	Proposed/Revised
Downstream Limit*	Vermejo Park Drive	N/A	N/A	N/A
Upstream Limit*	98th Street	N/A	N/A	N/A

*Proposed/Revised elevations must tie-into the Effective elevations within 0.5 foot at the downstream and upstream limits of revision.

2. Hydraulic Method/Model Used: Stormwater Studio

☒ Steady State ☐ Unsteady State ☐ One-Dimensional ☐ Two-Dimentional

3. Pre-Submittal Review of Hydraulic Models*

DHS-FEMA has developed two review programs, CHECK-2 and CHECK-RAS, to aid in the review of HEC-2 and HEC-RAS hydraulic models, respectively. We recommend that you review your HEC-2 and HEC-RAS models with CHECK-2 and CHECK-RAS.

4. HEC-RAS File Description**:

Models Submitted	Natural Run		Floodway Run		Datum
Duplicate Effective Model*	File Name:	Plan Name:	File Name:	Plan Name:	
Corrected Effective Model*	File Name:	Plan Name:	File Name:	Plan Name:	
Existing or Pre-Project Conditions Model	File Name:	Plan Name:	File Name:	Plan Name:	
Revised or Post-Project Conditions Model	File Name:	Plan Name:	File Name:	Plan Name:	
	SD.sws				
Other - (attach description)	File Name:	Plan Name:	File Name:	Plan Name:	

* For details, refer to the corresponding section of the instructions.
**See instructions for information about modeling other then HEC-RAS. ☒ Digital Models Submitted? (Required)

C. MAPPING REQUIREMENTS

A **certified topographic work map** must be submitted showing the following information (where applicable): the boundaries of the effective, existing, and proposed conditions 1%-annual-chance floodplain (for approximate Zone A revisions) or the boundaries of the 1%- and 0.2%-annual-chance floodplains and regulatory floodway (for detailed Zone AE, AO, and AH revisions); location and alignment of all cross sections with stationing control indicated; stream, road, and other alignments (e.g., dams, levees, etc.); current community easements and boundaries; boundaries of the requester's property; certification of a registered professional engineer registered in the subject State; location and description of reference marks; and the referenced vertical datum (NGVD, NAVD, etc.).

Topographic Information: ☒ Digital Mapping (GIS/CADD) Data Submitted (preferred)

Source: CSI-CARTESIAN SURVEYS INC. Date: November 2024

Vertical Datum: NAVD 88 Spatial Projection: NEW MEXICO STATE PLANE

Accuracy: 1-ft contour

Note that the boundaries of the existing or proposed conditions floodplains and regulatory floodway to be shown on the revised FIRM and/or FBFM must tie-in with the effective floodplain and regulatory floodway boundaries. Please attach **a copy of the effective FIRM and/or FBFM**, at the same scale as the original, annotated to show the boundaries of the revised 1%-and 0.2%-annual-chance floodplains and regulatory floodway that tie-in with the boundaries of the effective 1%-and 0.2%-annual-chance floodplain and regulatory floodway at the upstream and downstream limits of the area on revision.

☒ Annotated FIRM and/or FBFM (Required)

D. COMMON REGULATORY REQUIREMENTS*

1. For LOMR/CLOMR requests, do Base Flood Elevations (BFEs) or Special Flood Hazard Areas (SFHAs) increase compared to the effective BFEs? ☒ Yes ☐ No

   If Yes, please attach **proof of property owner notification**. Examples of property owner notifications can be found in the MT-2 Form 2 Instructions.

2. For CLOMR requests, if either of the following is true, please submit **evidence of compliance with Section 65.12 of the NFIP regulations**:

   - The proposed project encroaches upon a regulatory floodway and would result in increases above 0.00 foot compared to pre-project conditions.
   - The proposed project encroaches upon a SFHA with or without BFEs established and would result in increases above 1.00 foot compared to pre-project conditions.

3. Does the request involve the placement or proposed placement of fill? ☐ Yes ☒ No

   If Yes, the community must be able to certify that the area to be removed from the special flood hazard area, to include any structures or proposed structures, meets all of the standards of the local floodplain ordinances, and is reasonably safe from flooding in accordance with the NFIP regulations set forth at 44 CFR 60.3(A)(3), 65.5(a)(4), and 65.6(a)(14). Please see the MT-2 instructions for more information.

4. Does the request involve the placement or proposed placement of fill? ☐ Yes ☒ No

   If Yes, attach **evidence of regulatory floodway revision notification**. As per Paragraph 65.7(b)(1) of the NFIP Regulations, notification is required for requests involving revisions to the regulatory floodway Elements and examples of regulatory floodway revision notification can be found in the MT-2 Form 2 Instructions.

5. For CLOMR requests, please submit documentation to FEMA and the community to show that you have complied with Sections 9 and 10 of the Endangered Species Act (ESA). For actions authorized, funded, or being carried out by Federal or State agencies, please submit documentation from the agency showing its compliance with Section 7(a)(2) of the ESA. Please see the MT-2 instructions for more detail.

Flooding Source: Tributary 3 Sacate Blanco Arroyo

Note: Fill out one form for each flooding source studied

A. GENERAL

Complete the appropriate section(s) for each Structure listed below:

Channelization:	complete Section B
Bridge/Culvert:	complete Section C
Dam:	complete Section D
Levee/Floodwall:	complete Section E
Sediment Transport:	complete Section F (if required)

Description Of Modeled Structure

1. Name of Structure: Storm Drain

   Type (check one): ☒ Channelization ☐ Bridge/Culvert ☐ Levee/Floodwall ☐ Dam

   Location of Structure: Located between 98th Street and Amole Arroyo

   Downstream Limit/Cross Section: Amole Arroyo

   Upstream Limit/Cross Section: 98th Street

2. Name of Structure: _____

   Type (check one): ☐ Channelization ☐ Bridge/Culvert ☐ Levee/Floodwall ☐ Dam

   Location of Structure: _____

   Downstream Limit/Cross Section: _____

   Upstream Limit/Cross Section: _____

3. Name of Structure: _____

   Type (check one): ☐ Channelization ☐ Bridge/Culvert ☐ Levee/Floodwall ☐ Dam

   Location of Structure: _____

   Downstream Limit/Cross Section: _____

   Upstream Limit/Cross Section: _____

NOTE: FOR MORE STRUCTURES, ATTACH ADDITIONAL PAGES AS NEEDED.

B. CHANNELIZATION

Flooding Source: Tributary 3 Sacate Blanco Arroyo

Name of Structure: Storm Drain

1. Hydraulic Considerations

The channel was designated to carry 82 (cfs) and/or the 100 - year flood

The design elevation in the channel is based on (check one):

☐ Subcritical flow ☐ Critical flow ☐ Supercritical flow ☒ Energy grade line

If there is the potential for a hydraulic jump at the following locations, check all that apply and attach an explanation of how the hydraulic jump is controlled without affecting the stability of the channel.

☐ Inlet to channel ☐ Outlet to channel ☐ At Drop Structures ☐ At Transitions

☐ Other locations (specify): _____

2. Channel Design Plans

Attach the plans of the channelization certified by a registered professional engineer, as described in the instructions.

3. Accessory Structures

The channelization includes (check one):

☐ Levees [Attach Section E (Levee/Floodwall)] ☐ Drop structures ☐ Superelevated sections ☐ Energy dissipater

☐ Transitions in cross sectional geometry ☐ Debris basin/detention basin [Attach Section D (Dam/Basin)] ☐ Weir

☐ Other (Describe): _____

4. Sediment Transport Considerations

Are the hydraulics of the channel affected by sediment transport? ☐ Yes ☒ No

If yes, then fill out Section F (Sediment Transport) of Form 3. If No, then attach your explanation for why sediment transport was not considered.

C. BRIDGE/CULVERT

Flooding Source: _____

Name of Structure: _____

1. This revision reflects (check one):

☐ Bridge/Culvert not modeled in the FIS

☐ Modified Bridge/Culvert previously modeled in the FIS

☐ Revised analysis of Bridge/Culvert previously modeled in the FIS

2. Hydraulic model used to analyze the structure (e.g., HEC-2 with special bridge routine, WSPRO, HY8): _____

If different than hydraulic analysis for the flooding source, justify why the hydraulic analysis used for the flooding source could not analyze the structures. Attach justification.

3. Attach plans of the structures certified by a registered professional engineer. The plan detail and information should include the following (check the information that has been provided):

☐ Dimensions (height, width, span, radius, length)
☐ Shape (culverts only)
☐ Material
☐ Beveling and Rounding
☐ Wink Wall Angle
☐ Skew Angle
☐ Distance between Cross Sections
☐ Erosion Protection
☐ Low Chord Elevations - Upstream and Downstream
☐ Top of Road Elevations - Upstream and Downstream
☐ Structure Invert Elevations - Upstream and Downstream
☐ Stream Invert Elevations - Upstream and Downstream
☐ Cross-Section Locations

4. Sediment Transport Considerations

Are the hydraulics of the channel affected by sediment transport? ☐ Yes ☐ No

If yes, then fill out Section F (Sediment Transport) of Form 3. If No, then attach your explanation for why sediment transport was not considered.

D. DAM/BASIN

Flooding Source: _____

Name of Structure: _____

1. This request is for (check one): ☐ Existing Dam/Basin ☐ New Dam/Basin ☐ Modification of existing Dam/Basin

2. The Dam/Basin was designed by (check one): ☐ Federal Agency ☐ State Agency ☐ Private Organization

   ☐ Local Government Agency Name of the Agency or Organization: _____

3. The Dam was permitted as (check one): ☐ Federal Dam ☐ State Dam

   Provide the permit or identification number (ID) for the dam and the appropriate permitting agency or organization

   Permit or ID number _____ Permitting Agency or Organization _____

   a. ☐ Local Government Dam ☐ Private Dam

   Provided related drawings, specification and supporting design information.

4. Does the project involve revised hydrology? ☐ Yes ☐ No

   If Yes, complete the Riverine Hydrology & Hydraulics Form (Form 2).

   Was the dam/basin designed using critical duration storm? (must account for the maximum volume of runoff)

   ☐ Yes, provide supporting documentation with your completed Form 2.

   ☐ No, provide a written explanation and justification for not using the critical duration storm.

5. Does the submittal include debris/sediment yield analysis? ☐ Yes ☐ No

   If Yes, then fill out Section F (Sediment Transport). If No, then attach your explanation for why debris/sediment analysis was not considered?

6. Does the Base Flood Elevation behind the dam/basin or downstream of the dam/basin change? ☐ Yes ☐ No

   If Yes, complete the Riverine Hydrology & Hydraulics Form (Form 2) and complete the table below.

	Stillwater Elevation Behind the Dam/Basin	
FREQUENCY (% annual chance)	FIS	REVISED
10-year (10%)		
50-year (2%)		
100-year (1%)		
500-year (0.2%)		
Normal Pool Elevation		

7. Please attach a copy of the formal Operation and Maintenance Plan

E. LEVEE/FLOODWALL

1. System Elements

   a. This Levee/Floodwall analysis is based on (check one): ☐ Upgrading of an existing levee/floodwall system ☐ A newly constructed levee/floodwall system ☐ Reanalysis of an existing levee/floodwall system

   b. Levee elements and locations are (check one):

   ☐ Earthen embankment, dike, berm, etc Stationed _____ to _____

   ☐ Structured floodwall Stationed _____ to _____

   ☐ Other (describe): _____ Stationed _____ to _____

E. LEVEE/FLOODWALL (CONTINUED)

c. Structural Type (check one): ☐ Monolithic cast-in place reinforced concrete ☐ Reinforced concrete masonry block ☐ Sheet piling ☐ Other (describe): _____

d. Has this levee/floodwall system been certified by a Federal agency to provide protection from the base flood?

☐ Yes ☐ No

If Yes, by which agency? _____

e. Attach certified drawings containing the following information (indicate drawing sheet numbers):

1. Plan of the levee embankment and floodwall structures. Sheet Numbers: _____
2. A profile of the levee/floodwall system showing the Base Flood Elevation (BFE), levee and/or wall crest and foundation, and closure locations for the total levee system. Sheet Numbers: _____
3. A profile of the levee/floodwall system showing the Base Flood Elevation (BFE), levee and/or wall crest and foundation, and closure locations for the total levee system. Sheet Numbers: _____
4. A layout detail for the embankment protection measures. Sheet Numbers: _____
5. Location, layout, and size and shape of the levee embankment features, foundation treatment, Floodwall structure, closure structures, and pump stations. Sheet Numbers: _____

2. Freeboard

a. The minimum freeboard provided above the BFE is:

_____

Riverine

3.0 feet or more at the downstream end and throughout	☐ Yes	☐ No
3.5 feet or more at the upstream end	☐ Yes	☐ No
4.0 feet within 100 feet upstream of all structures and/or constrictions	☐ Yes	☐ No

Coastal

1.0 foot above the height of the one percent wave associated with the 1%-annual-chance stillwater surge elevation or maximum wave runup (whichever is greater).	☐ Yes	☐ No
2.0 feet above the 1%-annual-chance stillwater surge elevation	☐ Yes	☐ No

Please note, occasionally exceptions are made to the minimum freeboard requirement. If an exception is requested, attach documentation addressing Paragraph 65.10(b)(1)(ii) of the NFIP Regulations.

If No is answered to any of the above, please attach an explanation.

b. Is there an indication from historical records that ice-jamming can affect the BFE? ☐ Yes ☐ No

3. Closures

a. Openings through the levee system (check one): ☐ Exists ☐ Does not exist

If opening exists, list all closures:

Channel Station	Left or Right Bank	Opening Type	Highest Elevation for Opening Invert	Type of Closure Device

(Extend table on an added sheet as needed and reference)

Note: Geotechnical and geologic data

In addition to the required detailed analysis reports, data obtained during field and laboratory investigations and used in the design analysis for the following system features should be submitted in a tabulated summary form. (Reference U.S. Army Corps of Engineers [USACE] EM-1110-2-1906 Form 2086.)

E. LEVEE/FLOODWALL (CONTINUED)

4. Embarkment Protection

a. The maximum levee slope land side is: _____

b. The maximum levee slope flood side is: _____

c. The range of velocities along the levee during the base flood is: _____ (min) to _____ (max)

d. Embankment material is protected by (describe what kind): _____

e. Riprap Design Parameters (check one): ☐ Velocity ☐ Tractive Stress
Attach referrences

Reach	Sideslope	Flow Depth	Velocity	Curve or Straight	Stone Riprap			Depth of Toedown
					D_{100}	D_{50}	Thickness	
Sta _____ to _____								
Sta _____ to _____								
Sta _____ to _____								
Sta _____ to _____								
Sta _____ to _____								
Sta _____ to _____								

(Extend table on an added sheet as needed and reference each entry)

f. Is a bedding/filter analysis and design attached? ☐ Yes ☐ No

g. Describe the analysis used for other kinds of protection used (include copies of the design analysis):

Attach engineering analysis to support construction plans.

5. Embarkment and Foundation Stability

a. Identify locations and describe the basis for selection of critical location for analysis:

☐ Overall height: STA:_____ , height _____ ft.

☐ Limiting foundation soil strength:

Strength ϕ = _____ degrees, c = _____ psf

Slope: SS = _____ (h) to _____ (v)

(Repeat as needed on an added sheet for additional locations)

b. Specify the embankment stability analysis methodology used (e.g., circular arc, sliding block, infinite slope, etc.):

c. Summary of stability analysis results: _____

E. LEVEE/FLOODWALL (CONTINUED)

5. Embarkment and Foundation Stability (continued)

Case	Loading Conditions	Critical Safety Factor	Criteria (Min.)
I	End of construction		1.3
II	Sudden drawdown		1.0
III	Critical flood stage		1.4
IV	Steady seepage at flood stage		1.4
VI	Earthquake (Case I)		1.0

(Reference: USACE EM-1110-2-1913 Table 6-1)

d. Was a seepage analysis for the embankment performed? ☐ Yes ☐ No
If Yes, describe methodology used:

e. Was a seepage analysis for the embankment performed? ☐ Yes ☐ No

f. Were uplift pressures at the embankment landside toe checked? ☐ Yes ☐ No

g. Were seepage exit gradients checked for piping potential? ☐ Yes ☐ No

h. The duration of the base flood hydrograph against the embankment is _____ hours.

Attach engineering analysis to support construction plans.

6. Floodwall and Foundation Stability

a. Describe analysis submittal based on Code (check one): ☐ UBC (1988) ☐ Other (specify): _____

b. Stability analysis submitted provides for: ☐ Overturning ☐ Sliding ☐ If not, explain: _____

c. Loading included in the analyses were: ☐ Lateral earth @ P_A = _____ psf; P_p = _____ psf

☐ Surcharge-Slope @ _____, ☐ surface _____ psf

☐ Wind @ P_w = _____ psf

☐ Seepage (Uplift); _____ ☐ Earthquake @ P_{eq} = _____ %g

☐ 1%-annual-chance significant wave height: _____ ft.

☐ 1%-annual-chance significant wave period: _____ sec.

d. Summary of Stability Analysis Results: Factors of Safety.
Itemize for each range in site layout dimension and loading condition limitation for each respective reach.

Loading Condition	Criteria (Min)		Sta	To	Sta	To
	Overturn	Sliding	Overturn	Sliding	Overturn	Sliding
Dead & Wind	1.5	1.5				
Dead & Soil	1.5	1.5				
Dead, Soil, Flood, & Impact	1.5	1.5				
Dead, Soil, & Seismic	1.3	1.3				

(Ref: FEMA 114 Sept 1986; USACE EM 1110-2-2502)
Note: (Extend table on an added sheet as needed and reference)

E. LEVEE/FLOODWALL (CONTINUED)

e. Foundation bearing strength for each soil type:

Bearing Pressure	Sustained Load (psf)	Short Term Load (psf)
Computed design maximum		
Maximum allowable		

f. Foundation scour protection ☐ is, ☐ is not provided. If provided, attach explanation and supporting documentation:

Attach engineering analysis to support construction plans.

7. Settlement

a. Has anticipated potential settlement been determined and incorporated into the specified construction elevations to maintain the established freeboard margin?

b. The computed settlement range is _____ ft. to _____ ft.

c. Settlement of the levee crest is determined to be primarily from : ☐ Foundation consolidation

☐ Embankment compression ☐ Other (Describe): _____

d. Differential settlement of floodwalls ☐ has ☐ has not been accommodated in the structural design and construction

Attach engineering analysis to support construction plans.

8. Interior Drainage

a. Specify size of each interior watershed:

Drainage to pressure conduit: _____ acres

Drainage to ponding area: _____ acres

b. Relationship Established:

Ponding elevation vs. storage	☐ Yes	☐ No
Ponding elevation vs. gravity flow	☐ Yes	☐ No
Differential head vs. gravity flow	☐ Yes	☐ No

c. The river flow duration curve is enclosed: ☐ Yes ☐ No

d. Specify the discharge capacity of the head pressure conduit: _____ cfs

e. Which flooding conditions were analyzed?

Gravity flow (Interior Watershed)	☐ Yes	☐ No
Common storm (River Watershed)	☐ Yes	☐ No
Historical ponding probability	☐ Yes	☐ No
Coastal wave overtopping	☐ Yes	☐ No

If No for any of the above, attach explanation.

f. Interior drainage has been analyzed based on joint probability of interior and exterior flooding and the capacities of pumping and outlet facilities to provide the established level of flood protection.
☐ Yes ☐ No If No, attach explanation.

g. The rate of seepage through the levee system for the base flood is : _____ cfs

h. The length of levee system used to drive this seepage rate in item g: _____ ft.

E. LEVEE/FLOODWALL (CONTINUED)

8. Interior Drainage (continued)

i. Will pumping plants be used for interior drainage? ☐ Yes ☐ No

If Yes, include the number of pumping plants: _____ For each pumping plant, list:

	Plant #1	Plant #2
The number of pumps		
The ponding storage capacity		
The maximum pumping rate		
The maximum pumping head		
The pumping starting elevation		
The pumping stopping elevation		
Is the discharge facility protected?		
Is there a flood warning plan?		
How much time is available between warning and flooding?		

Will the operation be automatic? ☐ Yes ☐ No

If the pumps are electric; are there backup power sources? ☐ Yes ☐ No

(Reference: USACE EM-1110-2-3101, 3102, 3103, 3104, and 3105)
Include a copy of supporting documentation of data and analysis. Provide a map showing the flooded area and maximum ponding elevations for all interior watersheds that result in flooding.

9. Other Design Criteria

a. The following items have been addressed as stated:

Liquefaction ☐ is ☐ is not a problem

Hydrocompaction ☐ is ☐ is not a problem

Heave differential movement due to soils of high shrink/swell ☐ is ☐ is not a problem

b. For each of these problems, state the basic facts and corrective action taken:

Attach supporting documentation

c. If the levee/floodwall is new or enlarged, will the structure adversely impact flood levels and/or flow velocities floodside of the structure? ☐ Yes ☐ No

d. Sediment Transport Considerations:

Was sediment transport considered? ☐ Yes ☐ No

If Yes, then fill out Section F (Sediment Transport). If No, then attach your explanation for why sediment transport was not considered.

10. Operational Plan and Criteria

a. Are the planned/installed works in full compliance with Part 65.10 of the NFIP Regulations? ☐ Yes ☐ No

b. Does the operation plan incorporate all the provisions for closure devices as required in Paragraph 65.10(c)(1) of the NFIP regulations? ☐ Yes ☐ No

c. Does the operation plan incorporate all the provisions for interior drainage as required in Paragraph 65.10(c)(2) of the NFIP regulations? ☐ Yes ☐ No

If the answer is No to any of the above, please attach supporting documentation.

E. LEVEE/FLOODWALL (CONTINUED)

11. Maintenance Plan

Please attach a copy of the fomal maintenance plan for the levee/floodwall

12. Operational and Maintenance Plan

Please attach a copy of the formal Operations and Maintenance Plan for the levee/floodwall.

CERTIFICATION OF THE LEVEE DOCUMENTATION

This certification is to be signed and sealed by a licensed registered professional engineer authorized by law to certify elevation information data, hydrologic and hydraulic analysis, and any other supporting information as per NFIP regulations paragraph 65.10(e) and as described in the MT-2 Forms Instructions. All documents submitted in support of this request are correct to the best of my knowledge. I understand that any false statement may be punishable by fine or imprisonment under Title 18 of the United States Code, Section 1001.

Certifier's Name: _____ License No.: _____ Expiration Date: _____

Company Name: Telephone No.: _____ Fax No.: _____

Signature: _____ Date: _____ E-mail Address: _____

CERTIFICATION OF THE LEVEE DOCUMENTATION

Flooding Source: _____

Name of Structure: _____

If there is any indication from historical records that sediment transport (including scour and deposition) can affect the Base Flood Elevation (BFE); and/or based on the stream morphology, vegetative cover, development of the watershed and bank conditions, there is a potential for debris and sediment transport (including scour and deposition) to affect the BFEs, then provide the following information along with the supporting documentation:

Sediment load associated with the base flood discharge: Volume _____ acres-feet

Debris load associated with the base flood discharge: Volume _____ acres-feet

Sediment transport rate _____ (percent concentration by volume)

Method used to estimate sediment transport: _____

Most sediment transport formulas are intended for a range of hydraulic conditions and sediment sizes; attach a detailed explanation for using the selected method.

Method used to estimate scour and/or deposition: _____

Method used to revise hydraulic or hydrologic analysis (model) to account for sediment transport: _____

Please note that bulked flows are used to evaluate the performance of a structure during the base flood; however, FEMA does not map BFEs based on bulked flows.

If a sediment analysis has not been performed, an explanation as to why sediment transport (including scour and deposition) will not affect the BFEs or structures must be provided.

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

RIVERINE STRUCTURES FORM (FORM 3)

OMB Control Number: 1660-0016
Expiration: 1/31/2024

PAPERWORK BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 3.5 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing, reviewing, and submitting the form. You are not required to respond to this collection of information unless it displays a valid OMB control number. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden to: Information Collections Management, Department of Homeland Security, Federal Emergency Management Agency, 500 C Street, SW, Washington, DC 20472 , Paperwork Reduction Project (1660-0016). Submission of the form is required to obtain or retain benefits under the National Flood Insurance Program. **Please do not send your completed survey to the above address.**

PRIVACY ACT STATEMENT

AUTHORITY: The National Flood Insurance Act of 1968, Public Law 90-448, as amended by the Flood Disaster Protection Act of 1973, Public Law 93-234.

PRINCIPAL PURPOSE(S): This information is being collected for the purpose of determining an applicant's eligibility to request changes to National Flood Insurance Program (NFIP) Flood Insurance Rate Maps (FIRM).

ROUTINE USE(S): The information on this form may be disclosed as generally permitted under 5 U.S.C § 552a(b) of the Privacy Act of 1974, as amended. This includes using this information as necessary and authorized by the routine uses published in DHS/FEMA/NFIP/LOMA-1 National Flood Insurance Program (NFIP); Letter of Map Amendment (LOMA) February 15, 2006, 71 FR 7990.

DISCLOSURE: The disclosure of information on this form is voluntary; however, failure to provide the information requested may delay or prevent FEMA from processing a determination regarding a requested change to a (NFIP) Flood Insurance Rate Maps (FIRM).

Flooding Source: Sacate Blanco Diversion Channel

Note: Fill out one form for each flooding source studied

A. GENERAL

Complete the appropriate section(s) for each Structure listed below:

Channelization:	complete Section B
Bridge/Culvert:	complete Section C
Dam:	complete Section D
Levee/Floodwall:	complete Section E
Sediment Transport:	complete Section F (if required)

Description Of Modeled Structure

1. Name of Structure: Storm Drain

   Type (check one): ☒ Channelization ☐ Bridge/Culvert ☐ Levee/Floodwall ☐ Dam

   Location of Structure: Located between 98th Street and Amole Arroyo

   Downstream Limit/Cross Section: Amole Arroyo

   Upstream Limit/Cross Section: 98th Street

2. Name of Structure: Detention Pond

   Type (check one): ☐ Channelization ☐ Bridge/Culvert ☐ Levee/Floodwall ☒ Dam

   Location of Structure: Just upstream of Amole Arroyo

   Downstream Limit/Cross Section:

   Upstream Limit/Cross Section:

3. Name of Structure:

   Type (check one): ☐ Channelization ☐ Bridge/Culvert ☐ Levee/Floodwall ☐ Dam

   Location of Structure:

   Downstream Limit/Cross Section:

   Upstream Limit/Cross Section:

NOTE: FOR MORE STRUCTURES, ATTACH ADDITIONAL PAGES AS NEEDED.

B. CHANNELIZATION

Flooding Source: Sacate Blanco Diversion Channel

Name of Structure: Storm Drain

1. Hydraulic Considerations

The channel was designated to carry 188 (cfs) and/or the 100 - year flood

The design elevation in the channel is based on (check one):

☐ Subcritical flow ☐ Critical flow ☐ Supercritical flow ☒ Energy grade line

If there is the potential for a hydraulic jump at the following locations, check all that apply and attach an explanation of how the hydraulic jump is controlled without affecting the stability of the channel.

☐ Inlet to channel ☐ Outlet to channel ☐ At Drop Structures ☐ At Transitions

☐ Other locations (specify): _____

2. Channel Design Plans

Attach the plans of the channelization certified by a registered professional engineer, as described in the instructions.

3. Accessory Structures

The channelization includes (check one):

☐ Levees [Attach Section E (Levee/Floodwall)] ☐ Drop structures ☐ Superelevated sections ☐ Energy dissipater

☐ Transitions in cross sectional geometry ☒ Debris basin/detention basin [Attach Section D (Dam/Basin)] ☐ Weir

☐ Other (Describe): _____

4. Sediment Transport Considerations

Are the hydraulics of the channel affected by sediment transport? ☐ Yes ☒ No

If yes, then fill out Section F (Sediment Transport) of Form 3. If No, then attach your explanation for why sediment transport was not considered.

C. BRIDGE/CULVERT

Flooding Source: _____

Name of Structure: _____

1. This revision reflects (check one):

☐ Bridge/Culvert not modeled in the FIS

☐ Modified Bridge/Culvert previously modeled in the FIS

☐ Revised analysis of Bridge/Culvert previously modeled in the FIS

2. Hydraulic model used to analyze the structure (e.g., HEC-2 with special bridge routine, WSPRO, HY8): _____

If different than hydraulic analysis for the flooding source, justify why the hydraulic analysis used for the flooding source could not analyze the structures. Attach justification.

3. Attach plans of the structures certified by a registered professional engineer. The plan detail and information should include the following (check the information that has been provided):

☐ Dimensions (height, width, span, radius, length)
☐ Shape (culverts only)
☐ Material
☐ Beveling and Rounding
☐ Wink Wall Angle
☐ Skew Angle
☐ Distance between Cross Sections
☐ Erosion Protection
☐ Low Chord Elevations - Upstream and Downstream
☐ Top of Road Elevations - Upstream and Downstream
☐ Structure Invert Elevations - Upstream and Downstream
☐ Stream Invert Elevations - Upstream and Downstream
☐ Cross-Section Locations

4. Sediment Transport Considerations

Are the hydraulics of the channel affected by sediment transport? ☐ Yes ☐ No

If yes, then fill out Section F (Sediment Transport) of Form 3. If No, then attach your explanation for why sediment transport was not considered.

D. DAM/BASIN

Flooding Source: Sacate Blanco Diversion Channel

Name of Structure: TA Lands Subdivision Pond

1. This request is for (check one): ☐ Existing Dam/Basin ☒ New Dam/Basin ☐ Modification of existing Dam/Basin

2. The Dam/Basin was designed by (check one): ☐ Federal Agency ☐ State Agency ☒ Private Organization

☐ Local Government Agency Name of the Agency or Organization: Bohannan Huston Inc.

3. The Dam was permitted as (check one): ☐ Federal Dam ☒ State Dam

Provide the permit or identification number (ID) for the dam and the appropriate permitting agency or organization

Permit or ID number _____ Permitting Agency or Organization City of Albuquerque

a. ☐ Local Government Dam ☒ Private Dam

Provided related drawings, specification and supporting design information.

4. Does the project involve revised hydrology? ☒ Yes ☐ No

If Yes, complete the Riverine Hydrology & Hydraulics Form (Form 2).

Was the dam/basin designed using critical duration storm? (must account for the maximum volume of runoff)

☒ Yes, provide supporting documentation with your completed Form 2.

☐ No, provide a written explanation and justification for not using the critical duration storm.

5. Does the submittal include debris/sediment yield analysis? ☐ Yes ☒ No

If Yes, then fill out Section F (Sediment Transport). If No, then attach your explanation for why debris/sediment analysis was not considered?

6. Does the Base Flood Elevation behind the dam/basin or downstream of the dam/basin change? ☒ Yes ☐ No

If Yes, complete the Riverine Hydrology & Hydraulics Form (Form 2) and complete the table below.

	Stillwater Elevation Behind the Dam/Basin	
FREQUENCY (% annual chance)	FIS	REVISED
10-year (10%)		
50-year (2%)		
100-year (1%)	N/A	5024.0
500-year (0.2%)		
Normal Pool Elevation		

7. Please attach a copy of the formal Operation and Maintenance Plan

E. LEVEE/FLOODWALL

1. System Elements

a. This Levee/Floodwall analysis is based on (check one): ☐ Upgrading of an existing levee/floodwall system ☐ A newly constructed levee/floodwall system ☐ Reanalysis of an existing levee/floodwall system

b. Levee elements and locations are (check one):

☐ Earthen embankment, dike, berm, etc Stationed _____ to _____

☐ Structured floodwall Stationed _____ to _____

☐ Other (describe): _____ Stationed _____ to _____

E. LEVEE/FLOODWALL (CONTINUED)

c. Structural Type (check one): ☐ Monolithic cast-in place reinforced concrete ☐ Reinforced concrete masonry block ☐ Sheet piling ☐ Other (describe): _____

d. Has this levee/floodwall system been certified by a Federal agency to provide protection from the base flood?

☐ Yes ☐ No

If Yes, by which agency? _____

e. Attach certified drawings containing the following information (indicate drawing sheet numbers):

1. Plan of the levee embankment and floodwall structures. Sheet Numbers: _____
2. A profile of the levee/floodwall system showing the Base Flood Elevation (BFE), levee and/or wall crest and foundation, and closure locations for the total levee system. Sheet Numbers: _____
3. A profile of the levee/floodwall system showing the Base Flood Elevation (BFE), levee and/or wall crest and foundation, and closure locations for the total levee system. Sheet Numbers: _____
4. A layout detail for the embankment protection measures. Sheet Numbers: _____
5. Location, layout, and size and shape of the levee embankment features, foundation treatment, Floodwall structure, closure structures, and pump stations. Sheet Numbers: _____

2. Freeboard

a. The minimum freeboard provided above the BFE is:

_____

Riverine

3.0 feet or more at the downstream end and throughout	☐ Yes	☐ No
3.5 feet or more at the upstream end	☐ Yes	☐ No
4.0 feet within 100 feet upstream of all structures and/or constrictions	☐ Yes	☐ No

Coastal

1.0 foot above the height of the one percent wave associated with the 1%-annual-chance stillwater surge elevation or maximum wave runup (whichever is greater).	☐ Yes	☐ No
2.0 feet above the 1%-annual-chance stillwater surge elevation	☐ Yes	☐ No

Please note, occasionally exceptions are made to the minimum freeboard requirement. If an exception is requested, attach documentation addressing Paragraph 65.10(b)(1)(ii) of the NFIP Regulations.

If No is answered to any of the above, please attach an explanation.

b. Is there an indication from historical records that ice-jamming can affect the BFE? ☐ Yes ☐ No

3. Closures

a. Openings through the levee system (check one): ☐ Exists ☐ Does not exist

If opening exists, list all closures:

Channel Station	Left or Right Bank	Opening Type	Highest Elevation for Opening Invert	Type of Closure Device

(Extend table on an added sheet as needed and reference)

Note: Geotechnical and geologic data

In addition to the required detailed analysis reports, data obtained during field and laboratory investigations and used in the design analysis for the following system features should be submitted in a tabulated summary form. (Reference U.S. Army Corps of Engineers [USACE] EM-1110-2-1906 Form 2086.)

E. LEVEE/FLOODWALL (CONTINUED)

4. Embarkment Protection

a. The maximum levee slope land side is: _____

b. The maximum levee slope flood side is: _____

c. The range of velocities along the levee during the base flood is: _____ (min) to _____ (max)

d. Embankment material is protected by (describe what kind): _____

e. Riprap Design Parameters (check one): ☐ Velocity ☐ Tractive Stress
Attach referrences

Reach	Sideslope	Flow Depth	Velocity	Curve or Straight	Stone Riprap			Depth of Toedown
					D_{100}	D_{50}	Thickness	
Sta _____ to _____								
Sta _____ to _____								
Sta _____ to _____								
Sta _____ to _____								
Sta _____ to _____								
Sta _____ to _____								

(Extend table on an added sheet as needed and reference each entry)

f. Is a bedding/filter analysis and design attached? ☐ Yes ☐ No

g. Describe the analysis used for other kinds of protection used (include copies of the design analysis):

Attach engineering analysis to support construction plans.

5. Embarkment and Foundation Stability

a. Identify locations and describe the basis for selection of critical location for analysis:

☐ Overall height: STA:_____ , height _____ ft.

☐ Limiting foundation soil strength:

Strength ϕ = _____ degrees, c = _____ psf

Slope: SS = _____ (h) to _____ (v)

(Repeat as needed on an added sheet for additional locations)

b. Specify the embankment stability analysis methodology used (e.g., circular arc, sliding block, infinite slope, etc.):

c. Summary of stability analysis results: _____

E. LEVEE/FLOODWALL (CONTINUED)

5. Embarkment and Foundation Stability (continued)

Case	Loading Conditions	Critical Safety Factor	Criteria (Min.)
I	End of construction		1.3
II	Sudden drawdown		1.0
III	Critical flood stage		1.4
IV	Steady seepage at flood stage		1.4
VI	Earthquake (Case I)		1.0

(Reference: USACE EM-1110-2-1913 Table 6-1)

d. Was a seepage analysis for the embankment performed? ☐ Yes ☐ No
If Yes, describe methodology used:

e. Was a seepage analysis for the embankment performed? ☐ Yes ☐ No

f. Were uplift pressures at the embankment landside toe checked? ☐ Yes ☐ No

g. Were seepage exit gradients checked for piping potential? ☐ Yes ☐ No

h. The duration of the base flood hydrograph against the embankment is _____ hours.

Attach engineering analysis to support construction plans.

6. Floodwall and Foundation Stability

a. Describe analysis submittal based on Code (check one): ☐ UBC (1988) ☐ Other (specify): _____

b. Stability analysis submitted provides for: ☐ Overturning ☐ Sliding ☐ If not, explain: _____

c. Loading included in the analyses were: ☐ Lateral earth @ P_A = _____ psf; P_p = _____ psf

☐ Surcharge-Slope @ _____, ☐ surface _____ psf

☐ Wind @ P_w = _____ psf

☐ Seepage (Uplift); _____ ☐ Earthquake @ P_{eq} = _____ %g

☐ 1%-annual-chance significant wave height: _____ ft.

☐ 1%-annual-chance significant wave period: _____ sec.

d. Summary of Stability Analysis Results: Factors of Safety.
Itemize for each range in site layout dimension and loading condition limitation for each respective reach.

Loading Condition	Criteria (Min)		Sta	To	Sta	To
	Overturn	Sliding	Overturn	Sliding	Overturn	Sliding
Dead & Wind	1.5	1.5				
Dead & Soil	1.5	1.5				
Dead, Soil, Flood, & Impact	1.5	1.5				
Dead, Soil, & Seismic	1.3	1.3				

(Ref: FEMA 114 Sept 1986; USACE EM 1110-2-2502)
Note: (Extend table on an added sheet as needed and reference)

E. LEVEE/FLOODWALL (CONTINUED)

e. Foundation bearing strength for each soil type:

Bearing Pressure	Sustained Load (psf)	Short Term Load (psf)
Computed design maximum		
Maximum allowable		

f. Foundation scour protection ☐ is, ☐ is not provided. If provided, attach explanation and supporting documentation:

Attach engineering analysis to support construction plans.

7. Settlement

a. Has anticipated potential settlement been determined and incorporated into the specified construction elevations to maintain the established freeboard margin?

b. The computed settlement range is _____ ft. to _____ ft.

c. Settlement of the levee crest is determined to be primarily from : ☐ Foundation consolidation

☐ Embankment compression ☐ Other (Describe): _____

d. Differential settlement of floodwalls ☐ has ☐ has not been accommodated in the structural design and construction

Attach engineering analysis to support construction plans.

8. Interior Drainage

a. Specify size of each interior watershed:

Drainage to pressure conduit: _____ acres

Drainage to ponding area: _____ acres

b. Relationship Established:

Ponding elevation vs. storage	☐ Yes	☐ No
Ponding elevation vs. gravity flow	☐ Yes	☐ No
Differential head vs. gravity flow	☐ Yes	☐ No

c. The river flow duration curve is enclosed: ☐ Yes ☐ No

d. Specify the discharge capacity of the head pressure conduit: _____ cfs

e. Which flooding conditions were analyzed?

Gravity flow (Interior Watershed)	☐ Yes	☐ No
Common storm (River Watershed)	☐ Yes	☐ No
Historical ponding probability	☐ Yes	☐ No
Coastal wave overtopping	☐ Yes	☐ No

If No for any of the above, attach explanation.

f. Interior drainage has been analyzed based on joint probability of interior and exterior flooding and the capacities of pumping and outlet facilities to provide the established level of flood protection.
☐ Yes ☐ No If No, attach explanation.

g. The rate of seepage through the levee system for the base flood is : _____ cfs

h. The length of levee system used to drive this seepage rate in item g: _____ ft.

E. LEVEE/FLOODWALL (CONTINUED)

8. Interior Drainage (continued)

i. Will pumping plants be used for interior drainage? ☐ Yes ☐ No

If Yes, include the number of pumping plants: _____ For each pumping plant, list:

	Plant #1	Plant #2
The number of pumps		
The ponding storage capacity		
The maximum pumping rate		
The maximum pumping head		
The pumping starting elevation		
The pumping stopping elevation		
Is the discharge facility protected?		
Is there a flood warning plan?		
How much time is available between warning and flooding?		

Will the operation be automatic? ☐ Yes ☐ No

If the pumps are electric; are there backup power sources? ☐ Yes ☐ No

(Reference: USACE EM-1110-2-3101, 3102, 3103, 3104, and 3105)
Include a copy of supporting documentation of data and analysis. Provide a map showing the flooded area and maximum ponding elevations for all interior watersheds that result in flooding.

9. Other Design Criteria

a. The following items have been addressed as stated:

Liquefaction ☐ is ☐ is not a problem

Hydrocompaction ☐ is ☐ is not a problem

Heave differential movement due to soils of high shrink/swell ☐ is ☐ is not a problem

b. For each of these problems, state the basic facts and corrective action taken:

Attach supporting documentation

c. If the levee/floodwall is new or enlarged, will the structure adversely impact flood levels and/or flow velocities floodside of the structure? ☐ Yes ☐ No

d. Sediment Transport Considerations:

Was sediment transport considered? ☐ Yes ☐ No

If Yes, then fill out Section F (Sediment Transport). If No, then attach your explanation for why sediment transport was not considered.

10. Operational Plan and Criteria

a. Are the planned/installed works in full compliance with Part 65.10 of the NFIP Regulations? ☐ Yes ☐ No

b. Does the operation plan incorporate all the provisions for closure devices as required in Paragraph 65.10(c)(1) of the NFIP regulations? ☐ Yes ☐ No

c. Does the operation plan incorporate all the provisions for interior drainage as required in Paragraph 65.10(c)(2) of the NFIP regulations? ☐ Yes ☐ No

If the answer is No to any of the above, please attach supporting documentation.

E. LEVEE/FLOODWALL (CONTINUED)

11. Maintenance Plan

Please attach a copy of the fomal maintenance plan for the levee/floodwall

12. Operational and Maintenance Plan

Please attach a copy of the formal Operations and Maintenance Plan for the levee/floodwall.

CERTIFICATION OF THE LEVEE DOCUMENTATION

This certification is to be signed and sealed by a licensed registered professional engineer authorized by law to certify elevation information data, hydrologic and hydraulic analysis, and any other supporting information as per NFIP regulations paragraph 65.10(e) and as described in the MT-2 Forms Instructions. All documents submitted in support of this request are correct to the best of my knowledge. I understand that any false statement may be punishable by fine or imprisonment under Title 18 of the United States Code, Section 1001.

Certifier's Name: _____ License No.: _____ Expiration Date: _____

Company Name: Telephone No.: _____ Fax No.: _____

Signature: _____ Date: _____ E-mail Address: _____

CERTIFICATION OF THE LEVEE DOCUMENTATION

Flooding Source: _____

Name of Structure: _____

If there is any indication from historical records that sediment transport (including scour and deposition) can affect the Base Flood Elevation (BFE); and/or based on the stream morphology, vegetative cover, development of the watershed and bank conditions, there is a potential for debris and sediment transport (including scour and deposition) to affect the BFEs, then provide the following information along with the supporting documentation:

Sediment load associated with the base flood discharge: Volume _____ acres-feet

Debris load associated with the base flood discharge: Volume _____ acres-feet

Sediment transport rate _____ (percent concentration by volume)

Method used to estimate sediment transport: _____

Most sediment transport formulas are intended for a range of hydraulic conditions and sediment sizes; attach a detailed explanation for using the selected method.

Method used to estimate scour and/or deposition: _____

Method used to revise hydraulic or hydrologic analysis (model) to account for sediment transport: _____

Please note that bulked flows are used to evaluate the performance of a structure during the base flood; however, FEMA does not map BFEs based on bulked flows.

If a sediment analysis has not been performed, an explanation as to why sediment transport (including scour and deposition) will not affect the BFEs or structures must be provided.

APPENDIX B – ESA COMPLIANCE DOCUMENTATION

Attention: Mr. Brian Patterson

Subject: **Phase I Environmental Site Assessment**
TA LAND
A ±148 Acre Single-Family Residential Development
Southeast of Amole Mesa Avenue SW and 98TH Street
Albuquerque, New Mexico

Dear Mr. Patterson:

GEOTEK, LLC. (GEOTEK) is pleased to present this Phase I Environmental Site Assessment for the above-referenced subject Site. Services were conducted in substantial conformance with the scope and limitations of the American Society of Testing and Materials E 1527-21, "*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process,*" which is approved to meet the requirements of the federal All Appropriate Inquiries (AAI) standards as set forth in the Code of Federal Regulations, Title 40, and GEOTEK'S Proposal No. P0400824-ABR dated April 19, 2024.

Based on the investigation, this Phase I Environmental Site Assessment has not revealed evidence of a recognized environmental condition in connection with the subject Site. No further investigation is recommended at this time.

GEOTEK appreciates this opportunity to be of service. If you have any questions, or if GEOTEK can be of further service, please contact the office at (505) 456-4900.

Sincerely,
GEOTEK, LLC.

EXECUTIVE SUMMARY

GEOTEK, LLC. (GEOTEK) has performed a Phase I Environmental Site Assessment (ESA) for UPNs 100905437015540203 and -25518040101 (the "Site"), located in the city of Albuquerque, Bernalillo County, New Mexico. GEOTEK'S services were conducted in substantial conformance with the scope and limitations of the American Society of Testing and Materials (ASTM) E 1527-21, "*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*", which is approved to meet the requirements of the federal All Appropriate Inquiries (AAI) standards as set forth in the Code of Federal Regulations, Title 40, and GEOTEK Proposal No. P0400824-ABR, dated April 19, 2023. Any additions or deletions from the scope of services are discussed in the appropriate sections of this assessment.

A representative of GEOTEK conducted a Site reconnaissance on May 10, 2024. The weather was warm, windy, and the sky was cloudy. The irregular shaped Site is currently comprised of two (2) parcels of land (Bernalillo County Uniform Parcel Numbers 100905437015540203 and -25518040101). The parcels encompass a total of approximately 148 acres. The Site can generally be accessed from the southeast corner of the intersection of Amole Mesa Avenue SW and 98th Street.

The Site is generally vacant land bisected by Unser Boulevard and 8.5 acres of land belonging to Albuquerque Metropolitan Arroyo Flood Control District (AMAFCA). Additionally, numerous soil stockpiles, scattered trash/household debris and an empty retention pond were observed in the southwest portion of the Site. The soil stockpiles, scattered trash and household debris are considered to be a *de minimus* condition and do not represent a recognized environmental condition to the Site. However, the soil stockpiles, scattered trash and debris should be removed from the site and transported to a proper disposal facility prior to any future land development. Visual evidence of hazardous substances and wastes was not observed during the Site reconnaissance. No visual indication of spills or leaks were observed. No pungent or acrid odors were observed emanating from the Site.

The Site is in an area largely characterized by vacant land and residential development. The site is bound by Amole Mesa Avenue SW and Rudolfo Anaya Elementary School to the north, vacant land to the east, a residential development to the south, and 98th Street to the west. The Sacate Blanco Channel (Amole Arroyo) traverses the Site from the southwest to the northeast, and an empty drainage pond currently exists on the southwest corner of the Site. Additional ephemeral drainages along the northern and southern portion of the Site also exist locally. None of the adjoining properties appear to represent a recognized environmental condition or environmental concern to the Site.

The Site was not listed in any of the environmental database reports obtained for this assessment.

There are two (2) facilities listed in the database report within the various search distances specified by ASTM E 1527-21. Due to the nature of these listings, facility status and lack of violations, spills, leaks, investigations, elevations, or clean-ups, it is GEOTEK'S opinion that these facilities have not created a recognized environmental condition to the Site.

Based on readily available historical aerial imagery, the Site appears to be vacant land since at least 1951. At this time, the ephemeral drainage is depicted along the southern boundary. By 1967, a unpaved access roadway was developed in the northwest portion of the Site and traversed from the southwest to the northeast and earthwork activities can be observed on the northeast portion of the Site. Between 1975 and 1982, the existing Sacate Blanco channel was constructed parallel to the unpaved access road from the southwest portion of the site to the northeast. Between 1996 and 2006, Unser Boulevard had been developed as a two-lane unpaved road, spread fill is depicted along the norther boundary, and numerous unpaved access roads had developed across the Site. By 2011, Unser Boulevard had been paved with asphaltic concrete. By 2020, earthwork activities had commenced in the southwest portion of the Site for drainage pond and the median between the two lanes of Unser Boulevard had been developed. The Site has remained relatively unchanged since 2020 except for further development to the drainage pond in the southwest portion of the Site and a walled-off transformer pad to the east of Unser Boulevard.

The surrounding areas appear to be vacant land from at least 1951 until at least 1959. A single-family residence is first visible to the northeast of the Site in an aerial photograph dated 1959. By 1967, spread fill can be observed along the northeast portion of the Site. Between 1975 and 1982 a residential development had been constructed to the northeast. By 1986 a residential development had been constructed to the southeast. Between 1996 and 2006, the residential development to the north and south have expanded, a residential development to the west had been developed, and 98th Street had been developed and partially paved. By 2011, 98th Street had been fully paved and Rudolfo Anaya Elementary School had been constructed along with a paved Amole Mesa SW to the north of the Site. The surrounding properties appear to be similar to current conditions from 2011 to the present day.

Based on the investigation, this Phase I Environmental Site Assessment has not revealed evidence of a recognized environmental condition in connection with the subject Site. No further investigation is recommended at this time.

This executive summary does not contain all the information that is found in the full report. The report should be read in its entirety to obtain a more complete understanding of the information provided and to aid in any decisions made or actions taken based on this information.

1.0 INTRODUCTION

GEOTEK, LLC. (GEOTEK) has performed a Phase I Environmental Site Assessment (ESA) for UPN's 100905437015540203 and -25518040101 (the "Site"), located in the city of Albuquerque, Bernalillo County, New Mexico.

1.1 PURPOSE

The purpose of this Phase I ESA was to identify and evaluate actual and potential environmental conditions involving the subject Site. It was not the purpose of this assessment to determine the degree or extent of contamination, if any, but rather the potential for contamination.

1.2 SCOPE OF WORK

The Phase I ESA is a general characterization of environmental concerns based on reasonably ascertainable information and observations. GEOTEK performed the Phase I ESA in substantial accordance with ASTM Standard E 1527-21. The following services were provided for the assessment:

- A reconnaissance of the Site and surrounding properties to visually assess current utilization and indications of potential surface contamination. This was accomplished by driving the Site boundaries, and then traversing the Site until the entire Site had been surveyed.

- A reconnaissance of the surrounding area for approximately one-half mile was conducted, without entering the properties, making observations concerning property uses, conditions, and housekeeping.

- Interviews were conducted, either in person, via telephone, or via a written questionnaire(s) with the client representative, the seller's representative, and/or appropriate regulatory agency personnel.

- A review of the geologic and hydro-geologic settings was conducted using reasonably ascertainable public records and documents.

- An environmental database report was obtained from a data service provider. This database report compiles and locates documented "hazardous waste" facilities within specific minimum search distances as defined by ASTM E 1527-21. If necessary,

additional information on identified facilities was gathered by a file review at the appropriate federal, state, local, and/or tribal regulatory agency.

- A review of reasonably ascertainable historical records (including aerial photographs, topographic maps, building records, and city directories) was conducted to assess the historical land utilization and indications of potential contamination or sources of contamination for the Site.

- This report was prepared, which relates the findings of this study and presents the conclusions and recommendations.

Specific items not included in this Scope of Services are soil and water analysis, asbestos containing materials analysis, radon analysis, lead-based paint analysis, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, vapor intrusion testing, high voltage power lines, PFAS analysis, and other items not within the scope of ASTM E 1527-21.

1.3 SIGNIFICANT ASSUMPTIONS

Specific assumptions by GEOTEK for this assessment include:

- GEOTEK had permission to access the Site grounds;

- The client has provided GEOTEK with available geotechnical or environmental reports for the Site;

- The client has provided GEOTEK with known current or historic uses of hazardous materials at the Site, or with other specialized knowledge of the environmental history of the Site and surrounding area;

- The client is not the sole and absolute source of information;

- The seller has provided proper and complete access to their knowledge, both written and verbal, and GEOTEK can rely on the information.

1.4 LIMITATIONS AND EXCEPTIONS

GEOTEK conducted a Phase I Environmental Site Assessment in substantial accordance with ASTM E 1527-21 and as authorized by TA LAND COMPANY 1, LLC. This study does not include sampling of groundwater and/or materials on-site for environmental testing. This report is intended for the use of TA LAND COMPANY 1, LLC. The contents should not be relied upon by any party other than the aforementioned without the express written consent of GEOTEK.

The findings, conclusions, and recommendations made in this report are based on the information that was made available to GEOTEK, in most instances from public records. The information is relevant to the date of the sitework and should not be relied on to represent conditions at any later date. The opinions and conclusions expressed herein are based on information obtained during the assessment and on experience and current standards of technical practice. GEOTEK makes no other warranties, either express or implied, concerning the completeness of the data furnished to us. GEOTEK cannot be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time the assessment was undertaken. GEOTEK is not responsible, nor liable for work, testing or recommendations performed or provided by others. This Phase I Environmental Site Assessment is not and should not be construed as a warranty or guarantee about the presence or absence of environmental hazards or contaminants which may affect the subject site. Facts, conditions, and acceptable risk factors change with time; accordingly, this report should be viewed within this context.

Specific limitations to the scope of ASTM E 1527-21 due to contract limitations, availability of resources, and/or encountered Site conditions are discussed in the appropriate sections of this report.

1.5 SPECIAL TERMS AND CONDITIONS

This assessment report is presented as fulfilling the standard requirements of most financial institutions, governmental regulatory agencies, ASTM, and generally accepted industry standards and practices. Please refer to GEOTEK Proposal No. P0400824-ABR for complete terms and conditions for this assessment.

1.6 RELIANCE

This assessment has been prepared for the exclusive use, and may be relied upon by, TA LAND COMPANY 1, LLC, their successors and assignees. Third party reliance letters may be issued upon request and upon the payment of the, then current, fee for such letters. All third parties relying on this report, by such reliance, agree to be bound by the General Conditions and Limitations agreed by TA LAND COMPANY 1, LLC. No reliance by any party is permitted without such agreement, regardless of the content of the reliance letter itself.

2.0 DESCRIPTION OF SITE AND SURROUNDING AREA

The objective of describing the Site and surrounding area is to document current conditions as observed and to obtain information which would indicate the likelihood of a recognized environmental condition in connection with the Site. A representative of GEOTEK conducted a Site reconnaissance on May 10, 2024. The weather was warm, windy, and the sky was cloudy. The Site can generally be accessed from the northwest portion of the Site or southeast corner of the intersection of Amole Mesa Avenue SW and 98th Street.

2.1 SITE LOCATION AND LEGAL DESCRIPTION

The Site is located southeast of Amole Mesa Avenue SW and 98th Street, in the city of Albuquerque, Bernalillo County, New Mexico. According to the Bernalillo County Assessors Map, the Site is located in Section 4, Township 9 North, Range 2 East (see Figure 1 in Appendix A and documents in Appendix B). The Site is also known as Bernalillo County Assessor's Uniform Parcel Numbers (UPNs) 100905437015540203 and -25518040101. Additional legal descriptions for the Site are included in the Environmental Lien and AUL Search as obtained from Environmental Data Resources, Inc. (EDR) included in Appendix B. A Property Tax Map Report as obtained from EDR is also included in Appendix B.

2.2 SITE AND VICINITY GENERAL CHARACTERISTICS

The Site is generally vacant land bisected by Unser Boulevard and 8.5 acres of land belonging to Albuquerque Metropolitan Arroyo Flood Control District (AMAFCA). Additionally, numerous soil stockpiles, scattered trash/household debris and an empty retention pond were observed in the southwest portion of the Site. The soil stockpiles, scattered trash and household debris are considered to be a *de minimus* condition and do not represent a recognized environmental condition to the Site. However, the soil stockpiles, scattered trash and debris should be removed from the site and transported to a proper disposal facility prior to any future land development. An empty drainage pond was observed in the southwest corner and a walled-off transformer pad on the east side of Unser Boulevard.

The Site is an area largely characterized by vacant land.

The Site is currently zoned as "R-1A", "PD", and "NR-BP" on the City of Albuquerque Zoning Map (IDO Zone Look-up Map | ArcGIS Hub).

2.3 CURRENT PROPERTY USE

The Site is generally vacant land bisected by Unser Boulevard and 8.5 acres of land belonging to Albuquerque Metropolitan Arroyo Flood Control District (AMAFCA). Additionally, numerous soil stockpiles, scattered trash/household debris and an empty retention pond were observed in the southwest portion of the Site. An empty drainage pond was observed in the southwest corner and a walled-off transformer pad on the east side of Unser Boulevard.

2.4 SITE IMPROVEMENTS

The Site is generally vacant land bisected by Unser Boulevard and 8.5 acres of land belonging to Albuquerque Metropolitan Arroyo Flood Control District (AMAFCA). An empty drainage pond was observed in the southwest corner and a walled-off electrical pad on the east side of Unser Boulevard. Photographs of the Site are included in Appendix D.

2.4.1 HAZARDOUS SUBSTANCES

Visual evidence of hazardous substances and wastes was not observed during the Site reconnaissance. No visual indication of spills or leaks were observed. No pungent or acrid odors were observed emanating from the Site.

2.4.2 STORAGE TANKS

GEOTEK did not observe evidence of underground or above-ground fuel storage tanks (such as vent pipes, fill pipes, regular-shaped depressions, etc.) on the Site.

2.4.3 POLY-CHLORINATED BIPHENYLS (PCBS)

GEOTEK did observe a transformer on the east side of Unser Boulevard. The transformer has been walled off and resides on a concrete pad. The structure appears to be relatively new and no staining was observed surrounding the equipment. Given the approximately age of the transformer and good working condition, it is unlikely that PCB's are present and therefore this is not considered to be a recognized environmental condition or concern. Further, no elevators, hydraulic lift mechanisms, or trash compactors, etc. were observed which may contain PCBs on the Site.

2.4.4 CONTROLLED SUBSTANCES

GEOTEK consulted the U.S. Drug Enforcement Agency (DEA) website (Clandestine Drug Labs in the United States | DEA.gov) to cross-check the Site address and adjoining properties against published facilities subject to DEA enforcement. The Site nor any adjoining facilities appeared on the list of published facilities for the last five (5) years.

GEOTEK consulted with the County of Bernalillo Fire Department and the City of Albuquerque Police Department regarding controlled substances in association with the Site or adjoining facilities. Neither agency had information regarding the Site.

GEOTEK did not observe evidence of illegal or controlled substances being used or manufactured at the Site.

2.4.5 INDICATIONS OF SOLID WASTE DISPOSAL

GEOTEK observed soil stockpiles on the Site. Most likely associated with the earthwork development concerning the drainage pond located in the southwest portion of the Site.

2.4.6 UTILITY SUPPLY

Sewer and water services for the Site and area are provided by Albuquerque Bernalillo County Water Authority. Electric services for the Site and area are provided by PNM. Gas services for the Site and area are provided by New Mexico Gas Company.

2.4.7 DRAINAGE

Natural drainage at the Site is generally interpreted to be toward the east, conforming to the natural topography in the area. Ponded water was not observed during the Site reconnaissance.

2.4.8 OTHER CONDITIONS OF CONCERN

No visual indication of conditions of concern (drywells, cesspools, etc.) that would indicate a recognized environmental condition was observed during the Site reconnaissance.

2.4.9 INTERVIEWS

GEOTEK interviewed the following individuals while performing this assessment:

- Mr. Brian Patterson, a representative of the future Site owner, completed a User Questionnaire, dated May 2, 2024.
- Mr. Brian Patterson is currently under contract to purchase the property and completed an owner questionnaire, dated May 16, 2024 since there was no reply from the Salazar Family Trust.

The Site is currently unoccupied and therefore no Site interviews were conducted during the reconnaissance.

Information from this interview is incorporated into the appropriate sections of this report.

2.5 CURRENT ADJOINING PROPERTY USE

The Site is in an area largely characterized by vacant land. The site is bound on the north by Amole Mesa Avenue SW and Rudolfo Anaya Elementary School; vacant land to the east; 3101 West Meadow Drive SW, 9121-9149 Upper Meadow Avenue SW, 9001-9119 Hidden Spring Avenue SW, 8900 Sandy Spring Ave SW, and Anderson Hill Avenue to the south; and 98th Street to the west. None of the adjoining properties appear to represent a recognized environmental condition or environmental concern to the Site.

3.0 CLIENT PROVIDED INFORMATION

As a form of interview, Mr. Brian Patterson, a representative of the future Site owner completed a "User Questionnaire" for the Site, in accordance with ASTM E 1527-21. A copy of the completed questionnaire is included in Appendix C.

3.1 Environmental Clean Up Liens

Mr. Brian Patterson is not aware of any environmental clean-up liens at the Site.

3.2 Activity and Use Limitations

Mr. Brian Patterson is not aware of any activity use limitations at the Site.

3.3 Specialized Knowledge

Mr. Brian Patterson did not have any specialized knowledge of the Site or nearby properties. However, in the additional information he did specify that the Site includes archaeological sites and provided a Site Report.

3.4 Purchase Price

Mr. Brian Patterson states that the purchase price being paid for the property is below the fair market value due to archeological locations found on the Site.

3.5 Commonly Known Information

Mr. Brian Patterson states that he is not aware of commonly known or reasonably ascertainable information for the Site.

3.6 Obvious Indicators of Contamination

Mr. Brian Patterson states that he is not aware of obvious indicators of a likely environmental impact at the Site.

3.7 REASON FOR PERFORMING PHASE I ESA

This Phase I ESA was performed at the request of TA COMPANY 1, LLC in order to qualify for lender's requirements and due to planning/zoning requirement.

3.8 OTHER USER PROVIDED INFORMATION

GEOTEK was provided an archeological report concerning the Site, however no further information concerning the environmental history was provided by TA LAND COMPANY 1, LLC.

4.0 OWNER, PROPERTY MANAGER AND OCCUPANT INFORMATION

This section contains other relevant information regarding this assessment in accordance with ASTM E 1527-21.

4.1 OWNER, PROPERTY MANAGER AND OCCUPANT INFORMATION

It is GeoTek's understanding that Mr. Brian Paterson is currently under contract to purchase the property and was able to complete an owner questionnaire since there was no reply from the Salazar Family Trust. The Site is currently unoccupied and therefore no Site interviews were conducted during the reconnaissance.

4.2 INTERVIEWS

GEOTEK interviewed the following individuals while performing this assessment:

- Mr. Brian Patterson, a representative of the future Site owner, completed a User Questionnaire, dated May 2, 2024.

Information from the interview is incorporated into the appropriate sections of this report.

As a form of interview, Mr. Brain Patterson, a representative of the current Site owner, completed a "Property Owner Questionnaire" for the Site in accordance with ASTM E 1527-21. A copy of the completed questionnaire is included in Appendix C.

GEOTEK'S Site reconnaissance and research did not discover contradictory information from the Property Owner Questionnaire.

4.3 OTHER USER PROVIDED INFORMATION

GEOTEK was provided an archeological report concerning the Site, however no further information concerning the environmental history was provided by TA LAND COMPANY 1, LLC.

5.0 PROPERTY PHYSICAL SETTING

Surface and subsurface environments are of interest because they control the movement of water-born contaminants, which could be transported to and from the subject Site. GEOTEK reviewed information regarding the physical setting of the subject Site and immediate surrounding area.

5.1 REGIONAL GEOLOGY

Regionally, the Site lies within the Rio Grande Flood Plain, just west of the piedmont surface on the western side of the Albuquerque-Belen Basin. The Albuquerque-Belen basin is part of an interconnected series of north-south aligned grabens and structural basins which have subsided between mountain and highland uplifts comprising the Rio Grande Rift. The basin is approximately 100 miles long and varies from 20 to 30 miles wide and was formed during the Tertiary Period when the Sandia-Manzano fault block was uplifted and tilted, forming what is now the present-day Sandia, Manzanita, and Manzano Mountains. The gently sloping surface of the valley fill consists of a series of alluvial fans deposited unconformably on the formations of the Santa Fe Group. The primary stratigraphic units within the Santa Fe Group are the result of fluvial, alluvial, volcanic, and aeolian processes related to changes in basin tectonics and to changes in climate over the past few million years.

5.2 LOCAL GEOLOGIC SETTING

Based on a preliminary review of geologic maps, the Site's vicinity lies with Holocene to late Pleistocene-aged young alluvial-slope deposits (Qay) derived from the Upper Santa Fe Group geological formation. These units generally consist of fine to very coarse sand with gravel in varying amounts and sizes and may locally include thin lenses of clay. Additional data regarding soil survey information for the Site and Site area is also included in Appendix B.

5.3 TOPOGRAPHY

The Site and Site area can be considered as having gently sloping terrain in the west and central portions of the Site to relatively flat terrain in the northeast. Based on the USGS topographic map for the area and other documents reviewed for this report, the elevation of the Site ranges from approximately 5,112 to 5,022 feet above mean sea level.

5.4 VICINITY SURFACE DRAINAGE

Natural drainage at the Site is interpreted to be dominantly directed toward the east, conforming to the natural topography in the area.

5.5 HYDROGEOLOGY

According to ground water data obtained from the USGS National Water Information System, ground water within approximately 0.5 miles of the Site vicinity was identified depths ranging between approximately 145 to 186 feet bgs in 1973 and 2024 (the most recent well readings in the area). Groundwater is greater than 50 feet below ground surface with a flow estimated to be directed to the east.

6.0 ENVIRONMENTAL REGULATORY RECORDS REVIEW

The records review is conducted to help identify known recognized environmental conditions at the Site and/or on adjoining or nearby properties which may have impacted the subject Site.

6.1 ENVIRONMENTAL DATABASE RECORDS SEARCH

GEOTEK obtained and reviewed an environmental database report of the federal and state environmental records specified by ASTM E 1527-21. The database report was provided by Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut. Additionally, orphan or un-mappable sites listed by EDR were reviewed for the approximate minimum search distances noted and included in the discussion, if applicable. Refer to Appendix E for a copy of the database report.

ENVIRONMENTAL DATABASE	MINIMUM SEARCH DISTANCE	SITE	ADJOINING	TOTAL LISTED
U.S. Department of Defense (DOD) facilities and Formerly Used Defense Sites (FUDS)	1.0 Mile	No	0	0
Environmental Protection Agency (EPA) - National Priorities List (NPL), including delisted NPL	1.0 Mile	No	0	0
EPA – Superfund Enterprise Management System (SEMS), including archived sites (formerly CERCLIS)	0.5 Mile	No	0	0
EPA – Resource Conservation and Recovery Act (RCRA), Corrective Action Facilities (CORRACTS)	1.0 Mile	No	0	0
EPA – RCRA, Transportation, Storage, and Disposal facilities (TSD)	0.5 Mile	No	0	0
EPA - RCRA Generators	Site and Adjoining	No	0	0
EPA – Emergency Response Notification System (ERNS)	Site	No	N/A	0
Federal institutional control/engineering control registries	Site	No	N/A	0

ENVIRONMENTAL DATABASE	MINIMUM SEARCH DISTANCE	SITE	ADJOINING	TOTAL LISTED
Leaking Underground Storage Tanks (LUST), including historic and archive databases	0.5 Mile	No	0	0
Underground Storage Tanks (UST), including historic USTs and archive databases	Site and Adjoining	No	0	0
State institutional control/engineering control registries	Site	No	N/A	0
Federal and/or State Voluntary Cleanup Program (VCP) sites	0.5 Mile	No	0	0
Federal and/or State Brownfield Sites (BFS)	0.5 Mile	No	0	0
Local and/or Tribal databases	Up To 1.0 Mile	No	1	1
Drycleaners	0.25 Mile	No	0	0
Other databases	Up to 1.0 Mile	No	1	1
Unmappable facilities	Up to 1.0 Mile	No	0	5

N/A – Not Applicable

6.2 Discussion of Regulatory Records

6.2.1 Department of Defense

The Department of Defense (DOD) facility database includes federal facilities operated by the DOD which encompasses greater than 640 acres. Formerly Used Defense Sites (FUDS) are properties where the U.S. Army Corps of Engineers is actively working or will take necessary cleanup actions. Environmental impacts from the operations of such facilities have been documented across the continental United States. The DOD and FUDS databases are searched for a 1.0-mile distance.

The Site does not appear on the DOD or FUDS databases. There are no facilities listed on the DODS or FUDS databases within 1.0-mile of the subject Site.

6.2.2 National Priorities List

The National Priorities List (NPL) is the EPA's list of confirmed or proposed Superfund sites. GeoTek's review of this data includes sites which have been delisted from the NPL. The NPL is searched for a 1.0-mile distance.

The Site does not appear on the NPL. There are no NPL facilities located within 1.0-mile of the Site.

6.2.3 SUPERFUND ENTERPRISE MANAGEMENT SYSTEM

The Superfund Enterprise Management System (SEMS, formerly CERCLIS) is a compilation of sites that the EPA has investigated or is currently investigating for a release or threatened release of hazardous substances. GEOTEK'S review of SEMS sites includes archive (no further remedial action planned) facilities. The SEMS list is searched for a 0.5-mile distance.

The Site does not appear on the SEMS list. There are no SEMS facilities located within 0.5-mile of the Site.

The Site does not appear on the SEMS-ARCHIVE list. There are no facilities on the SEMS-ARCHIVE list within 0.5-mile of the Site.

6.2.4 RESOURCE CONSERVATION AND RECOVERY ACT

The Resource Conservation and Recovery Act compile selective information on facilities which generate, transport, store, treat and or dispose of hazardous waste. RCRA facilities can be listed on one of three databases:

- *Corrective Action Facilities (CORRACTS)* are facilities undergoing corrective action. A corrective action order is issued pursuant to RCRA Section 3008(h) when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. The CORRACTS list is searched for a 1.0-mile distance.

  The Site does not appear on the CORRACTS list. There are no CORRACTS facilities located within 1.0-mile of the site.

- *Transportation, Storage, and Disposal Facilities (TSD)* includes facilities that transport, store or dispose of hazardous waste and are not listed on the RCRA Generators list. The TSD is searched for a 0.5-mile distance.

  The Site does not appear on the RCRA TSD list. There are no RCRA TSD facilities located within 0.5-mile of the site.

- *Generators List* identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Generators database is a compilation by the EPA of reporting facilities that generate hazardous waste. The RCRA generators list is searched for the Site and adjoining properties.

  The Site does not appear on the RCRA Generators list. There are no facilities listed on the RCRA Generators list that adjoin the Site.

6.2.5 Federal Institutional Control/Engineering Control Registries

The EPA maintains three (3) databases which list sites that have institutional and/or engineering controls in place as part of their operations. These databases are searched for the Site.

The Site does not appear on these databases.

6.2.6 Emergency Response Notification System

The Emergency Response Notification System (ERNS) is a national database used to collect information on reported releases of oil or hazardous substances. The ERNS list is searched for the Site.

The Site does not appear on the ERNS list.

6.2.7 State Response Sites

The State Response Sites (RESPONSE) records are the state equivalent to the federal National Priorities List (NPL) database. The RESPONSE database is searched for a 1.0-mile distance.

The Site does not appear on the RESPONSE database. There are no RESPONSE facilities located within 1.0-mile of the site.

6.2.8 Leaking Underground Storage Tanks List

Leaking Underground Storage Tanks (LUST) list is a compilation of petroleum storage tank sites that have reported a release. GeoTek's review includes historic, archived and tribal LUST databases. The LUST list is searched for a 0.5-mile distance.

The Site does not appear on the LUST list. There are no facilities identified on the LUST databases withing 0.5-mile of the Site.

6.2.9 Underground Storage Tanks List

Underground Storage Tank (UST) list is a compilation of petroleum storage tank sites that are registered with the state of New Mexico. GeoTek's review included historic, archived, and tribal UST databases. The UST list is searched for the Site and adjoining properties.

The Site does not appear on the UST list. There are no facilities adjoining to the Site on the UST list.

The Site does not appear on the HIST UST list. There are no facilities adjoining to the Site on the HIST UST list.

6.2.10 State Institutional Control/Engineering Control Registries

The State of New Mexico maintains institutional and engineering control databases or registries. This lists sites with engineering or institutional controls in place. Institutional controls include administrative measures intended to prevent exposure to contaminants remaining on site. Engineering controls include various forms of caps, building foundations, liners, and treatment methods. The State Institutional Control/Engineering Control Registries is searched for the Site.

The subject Site does not appear on the State Institutional Control/Engineering Control Registries.

6.2.11 Federal and/or State Voluntary Cleanup Program

Voluntary Cleanup Program (VCP) facilities are those where the current or past owner of which has entered into an agreement with EPA or the state to utilize their own resources to remediate a site or facility. The VCP databases are searched for 0.5-mile.

The Site does not appear on the VCP databases. No facilities were identified on the VCP databases withing 0.5-mile of the Site.

6.2.12 BROWNFIELD SITES

Brownfield sites (BFSs) are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Federal brownfields are listed by EPA. State brownfields in California are listed by CEPA. BFSs are searched for 0.5-mile.

The Site does not appear on the federal or stated BFS database. There are no BFS facilities within 0.5-mile of the Site.

6.2.13 LOCAL AND/OR TRIBAL DATABASES

The Site does not appear on the local databases reviewed.

Tribal governments are under the jurisdiction of the EPA for environmental concerns. Currently, the EPA Region 6 publishes LUST and UST information for tribes in Arkansas, Louisiana, New Mexico, Oklahoma, Texas, and 66 Tribal Nations. The LUST database is searched for 0.5 mile, and the UST database is searched for 0.25 mile.

The Site does not appear on the Tribal LUST or UST databases.

There is one (1) facility listed on the State Cleanup Sites (SCS) database. The facility is listed as Aceves Domestic Well and is located at 4329 Meade SW, approximately 1,322 feet (0.25 mile) southeast of the Site. The status is listed as "closed" as of April 9, 2007.

Based on the facility's nature, facility status, distance and being located hydro-geologically down-gradient, it is GeoTek's opinion this facility has not created a recognized environmental condition to the Site.

No facilities were identified on the Tribal LUST or UST databases within 0.5 mile of the Site.

6.2.14 DRYCLEANERS

The DRYCLEANERS list is compiled and provided by CEPA. The DRYCLEANER database is searched for a 0.25-mile distance.

The Site does not appear on the DRYCLEANER list. There are no DRYCLEANER facilities listed within 0.25-mile of the Site.

6.2.15 Other Databases

EDR compiles information from multiple federal, state, local, and proprietary databases. Most are secondary or tertiary or redundant. Facilities compiled on these other databases are evaluated based on the severity of the listing, distance, and location.

The Site does not appear on any other databases within the environmental database report obtained for this assessment. There are no additional facilities listed on the database report within the various search distances specified by ASTM E 1527-21.

6.2.15.1 Historic Automotive Facilities

EDR provides a proprietary database including the names, locations, and dates of known historic automotive repair and service facilities. This database is searched for 0.25-mile.

The Site does not appear on the historic automotive facilities database.

Route 66 Enterprises LLC is listed as a mapped facility approximately 267 feet (0.051 mile) east-northeast from the Site as of 2014. The facility is considered to be at a lower elevation than the Site and has since been removed and replaced by a residential development and therefore is not considered a recognized environmental condition to the Site.

6.2.15.2 Historical Drycleaners

EDR provides a proprietary database including the names, locations, and dates active of known dry-cleaning facilities. The state and certain local regulatory agencies also provide information on dry-cleaning facilities. These databases are searched for 0.25-mile.

The Site does not appear on the Historical Drycleaners database. There are no listed facilities within 0.25-mile.

6.2.15.3 Manufactured Gas Plants

EDR provides a proprietary database including the names, locations, and dates active of known manufactured gas plants (MGP). This database is searched for 1.0-mile.

The Site does not appear on the MGP database. There are no listed facilities within 0.25-mile.

6.2.16 UNMAPPABLE FACILITIES

GEOTEK reviewed the listing of "orphan" or unmappable facilities in the database report. There are five (5) unmapped facilities in the database report.

The first facility listed is ROBERT'S OIL TRUCK ACCIDENT, at Broadway and Rio Bravo in Albuquerque, NM. The facility is listed on the State Cleanup Sites (SCS) database. The SCS database listing has a status of "Closed" as of July 21, 1999. Due to its closed status, it is our opinion that this facility has not created a recognized environmental condition at the Site.

The second facility listed is ROBERT'S OIL TRUCK ACCIDENT, at Gibson and Mulberry in Albuquerque, NM. The facility is listed on the State Cleanup Sites (SCS) database. The SCS database listing has a status of "Closed" as of March 30, 1996. Due to its closed status, it is our opinion that this facility has not created a recognized environmental condition at the Site.

The third facility listed is KAFB/SNL BURN SITE, at Lurance canyon burn site in Albuquerque, NM. The facility is listed on the State Cleanup Sites (SCS) database. The SCS database listing has a status of "Not Reported". Due to its distance to the Site (approximately 19 mi), it is our opinion that this facility has not created a recognized environmental condition at the Site.

The fourth facility listed is KAFB MCCORMICK RANCH, at McCormick Ranch, SW corner of base in Albuquerque, NM. The facility is listed on the State Cleanup Sites (SCS) database. The SCS database listing has a status of "referred". Due to its distance to the Site (approximately 10 mi), it is our opinion that this facility has not created a recognized environmental condition at the Site.

The fifth facility listed is ILLEGAL DUMPING OF USED OIL DRUMS, at East of 98th and I-40 in Albuquerque, NM. The facility is listed on the State Cleanup Sites (SCS) database. The SCS database listing has a status of "Closed" as of December 4, 2000. Due to its closed status, it is our opinion that this facility has not created a recognized environmental condition at the Site.

GEOTEK consulted with the County of Riverside Fire Department and the City of Menifee Police Department regarding controlled substances in association with the Site or adjoining facilities. Neither agency had information regarding the Site.

6.3 OUT OF SCOPE CONSIDERATIONS

Per- and Poly-Fluoroalkyl substances (PFAS) are a group of over 9,000 synthetic chemicals that have been used for over 70 years. Due to the very stable carbon-fluorine bonds, perfluoroalkyls are resistant to biodegradation, photooxidation, direct photolysis, and hydrolysis. Atmospheric deposition can lead to contamination of soils and leaching into groundwater away from point sources. Health effects in humans may include cancer, cardiovascular, immunological, endocrine, reproductive, and hepatic harm.

At the time of the adoption of ASTM 1527-21 standard, PFAS chemicals were considered to be "emerging contaminants" and therefore technically are considered to be non-scope considerations, per the ASTM-1527-21 standards. However, as of April 19, 2024, the United States Environmental Protection Agency (USEPA) officially designated the regulatory status of two (2) commonly utilized PFAS chemicals as hazardous substances under CERCLA. The two (2) chemicals are perfluoro octane sulfonic acid (PFOS) and perfluorooctanoic acid (PFOA). Furthermore, it is likely that numerous additional chemicals within the PFAS family will become officially designated as hazardous substances in the near future.

Although still technically considered an emerging contaminant per the governing ASTM 1527-21 standards, GEOTEK conservatively has elected to currently consider PFAS chemicals to be hazardous substances and thus potentially may represent a recognized environmental condition. Generally, high-risk PFAS sites include airports, landfills, wastewater-treatment plants, government and military sites, petroleum plants, fire suppression/firefighting sites with aqueous film forming foam (AFFF), PFAS treated material and food packaging facilities, plating facilities, some biosolid farming sites, and most chemical production and manufacturing facilities, among others.

The Site does not appear on the PFAS database within the EDR Radius Report. The Site does not appear on the USEPA PFAS Analytic Tools website (PFAS Analytic Tools (epa.gov)).

Based on the lack of high-risk facilities and no obvious signs of substantial PFAS contamination at the Site, it is GEOTEK'S opinion that PFAS chemicals do not represent a recognized environmental condition to the Site.

7.0 VAPOR ENCROACHMENT SCREENING

The purpose of a Vapor Encroachment Screen (VES) is to identify, to the extent feasible, if a Vapor Encroachment Condition (VEC) exists at the Site.

A Vapor Encroachment Screen Report was generated for the Site and Site area utilizing EDR's Vapor Encroachment Worksheet (see Appendix F).

It was determined that there are no historical dry cleaners or gas stations located within 600 feet and/or up gradient from the Site. It was determined that one condition might indicate a VEC exists at the Site.

ROUTE 66 ENTERPRISES LLC referenced by EDR as a Historic Auto mapped facility. The facility is at 2851 Butch Cassidy Drive SW and has since been constructed as a residential development.

It is GEOTEK'S opinion that a VEC is not likely to exist at the subject Site. The Vapor Encroachment Screen report is included in Appendix F.

8.0 SITE AND SURROUNDING AREA HISTORY

In order to construct the history of the Site and the surrounding area, GEOTEK reviewed reasonably ascertainable public documents, including aerial photographs, topographic maps, building records, city directories, fire insurance maps, environmental liens and activity use limitations (AULs) and county assessor history records.

8.1 HISTORICAL SITE USAGE

8.1.1 AERIAL PHOTOGRAPH REVIEW

GEOTEK reviewed aerial photographs dated 1951, 1959, 1967, 1961, 1967, 1973, 1975, 1982, 1986, 1991, 1996, 2006, 2011, 2016, 2020 and 2023 (see Appendix A and B).

Based on readily available historical information, the Site appears to be vacant land from at least 1951 until at least 1982.

By 1982, the 8.5 acres of land belonging to Albuquerque Metropolitan Arroyo Flood Control District (AMAFCA) had been developed bisecting the Site.

By 2016, Unser Boulevard was developed as an unpaved road on the eastern portion of the Site and the generator pad to the east of Unser Boulevard had been constructed.

By 2020, earthwork operations had commenced in the southwest portion of the Site and seems to haven been completed by 2023 according to recent arial photographs and confirmed by the Site reconnaissance.

A 2023 aerial photograph is utilized for Figure 3 (Appendix A).

8.1.2 ASSESSOR'S INFORMATION

The Site is known as Bernalillo County Assessors Uniform Parcel Numbers (UPNs) 100905437015540203 and -25518040101. Additional legal descriptions for the Site are included in the Environmental Lien and AUL Search as obtained from Environmental Data Resources, Inc. (EDR) included in Appendix B. A Property Tax Map Report as obtained from EDR is also included in Appendix B. A Bernalillo Assessor's Parcel Map as obtained from the Bernalillo County Assessor's website (Bernalillo County Assessor's Office (bernco.gov)).

8.1.3 Building Department Records

A Building Permit Report, as obtained from and provided by EDR, is included in Appendix B. No permits were found for the Site as there is currently no address.

8.1.4 Chain of Title

GeoTek has not received nor been authorized to obtain Chain-of-Title documents for the Site.

8.1.5 City Directory Review

GeoTek obtained The EDR – City Directory Image Report, as obtained from and provided by EDR, and included in Appendix B. The Site does not have a physical address, therefore was not listed in the report. However, several addresses were listed as adjoining properties. These listings are mostly residential in nature and are not considered an environmental concern to the Site.

8.1.6 Interviews

GeoTek interviewed the following individuals while performing this assessment:

- Mr. Brian Patterson, a representative of the future Site owner, completed a User Questionnaire, dated May 2, 2024.
- Mr. Brian Patterson, a representative (a representative of the current Site owner) completed a Property Owner Questionnaire, dated May 16, 2024. He indicated that TA LAND COMPANY 1, LLC is under contract to purchase the property in July. A copy was not received from the Salazar Family Trust.

Information from these interviews is incorporated into the appropriate sections of this report.

As a form of interview, Mr. Brian Patterson, a representative of the current Site owner, completed a "Property Owner Questionnaire" for the Site in accordance with ASTM E 1527-21. A copy of the completed questionnaire is included in Appendix C.

Mr. Patterson answered in the negative or unknown to most of the questions. However, Mr. Patterson answered in the affirmative to a stormwater retention basin on Site and that the stormwater does flow from an off-site source onto the Site.

GEOTEK'S Site reconnaissance and research did not discover contradictory information from the Property Owner Questionnaire.

8.1.7 RECORDER'S INFORMATION

According to information provided by the EDR Environmental Lien and AUL Search, the Site is currently owned by the Salazar Family Trust. No record of environmental liens nor activity and use limitations (AULs) was revealed in the documents reviewed. A copy of this report is included in Appendix B.

8.1.8 SANBORN MAP REVIEW

Sanborn Fire Insurance Maps for the parcel were requested from EDR-Sanborn, which owns and maintains the largest and most complete collection of the maps. No source sheets were provided in the Sanborn Map Report. The Sanborn Map Report is included in Appendix B.

8.1.9 TOPOGRAPHIC MAP REVIEW

GEOTEK reviewed the following topographic map sheets:

- Bernalillo 1888 (30-minute series), dated 1888
- Albuquerque 1889 (30-minute series), dated 1889
- Albuquerque 1893 (30-minute series), dated 1893
- West Albuquerque 1934 (7.5-minute series), dated 1934
- Albuquerque 1938 (15-minute series), dated 1938
- La Mesita Negra SE (7.5-minute series), dated 1954
- Albuquerque West (7.5-minute series), dated 1960
- La Mesita Negra SE (7.5-minute series), dated 1967
- Albuquerque West (7.5-minute series), dated 1972
- Albuquerque (15-minute series), dated 1986
- La Mesita Negra SE (7.5-minute series), dated 1996
- Albuquerque West (7.5-minute series), dated 2013
- Albuquerque West (7.5-minute series), dated 2017
- Albuquerque West (7.5-minute series), dated 2020

The Topo Map Report, as obtained from EDR, is included in Appendix B.

The Site appears to be vacant land on all of the topographic map sheets until 2013 when Unser Boulevard is depicted.

The topographic map sheets show little detail other than streets in the vicinity and Unser Boulevard on the Site.

A 2020 topographic map sheet is utilized for Figure 2 (Appendix A).

8.2 Historical Immediately Surrounding Property Usage

8.2.1 Aerial Photograph Review

GeoTek reviewed aerial photographs dated 1951, 1959, 1967, 1973, 1975, 1982, 1986, 1991, 1996, 2006, 2011, 2016, 2020 and 2023 (see Appendix A and B).

The surrounding areas appear to be vacant land from at least 1951.

By 1959, an apparent single-family residence is depicted to the northeast of the Site.

By 1982, the existing Sacate Blanco channel was constructed parallel to the unpaved access road from the southwest portion of the site to the northeast. A residential development is depicted northeast of the Site.

Between 1982 and 1986, the residential development to the northeast expands north and a residential development is depicted to the southeast of the Site.

Between 1996 and 2006, the residential developments to the northeast and southeast expanded the west. A residential development is depicted to the west of the Site. expands north and a residential development is depicted to the southeast of the Site. Unser Boulevard had been constructed as an unpaved road.

By 2011, Rudolfo Anaya Elementary School had been constructed and Unser Boulevard had been paved.

By 2020, earthwork operations had commenced on the southwest portion of the Site for the stormwater retention pond. Since the Site and surrounding areas have remained in a similar condition through recent arial photography.

8.2.2 CITY DIRECTORIES

GEOTEK has reviewed a City Directory Image report obtained from and provided by EDR for the Site and surrounding property addresses. The City Directory Image report provides information on numerous nearby property addresses. The surrounding properties appear to be primarily residential in nature. These facilities do not appear to have created a recognized environmental condition at the subject Site.

8.2.3 SANBORN MAP REVIEW

Sanborn Fire Insurance Maps for the parcel were requested from EDR-Sanborn, which owns and maintains the largest and most complete collection of the maps. No source sheets were provided in the Sanborn Map Report. The Sanborn Map Report is included in Appendix B.

8.2.4 TOPOGRAPHIC MAP REVIEW

GEOTEK reviewed the following topographic map sheets:

- Bernalillo 1888 (30-minute series), dated 1888
- Albuquerque 1889 (30-minute series), dated 1889
- Albuquerque 1893 (30-minute series), dated 1893
- West Albuquerque 1934 (7.5-minute series), dated 1934
- Albuquerque 1938 (15-minute series), dated 1938
- La Mesita Negra SE (7.5-minute series), dated 1954
- Albuquerque West (7.5-minute series), dated 1960
- La Mesita Negra SE (7.5-minute series), dated 1967
- Albuquerque West (7.5-minute series), dated 1972
- Albuquerque (15-minute series), dated 1986
- La Mesita Negra SE (7.5-minute series), dated 1996
- Albuquerque West (7.5-minute series), dated 2013
- Albuquerque West (7.5-minute series), dated 2017
- Albuquerque West (7.5-minute series), dated 2020

The Topo Map Report, as obtained from EDR, is included in Appendix B.

The surrounding residential developments are depicted on the topographic map sheets dated 1972, 1986, and 1996.,

The 2013, 2017, and 2020 topographic map sheets show little detail other than streets in the vicinity.

A 2020 topographic map sheet is utilized for Figure 2 (Appendix A).

8.3 HISTORICAL USE SUMMARY

Based on readily available historical aerial imagery, the Site appears to be vacant land from at least 1951. At this time, the ephemeral drainage is depicted along the southern boundary. By 1967, an unpaved access roadway was developed in the northwest portion of the Site and traversed from the southwest to the northeast and earthwork activities can be observed on the northeast portion of the Site. Between 1975 and 1982, the existing Sacate Blanco channel was constructed parallel to the unpaved access road from the southwest portion of the site to the northeast. Between 1996 and 2006, Unser Boulevard had been developed as a two-lane unpaved road, spread fill is depicted along the norther boundary, and numerous unpaved access roads had developed across the Site. By 2011, Unser Boulevard had been paved with asphaltic concrete. By 2020, earthwork activities had commenced in the southwest portion of the Site for drainage pond and the median between the two lanes of Unser Boulevard had been developed. The Site has remained relatively unchanged since 2020 except for further development to the drainage pond in the southwest portion of the Site and a walled-off transformer pad to the east of Unser Boulevard.

Data gaps exist from 1952 to 1958, 1959 to 1966, and 1997 to 2005 due to the limited records which are reasonably ascertainable in the local area. However, it is GEOTEK'S opinion that additional historical information, if it were to become available, is not likely to change the conclusions or recommendations of this assessment.

9.0 SIGNIFICANT DATA GAPS

No significant data gaps were discovered while performing this Phase I Environmental Site Assessment. Therefore, it is GEOTEK'S opinion that sufficient information was obtained to identify current Site conditions and past Site usage.

Minor data gaps include:

- Data gaps exist from 1952 to 1958, 1959 to 1966, and 1997 to 2005 due to the limited records which are reasonably ascertainable in the local area. However, it is GEOTEK'S opinion that additional historical information, if it were to become available, is not likely to change the conclusions or recommendations of this assessment.

- GEOTEK has not received nor reviewed Chain-of-Title documents for the Site.

It is GEOTEK'S opinion that additional information, if it were to become available, is not likely to change the conclusions or recommendations of this assessment.

10.0 CONCLUSIONS AND RECOMMENDATIONS

GEOTEK has performed a Phase I Environmental Site Assessment (ESA) for the subject Site in substantial conformance with the scope and limitations of ASTM E 1527-21 and GEOTEK Proposal No. P0400824-ABR dated April 19, 2024. Any exceptions to, or deletions from, this practice are described in the appropriate sections of this report.

Based on this investigation, this Phase I Environmental Site Assessment has not revealed evidence of a recognized environmental condition in connection with the subject Site. No further investigation is recommended at this time.

11.0 CERTIFICATIONS

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject Site. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

The qualifications of the Project Team are included in Appendix G.

GEOTEK appreciates this opportunity to be of service. If you have any questions, or if we can be of further service, please contact us at (505) 456-4900.

Sincerely,
GEOTEK RESIDENTIAL LLC

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1910 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address and/or parcel information to:

- search for parcel information and/or legal description
- search for ownership information
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc
- search for publicly available environmental encumbering instrument(s) filed on or after the recording of the current deed; between the recording of the current deed and present
- provide a copy of any environmental encumbrance(s)
- provide a copy of the current deed when available

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Warranty Deed

KNOW ALL MEN BY THESE PRESENTS THAT:

For valuable consideration of $10.00, and other good and valuable consideration, the receipt of which is hereby acknowledged, Victor Salazar as trustee of The Salazar Family Trust, dated February 12, 1982, (the "Grantor"), does hereby convey, with special warranty covenants, unto Julia E. Salazar, not married, of 12659 Moorpark Street, Unit 5, Studio City, CA 90614, (the "Grantee") as the sole tenant, the following lands and property, together with all improvements attached to the property, lying in the County of Bernalillo, State of New Mexico:

> Undivided seven-hundred and fifteen one-hundredths percent (0.715%) in and to Tract 13-D of Lands of the Salazar Family Trust Et Al, City of Albuquerque, New Mexico, Bernalillo County as the same as shown and designated on the Plat thereof, filed in the Office of The County Clerk of Bernalillo County, New Mexico on August 1, 2006.

Prior instrument reference: Book 2006C, page 237, document No. 2006114441, of the recorder of Bernalillo, New Mexico

Less and except all oil, gas and minerals, on and under the above described property owned by the Grantor, if any, which are reserved by the Grantor.

Subject to all easements, rights-of-way, protective covenants and mineral reservations of record, if any.

TO HAVE AND TO HOLD same unto the Grantee and the Grantee's heirs and assigns forever, with all appurtenances attached to the property.

The Grantor covenants with the Grantee that the Grantor is lawfully seized in fee simple of the granted premises; that the same are free from all encumbrances except those set forth above; that the Grantor has good right, full power and lawful authority to sell and convey the property to the Grantee; and that the Grantor and the Grantor's heirs, executors, and administrators shall warrant and defend the property to the Grantee forever against the claims by, through, or under the Grantor.

Taxes for tax year 2019 will be paid by the Grantee.

IN WITNESS WHEREOF this Warranty Deed was executed by the Grantor on this 10th day of May, 2019.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use (s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Geotek were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

QUESTIONNAIRE(S) AND SITE DOCUMENTS FROM OTHER SOURCES

PHASE I ENVIRONMENTAL SITE ASSESSMENT
OWNER, OCCUPANT, KEY SITE MANAGER QUESTIONNAIRE
GEOTEK PROJECT NO. _____

GEOTEK

Instructions – Thank you for completing this environmental questionnaire. Please answer the questions below based on your knowledge. You are not expected to find the answers. If you answer "yes" to any of the questions, please provide additional information, or a GeoTek representative will contact you to go over the information. Feel free to attach any information you think might be helpful with your answers. Your information is important to us in assessing the site, so please complete the form and return as soon as possible.

SITE INFORMATION

Address: BOUNDED BY 98th 10th West, South of RUDOLFO ANAYO ELEM. SCHOOL City: ABQ State: NM

Current Occupants: N/A

Current Activities: N/A

UTILITY INFORMATION

Please list the service providers for the following utilities:

Electric: PNM Water: ABCWUA

Gas: NMGCO Sewer: ABCWUA

Solid Waste: N/A

STRUCTURES

☒ Yes ☐ No ☐ Unk Are there current buildings on the Site?

If Yes please provide use/occupant - CELL PHONE TOWER IN THE NORTHEAST AREA

☐ Yes ☐ No ☒ Unk Were there buildings on the Site in the past?

If Yes please provide use/occupant - _____

SOLID WASTE

☐ Yes ☒ No ☐ Unk Has solid waste like garbage, trash, demolition debris, construction debris, landscaping debris, liquids, and/or containers been discarded on or buried beneath the Site?

☐ Yes ☒ No ☐ Unk Has the Site operated as a landfill?

☐ Yes ☒ No ☐ Unk Has soil from an off-site source been placed, spread, or piled on the surface or used as fill on the Site?

☐ Yes ☒ No ☐ Unk Were used tires discarded on or buried beneath the Site?

☐ Yes ☒ No ☐ Unk Are there former stock ponds, wastewater ponds, silage pits, or other excavations that have been filled on the Site?

PHASE I ENVIRONMENTAL SITE ASSESSMENT
OWNER, OCCUPANT, KEY SITE MANAGER QUESTIONNAIRE
GEOTEK PROJECT NO. _____

WASTEWATER AND LIQUID DISCHARGES

☐ Yes	☒ No	☐ Unk	Are there current liquid discharges on the Site or were there liquid discharges on the Site in the past?
☐ Yes	☒ No	☐ Unk	Are there current wastewater interceptors, clarifiers, or sumps on the Site or were there wastewater interceptors, clarifiers, or sumps on the Site in the past?
☐ Yes	☒ No	☐ Unk	Are there current septic systems on the Site?
☐ Yes	☒ No	☐ Unk	Were there septic systems on the Site in the past?

STORAGE TANKS

☐ Yes	☒ No	☐ Unk	Are there aboveground storage tanks (ASTs) currently located on the Site?
☐ Yes	☒ No	☐ Unk	Were ASTs located on the Site in the past?
☐ Yes	☒ No	☐ Unk	Are there underground storage tanks (USTs) currently located on the Site?
☐ Yes	☒ No	☐ Unk	Were USTs located on the Site in the past?

HAZARDOUS SUBSTANCES, PETROLEUM PRODUCTS AND CONTAINERS

☐ Yes	☒ No	☐ Unk	Are there containers of hazardous chemicals or petroleum products currently stored or used on the Site?
☐ Yes	☒ No	☐ Unk	Have hazardous chemicals or petroleum products been used on the Site?
☐ Yes	☒ No	☐ Unk	Are there current in-ground hydraulic lifts on the Site?
☐ Yes	☒ No	☐ Unk	Are there current elevators on the Site?
☐ Yes	☒ No	☐ Unk	Were in-ground hydraulic lifts present on the Site in the past?
☐ Yes	☒ No	☐ Unk	Were elevators on the Site in the past?
☐ Yes	☒ No	☐ Unk	Have pesticides been mixed, stored, or applied on the Site?

STORMWATER AND DRAINAGE PROVISIONS

☐ Yes	☒ No	☐ Unk	Are there drywells on the Site?
☐ Yes	☒ No	☐ Unk	If yes, are they registered with the state agency?
☒ Yes	☐ No	☐ Unk	Are there stormwater retention basins on the Site?
☐ Yes	☐ No	☐ Unk	Does stormwater from an off-site source flow onto the Site?

PHASEI ENVIRONMENTAL SITE ASSESSMENT
OWNER, OCCUPANT, KEY SITE MANAGER QUESTIONNAIRE
GEOTEK PROJECT NO. _____

GEOTEK

WELLS

Do you know of current or former groundwater wells on the Site? If Yes, check type of well(s):

☐ Irrigation ☐ Domestic ☐ Livestock ☐ Monitoring ☐ Geotechnical

CURRENT/PREVIOUS ENVIRONMENTAL ACTIONS

☐ Yes ☒ No ☐ Unk Are there previous environmental inspections, environmental investigations, environmental site assessments, environmental violations, pending lawsuits, or administrative actions, or environmental liens relating to the Site, or to the current or past owners, occupants, or facilities which were on the Site?

ENVIRONMENTAL DOCUMENTS

Do you know of any of the following types of documents related to the Site, and can you provide copies to GeoTek? Check all that apply:

☐ Prior Environmental Site Assessments
☐ Environmental Audit Reports
☐ Hazardous Waste Generator Notices
☐ Geotechnical Reports
☐ SARA Title III/Form R Reports
☐ Title Records
☐ Hazardous Waste Manifests
☐ Water Well Records
☐ Drywell Registration Records
☐ NPDES Permits
☐ Wastewater Discharge Permits
☐ Air Emissions Permits
☐ UST Registrations
☐ Aquifer Protection Permits
☐ Safety Data Sheets
☐ Safety Plans
☐ Spill Prevention Control and Countermeasure Plan
☐ Storm Water Pollution Prevention Plan

PRIOR SITE USES

Do you know if the Site was used for any of the following activities? Check all that apply. List other past uses/owners in the notes section below.

☐ Gasoline or Diesel Fueling Station
☐ Heavy Equipment Repair or Maintenance
☐ Commercial Laundry
☐ Industrial/Manufacturing Warehousing/Distribution
☐ Business Farm Operation: Agriculture or Dairy
☐ Automotive Sales or Services
☐ Dry-cleaning
☐ Medical Services Commercial Printing
☐ Junkyard or Salvage
☐ Laboratory or Chemical Handling

PHASEI ENVIRONMENTAL SITE ASSESSMENT
OWNER, OCCUPANT, KEY SITE MANAGER QUESTIONNAIRE
GEOTEK PROJECT NO. _____

PERSON COMPLETING THE FORM

Name: BRIAN PATTERSON Years Familiar w/Site: 6 MONTHS

Business Affiliation: TA LAND COMPANY I, LLC c/o TITAN PROPERTY MANAGEMENT

Address: 6300 RIVERSIDE PLAZA #200 City: ABQ State: NM Zip: 87120

Tel: 505-998-0169 Fax: _____ Email: BPATTERSON@TITAN-DEVELOPMENT

Relationship to the Site (please check all that apply):

Owner	Occupant	Key Site Manager
☐ Individual Owner	☐ Owner Occupant	☐ Site Manager
☒ Corporation or LLC	☐ Business Occupant	☐ Facilities Manager
☐ Partnership	☐ Business Employee	☐ Maintenance Supervisor
☐ Trust/Trustee		☐ Plant Supervisor

NOTES

PHASE I ENVIRONMENTAL SITE ASSESSMENT
USER QUESTIONNAIRE PER ASTM E1527-13
GEOTEK PROJECT NO: 2454-ABR

GeoTek requests your assistance to identify and assemble information described by the *User Responsibilities* criteria of the ASTM standard. The *User* is defined as a purchaser, potential tenant, owner, lender or Site manager, or other party seeking to use the Phase I ESA report. For all "Yes" answers, please provide copies, references or additional information on an attached sheet.

Your Name: TA Land Company 1, LLC Tel: 505-998-0163
User's Name: Brian Patterson
Site Name: TA Land
Site Address: East of Unser, West of 98th, North of Dennis Chavez and South Rudolfo Anaya ES City: Albuquerque State: NM

Are there any environmental clean-up liens filed or recorded against the Site?	YES	☐	NO	☑	UNK	☐
Are there any Activity and Use Limitations, including Engineering Controls, Institutional Controls or Land Use Restrictions, that have been filed or recorded against the Site?	YES	☐	NO	☑	UNK	☐
Do you have any special knowledge or experience about the Site, nearby sites, or the activities that occur or occurred on the Site?	YES	☐	NO	☐	UNK	☐
Is the purchase price of the Site below fair market value?	YES	☑	NO	☐	UNK	☐
If "YES," is it possible the lower price might be attributable to real or perceived environmental contamination?	YES	☐	NO	☐	UNK	☐
Is there commonly known or reasonably ascertainable information about water quality problems, chemical releases, environmental compliance issues, permit violations, or government enforcement actions, or other environmental conditions that might have a negative impact on the environmental condition of the Site or the surrounding area? If answered 'Yes', please provide specific details in the 'Additional Information' section below.	YES	☐	NO	☑	UNK	☐
Are there any pending, threatened or past legal actions or government enforcement actions Involving the Site or current or past occupants of the Site?	YES	☐	NO	☑	UNK	☐
Are there any government enforcement actions involving the Site or against current or former Occupants or owners for possible or documented violations of environmental laws or regulations?	YES	☐	NO	☑	UNK	☐
Are there any obvious indicators of environmental contamination at the Site?	YES	☐	NO	☑	UNK	☐

Why do you want to have this Phase I Environmental Site Assessment performed?

- ☐ Potential Landowner Liability Protection under CERCLA
- ☑ Lender's Requirements
- ☐ Business Operations Planning
- ☐ Baseline Review
- ☑ Planning/Zoning Requirements

Do you know if any of the following types of documents about the Site exist, and can you provide copies to GeoTek?

- ☐ Environmental Site Assessment Reports
- ☐ Environmental Compliance Audit Reports
- ☐ Underground Injection Permits
- ☐ Hazardous Waste Generator Notices
- ☐ Community Right-To-Know Plan
- ☐ Environmental Management Plan
- ☐ Hydrogeologic Reports
- ☐ Geotechnical Reports
- ☐ SARA Title III/Form R Reports
- ☐ Risk Assessments
- ☐ Chain-of-Title Records
- ☐ NPDES Permits
- ☐ Wastewater Permits
- ☐ Solid Waste Permits
- ☐ Air Emissions Permits
- ☐ UST Registrations
- ☐ AST Registrations
- ☐ Material Data Safety Sheets (MSDS)
- ☐ Safety Plans
- ☐ Stormwater Plans
- ☐ Notice of Violations
- ☐ Institutional/Engineering Controls

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of state- and tribal hazardous waste facilities

SCS: State cleanup sites that fall under the state's Water Quality Control Commission Regulations.

A review of the SCS list, as provided by EDR, and dated 01/12/2023 has revealed that there is 1 SCS site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
ACEVES DOMESTIC WELL Closed Date: 4/9/2007	4329 MEADE SW	SE 1/4 - 1/2 (0.250 mi.)	2	8

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
ROUTE 66 ENTERPRISES	2851 BUTCH CASSIDY D	ENE 0 - 1/8 (0.051 mi.)	1	8

EXECUTIVE SUMMARY

Due to poor or inadequate address information, the following sites were not mapped. Count: 5 records.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 02/29/2024

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/20/2023

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/04/2023

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

SHWS: This state does not maintain a SHWS list. See the Federal CERCLIS list and Federal NPL list.

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

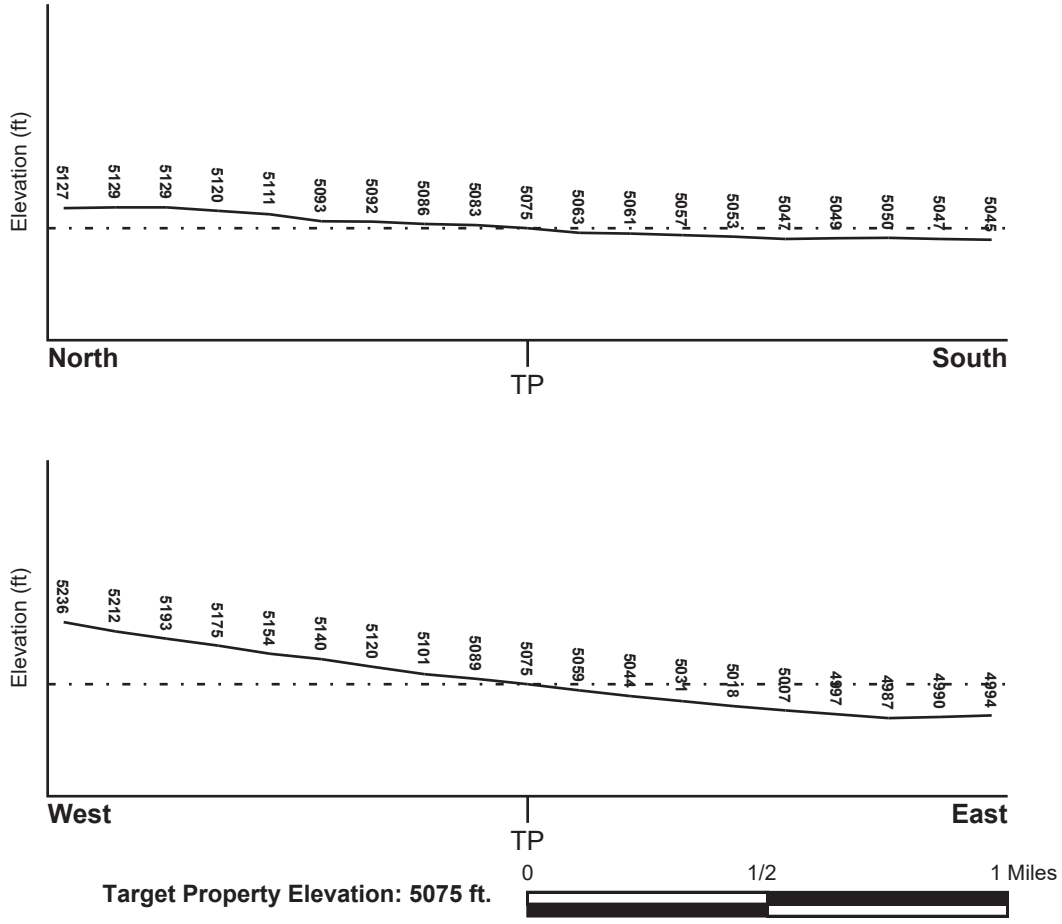
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

ALBUQUERQUE WEST	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Bluepoint

Soil Surface Texture: loamy fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	loamy fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 42.34	Max: 9 Min: 7.9
2	7 inches	20 inches	stratified fine sand to gravelly loamy fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 42.34	Max: 9 Min: 7.9
3	20 inches	59 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 42.34	Max: 9 Min: 7.9

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: US Fish & Wildlife Service
Telephone: 505-248-6660

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

APPENDIX G

PROJECT TEAM QUALIFICATIONS

KEVIN KENNEDY, STAFF ENGINEER

STAFF ENGINEER

AREAS OF EXPERTISE:

- Construction Materials Testing
- Laboratory Analysis
- Special Inspections
- Geotechnical Evaluation
- Construction Management

YEARS OF EXPERTISE: 13

EDUCATION:

- BS, Civil Engineering, University of Colorado-2008

REGISTRATIONS/CERTIFICATIONS:

- ACI-Concrete Field-Testing Technician
- HAZWOPER General Site Worker (40 hour)
- TTCP- Aggregate Testing Technician Level 1
- TTCP- Hot-Mix Asphalt Testing Technician Level 1
- TTCP- Soils Testing Technician Level 1
- OSHA Construction Safety (10 hour)

PERSONAL EXPERIENCE:

Mr. Kennedy is a Staff Engineer and has been with GeoTek since May 2023. He is currently undergoing the registration process through the state of New Mexico to obtain his E.I.. His professional experience has been primarily in Construction Quality Control and Quality Assurance, Construction Materials Testing, Laboratory Analysis, and Geotechnical Evaluation. Mr. Kennedy has performed numerous geotechnical investigations of subsurface materials as well as water and soil sampling for specific environmental projects. He is familiar with and has utilized sampling, coring, and testing procedures in accordance with ASTM, AASHTO, and CDOT standards in the field. He has worked on various industrial, mining, commercial, and residential projects performing construction management and quality assurance across the U.S. and internationally. With GeoTek, Mr. Kennedy has performed field work, special inspections, laboratory testing, and report preparation for numerous commercial and residential projects throughout New Mexico.

As a Staff Engineer, the majority of his experience has been working in the field working with construction contractors, surveyors, and drillers. His technical functions include overseeing and quality control of various projects across New Mexico for residential and commercial development, including earthwork, civil improvements, structural and geotechnical special inspections, and reviewing field, inspection, and laboratory testing reports.

RELEVANT PROJECT EXPERIENCE INCLUDES:

- ***Ordinance Cleanup Investigation, Hope, AR (Tetra Tech).*** Performed logging and documented debris that was unearthed during this unexploded ordinance (UXO) research investigation onsite. Provided a descriptions and assessments of field findings, recorded dimensions, photographed objects as discovered, and returned to site office. Seeds were placed prior to the investigation as a quality control measure to ensure complete ordinance removal from the grid. (September – November 2015)

- ***Sunshine Mine Fire Glenwood Springs, CO (Tetra Tech).*** Observed drilling operations at various mine fire locations along the western slope. Completed daily drilling logs and prepared and installed thermo-couples. Recorded temperatures and other data for the required modeling. (2015-)

- ***Enbridge Geological Slope Stability Analysis (Tetra Tech).*** Hiked the Enbridge oil pipeline corridor along the upper peninsula of MI, across WI, and into MN to access specific locations and evaluate numerous slopes and water crossings. The project required specific slopes within the corridor to be rated based on their potential failure that could possibly result in a pipeline failure. The buried pipelines were located with a Lyca device and the locations were photographed and assessed. The ground cover, vegetation and angle of the slope were recorded and input into an analysis software. (March 2015 – May 2015)

- ***AGM Early Civil Works, AGM Inc. Guyana, South America (Tetra Tech).*** Performed tasks and duties as the assigned lead Quality Assurance Engineer. Responsibilities included overseeing the Quality Control (QC) program, reviewing soil laboratory testing and field testing, and performing sub-grade inspections prior to embankment fill installation. An internal daily report was required and a weekly report summarizing both QC activities and construction activities was prepared and transmitted to the client for review. Construction oversight was provided to assist with the daily construction/earthworks operations. Acceptable borrow source locations were identified and observed construction perform the embankment fill installation. (2014 - Feb. 2015)

- ***S.T.A.R.T. Program, Environmental Protection Agency (URS).*** Provided construction oversight to ensure that work was performed in accordance with specifications, plans, and safety requirements. Acted as an environmental first responder for Region 8 of the EPA. Collected samples of various materials from buildings and spill sites and shipped them to a lab for analysis to determine if there is an environmental hazard. (2011-2012)

Kyle R. McHargue, PG

Project Geologist

Registrations

Registered Geologist, PG 9790

Education

B.A., Geology, University of Hawaii, Manoa

Certifications

OSHA 40-Hr HAZWOPER Training

OSHA 10-Hour Construction Safety and Health Training

Nuclear Gauge Certified

APNGA Radiation Safety Officer Certified

First Aid/CPR

Professional Affiliations

BIA Riverside

BIA Emerging Leaders

Professional Experience

Kyle McHargue has over 9 years of geotechnical and environmental experience working on and managing a diverse range of geotechnical and environmental projects throughout Southern California throughout Riverside, San Bernardino, Orange, San Diego, Los Angeles and Alameda counties. His geotechnical experience has ranged from staff and project geologist. Mr. McHargue's responsibilities include preparation of proposals, project management, preliminary geotechnical investigations, rippibility studies, fault hazard investigations, landslide investigations, seismic refraction surveys, settlement monitoring, percolation and infiltration studies, manure and methane evaluations, and field studies as a field and project geologist for a diverse range of grading projects. Mr. McHargue has performed hundreds of Phase I and Phase II Environmental Site Assessments for various property acquisitions and transfers in Riverside, Orange, San Diego, Los Angeles, San Bernardino, Kern, Fresno and Imperial Counties in California and Maricopa County in Arizona. Mr. McHargue also has over 5 years of field and office experience in land surveying and Storm Water Pollution Prevention Program (SWPPP) inspections.

Representative Project Experience-

Corona, Riverside County, California - Project Manager. Directed a geotechnical investigation, fault hazard and landslide investigation, slope stability analysis and Phase I Environmental Site Assessment for the Chaudhuri Estates hillside residential development.

Wildomar, Riverside County, California – Field Geologist. Supervised rough grading operations for 84-lot residential subdivision. In field challenges included stabilization fill design, fault hazard mapping, and high groundwater mitigation design.

Temecula, Riverside County, California – Project Geologist. Performed AP Fault Zone investigation, geotechnical and infiltration investigations for two adjacent commercial projects.

Ontario, San Bernardino County, California – Project and Field Geologist. Performed geotechnical, infiltration and manure/methane investigations for 121-acre development. Also supervised rough grading operations for a residential development included field mapping, field recommendations for remedial grading and preparation of reports and geologic maps.

Temecula, Riverside County, California – Field Geologist. Forensic distress investigation for religious center's structural & wall failures.

Anaheim Hills, Orange County, California – Project Geologist. Planned and performed geotechnical, infiltration investigations including all report preparation and slope stability analysis.

Coachella, Riverside County, California – Lead Field Geologist. Managed and geologically mapped 1,800 linear feet of fault trenching on the San Andreas Fault, including all background research and report preparation.

Employment History

GeoTek, Inc., Riverside-Project Geologist Jan. 2019 – Present

LGC Geo-Environmental, Inc., Temecula-Staff/Project Geologist Feb. 2015 – Jan. 2019

LGC Geo-Environmental, Inc., Temecula-Staff Geologist Dec. 2013 – Feb. 2015

Phase I Environmental Site Assessment - Undeveloped Land - Five-Acre Exchange Site, Maricopa County, Arizona: Environmental Specialist conducting a Phase 1 Environmental Site Assessment (ESA) on about 5 acres of vacant desert land used for occasional recreation. The site was located in a remote area requiring access by foot to see all 5 acres including some deep wash channels. The site vicinity has historically been mined, so we searched for mine exploration pits and mine tailings piles. Conducted research on site history and assisted with the Phase I ESA report writing.

Phase I Environmental Site Assessment - Agricultural Land - Verde Trails; Avondale, Arizona: Environmental Specialist for a Phase 1 ESA Northwest and Southwest of West Broadway Rd and South 107th Ave. The Site is approximately 108.2 acres of agricultural crop land and vacant, graded land planned for residential development. The Site included an archeological exploration pit that required visual inspection on foot. She aided in Site reconnaissance, research, and report writing.

Phase I Environmental Site Assessment – Arizona State Land Department Site, Pinal County, Arizona: Environmental Specialist on an updated Phase 1 ESA for an area of approximately 2,783 acres of land primarily used for cattle grazing. A public highway crossing was located through the central portion of the Site along with two developed areas in the southeast section of the Site including a horse and cattle ranch, as well as an aviation facility for model aircrafts. A cattle graveyard was also located on the Site. Many portions of the Site were not accessible by vehicle, resulting in extensive visual inspection of the Site on foot. Some features were identified in the research that were not found in the field during the previous Phase I ESA site reconnaissance. Identified GPS coordinates of these features to find them during the current site reconnaissance. Assisted with research and report preparation.

Phase I Environmental Site Assessment – Happy Valley Storage Site, Peoria, Arizona: Environmental Specialist for a Phase 1 ESA for the purpose of developing a new storage facility. The parcel contained a rural residence with a septic system. Vehicle repair and maintenance activities were conducted on the Site in the past, so the potential for hazardous substances and petroleum products being discharged into the septic system was identified as an issue. She aided in the Site reconnaissance, research, and report writing.

Phase II Environmental Site Assessment – City of Phoenix – Street Transportation Department Partial Acquisition, Phoenix, Arizona: On Site Environmental Field Specialist directing environmental drilling contractors and assisting with sampling activities associated with recognized environmental conditions. The Site consisted of 823.41 square feet of an asphalt paved driveway associated with a formerly developed window tinting shop, autobody shop, spray paint booth, and car audio shop. She coordinated with a private utility locator prior to drilling activities. The samples and work areas were screened

with a photoionization detector (PID), and the samples were analyzed for volatile organic compounds (VOCs), Resource Conservation and Recovery Act (RCRA) metals, and Polynuclear Aromatic Hydrocarbons (PAHs). Ms. Welch conducted the Phase I Environmental Site Assessment, assisted with the Phase II Environmental Site Assessment sampling, field documentation, and report writing.

Phase II Environmental Site Assessment -- Happy Valley Storage – Seepage Pit Sampling, Peoria, Arizona: On Site Safety Officer and Field Specialist for sampling a seepage pit connected to a septic tank associated with a septic system located at a residential property. The purpose of this project was to determine if petroleum products or hazardous substances, typically used in vehicle maintenance could have been discharged to the septic system and impacted the subsurface. Coordinated with a septic tank pumper to remove liquids from the pit. The pit was sampled via a hand auger and samples were acquired and sent to an analytical laboratory for testing.

Phase II Environmental Site Assessment – Combs Ranch Developed Area, San Tan Valley, Arizona: On Site Environmental Field Specialist directing environmental drilling contractors and assisting with sampling activities associated with recognized environmental conditions. The Site consisted of approximately 220.5 acres of agricultural land with a developed area containing three residences and a maintenance structure on the eastern portion of the Site. She coordinated with a private utility locator prior to drilling activities. The samples and work areas were screened with a photoionization detector (PID), and the samples were analyzed for chlorinated pesticides, chlorinated herbicides, volatile organic compounds (VOCs), Resource Conservation and Recovery Act (RCRA) metals, and Polynuclear Aromatic Hydrocarbons (PAHs). Ms. Welch conducted the Phase I Environmental Site Assessment, assisted with the Phase II Environmental Site Assessment sampling, field documentation, and report writing.

Geotechnical Evaluation - Victory at Verrado Parcel 3B Lots and Verrado Way Turn Bays: Staff Professional providing a post-grading geotechnical evaluation of geologic and geotechnical conditions on the Site to aid in planning, design, and construction of proposed development. She obtained bulk samples from the test borings for observation and laboratory analysis and aided in report preparation.

Phase I Environmental Site Assessments – City of Phoenix (COP) Street Transportation Department Partial Acquisition, Phoenix, Arizona: Completed numerous COP Phase 1 ESAs located in the Phoenix Metropolitan area on portions of undeveloped, commercial, and residential portions of land. Hazardous substances and petroleum products were present on a variety of Sites, resulting in environmental impacts. She conducted extensive research including the review of regulatory databases, historical sources, public and government records, sewer and water line maps, archaeology assessments, Site reconnaissance, and report writing.

I. INTRODUCTION

TA Land Subdivision is a single-family residential development community that will be built in three phases, ultimately consisting of approximately 628 lots on 127 acres. The site is located between Unser Blvd and 98th Street, just south of the Amole Channel and north of Anderson Hills. This drainage report will address the overall master drainage plan for the full three phased subdivision to adequately size the backbone infrastructure, including the storm drain and the TA Lands Pond, but will focus primarily on Phase 1. Phase 1 will contain 283 lots on approximately 55 acres within IDO zoning R1-A. The site currently drains from the west to northeast. In the proposed conditions the site will have the same drainage pattern and will accept any offsite flows. Storm runoff will be conveyed by the internal street network and collected by an internal storm drain network through a series of onsite detention ponds, finally culminating at the TA Subdivision Pond located at the northeast most corner of the site. The ponds will reduce the discharge from the site to be within the allowable discharge.

Although the full development will occur in three phases, only portions of the full site will be graded with the construction of the Phase 1 to install the backbone infrastructure and balance the earthwork.

In addition, the site currently contains two floodplains. The northern floodplain has been cut off by the Desert Sands Subdivision and is no longer an active floodplain, but is still identified as a FEMA floodplain Zone A. The southern floodplain is formally known as the Sacate Blanco Diversion Channel and is a man-made diversion channel which conveys the offsite developed flows from Desert Sands Subdivision through our proposed site to the Amole Channel. A FEMA floodplain, Zone A is located along this diversion. This development will be removing this diversion channel and replacing it with a backbone storm drain system. In addition, to help attenuate these offsite flows, a series of detention ponds will be constructed onsite. A CLOMR and\or LOMR will be prepared to remove both of these floodplains. We will work with the COA, AMAFCA, and FEMA for this process.

II. PURPOSE OF REPORT

The purpose of this report is to provide site-specific drainage analysis for existing and ultimate conditions for the subdivision development referred to as TA Lands Subdivision. This plan is prepared and submitted to support the design and grading of the subdivision and internal streets for preliminary, final plat, and construction plan approvals.

III. METHODOLOGY AND REFERENCES

The drainage analysis was completed for the fully developed conditions of the entire three phased TA Lands Subdivision in order to size the backbone infrastructure. This analysis is presented for reference in Exhibit D. This report specifically details the drainage analysis for Phase 1. The runoff flow rates and volumes for the onsite basins were computed for the 100 year – 24 hour storms in accordance with the City of Albuquerque Development Process Manual (DPM), Chapter 6. Rational Method is used in this report for the hydrology analysis to size swales, storm drain, and inlet capacity. The storm drain system hydraulic grade line (HGL) has been computed using the software Stormwater Studio. To analyze the detention ponds, HEC-HMS V14.2 was utilized. Street hydraulic capacities were computed in accordance with the COA DPM and using 8" standard curb & gutter for the subdivision. Manufactures curvilinear pipe recommendations can be found in Appendix F.

This report is consistent with previously approved drainage reports for this development, the *Amole-Hubbell Drainage Master Plan Update* (Wilson, 2013), as superseded by the *Design Analysis Report for the Expansion of Hubbell Lake Detention Dam* (BHI, December 2024), and the drainage criteria presented in the City of Albuquerque DPM. The following City of Albuquerque documents will be referenced throughout this report. Excerpts from these documents can be found in Exhibit I.

Desert Sands Subdivision Drainage Analysis Report, prepared by Mark Goodwin & Associates, PA Inc., April 2016. This document provides the offsite flow entering our site from the Desert Sands Subdivision.

98th Street Improvements from Gibson Blvd SW to Senator Dennis Chavez Boulevard SW Drainage Report, prepared by WHPacific, April 2013. This document provides the drainage master plan for the flow entering our property from 98th Street.

Albuquerque Public Schools Prototype Elementary School Site No 3, prepared by Bohannan Huston Inc., December 2007. This document provides the drainage master plan for full buildout condition of the APS Property to the north of our site.

Design Analysis Report for the Expansion of Hubbell Lake Detention Dam, prepared by Bohannan Huston Inc., December 2024. This document includes a hydrologic analysis for the fully developed watershed upstream of the Amole and Hubbell Lake Detention system.

Amole-Hubbell Drainage Master Plan Update Final Report, prepared by Wilson and Company, May 2013. This document is the basis for the fully developed hydrology presented in *Design Analysis Report for the Expansion of Hubbell Lake Detention Dam* (BHI, December 2024) and is superseded by said report.

IV. SITE LOCATION AND CHARACTERISTICS

Phase 1 is approximately 55 acres, located between Unser Blvd and 98th Street, just south of the Amole Channel and north of Anderson Hills. See Exhibit A. The existing topography slopes primarily from the west to northeast across the site with the majority of the slopes less than 9%.

As mentioned, there is an existing diversion channel, known as the Sacate Blanco Diversion Channel, within the Phase 1 site that conveys storm runoff to AMAFCA Amole Channel.

V. EXISTING CONDITIONS

Based on the existing topography, the site is broken into six offsite and two onsite basins. The existing basin and drainage patterns are shown graphically on the Existing Conditions Basin Map Exhibit C. This map supports the narrative below when describing the existing flow patterns. Additionally, this basin map quantifies the flow rates based on the City of Albuquerque Rational Method to size the various drainage components used to mitigate the offsite flows that enter the Phase 1 development. The site consists of undeveloped land and currently drains from west to northeast. There is an existing diversion channel within the property boundary.

Offsite Ex Basin-1 flows from the west to the east and discharges into Vermejo Park Drive. This basin also contains the northern floodplain mentioned above This floodplain is no longer active since it has been cut off by the Desert Sands Subdivision.

Offsite Ex Basin-4 drains into the southwest corner of our site through 2 x 36” pipes and 1 x 18” pipe running under 98th Street before discharging into an existing stormwater quality pond. This flow represents the fully developed flows from the Desert Sands Subdivision (Q=138 cfs) as well as some surface flows from 98th street (Q=12 cfs max). The total flow entering the site from this Offsite Basin-4 is approximately Q=150 cfs.

Offsite Ex Basin-2C accepts the offsite flows from Offsite Ex Basin 4 and conveys them through an existing “arroyo” to the Sacate Blanco Diversion Channel located in Onsite Ex Basin-2D.

Offsite Ex Basin-2A and 2B drain towards Onsite Ex Basin-2D.

Onsite Ex Basin-2D is located within the phase 1 boundary and contains the Sacate Blanco Diversion Channel. This Basin ultimately discharges into the Amole Channel

Offsite Basin-3A flows into Onsite Ex Basin 3B. Onsite Ex Basin 3B is also located within the phase 1 boundary. The majority of this basin primarily drains northeast towards an existing culvert that captures these flows and conveys them under Unser Blvd to the east of the site. However, this basin also contains an existing “arroyo” that flows to the southeast corner of the site. The flow from this “arroyo” will turn and then be conveyed north by a natural swale running parallel to Unser towards an existing culvert. In existing conditions, the total flow from our site into this culvert is 62 cfs.

Offsite Ex Basin-5 is a small portion of the existing APS property that drains towards Onsite Ex Basin–2D. Per the approved APS Drainage Master Plan, this flow is 2.73 cfs.

In existing conditions, Offsite Ex Basin 4, 2A, 2B, 2C and Onsite Ex basin 2D discharge to the Amole Channel and have a total flow rate of 258 cfs (as determined with the rational method, 229cfs as determined by HMS model).

VI. DEVELOPED CONDITIONS

The proposed development drainage plan follows the existing drainage paths. In order to size the backbone infrastructure, the entire three phased subdivision was broken into multiple subbasins and analyzed for future developed flows. This Master Planned Proposed Conditions Basin Map is provided for reference in Exhibit D. Similarly, for the Phase 1 Development, the site was broken into separate subbasins and analyzed for the developed flows and is shown shown graphically on the Phase 1 Proposed Conditions Basin Map in Exhibit E. Phase 1 also includes the construction of the backbone storm drain that will convey the Desert Sands Subdivision developed flows though the TA Lands Subdivision as well as the onsite detention ponds required to detain the developed flows prior to entering the downstream TA Lands Subdivision Pond. In the interim conditions, prior to the full development of phase 2 and phase 3, these detention ponds also serve to mitigate the offsite existing flows that enter the Phase 1 development.

A. ALLOWABLE

Per the City drainage policy, Article 6-7, the allowable discharge is the historic conditions flowrate of 229 cfs reaching the existing 84" RCP pipe that conveys flow from the Sacate Blanco Arroyo Channel to the Amole Channel underneath Unser Blvd. Although both the approved *Amole-Hubbell Drainage Master Plan Update* (Wilson, 2013) and superseding *Design Analysis Report for the Expansion of Hubbell Lake Detention Dam* (BHI, December 2024) show a smaller drainage area contributing to the Sacate Blanco Arroyo Channel at this location, they both show a higher developed flowrate, 338 cfs and 359 cfs, respectively. Two additional drainage areas that were assumed to drain to the Amole Channel directly via a storm drain (Basin A230) or drain underneath Unser (area southeast of Basin A233) have been redirected to the project outfall (AP 16). Limiting the allowable discharge from this larger drainage to the historic conditions flowrate at this location results in a decrease to the peak flowrate being discharged into the Amole Channel from the project area. The existing flowrate was calculated using HEC-HMS version 4.12 and the drainage basins included in the *Design Analysis Report for the Expansion of Hubbell Lake Detention Dam* (BHI, December 2024). The percent impervious for the basins that represent the project site was updated to zero to represent existing conditions and the existing stormwater quality volume (SWQV) pond at the southwest corner of the project site was modeled. Existing conditions flowrate calculations, modeled in HEC-HMS and used for the detention ponds' design, are included in Appendix E.

B. OFFSITE FLOW MANAGEMENT

The total offsite flow entering the Phase 1 site in proposed conditions remains the same as in the existing conditions. The offsite flow will be accepted by the proposed development and safely conveyed by the proposed swales, streets and storm drain network. Refer to Phase 1 Proposed Conditions Basins Map (Exhibit E) and the Grading Plan (Exhibit G) for additional details on the offsite flow management.

The developed flows from Offsite Ex Basin 4 (Q=148 cfs), will be captured and detained in the West Pond before discharging into the backbone storm drain. The West detention pond is designed with a 1' freeboard. The flow out of this pond is 37 cfs.

The flows from Offsite Ex Basin 5 (Q=2.7 cfs) will be conveyed by a proposed swale along the rear of the perimeter wall. The swale will direct the flows as in existing conditions towards the Amole Channel.

Offsite Ex Basin -1 will remain as in existing conditions and will discharge into Vermejo Park Dr and flow north away from our site.

Offsite Ex Basin – 2A will flow into the North detention pond before discharging into the Phase 1 northern storm drain system.

Offsite Ex Basin - 2B and 2C will flow towards the western boundary of the Phase 1 subdivision. A proposed swale adjacent to this boundary (parallel to Anderson Hills Avenue) will capture these flows and divert them to the South Pond.

Basin - 36A produces 6 cfs during the full buildout. This is significantly less than the existing conditions of 62 cfs and thus improves the downstream conditions.

Basin – 35A will drain towards Unser Blvd and to an existing inlet at the corner of Anderson Hill and Unser Blvd. This project will ultimately remove and replace this inlet to account for a right turn lane in Unser Blvd.

C. ONSITE FLOW MANAGEMENT

In the Phase 1 proposed conditions, the site is divided into twenty three onsite basins for analysis purposes. Using Section 6-1(A)(2) of the City's DPM, a land treatment was assigned to each onsite basin. Since the number of residential units per acre is less than 6, the percent D land treatment area was determined by "Single Family Residential" equation listed in the City's DPM Table 6.2.10. The remaining area was split between land treatments B and C.

Developed flows are calculated for the 100 year – 24 hour storm event and are shown in Appendix A. The developed flows from the subdivision will be conveyed by the internal streets and proposed storm drain networks to the pond located at the northeast corner of the site known as TA Lands Subdivision Pond.

The Phase 1 Proposed Conditions Basin Map, Exhibit E, illustrates the basin locations and flow directions for the proposed development as well as the proposed street configurations for the subdivision.

There are multiple water blocks and low points planned and placed strategically throughout the site to direct the flow to the detention ponds. The sections below will discuss the basins and their flow path to each pond and discharge points.

Drainage to South pond:

The South pond is sized for the future development as illustrated in the Planned Subdivision Proposed Conditions in Appendix D. At this fully developed condition, this pond accepts 108 cfs of developed flow and releases 55 cfs into the downstream backbone storm drain. It is designed with 1' of freeboard. For Phase 1, as mentioned above, Offsite Ex Basins 2B and 2C drain towards a proposed swale that enters the South Pond. Ex Basin 3A contains the backbone storm drain. In Phase 2, the backbone storm drain will be under a paved road, so, for Phase 1, this area will be graded to these future road grades and, as such, will be draining into the South pond. In addition, the developed flows from Basin-20 (Anderson Hills Avenue) will drain to a sump inlet that also discharges into the South pond. Since the Phase 1 conditions produce less flow than the fully developed conditions, the South pond will have adequate capacity for Phase 1.

Drainage to North pond:

The North pond is sized for the future development as illustrated in the Planned Subdivision Proposed Conditions in Appendix D. At this fully developed condition, this pond accepts 103 cfs of developed flow and releases 22 cfs into the downstream north storm drain. It is designed with 1' of freeboard. For Phase 1, as mentioned above, Offsite Ex Basin 2A drains into this pond. In addition, on grade inlets capture street flow from the proposed roads in Basin 28 and discharge into the North pond. Since the Phase 1 conditions produce less flow than the fully developed conditions, the North pond will have adequate capacity for Phase 1.

TA Lands Subdivision Pond:

The TA Lands Subdivision Pond is the final discharge point for the TA Lands subdivision and is discussed in more detail later in this report. The proposed subdivision drains to this pond from two separate storm drain systems. The north storm drain system and the backbone storm drain system. These storm drain systems are detailed in Exhibit F. The north storm drain system accepts the detained flows from the North pond as well and the basins 28, 28A, 38, 39 and 40. The north storm drain system ultimately discharges 82 cfs into the TA Lands Subdivision Pond. The backbone storm drain system accepts the detained flows from the South pond as well and the developed flows from the basins 29-37 and Basin 41. The backbone storm drain system ultimately discharges 188 cfs into the TA Lands Subdivision Pond.

VII. TA LANDS SUBDIVISION POND

The TA Lands Subdivision Pond, shown in Exhibit H, stores a 100-year volume of 6.9 acre-feet with a total volume of 11.5 acre-feet including three and a half feet of freeboard measured from the 100-year water surface elevation to the top of the pond embankment. The pond will have 4:1 side slopes and a 12-foot access road around the top. The pond will be maintained by the subdivision homeowner's association. Where the top of the pond is higher than existing ground, the 12-foot (top width) access road will function as an earthen berm. A seepage and slope stability is currently underway. The proposed pond was modeled using HEC-HMS version 4.12. The stage storage rating curve used to model the pond is provided in Table 1 below.

TABLE 1 - TA LANDS SUBDIVISION POND STAGE-STORAGE

Elevation (ft)	Storage (ac-ft)
5017.0	0.0
5020.2	1.7
5027.5	11.5

The pond outlet will consist of a single, existing 84" reinforced concrete pipe (RCP) pipe with an invert elevation of 5020.2. The bottom of the pond is set below the invert elevation of the existing pipe to provide the required Storm Water Quality Volume (SWQV), discussed later in this report. The pond bottom varies from 5017-ft to 5020.2-ft. Two storm drains from the subdivision outlet to the pond with invert elevations of 5017-ft, in the southwestern corner of the pond. To accommodate the elevation of these storm drains and the SWQV, the bottom of the pond gradually transitions up to meet the elevation of the 84" RCP pipe invert. The 12-ft maintenance access road also slopes down into the bottom of the pond, at an approximate slope of 10%. Because a Water Surface Elevation (WSE) of around 5024 is necessary for the subdivision storm drain hydraulics, the HEC-HMS pond routing model results show that the pond stores 6.9 ac-ft and has an outflow of 93 cfs. The results of this analysis are included in Appendix E and are summarized in Table 2.

TABLE 2 - HEC-HMS MODEL RESULTS

Peak Inflow (cfs)	222
Peak Outflow (cfs)	93
Peak Storage (ac-ft)	6.9
Peak Water Surface Elevation (WSE) (ft)	5024.05

A. POND PRIMARY OUTFALL DESIGN

The pond's principal outfall will be one, existing 84-inch RCP, with a ported riser or trash rack at the inlet for floatable capture per AMAFCA Technical Standards Manual, Section 6.3.1.

Hydraulic analysis of the outfall pipe was performed using HEC-HMS version 4.12. The peak outflow listed in Table 2 is less than the existing conditions 100-year peak flow of 223 cfs. Due to limitations in the internal storm drain design, the 100-year WSE was limited to 5024 feet and the maximum flow out of the existing 84” pipe with only 3.8 feet of head is 93 cfs. The discharge from the pond enters the AMAFCA Amole Channel downstream east of Unser Blvd.

B. POND EMERGENCY SPILLWAY DESIGN

An emergency spillway was not included in the pond design because the existing ground in the direction of the historic flow path is 5 feet above the 100-year WSE. In lieu of an emergency spillway, an additional 1.5 feet of freeboard is provided in addition to the 2.0 feet required per AMAFCA Technical Standards Manual, Section 4.3.6, for a total of 3.5 feet of freeboard. This approach was verified with City of Albuquerque Hydrology, and this correspondence is included in Appendix E. If the pond were to overtop, discharge would flow over the southeast corner of the pond and along Unser for approximately 400 feet to an existing 68”x43” arch pipe which conveys flow from west to east under Unser.

VIII. STORMWATER QUALITY REQUIREMENTS

The TA Lands Subdivision Pond provides dead storage of 1.7 ac-ft. This is achieved by holding the pond bottom at an elevation of 5017 feet, which is 3.2 feet below the inlet into the outlet pipe. This dead storage volume, in addition to dead storage provided in the internal ponds, meets the SWQV requirements of the new City Drainage Ordinance per

Section 6-12 of the City's DPM. The required storage for the entire subdivision is calculated as 0.42 inches times the subdivision acreage times the percent impervious, and is equal to 3.1 ac-ft. The percolation test data and infiltration calculations included in Appendix E show that the dead storage will drain in less than 96 hours. This percolation test data was taken at the location of the TA Lands Subdivision Pond and the percolation rate is assumed to be similar at the internal pond locations.

The retention volume of 1.7 ac-ft provided in the TA Lands Subdivision Pond and 2.5 ac-ft provided the internal ponds, fulfil the water quality requirement for this project. The results of the detention pond analysis are included in Appendix E and are summarized in Table 3.

TABLE 3 – RETENTION VOLUME

Pond Name	Retention Volume (ac-ft)	Retention Depth (ft)	Infiltration Time (hours)
South West	0.16	0.5	1
Mid	0.23	2.0	5
North	0.79	2.0	5
South	1.33	6.5	17
Main	1.70	3.2	9
Total	4.21	-	-

IX. FEMA FLOODPLAIN ANALYSIS

The Sacate Blanco Arroyo is currently delineated as a FEMA Zone A. Refer to Exhibit B for an excerpt from the FEMA Flood Insurance Rate Map (FIRM) panel. Zone A is defined by FEMA as:

The flood hazard zone that corresponds to the 1-percent-annual chance floodplains that are determined by Zone A study methods in shallow flooding areas. No 1-percent-annual-chance flood elevations or average depths are shown within this zone on the FIRM.

A. PROPOSED FLOODPLAIN IMPACTS

The existing floodplain delineation will be removed from the FIRM by the proposed development because the 1-percent-annual-chance flood event will be conveyed underground in the storm drain network with some above ground ponding areas. The ponding areas will be added to the FIRM as Zone AE areas.

B. LETTER OF MAP REVISION SUBMITTALS

Coordination with FEMA and the local floodplain manager is required as part of the Conditional Letter of Map Revision (CLOMR) and Letter of Map Revision (LOMR) process. A CLOMR will be submitted to FEMA during the design phase to demonstrate the proposed improvements are sufficient to remove the floodplain. After construction is complete, a LOMR will be submitted to FEMA to demonstrate the improvements constructed are consistent with the CLOMR at which time the FIRM can officially be revised.

X. GRADING PLAN

The grading plan for TA Lands Subdivision is included in Exhibit G of this report. Exhibit H illustrates the grading for the TA Lands Subdivision downstream pond.

XI. CONCLUSION

This drainage report is in compliance with the previously approved *Amole-Hubbell Drainage Master Plan Update* (Wilson, 2013), drainage reports, and the City of Albuquerque DPM and summarizes the hydrologic and hydraulic analysis for the new subdivision. With the proposed storm drain network there are no adverse effects anticipated to the existing infrastructure. The proposed storm drain infrastructure and drainage management schemes allow for the safe management of storm runoff. The implementation of these concepts would result in the safe passage of the 100 year - 24 hour storm event.

You don't often get email from tchen@cabq.gov. Learn why this is important

Hi Anna:
In this situation, using additional freeboard in lieu of a spillway is acceptable.

Thanks!

Subject: Emergency Spillway Requirement for HOA-Maintained Detention Pond

Hi Tiequan,

I am working on the design for a subdivision pond that will be maintained by the Homeowner's Association. Due to constraints with the storm drain system for the subdivision, the 100-year water surface elevation in the pond is about 5' below the elevation of the public right-of-way and historic flow path downstream of the pond. Therefore, including an emergency spillway would cause the pond volume to be much larger than needed for the 100-year event. Have you ever used additional freeboard in lieu of a spillway for a pond? If the pond is completely full, the storm drain will not be convey any inflow to the pond in a larger event or if the primary outlet was plugged.

Thank you,

Anna Caffrey, PE, CFM
Project Engineer Water Resources

Curved Alignment

Changes in direction of sewer lines are usually accomplished at manhole structures. Grade and alignment changes in concrete pipe sewers, however, can be incorporated into the line through the use of deflected straight pipe, radius pipe or specials.

DEFLECTED STRAIGHT PIPE

With concrete pipe installed in straight alignment and the joints in a home (or normal) position, the joint space, or distance between the ends of adjacent pipe sections, is essentially uniform around the periphery of the pipe. Starting from this home position any joint may be opened up to the maximum permissible on one side while the other side remains in the home position. The difference between the home and opened joint space is generally designated as the pull. The maximum permissible pull must be limited to that opening which will provide satisfactory joint performance. This varies for different joint configurations and is best obtained from the pipe manufacturer.

The radius of curvature which may be obtained by this method is a function of the deflection angle per joint (joint opening), diameter of the pipe and the length of the pipe sections.

The radius of curvature is computed by the equation:

$$R = \frac{L}{2\left(\text{TAN}\ \frac{1}{2}\ \frac{\Delta}{N}\right)} \qquad (1)$$

where:

- R = radius of curvature, feet
- L = length of pipe sections measured along the centerline, feet
- Δ = total deflection angle of curve, degrees
- N = number of pipe with pulled joints
- $\frac{\Delta}{N}$ = total deflection of each pipe, degrees

From Figure 1, the deflection angle $\frac{1}{2}\ \frac{D}{N}$ is further defined as:

$$\frac{1}{2}\ \frac{\Delta}{N} = \text{SIN}^{-1}\ \frac{\text{PULL}}{2(D + 2t)} \text{ or } \text{SIN}^{-1}\ \frac{\text{PULL}}{2B_c} \qquad (2)$$

where:

- PULL = joint opening, inches
- D = inside pipe diameter, inches
- t = wall thickness, inches

Figure 1 Deflected Straight Pipe

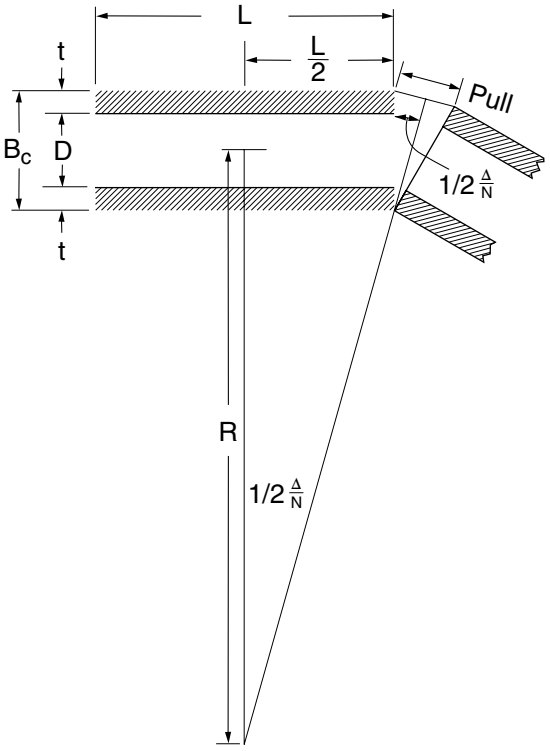

Figure 2 Curved Alignment Using Deflected Straight Pipe

B_c = outside pipe diameter, inches

The joint opening and pipe length required to provide a curved pipeline alignment may be calculated using the unit values found in Table 1 on page 3. The table tabulates the radius of a pipeline constructed of standard eight-foot laying length pipe with a 1-inch joint opening (PULL). Other pipeline radii may be calculated by changing, first, the joint opening, and if necessary, the pipe laying length. An eight-foot laying length is standard for most concrete pipe manufacturers. Other lengths may require special manufacturing procedures. Changes in the design radius are directly proportional to the pipe laying length and inversely proportional to the joint opening. The specific pull per pipe joint is found by the equation:

$$PULL_x = \left(\frac{L_x}{L_8}\right)\left(\frac{R_u}{R_x}\right)\left(PULL_8\right) \quad (3)$$

$$R_x = (L_x/L_8)(PULL_8/PULL_x)\, R_u \quad (4)$$

where:

PULL = the joint opening
Ru = the Unit Radius (Taken from Table 1)
Lx = Length of deflected pipe

Specific radii may be calculated by the following procedure:

- Select the unit radius of curvature for the specified diameter pipe from the chart.
- Increase or decrease the joint opening (PULL) in Equation 1 to obtain the design radius. If the required joint opening exceeds the pipe manufacturers recommendations, select a pipe with a shorter laying length. Four and six foot are common non-standard pipe lengths. Check with the pipe manufacturer for availability of non-standard lengths.
- Recalculate the pull for the shorter pipe.

As illustrated in Figure 2, when concrete pipe is installed on curved alignment using deflected straight pipe, the point of curve (P.C.) is at the midpoint of the last undeflected pipe section and the point of tangent (P.T.) is at the midpoint of the last pulled pipe.

RADIUS PIPE

Radius pipe, also referred to as bevelled or mitered pipe, incorporates the deflection angle into the pipe joint. The pipe is manufactured by shortening one side of the pipe. The amount of shortening or drop for any given pipe is dependent on manufacturing feasibility. Because of the possibility of greater deflection angles per joint, sharper curvature with correspondingly shorter radii can be obtained with radius pipe than with deflected straight pipe. As in the case of deflected straight pipe, the radius of curvature which may be obtained by radius pipe is a function of the deflection angle per joint, diameter of the pipe, length of pipe sections and wall thickness.

The radius of curvature is computed by the equation:

$$R = \frac{L}{\text{TAN}\ \frac{\Delta}{N}} - \left(\frac{D}{2} + t\right) \quad (5)$$

where:

Δ = total deflection angle of curve, degrees
N = number of radius pipe
L = standard pipe length being used, feet
$\frac{\Delta}{N}$ = total deflection angle of each pipe

From Figure 3, the radius of curvature can be expressed in terms of the drop and is given by the equation:

$$R = \frac{L(D + 2t)}{DROP} - \left(\frac{D}{2} + t\right) \quad (6)$$

$$R = B_c\left(\frac{L}{DROP} - \frac{1}{2}\right) \quad (7)$$

$$DROP = \frac{LB_c}{R + B_{c/2}} \quad (8)$$

where:

B_c = outside diameter of the pipe, feet

Figure 5 presents R/Bc ratios for drops from one inch through 15 inches and commonly manufactured pipe lengths. **Since the maximum permissible drop for any given pipe is dependent on manufacturing feasibility, it is essential to coordinate the design of radius pipe with the pipe manufacturer. Many manufacturers have standardized joint configurations and deflections for specific radii and economics may be realized by utilizing standard radius pipe.**

As illustrated in Figure 4, when concrete pipe is installed on curved alignment using radius pipe, the pipe sections are oriented such that the plane of the dropped joint is tangent to the theoretical circular curve. Projection of the joints do not converge at a common point, but are tangents to a common circle of diameter equal to the length of pipe sections. The point of curve (P.C.) is at the midpoint of the last straight pipe and the point of tangent (P.T.) is one half of the standard pipe length back from the straight end of the last radius pipe. The required number of pieces of radius pipe is equal to the length of the circular curve in feet divided by the centerline length of the radius pipe (L-1/2 DROP). Where possible, minor modifications in the radius are normally made so this quotient will be a whole number.

Minimum radius of curvature obtained from equations (1) and (5) are approximate, but are within a range of accuracy that will enable the pipe to be readily installed to fit the required alignment. A reasonable amount of field adjustment is possible for radius pipe by pulling the joints in the same manner as with deflected straight pipe.

BENDS AND SPECIAL SECTIONS

Special precast sections can be used for extremely

© 2012 American Concrete Pipe Association, all rights reserved.

short radius curves which cannot be negotiated with either deflected straight pipe or with conventional radius pipe. Sharper curves can be handled by using special short lengths of radius pipe rather than standard lengths. These may be computed in accordance with the methods discussed for radius pipe. Certain types of manufacturing processes permit the use of a dropped joint on both ends of the pipe, which effectively doubles the deflection. Special bends, or elbows can be manufactured to meet any required deflection angle and some manufacturers produce standard bends which provide given angular deflection per section.

One or more of these methods may be employed to meet the most severe alignment requirements. **Since manufacturing processes and local standards vary, local concrete pipe manufacturers should be consulted to determine the availability and geometric configuration of special sections.**

The following example illustrates proper use of the Tables and Figures.

Given: A 42-inch diameter concrete pipe storm sewer is to be installed on curved alignment corresponding to the roadway curvature. The pipe will be manufactured in 7-1/2 foot lengths with a 4-1/2-inch wall thickness. The curve data for the roadway curb is:

point of intersection station	P.I.	= 50+00
point of curve station	P.C.	= 49+29.6
point of tangent station	P.T.	= 50+63.1
total deflection angle	Δ	= 45°
radius of curvature	R	= 170 feet

Find: The required pull per joint for deflected straight pipe or the required drop for radius pipe.

Solution: From Table 1, for a 42-inch diameter pipe, the radius of curvature for a 1-inch pull is 408 feet. The required pull for 170 feet is:

$$PULL_X = \left(\frac{7.5}{8}\right)\left(\frac{408}{170}\right)\left(1\right) = 1.125"$$

To evaluate the required drop for radius pipe to negotiate the roadway curvature, it is first necessary to calculate the R/Bc ratio:

$$\frac{R}{B_c} = \frac{170}{4.25} = 40$$

Enter Figure 5 on the vertical scale at R/Bc 40. Proceed horizontally until the line representing L = 7.5 feet is intersected. At this point the horizontal scale shows the required drop to be 2.2 inches. Or

$$\text{Drop} = \frac{(7.5)\ (4.25)}{170 + 4.25/2} = 0.185 \text{ ft.} = 2.2 \text{ in.}$$

Answer: Radius pipe with a 2-1/4-inch drop would be required. **It is important to consult local concrete pipe manufacturers to determine the feasibility of manufacturing a 42-inch diameter pipe with the required drop.**

ABCWUA PUBLIC WATER & SANITARY SEWER EASEMENTS:

ALBUQUERQUE BERNALILLO COUNTY WATER UTILITY AUTHORITY (ABCWUA) IS GRANTED EASEMENT(S) IN THE DIMENSIONS NOTED ON THIS PLAT FOR THE CONSTRUCTION, INSTALLATION, MAINTENANCE, REPAIR, MODIFICATIONS, REPLACEMENT AND OPERATION OF PUBLIC WATER AND SANITARY SERVICE LINES, EQUIPMENT AND FACILITIES REASONABLY NECESSARY TO PROVIDE SERVICE TOGETHER WITH FREE ACCESS ON AND OVER THE EASEMENT AND THE RIGHT TO REMOVE TREES, SHRUBS, UNDERGROWTH AND ANY OTHER OBSTACLES, MODIFICATIONS, OR STRUCTURES WHICH INTERFERE WITH USE OF THE EASEMENT.

DRAINAGE FACILITIES MAINTENANCE NOTES:

AREAS DESIGNATED ON THE ACCOMPANYING PLAT AS "DRAINAGE EASEMENTS" ["DETENTION AREAS"] ARE HEREBY DEDICATED BY THE OWNER AS A PERPETUAL EASEMENT FOR THE COMMON USE AND BENEFIT OF THE VARIOUS LOTS WITHIN THE SUBDIVISIONS FOR THE PURPOSE OF PERMITTING THE CONVEYANCE OF STORM WATER RUNOFF AND THE CONSTRUCTING AND MAINTAINING OF DRAINAGE FACILITIES [STORM WATER DETENTION FACILITIES] IN ACCORDANCE WITH STANDARDS PRESCRIBED BY THE CITY OF ALBUQUERQUE. NO FENCE, WALL, BUILDING OR OTHER OBSTRUCTION (UNLESS SHOWN ON THE APPROVED GRADING PLAN) MAY BE PLACED OR MAINTAINED IN THE EASEMENT AREA WITHOUT APPROVAL OF THE CITY ENGINEER OF THE CITY OF ALBUQUERQUE. THERE ALSO SHALL BE NO ALTERATION OF THE GRADES OR CONTOURS IN SAID EASEMENT AREA WITHOUT THE APPROVAL OF THE CITY ENGINEER. IT SHALL BE THE DUTY OF THE LOT OWNERS OF THIS SUBDIVISION TO MAINTAIN SAID DRAINAGE EASEMENT [DETENTION AREA] AND FACILITIES AT THEIR COST IN ACCORDANCE WITH STANDARDS PRESCRIBED BY THE CITY OF ALBUQUERQUE. THE CITY SHALL HAVE THE RIGHT TO ENTER PERIODICALLY TO INSPECT THE FACILITIES. IN THE EVENT SAID LOT OWNERS FAIL TO ADEQUATELY AND PROPERLY MAINTAIN DRAINAGE EASEMENT [DETENTION AREA] AND FACILITIES, AT ANY TIME FOLLOWING FIFTEEN (15) DAYS WRITTEN NOTICE TO SAID LOT OWNERS, THE CITY MAY ENTER UPON SAID AREA, PERFORM SAID MAINTENANCE, AND THE COST OF PERFORMING SAID MAINTENANCE SHALL BE PAID BY APPLICABLE LOT OWNERS PROPORTIONATELY ON THE BASIS OF LOT OWNERSHIP. IN THE EVENT LOT OWNERS FAIL TO PAY THE COST OF MAINTENANCE WITHIN THIRTY (30) DAYS AFTER DEMAND FOR PAYMENT MADE BY THE CITY, THE CITY MAY FILE A LIEN AGAINST ALL LOTS IN THE SUBDIVISION FOR WHICH PROPORTIONATE PAYMENT HAS NOT BEEN MADE. THE OBLIGATIONS IMPOSED HEREIN SHALL BE BINDING UPON THE OWNER, HIS HEIRS, AND ASSIGNS AND SHALL RUN WITH ALL LOTS WITHIN THIS SUBDIVISION.

THE GRANTOR AGREES TO DEFEND, INDEMNIFY, AND HOLD HARMLESS, THE CITY, ITS OFFICIALS, AGENTS AND EMPLOYEES FROM AND AGAINST ANY AND ALL CLAIMS, ACTIONS, SUITS, OR PROCEEDINGS OF ANY KIND BROUGHT AGAINST SAID PARTIES FOR OR ON ACCOUNT OF ANY MATTER ARISING FROM THE DRAINAGE FACILITY PROVIDED FOR HEREIN OR THE GRANTOR'S FAILURE TO CONSTRUCT, MAINTAIN, OR MODIFY SAID DRAINAGE FACILITY.

Free Consent & Dedication

THE SUBDIVISION SHOWN AND DESCRIBED HEREON IS WITH THE FREE CONSENT AND IN ACCORDANCE WITH THE DESIRES OF THE UNDERSIGNED OWNER(S) THEREOF AND GRANT ALL EASEMENTS AS SHOWN HEREON. EXISTING AND/OR GRANTED PUBLIC UTILITY EASEMENTS (P.U.E) AS SHOWN HEREON, UNLESS NOTED OTHERWISE, ARE FOR THE COMMON AND JOINT USE OF GAS, ELECTRICAL POWER AND COMMUNICATION SERVICES FOR BURIED AND/OR OVERHEAD DISTRIBUTION LINES, CONDUIT AND PIPES FOR UNDERGROUND UTILITIES. SAID UTILITY COMPANIES HAVE THE RIGHT OF INGRESS/EGRESS FOR CONSTRUCTION OF, MAINTENANCE OF AND REPLACEMENT OF SAID UTILITIES INCLUDING THE RIGHT TO TRIM INTERFERING TREES AND SHRUBS WITHIN SAID P.U.E.. SAID OWNERS CERTIFY THAT THIS SUBDIVISION IS THEIR FREE ACT AND DEED.

THE PLAT SHOWN HEREON IS MADE WITH FREE CONSENT AND IN ACCORDANCE OF THE DESIRES OF THE UNDERSIGNED OWNER(S), THE EXECUTION OF THIS PLAT IS THEIR FREE ACT AND DEED, THOSE SIGNING AS OWNER(S) WARRANT THAT THEY HOLD AMONG THEM, COMPLETE INDEFEASIBLE TITLE IN FEE SIMPLE TO THE LAND SHOWN ON THIS PLAT. OWNER(S) HEREBY AFFIRM THAT THE DESCRIBED PROPERTY SHOWN ON THIS PLAT LIES WITHIN THE PLATTING AND SUBDIVISION JURISDICTION OF CITY OF ALBUQUERQUE, NEW MEXICO. SAID OWNER(S) HEREBY GRANT ALL EASEMENTS AS MAY BE SHOWN ON THIS PLAT TO THE CITY OF ALBUQUERQUE, NEW MEXICO IN FEE SIMPLE WITH WARRANTY COVENANTS. SAID OWNERS DO HEREBY DEDICATE ADDITIONAL PUBLIC RIGHT 0F WAY AS SHOWN HEREON TO THE CITY OF ALBUQUERQUE IN FEE SIMPLE

SPECIAL FLOOD HAZARD AREAS
- Without Base Flood Elevation (BFE) *Zone A, V, A99*
- With BFE or Depth *Zone AE, AO, AH, VE, AR*
- Regulatory Floodway

OTHER AREAS OF FLOOD HAZARD
- 0.2% Annual Chance Flood Hazard, Areas of 1% annual chance flood with average depth less than one foot or with drainage areas of less than one square mile *Zone X*
- Future Conditions 1% Annual Chance Flood Hazard *Zone X*
- Area with Reduced Flood Risk due to Levee. See Notes. *Zone X*
- Area with Flood Risk due to Levee *Zone D*

OTHER AREAS
- NO SCREEN Area of Minimal Flood Hazard *Zone X*
- Effective LOMRs
- Area of Undetermined Flood Hazard *Zone D*

GENERAL STRUCTURES
- Channel, Culvert, or Storm Sewer
- Levee, Dike, or Floodwall

OTHER FEATURES
- 20.2 / 17.5 Cross Sections with 1% Annual Chance / Water Surface Elevation
- Coastal Transect
- Base Flood Elevation Line (BFE)
- Limit of Study
- Jurisdiction Boundary
- Coastal Transect Baseline
- Profile Baseline
- Hydrographic Feature

MAP PANELS
- Digital Data Available
- No Digital Data Available
- Unmapped

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 2/24/2025 at 3:13 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

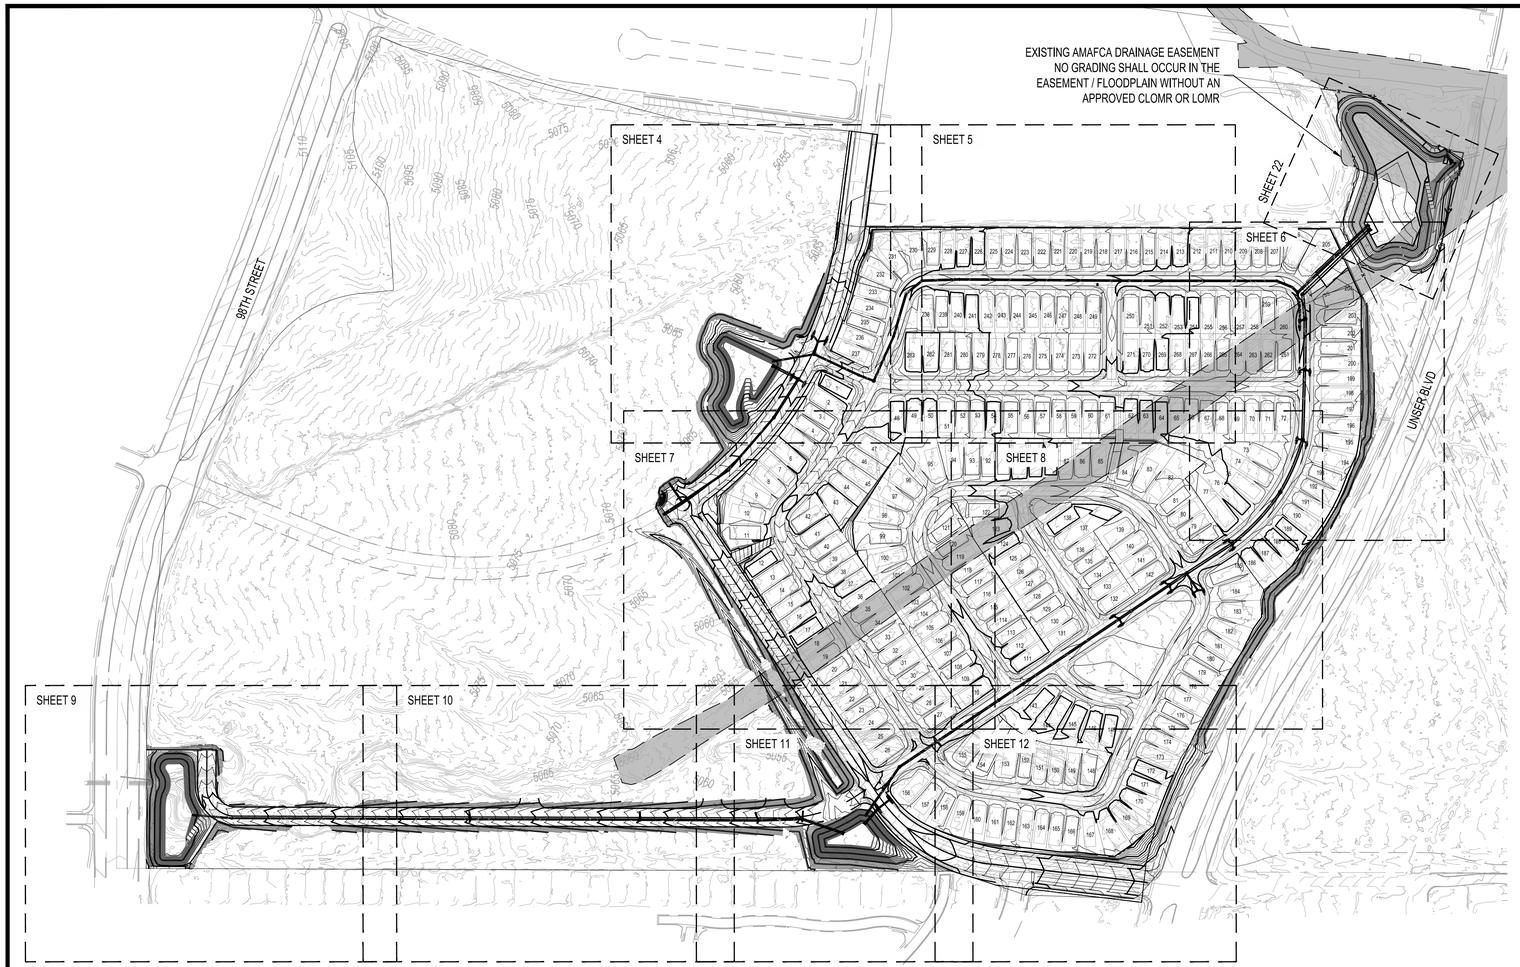
EXHIBIT G
GRADING PLAN



GENERAL NOTES

1. ALL WORK DETAILED ON THESE PLANS AND PERFORMED UNDER THIS CONTRACT SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE PROJECT SPECIFICATIONS AND THE PROJECT GEOTECHNICAL REPORT. WHERE APPLICABLE, CITY OF ALBUQUERQUE PUBLIC WORKS STANDARDS SHALL APPLY.

2. THE CONTRACTOR SHALL ABIDE BY ALL LOCAL, STATE, AND FEDERAL LAWS, RULES AND REGULATIONS WHICH APPLY TO THE CONSTRUCTION OF THESE IMPROVEMENTS, INCLUDING EPA REQUIREMENTS WITH RESPECT TO STORM WATER DISCHARGE.

3. PRIOR TO CONSTRUCTION, THE CONTRACTOR SHALL FIELD VERIFY THE HORIZONTAL AND VERTICAL LOCATIONS OF ALL POTENTIAL OBSTRUCTIONS INCLUDING ALL UNDERGROUND UTILITIES. SHOULD A CONFLICT EXIST, THE CONTRACTOR SHALL NOTIFY THE CONSTRUCTION OBSERVER OR ENGINEER SO THAT THE CONFLICT CAN BE RESOLVED WITH A MINIMUM AMOUNT OF DELAY.

4. TWO (2) WORKING DAYS PRIOR TO ANY EXCAVATION, THE CONTRACTOR SHALL CONTACT LINE LOCATING SERVICE FOR LOCATION OF EXISTING UTILITIES.

5. ALL ELECTRICAL, TELEPHONE, CABLE TV, GAS AND OTHER UTILITY LINES, CABLES, AND APPURTENANCES ENCOUNTERED DURING CONSTRUCTION THAT REQUIRE RELOCATION, SHALL BE COORDINATED WITH THAT UTILITY. THE CONTRACTOR SHALL BE RESPONSIBLE FOR COORDINATION OF ALL NECESSARY UTILITY ADJUSTMENTS. NO ADDITIONAL COMPENSATION WILL BE ALLOWED FOR DELAYS OR INCONVENIENCES CAUSED BY UTILITY COMPANY WORK CREWS. THE CONTRACTOR MAY BE REQUIRED TO RESCHEDULE HIS ACTIVITIES TO ALLOW UTILITY CREWS TO PERFORM THEIR REQUIRED WORK.

6. THE CONTRACTOR IS RESPONSIBLE FOR PROTECTING ALL EXISTING UTILITY LINES WITHIN THE CONSTRUCTION AREA. ANY DAMAGE TO EXISTING FACILITIES CAUSED BY CONSTRUCTION ACTIVITY SHALL BE REPAIRED OR REPLACED AT THE CONTRACTOR'S EXPENSE AND APPROVED BY THE CONSTRUCTION OBSERVER.

7. CONSTRUCTION ACTIVITY SHALL BE LIMITED TO THE PROPERTY AND/OR PROJECT LIMITS. ANY DAMAGE TO ADJACENT PROPERTIES RESULTING FROM THE CONSTRUCTION PROCESS SHALL BE REPAIRED OR REPLACED AT THE CONTRACTOR'S EXPENSE.

8. OVERNIGHT PARKING OF CONSTRUCTION EQUIPMENT SHALL NOT OBSTRUCT DRIVEWAYS OR DESIGNATED TRAFFIC LANES. THE CONTRACTOR SHALL NOT STORE ANY EQUIPMENT OR MATERIAL WITHIN THE PUBLIC RIGHT-OF-WAY.

9. THE CONTRACTOR SHALL OBTAIN ALL THE NECESSARY PERMITS FOR THE PROJECT PRIOR TO COMMENCING CONSTRUCTION (I.E., BARRICADING, TOPSOIL DISTURBANCE, EXCAVATION PERMITS, EPA STORM WATER PERMITS, ETC.).

10. ALL PROPERTY CORNERS DESTROYED DURING CONSTRUCTION SHALL BE REPLACED AT THE CONTRACTOR'S EXPENSE. ALL PROPERTY CORNERS MUST BE RESET BY A REGISTERED LAND SURVEYOR.

11. THE CONTRACTOR SHALL PREPARE A CONSTRUCTION TRAFFIC CONTROL AND SIGNING PLAN AND OBTAIN APPROVAL OF SUCH PLAN FROM THE CITY OF ALBUQUERQUE, TRAFFIC ENGINEERING DEPARTMENT, PRIOR TO BEGINNING ANY CONSTRUCTION WORK ON OR ADJACENT TO EXISTING STREETS.

12. ALL BARRICADES AND CONSTRUCTION SIGNING SHALL CONFORM TO APPLICABLE SECTIONS OF THE "MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES" (MUTCD), US DEPARTMENT OF TRANSPORTATION, LATEST EDITION.

13. THE CONTRACTOR SHALL MAINTAIN ALL CONSTRUCTION BARRICADES AND SIGNING AT ALL TIMES. THE CONTRACTOR SHALL VERIFY THE PROPER LOCATION OF ALL BARRICADING AT THE END AND BEGINNING OF EACH DAY.

14. THE CONTRACTOR SHALL TAKE ALL STEPS NECESSARY TO CONFORM WITH EPA REQUIREMENTS, INCLUDING COMPLIANCE WITH NPDES REQUIREMENTS.

GRADING NOTES

1. EXCEPT AS PROVIDED HERIN, GRADING SHALL BE PERFORMED AT THE ELEVATIONS AND IN ACCORDANCE WITH THE DETAILS SHOWN ON THIS PLAN.

2. CONTRACTOR SHALL OBTAIN AND ABIDE BY A TOPSOIL DISTURBANCE PERMIT FROM THE CITY OF ALBUQUERQUE ENVIRONMENTAL HEALTH DIVISION, PRIOR TO CONSTRUCTION. THE COST FOR REQUIRED CONSTRUCTION DUST AND EROSION CONTROL MEASURES SHALL BE INCIDENTAL TO THE PROJECT COST. THE CONTRACTOR SHALL CONFORM TO ALL CITY, COUNTY, STATE, AND FEDERAL DUST CONTROL MEASURES AND REQUIREMENTS AND WILL BE RESPONSIBLE FOR PREPARING AND OBTAINING ALL NECESSARY APPLICATIONS AND APPROVALS.

3. ALL WORK RELATIVE TO FOUNDATION CONSTRUCTION, SITE PREPARATION, AND PAVEMENT INSTALLATION, AS SHOWN ON THIS PLAN, SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE SOILS REPORT. ALL OTHER WORK, UNLESS OTHERWISE STATED OR PROVIDED FOR HEREON, SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE PROJECT SPECIFICATIONS (FIRST PRIORITY), AND/OR THE CITY OF ALBUQUERQUE (COA) STANDARD SPECIFICATIONS FOR PUBLIC WORKS (SECOND PRIORITY)

4. TWO WORKING DAYS PRIOR TO EXCAVATION, CONTRACTOR MUST CONTACT LINE LOCATING SERVICE FOR LOCATION OF EXISTING UTILITIES.

5. PRIOR TO GRADING, ALL VEGETATION DEBRIS, AND NEAR SURFACE ORGANICALLY CONTAMINATED SOIL SHALL BE STRIPPED FROM ALL AREAS TO BE GRADED. VEGETATION AND DEBRIS SHALL BE DISPOSED OF OFF-SITE OR STOCK-PILED FOR USE IN PLANTERS AND NON-STRUCTURAL FILLS.

6. EARTH SLOPES SHALL NOT EXCEED 4 HORIZONTAL TO 1 VERTICAL UNLESS SHOWN OTHERWISE.

7. IT IS THE INTENT OF THESE PLANS THAT THIS CONTRACTOR SHALL NOT PERFORM ANY WORK OUTSIDE OF THE PROPERTY BOUNDARIES EXCEPT AS REQUIRED BY THIS PLAN.

8. THE CONTRACTOR IS TO ENSURE THAT NO SOIL ERODES FROM THE SITE ONTO ADJACENT PROPERTY OR PUBLIC RIGHT-OF-WAY. THIS SHOULD BE ACHIEVED BY CONSTRUCTING TEMPORARY BERMS AT THE PROPERTY LINES WETTING THE SOIL TO PROTECT IT FROM WIND EROSION.

9. A DISPOSAL SITE FOR ALL EXCESS EXCAVATION AND UNSUITABLE MATERIAL SHALL BE OBTAINED BY THE CONTRACTOR IN COMPLIANCE WITH APPLICABLE ENVIRONMENTAL REGULATIONS AND APPROVED BY THE OBSERVER. ALL COSTS INCURRED IN OBTAINING A DISPOSAL SITE AND HAUL THERETO SHALL BE CONSIDERED INCIDENTAL TO THE PROJECT, AND NO SEPARATE MEASUREMENT OR PAYMENT SHALL BE MADE.

10. PAVING AND ROADWAY GRADES SHALL BE +/- 0.1' FROM PLAN ELEVATIONS. PAD ELEVATION SHALL BE +/- 0.05' FROM BUILDING PLAN ELEVATIONS.

11. ALL SPOT ELEVATIONS ARE TO FLOWLINE UNLESS OTHERWISE NOTED. VALLEY GUTTER ELEVATIONS ARE SHOWN AT FLOWLINE ELEVATION.

12. GRADING SHALL BE IN ACCORDANCE WITH THE GEOTECHNICAL REPORT.

12	F	Dbl 'C'	16.09	10.50	10.22	0.02	0.47	5107.59	5107.52	5107.78	0.67	5108.45	5108.70
15	D	Dbl 'C'	16.09	10.50	6.38	0.01	0.34	5107.74	5107.54	5107.57	0.40	5107.97	5108.70
16	D	Dbl 'C'	16.09	10.50	6.38	0.01	0.34	5107.74	5107.54	5107.57	0.40	5107.97	5108.70

1) Orifice Equa Q = 0.6 A (2gh)$^{0.5}$ so h=(Q/.6/A)^2/2/g
2) Weir Equati Q = 3 L h$^{3/2}$ so h= (Q/3/L)$^{2/3}$
3) The orifice equation is used in accordance with FHA HEC-22, and the height is added to the center of the grate elevation which is 0.72' below the top of curb elevation.
4) The weir equation is used in accordance with FHA HEC-22, and the height is added to the lip of gutter elevation which is 0.54' below the top of curb elevation.
5) The Area and Effective Perimiter are calculated by "Hydraulic Tool Box 4.2" in accordance with Federal Highway Administration HEC-22 3rd eddition, Rev Aug., 2013
6) Emergency Overflow from inlets #7, 8, 11, & 12 goes south in alignment F to alignment D. The total flow is 52.58 cfs and has a normal depth of 0.67' at 0.5% slope.
7) Emergency Overflow from inlets #15 & 16 goes east in alignment D to 98th St. The total flow is 12.28 cfs and has a critical depth of 0.40' at the high spot.

LEGAL DESCRIPTION
TRACT 8-A1-A, EL RANCHO GRANDE I, ALBUQUERQUE, NEW MEXICO

GRADING AND DRAINAGE NARRATIVE

Site Location and Background Information

The purpose of this submittal is to present a final grading and drainage plan for the proposed Prototype 3 Elementary School (El Rancho Grande Elementary School) off the far west end of Blake Road S.W. The site is in rainfall zone 1 as defined by figure A-1 of the DPM section 22. The existing legal description of the site is TRACT 8-A1-A, EL RANCHO GRANDE I, ALBUQUERQUE, NEW MEXICO . Please see the vicinity map on this sheet for a graphic depiction of the site location.

Existing Conditions

This entire site is approximately 15 acres and is undeveloped land that is approved for rough grading (stamp date: 7-06-07) per concepts of the approved master drainage plan for Tract 8-A-1-A, El Rancho Grande Elementary School (stamp date: 7-09-2007). The site is naturally sloped roughly 1% to 4% to the east, draining to an existing developed outfall (rated for 57 CFS per the master drainag plan) to the Amole arroyo that was sized for fully developed flows.

Proposed Conditions

Under proposed conditions the site will slope to the east with gentler slopes than present and will make up grade differences w/ steps and terraces. The site contours and storm drain systems will divert and convey runoff to a concrete rundown which will tie directly to the existing site outfall structure. The field will drain to the remainder of the existing detention pond and then to the existing outfall structure. Per the approved plan, the allowable outfall is 57 CFS, and with this plan we are complying with that requirement: Qproposed = 49 CFS.

Flood plain

In accordance with FEMA community map panel #35001C0336E, the site has a zone A flood plain flowing across the northeast portion. This map was revised per a LOMR dated 11/20/06 which removed most of it.

Per the master drainage plan; "The existing flood hazard zone and flood plain drainage easements previously impacting the site are obsolete and will be eliminated by others. As such, they will not limit site developement. APS is working with the seller to have the obsolete floodplain easement officially vacated through DRB."

Conclusions

The proposed site improvemets and drainage trends are consistent with previously approved plans for the site.

This Tract is permitted free discharge up to 57 CFS to an existing 36" RCP outlet near the NE corner to the AMAFCA Amole channel. This design discharges 49 CFS at the peak of the design storm.

Offsite flows do not impact the site.

This drainage submittal has been prepared in accordance with City of Albuquerque requirements. This plan is compliant with the master drainage plan. The implementation of this design would result in the safe passage of the 100 year storm event. With this submittal we request hydrology department approval for building permit.

APS PROTOTYPE #3 SITE BASIN PROPERTIES

Proposed Ultimate Development Conditions Basin Data Table

This table is based on the DPM Section 22.2, Zone: 1

DESIGN ANALYSIS REPORT FOR THE EXPANSION OF HUBBELL LAKE DETENTION DAM

Table 2. Zoning to TR-55 Categorization

City/County Zoning Category	Table 2-2a Category (shown on Figure 7)	TR-55 Imperviousness
Business Park	Commercial and business	85
City-owned or Managed Public Parks	Open space, poor condition	0
Commercial	Commercial and business	85
Commercial and business	Commercial and business	85
Commercial Light Industrial Zone	Commercial and business	85
Drainage Right of Way	Industrial	72
General Manufacturing	Industrial	72
Industrial	Industrial	72
Light Manufacturing	Industrial	72
Light Manufacturing Zone	Industrial	72
Low Intensity	Residential, 1/4 acre	38
Major Right of Way	Street and Road	90
Manufactured Home Community	Residential, 1/8 acre or less (townhouse)	65
Mobile Home & Single Family Residential Zone	Residential, 1/8 acre or less (townhouse)	65
Moderate Intensity	Industrial	72
Multi-family High Density	Residential, 1/8 acre or less (townhouse)	65
Multi-family Low Density	Residential, 1/8 acre or less (townhouse)	65
Neighborhood Commercial Zone	Commercial and business	85
Non-City Parks and Open Space	Open space, poor condition	0
Open Space	Open space, poor condition	0
Parks	Open space, poor condition	0
Planned Development	Commercial and business	85
Residential, 1 acre	Residential, 1 acre	20
Residential, 1/4 acre	Residential, 1/4 acre	38
Residential, 1/8 acre or less (townhouses)	Residential, 1/8 acre or less (townhouse)	65
Single Family Residential Zone	Residential, 1/4 acre	38
Single-Family (Large Lot)	Residential, 1 acre	20
Single-Family (Medium Lot)	Residential, 1/4 acre	38
Single-Family (Small Lot)	Residential, 1/8 acre or less (townhouse)	65
Townhouse	Residential, 1/8 acre or less (townhouse)	65
Transition	Commercial and business	85
Upper Petroglyphs Highway Commercial Zone	Commercial and business	85
Upper Petroglyphs Industrial Park Zone	Industrial	72
West Central Commercial/Light Industrial Zone	Commercial and business	85
Rural and agricultural **	- Open space, poor condition or - Residential, 1/4 acre	- 0 or - 38

**Rural and agricultural areas that are anticipated to remain undeveloped will be categorized as open space in poor conditions. However, many of the areas currently zoned as Rural Agricultural were assumed to be developed as residential, industrial, commercial, or used an average percent impervious of 42.3% to represent unknown future development in the 2015 study. For this study, it is recommended the average percent impervious of 42.3% assumption be represented using the Residential, 1/4 acre land use category based on how the area has been developing.

NOTES

1. THE CONTRACTOR SHALL FIELD VERIFY ALL EXISTING UTILITY LOCATIONS AND NOTIFY THE ENGINEER IMMEDIATELY OF ANY DISCREPANCIES.
2. ALL CURB RETURN RADII SHALL BE 25' UNLESS OTHERWISE SPECIFIED.
3. ALL CURVE DATA AND DIMENSIONS REFER TO FACE OF CURB UNLESS OTHERWISE SPECIFIED.
4. GRADE ELEVATIONS, WHERE NOTED, ARE ALONG FLOWLINE OF CURB UNLESS OTHERWISE SPECIFIED.
5. CONTRACTOR IS TO INSTALL A 4" X 4" X 5' POST AND EMS AT THE END OF EACH SANITARY SEWER SERVICE.
6. CONTRACTOR IS RESPONSIBLE FOR REPAIR AND/OR REPLACEMENT OF ALL UTILITY CONDUITS AND EXISTING LINES.
7. ANY ADDITIONAL GRADING REQUIRED TO MATCH PROPOSED STREET GRADES SHALL BE INCIDENTAL TO PAVING ITEMS.
8. CONTRACTOR SHALL PROVIDE THE INSPECTORS, (CITY AND PRIVATE) WITH THE PROPOSED HYDROSTATIC TESTING PLAN. THE PLAN MUST BE APPROVED BEFORE TESTING OPERATIONS BEGIN.
9. CONTRACTOR SHALL PARK EQUIPMENT AND VEHICLES AS NOT TO INTERFERE WITH NORMAL ACTIVITIES OF RESIDENTS OR OTHER CONTRACTORS ON SITE.
10. ANY DAMAGE TO THE EXISTING FACILITIES (CURB & GUTTER, PAVEMENT, CONDUITS, LANDSCAPING, UTILITY LINES, ETC.) DURING CONSTRUCTION SHALL BE REPLACED AT THE CONTRACTORS' EXPENSE.
11. REMOVAL OF THE EXISTING CURB AND GUTTER TO NEAREST JOINT.
12. WHEELCHAIR RAMPS SHALL BE CONSTRUCTED PRIOR TO ACCEPTANCE OF CURB & GUTTER.
13. RCP SHALL BE INSTALLED SO THAT THE JOINT GAP AT THE HOME POSITION SHALL CONFORM TO THE APPROVED MANUFACTURER'S RECOMMENDATIONS. MANUFACTURER'S RECOMMENDED JOINT GAP TOLERANCES FOR EACH PIPE SIZE AND TYPE SHALL BE SUBMITTED TO THE ENGINEER FOR APPROVAL PRIOR TO PLACEMENT OF PIPE. RCP JOINTS SHALL NOT BE GROUTED UNLESS DIRECTED BY THE ENGINEER AFTER CITY APPROVAL.
14. ALL EXCAVATION, TRENCHING, AND SHORING ACTIVITIES MUST BE CARRIED-OUT IN ACCORDANCE WITH OSHA 29 CFR 1926.650 SUBPART P.
15. ELECTRONIC MARKER SPHERES (EMS) WILL BE PLACED ACCORDING TO SECTION 170 OF THE CITY OF ALBUQUERQUE STANDARD SPECIFICATION FOR PUBLIC WORKS CONSTRUCTION, 1986 EDITION AS REVISED THROUGH UPDATE #9.
16. AT UTILITY CROSSINGS WHERE LESS THAN 1.5 FOOT OF SEPARATION FROM STORM DRAIN PIPE OR MANHOLE IS PRESENT LEAN FILL IS TO BE USED 1) FOR A DISTANCE OF 5 FEET ON EACH SIDE OF THE SD ℄ FROM TOP OF STORM DRAIN TO BOTTOM OF SANITARY SEWER OR WATER LINE OR 2) FOR 10 FEET ALONG SANITARY SEWER OR WATER LINE CENTERED ON THE MANHOLE WITH DEPTH EQUAL TO 2X SEWER OR WATER LINE DIAMETER.
17. DEFLECT PIPE 1/2 OF ALLOWABLE MANUFACTURER SPECIFICATION. A VERTICAL & HORIZONTAL DEFLECTION SHALL NOT OCCUR AT SAME JOINT.
18. CONTRACTOR TO INSTALL A MIN 2' TANGENT SECTION ENTERING OR EXITING ANY BEND AT A CURVILINEAR PIPE.

GENERAL NOTE:
ALL SANITARY SEWER MANHOLES SHALL BE 4' DIAMETER TYPE "E" AS PER C.O.A. STANDARD DRAWING 2101 UNLESS OTHERWISE NOTED.
ALL STORM DRAIN MANHOLES SHALL BE 4' DIAMETER TYPE "E" AS PER COA STANDARD DRAWING 2208 UNLESS OTHERWISE NOTED.
SAS LINE TO BE PVC (SDR-35)
STORM DRAIN LINE TO BE CLASS III RCP UNLESS OTHERWISE SPECIFIED.
WATER LINE TO BE C900-PVC (DR-18).
ALL WATER METERS 3/4" (UNLESS OTHERWISE NOTED)
ALL VALVES AND BENDS TO BE RESTRAINED WITH RESTRAINING JOINT UNLESS OTHERWISE NOTED.
VALVES PER STD. DWG. 2326 & 2328
MANHOLES PER STD. DWG. 2101 & 2102
DROP MANHOLE PER STD. DWG. 2116
WATER SERVICE PER STD. DWG. 2361,2362 & 2368
SAS SERVICE PER STD. DWG. 2125
TRACER WIRE PER STD. DWG. 2190, 2191,2302, 2365, 2342

4. GRADE ELEVATIONS, WHERE NOTED, ARE ALONG FLOWLINE OF CURB UNLESS OTHERWISE SPECIFIED.
5. CONTRACTOR IS TO INSTALL A 4" X 4" X 5' POST AND EMS AT THE END OF EACH SANITARY SEWER SERVICE.
6. CONTRACTOR IS RESPONSIBLE FOR REPAIR AND/OR REPLACEMENT OF ALL UTILITY CONDUITS AND EXISTING LINES.
7. ANY ADDITIONAL GRADING REQUIRED TO MATCH PROPOSED STREET GRADES SHALL BE INCIDENTAL TO PAVING ITEMS.
8. CONTRACTOR SHALL PROVIDE THE INSPECTORS, (CITY AND PRIVATE) WITH THE PROPOSED HYDROSTATIC TESTING PLAN. THE PLAN MUST BE APPROVED BEFORE TESTING OPERATIONS BEGIN.
9. CONTRACTOR SHALL PARK EQUIPMENT AND VEHICLES AS NOT TO INTERFERE WITH NORMAL ACTIVITIES OF RESIDENTS OR OTHER CONTRACTORS ON SITE.
10. ANY DAMAGE TO THE EXISTING FACILITIES (CURB & GUTTER, PAVEMENT, CONDUITS, LANDSCAPING, UTILITY LINES, ETC.) DURING CONSTRUCTION SHALL BE REPLACED AT THE CONTRACTORS' EXPENSE.
11. REMOVAL OF THE EXISTING CURB AND GUTTER TO NEAREST JOINT.
12. WHEELCHAIR RAMPS SHALL BE CONSTRUCTED PRIOR TO ACCEPTANCE OF CURB & GUTTER.
13. RCP SHALL BE INSTALLED SO THAT THE JOINT GAP AT THE HOME POSITION SHALL CONFORM TO THE APPROVED MANUFACTURER'S RECOMMENDATIONS. MANUFACTURER'S RECOMMENDED JOINT GAP TOLERANCES FOR EACH PIPE SIZE AND TYPE SHALL BE SUBMITTED TO THE ENGINEER FOR APPROVAL PRIOR TO PLACEMENT OF PIPE. RCP JOINTS SHALL NOT BE GROUTED UNLESS DIRECTED BY THE ENGINEER AFTER CITY APPROVAL.
14. ALL EXCAVATION, TRENCHING, AND SHORING ACTIVITIES MUST BE CARRIED-OUT IN ACCORDANCE WITH OSHA 29 CFR 1926.650 SUBPART P.
15. ELECTRONIC MARKER SPHERES (EMS) WILL BE PLACED ACCORDING TO SECTION 170 OF THE CITY OF ALBUQUERQUE STANDARD SPECIFICATION FOR PUBLIC WORKS CONSTRUCTION, 1986 EDITION AS REVISED THROUGH UPDATE #9.
16. AT UTILITY CROSSINGS WHERE LESS THAN 1.5 FOOT OF SEPARATION FROM STORM DRAIN PIPE OR MANHOLE IS PRESENT LEAN FILL IS TO BE USED 1) FOR A DISTANCE OF 5 FEET ON EACH SIDE OF THE SD ℄ FROM TOP OF STORM DRAIN TO BOTTOM OF SANITARY SEWER OR WATER LINE OR 2) FOR 10 FEET ALONG SANITARY SEWER OR WATER LINE CENTERED ON THE MANHOLE WITH DEPTH EQUAL TO 2X SEWER OR WATER LINE DIAMETER.
17. DEFLECT PIPE 1/2 OF ALLOWABLE MANUFACTURER SPECIFICATION. A VERTICAL & HORIZONTAL DEFLECTION SHALL NOT OCCUR AT SAME JOINT.
18. CONTRACTOR TO INSTALL A MIN 2' TANGENT SECTION ENTERING OR EXITING ANY BEND AT A CURVILINEAR PIPE.

GENERAL NOTE:
ALL SANITARY SEWER MANHOLES SHALL BE 4' DIAMETER TYPE "E" AS PER C.O.A. STANDARD DRAWING 2101 UNLESS OTHERWISE NOTED.
ALL STORM DRAIN MANHOLES SHALL BE 4' DIAMETER TYPE "E" AS PER COA STANDARD DRAWING 2208 UNLESS OTHERWISE NOTED.
SAS LINE TO BE PVC (SDR-35)
STORM DRAIN LINE TO BE CLASS III RCP UNLESS OTHERWISE SPECIFIED.
WATER LINE TO BE C900-PVC (DR-18).
ALL WATER METERS 3/4" (UNLESS OTHERWISE NOTED)
ALL VALVES AND BENDS TO BE RESTRAINED WITH RESTRAINING JOINT UNLESS OTHERWISE NOTED.

BHI JOB NO. 20250012

NOTES

1. THE CONTRACTOR SHALL FIELD VERIFY ALL EXISTING UTILITY LOCATIONS AND NOTIFY THE ENGINEER IMMEDIATELY OF ANY DISCREPANCIES.
2. ALL CURB RETURN RADII SHALL BE 25' UNLESS OTHERWISE SPECIFIED.
3. ALL CURVE DATA AND DIMENSIONS REFER TO FACE OF CURB UNLESS OTHERWISE SPECIFIED.
4. GRADE ELEVATIONS, WHERE NOTED, ARE ALONG FLOWLINE OF CURB UNLESS OTHERWISE SPECIFIED.
5. CONTRACTOR IS TO INSTALL A 4" X 4" X 5' POST AND EMS AT THE END OF EACH SANITARY SEWER SERVICE.
6. CONTRACTOR IS RESPONSIBLE FOR REPAIR AND/OR REPLACEMENT OF ALL UTILITY CONDUITS AND EXISTING LINES.
7. ANY ADDITIONAL GRADING REQUIRED TO MATCH PROPOSED STREET GRADES SHALL BE INCIDENTAL TO PAVING ITEMS.
8. CONTRACTOR SHALL PROVIDE THE INSPECTORS, (CITY AND PRIVATE) WITH THE PROPOSED HYDROSTATIC TESTING PLAN. THE PLAN MUST BE APPROVED BEFORE TESTING OPERATIONS BEGIN.
9. CONTRACTOR SHALL PARK EQUIPMENT AND VEHICLES AS NOT TO INTERFERE WITH NORMAL ACTIVITIES OF RESIDENTS OR OTHER CONTRACTORS ON SITE.
10. ANY DAMAGE TO THE EXISTING FACILITIES (CURB & GUTTER, PAVEMENT, CONDUITS, LANDSCAPING, UTILITY LINES, ETC.) DURING CONSTRUCTION SHALL BE REPLACED AT THE CONTRACTORS' EXPENSE.
11. REMOVAL OF THE EXISTING CURB AND GUTTER TO NEAREST JOINT.
12. WHEELCHAIR RAMPS SHALL BE CONSTRUCTED PRIOR TO ACCEPTANCE OF CURB & GUTTER.
13. RCP SHALL BE INSTALLED SO THAT THE JOINT GAP AT THE HOME POSITION SHALL CONFORM TO THE APPROVED MANUFACTURER'S RECOMMENDATIONS. MANUFACTURER'S RECOMMENDED JOINT GAP TOLERANCES FOR EACH PIPE SIZE AND TYPE SHALL BE SUBMITTED TO THE ENGINEER FOR APPROVAL PRIOR TO PLACEMENT OF PIPE. RCP JOINTS SHALL NOT BE GROUTED UNLESS DIRECTED BY THE ENGINEER AFTER CITY APPROVAL.
14. ALL EXCAVATION, TRENCHING, AND SHORING ACTIVITIES MUST BE CARRIED-OUT IN ACCORDANCE WITH OSHA 29 CFR 1926.650 SUBPART P.
15. ELECTRONIC MARKER SPHERES (EMS) WILL BE PLACED ACCORDING TO SECTION 170 OF THE CITY OF ALBUQUERQUE STANDARD SPECIFICATION FOR PUBLIC WORKS CONSTRUCTION, 1986 EDITION AS REVISED THROUGH UPDATE #9.
16. AT UTILITY CROSSINGS WHERE LESS THAN 1.5 FOOT OF SEPARATION FROM STORM DRAIN PIPE OR MANHOLE IS PRESENT LEAN FILL IS TO BE USED 1) FOR A DISTANCE OF 5 FEET ON EACH SIDE OF THE SD ℄ FROM TOP OF STORM DRAIN TO BOTTOM OF SANITARY SEWER OR WATER LINE OR 2) FOR 10 FEET ALONG SANITARY SEWER OR WATER LINE CENTERED ON THE MANHOLE WITH DEPTH EQUAL TO 2X SEWER OR WATER LINE DIAMETER.
17. DEFLECT PIPE 1/2 OF ALLOWABLE MANUFACTURER SPECIFICATION. A VERTICAL & HORIZONTAL DEFLECTION SHALL NOT OCCUR AT SAME JOINT.
18. CONTRACTOR TO INSTALL A MIN 2' TANGENT SECTION ENTERING OR EXITING ANY BEND AT A CURVILINEAR PIPE.

GENERAL NOTE:
ALL SANITARY SEWER MANHOLES SHALL BE 4' DIAMETER TYPE "E" AS PER C.O.A. STANDARD DRAWING 2101 UNLESS OTHERWISE NOTED.
ALL STORM DRAIN MANHOLES SHALL BE 4' DIAMETER TYPE "E" AS PER COA STANDARD DRAWING 2208 UNLESS OTHERWISE NOTED.
SAS LINE TO BE PVC (SDR-35)
STORM DRAIN LINE TO BE CLASS III RCP UNLESS OTHERWISE SPECIFIED.
WATER LINE TO BE C900-PVC (DR-18).
ALL WATER METERS 3/4" (UNLESS OTHERWISE NOTED)
ALL VALVES AND BENDS TO BE RESTRAINED WITH RESTRAINING JOINT UNLESS OTHERWISE NOTED.
VALVES PER STD. DWG. 2326 & 2328
MANHOLES PER STD. DWG. 2101 & 2102
DROP MANHOLE PER STD. DWG. 2116
WATER SERVICE PER STD. DWG. 2361,2362 & 2368
