Grading & Drainage Plan and Drainage Report
Engineer's Stamp Date: 06/21/22
Hydrology File: N10D009**

Dear Mr. Biazar:

PO Box 1293

Albuquerque

NM 87103

Based upon the information provided in your submittal received on 03/14/2022 and additional information received on 07/18/2022, this site is in Bernalillo County but does discharge into Amole Del Norte Diversion Channel which is maintained by the City of Albuquerque. The project will be utilizing existing pipe penetrations into the Amole Del Norte Channel. Since there is no new pipe penetration into the Amole Del Norte Channel, the City of Albuquerque Hydrology Section does not need to approve either the Grading & Drainage Plan or the Drainage Report.

If you have any questions, please contact me at 924-3995 or rbrissette@cabq.gov.

www.cabq.gov

Sincerely,

Renée C. Brissette, P.E. CFM
Senior Engineer, Hydrology
Planning Department

City of Albuquerque

Planning Department
Development & Building Services Division

(dia)

Location
SW Mobile Home Park is located at 4201 Blake Rd., SW containing 10.2356 acre. See attached portion of Vicinity for exact location.

Purpose
The purpose of this drainage report is to present a grading and drainage solution in support of the Administrative Amendment to the Site Plan to increase the number of spaces.

Existing Drainage Conditions
The site drains to the southeast corner of the site at a flow rate of 25.63 cfs and then to existing small pond along Blake. From there the runoff drains to the Amole Channel via a 24" storm drain pipe. There is an existing small offsite basin that drains to this site from the west at a flow rate of 4.11 cfs. The offsite runoff along with the on-site runoff drains to the southeast corner of the property.

Proposed Conditions and On-Site Drainage Management Plan
The drainage patterns will remain the same. The site previously is been graded. A swale will be constructed along the easterly wall to carry the runoff to a proposed pond located at the southeast corner of the property. Then from there the runoff will drain at a controlled discharge rate of the 2.67 cfs via an eight inch pipe to the existing pond along Blake Rd. AHYMO was used to calculate the routing of the runoff through the pond. The pond is designed to retain the 2" of water (0.29006 ac-ft) to meet the 90th Percentile Rain Event volume (0.1798 ac-ft).

EXISTING CONDITIONS

THE ENGINEER HAS PERSONALLY INSPECTED THE LAND, AND NO GRADING, FILLING, OR EXCAVATION HAS OCCURRED THEREON SINCE THE EXISTING CONTOUR MAP WAS PREPARED.

DRAINAGE REPORT
FOR

MOBILE HOME PARK
4201 BLAKE ROAD

Prepared by:

SBS CONSTRUCTION AND
ENGINEERING, LLC

7632 WILLIAM MOYERS AVE., NE
ALBUQUERQUE, NEW MEXICO
87122 (505) 804-5013
EMAIL: AECLLC@AOL.COM

June 21, 2022

A handwritten signature in black ink, appearing to be "R. Afaghpour", written over a horizontal line.

REZA AFAGHPOUR
PE NO. 11814

Location

SW Mobile Home Park is located at 4201 Blake Rd., SW containing 10.2356 acre. See attached portion of Vicinity for exact location.

Purpose

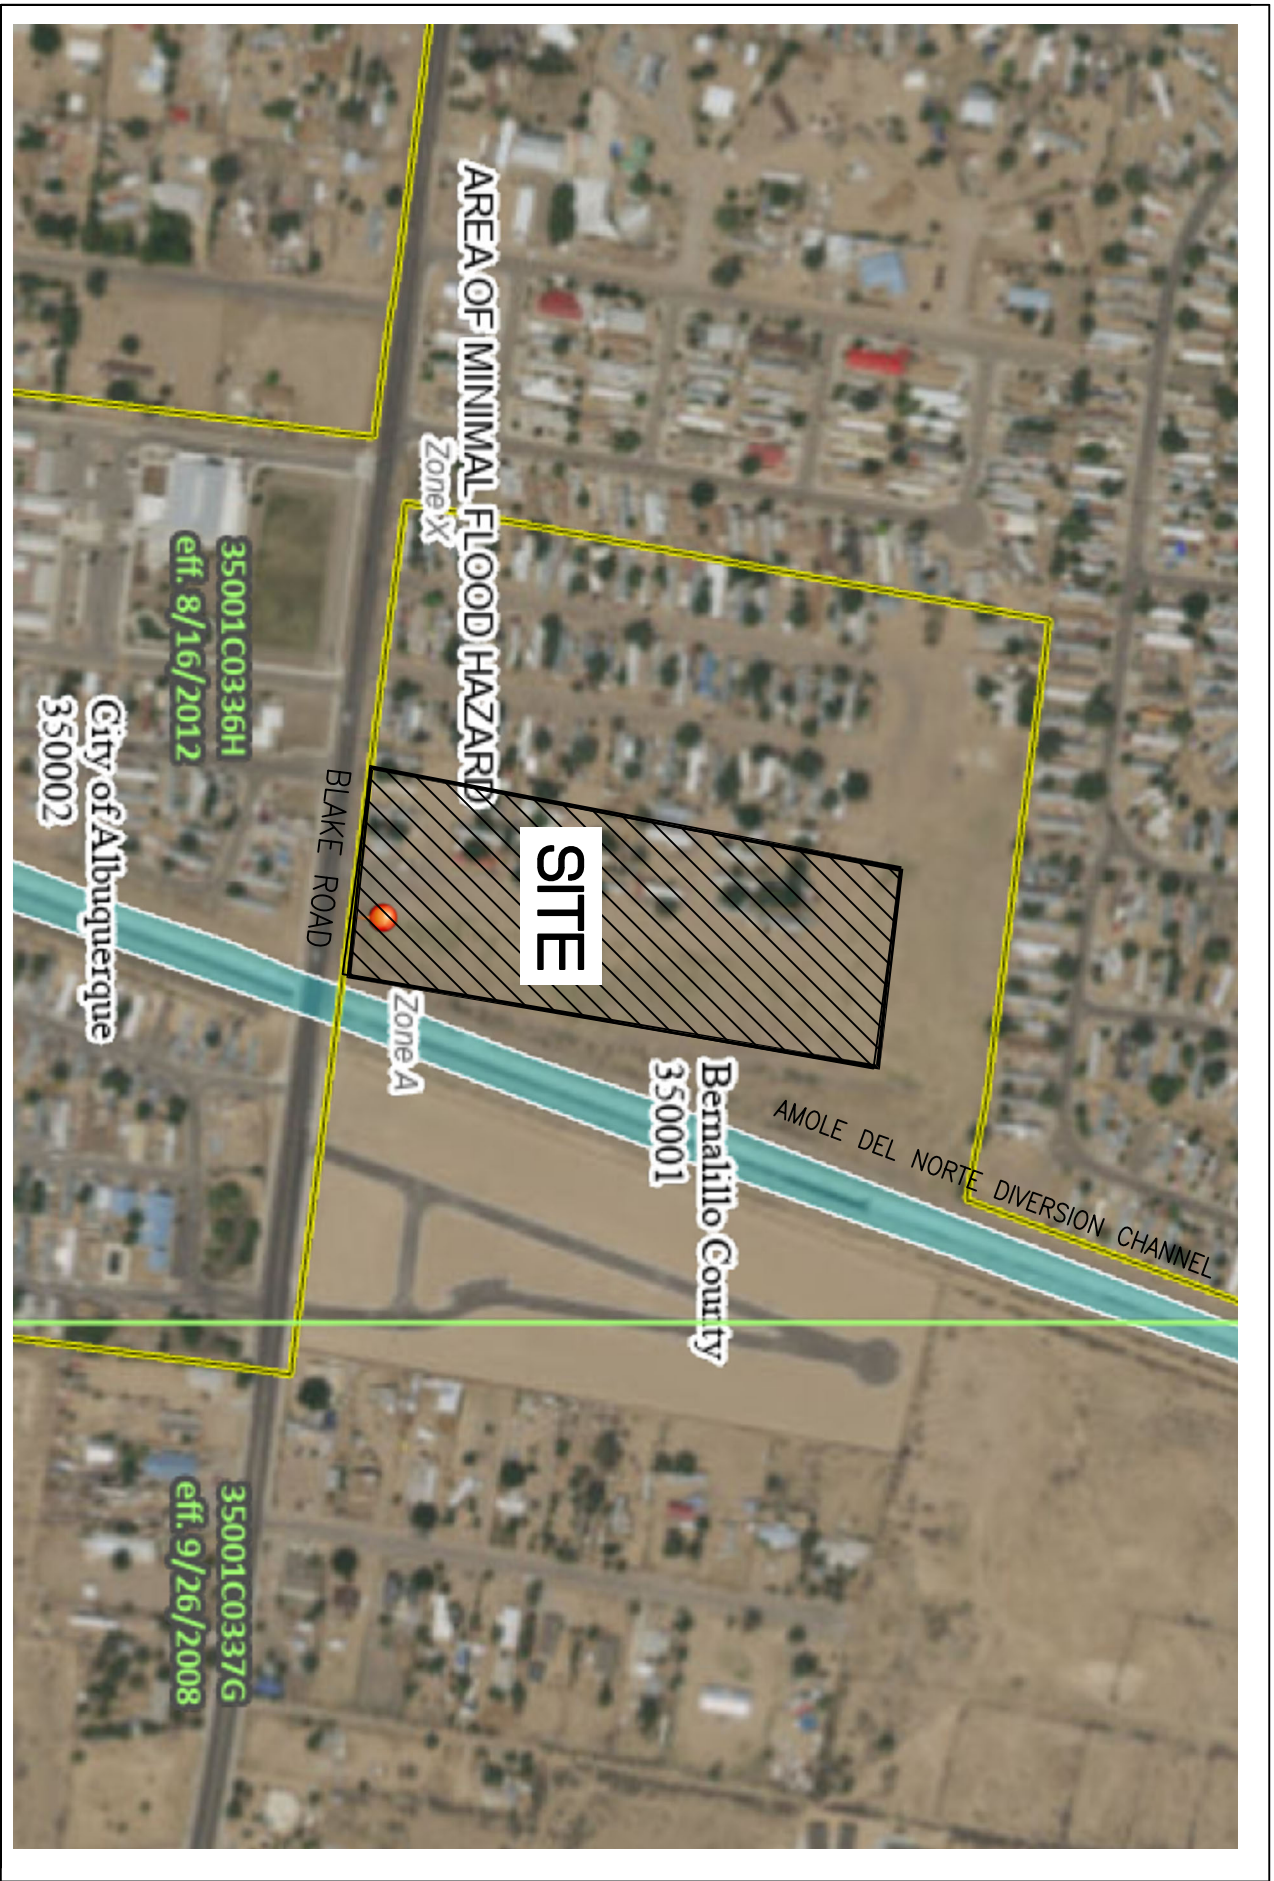

The purpose of this drainage report is to present a grading and drainage solution in support of the Administrative Amendment to the Site Plan to increase the number of spaces.

Existing Drainage Conditions

The site drains to the southeast corner of the site at a flow rate of 25.63 cfs and then to existing small pond along Blake. From there the runoff drains to the Amole Channel via a 24" storm drain pipe. There is an existing small offsite basin that drains to this site from the west at a flow rate of 4.11 cfs. The offsite runoff along with the on-site runoff drains to the southeast corner of the property.

Proposed Conditions and On-Site Drainage Management Plan

The drainage patterns will remain the same. The site previously is been graded. A swale will be constructed along the easterly wall to carry the runoff to a proposed pond located at the southeast corner of the property. Then from there the runoff will drain at a controlled discharge rate of the 2.67 cfs via an eight-inch pipe to the existing pond along Blake Rd. AHYMO was used to calculate the routing of the runoff through the pond. The pond is designed to retain the 2' of water (0.29006 ac-ft) to meet the 90th Percentile Rain Event volume (0.1798 ac-ft).
