Purpose

The purpose of this report is to determine pre- and post- runoff drainage characteristics and drainage design for the new PNM substation on Los Picaros Rd, between I-25 and University Blvd.

Introduction

Project Location

The project is located in Zone Atlas Grid Q15 on Tract A-1 and Tract B, Sunset Memorial Park, see below (Figure 1). PNM is also the owner of the lot to west (Tract A-2, Sunset Memorial Park); the existing plats are included as Attachment 1-1.

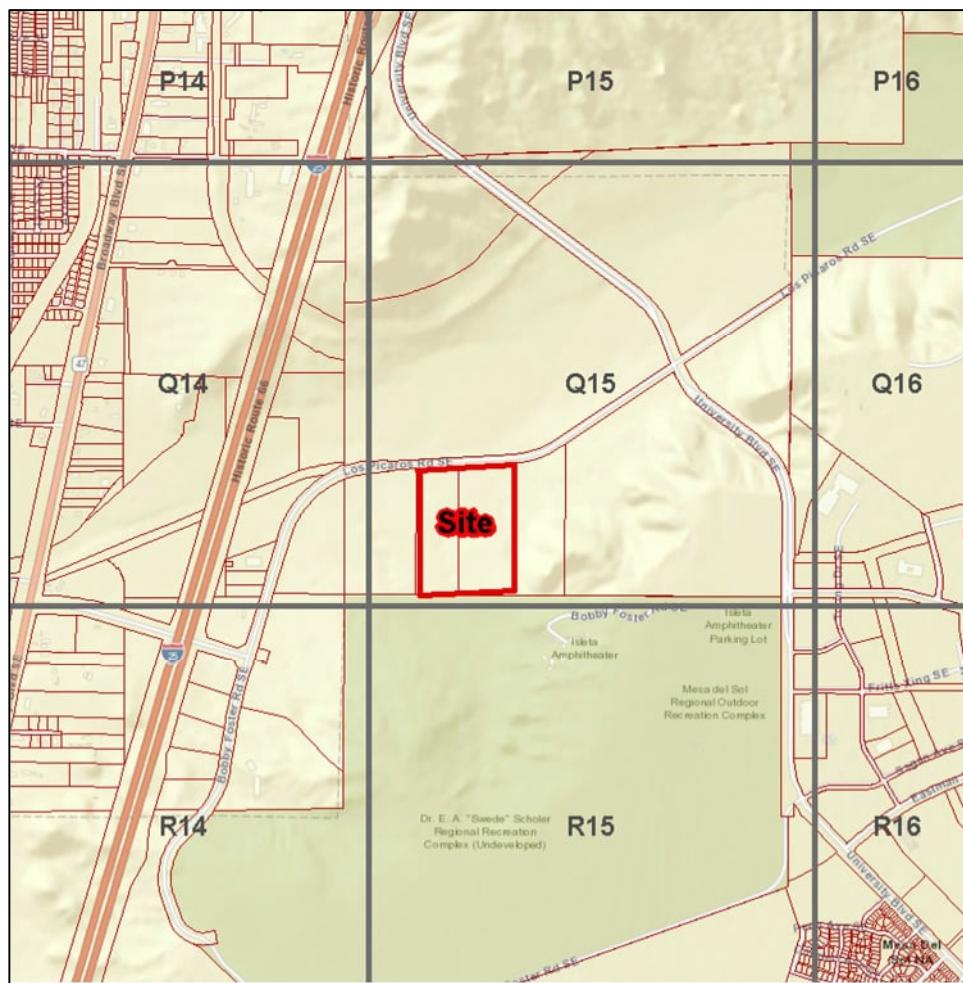

Figure 1: Project location

The Site is located in unincorporated Bernalillo County and takes access off Los Picaros Rd, a City of Albuquerque maintained road in unincorporated Bernalillo County. The adjacent properties to the south- Isleta Amphitheater, the Scholer Regional Recreational Complex, and the closed South Broadway Landfill are within the Albuquerque City limits; portions of these lands drain into the site.

Floodplain

This project is not located in a Special Flood Hazard Area per FEMA FIRM Panel: 35001C0344G effective: 9/26/2008 (Figure 2):

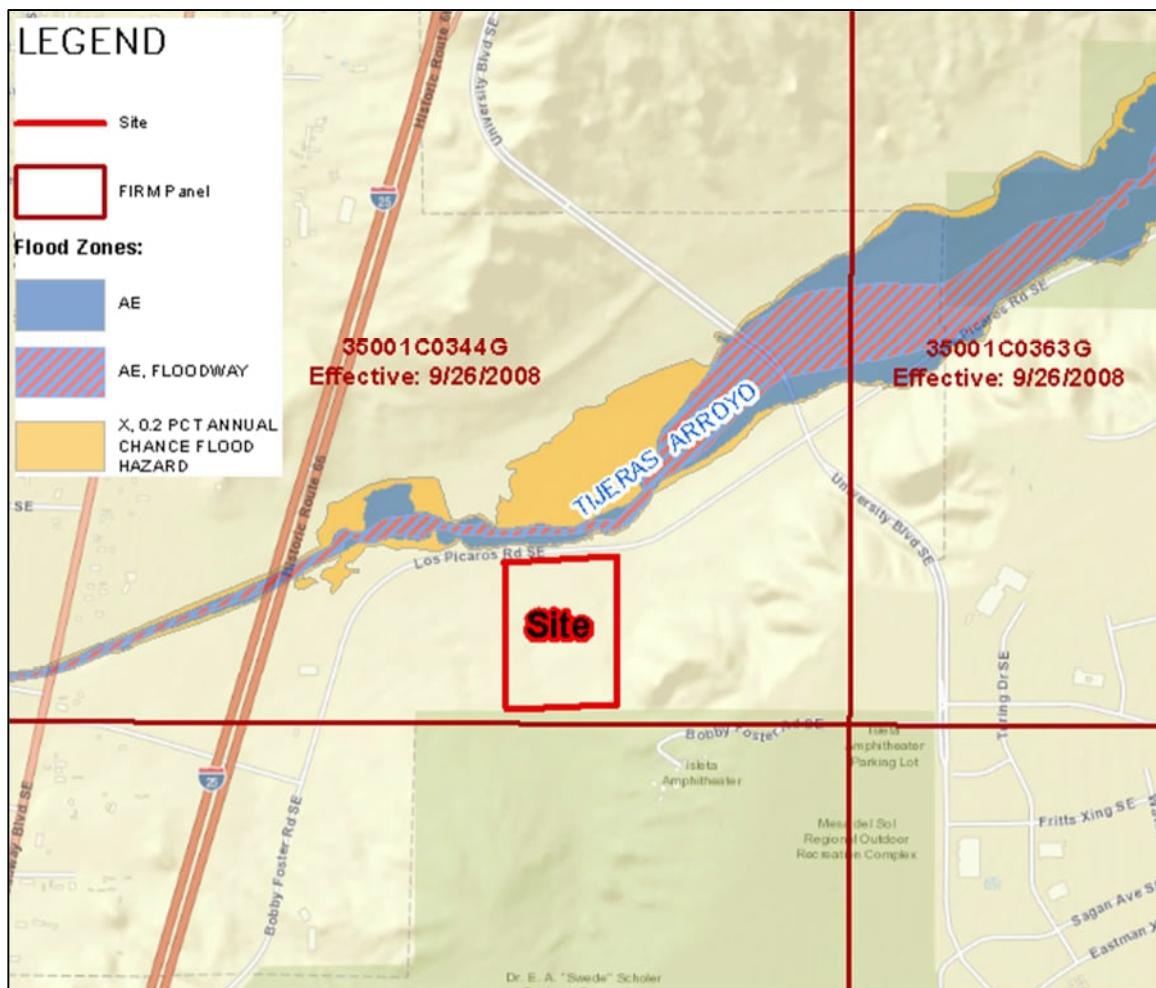

Figure 2: FEMA FIRM excerpt

This project is designed to result in no adverse impact to downstream floodplains, namely the Tijeras Arroyo Floodway and Floodplain.

Proposed Project

This project will consist of grading, wall construction, power substation improvements, access roads, ponding, and drainage improvements for a new PNM substation. Drainage patterns will be modified to discharge into ponds, swales and storm drain constructed with this project. The grading plan for this project is included as Attachment 1-2.

This project will be constructed in 2 phases. Phase 1 will construct the 145kw substation occupying the southern half of the site. Phase 2 will expand the substation into the north half of the site for the full 345kw substation.

Hydrology

The purpose of the existing and proposed Hydrology is to demonstrate that the proposed development will have no adverse impact on downstream capacity as it will not modify the discharge locations in a way that negatively impacts adjacent properties, including Los Picaros Road Right-of-Way (ROW).

Hydrology Design Data

Elevation data for the offsite contributing drainage areas was obtained from 2010 Bernalillo County LiDAR with 1-2ft vertical accuracy (BernCo, 2010). All elevation data herein is presented in NAVD 88; horizontal data is in NAD83/New Mexico State Plan Coordinate System -Central (US Foot). The following hydrologic inputs and assumptions were used:

- Software: HEC-HMS 4.10
- Runoff Method: SCS Curve Numbers w/ CABQ Land Treatments (A, B, C, & D)
- Storm: 100-year, 24-hour storm with peak at hour 12
- Precipitation Data: NOAA Atlas 14, at centroid of study area, see Attachment 1-3
- Time of Concentration: SCS Upland method, per DPM 6-2(B)(2)
- Lag time: SCS Curve Number method, per DPM 6-2(B)(3)

Existing Hydrology

The existing drainage is divided as shown in Figure 3 and in greater detail as Attachment 2-1. Hydrologic inputs are provided in Attachment 2-2; HEC-HMS model development and model results are provided in Attachment 2-3.

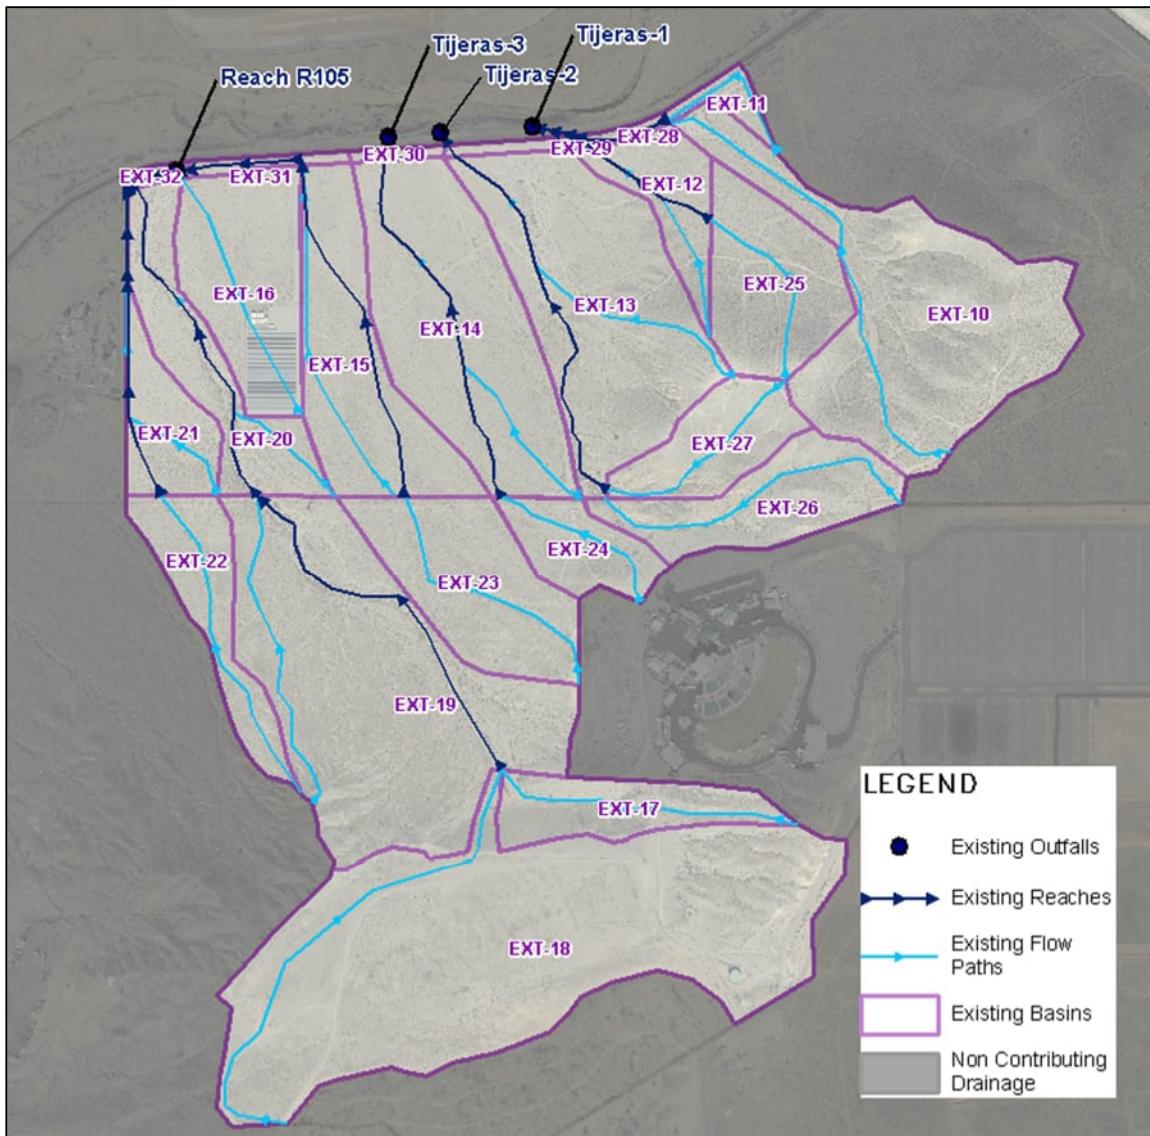

Figure 3: Existing drainage patterns

- Basins EXT-10, EXT-11, EXT-12, EXT-25, and EXT -28 discharge across Los Picaros Rd and into the Tijeras Arroyo at outfall "Tijeras-1". These flows are adjacent (east) to the project site and do not impact the project site but will be wholly or partially captured by the construction of a retention pond.
- Basins EXT-13, EXT-26, EXT-27, and EXT-29 discharge across Los Picaros Rd and into the Tijeras Arroyo at outfall "Tijeras-2". These flows impact the eastern side of the project site and will be impacted by the project.
- Basins EXT-14, EXT-24, and EXT-30 discharge into the Tijeras Arroyo at outfall "Tijeras-3". These flows impact the center of the project area and will be impacted by the project.
- Basins EXT-15, EXT-23, and EXT-31 discharge to a swale along the south side of Los Picaros Rd, then to outfall "LosPicaros-1". These flows impact the western side of the project area and will be impacted by the project.

- Basins EXT-16, EXT-19 and EXT-20 discharge to a swale along the south side of Los Picos Rd then to outfall "LosPicos-1". These flows are adjacent (west) to the project site and do not impact the project site, but a portion of these basins will be captured by the construction of a detention pond.
- Basins, EXT-17, EXT-18, EXT-21, EXT-22, and EXT-32 discharge to a swale along the south side of Los Picos Rd then to outfall "LosPicos-1". These flows are adjacent (west) to the project site and do not impact the project site nor will they be impacted by the project.

The existing site and surrounding drainage is moderately sloped desert scrub (Figure 4). Gradual slopes (0-10%) were assigned CABO Land Treatment A, moderate slopes (11-20%) were assigned Treatment B, and steep slopes (21% +) were assigned Treatment C.

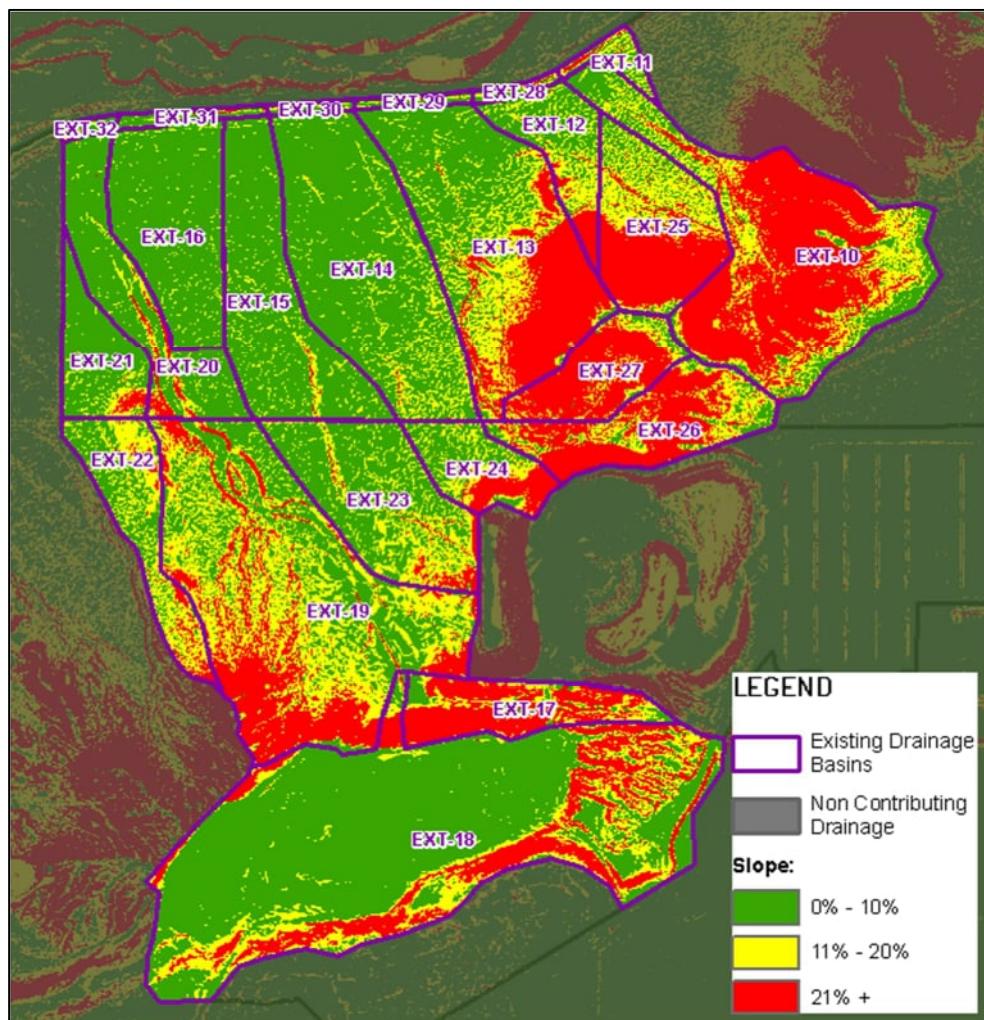

Figure 4: Contributing drainage area slopes

Slope was the primary driver for land treatment and curve number selection, with the following exceptions:

- Basin EXT-18. A substantial portion of this basin is the closed South Broadway Landfill; land treatments were adjusted to Treatment C, for landfill cap, over the landfill area.

- Basins- EXT-11, EXT-28, EXT29, EXT-30, EXT-31, and EXT-32. These basins are the Los Picaros Right-of-Way (ROW) (EXT-11 does contain a portion of private land) and were adjusted to include the paved road (Treatment D); remaining ROW was adjusted to Treatment C, for soils compacted by human activity.
- Basin EXT-16. This includes the existing PNM solar site. The solar site and gravel access road were adjusted to Treatment C, for soils compacted by human activity.

Proposed Hydrology

The proposed drainage area is divided as shown in Figure 5 and in greater detail as Attachment 3-1. Hydrologic inputs are provided in Attachment 3-2; HEC-HMS model development and model results are provided in Attachment 3-3.

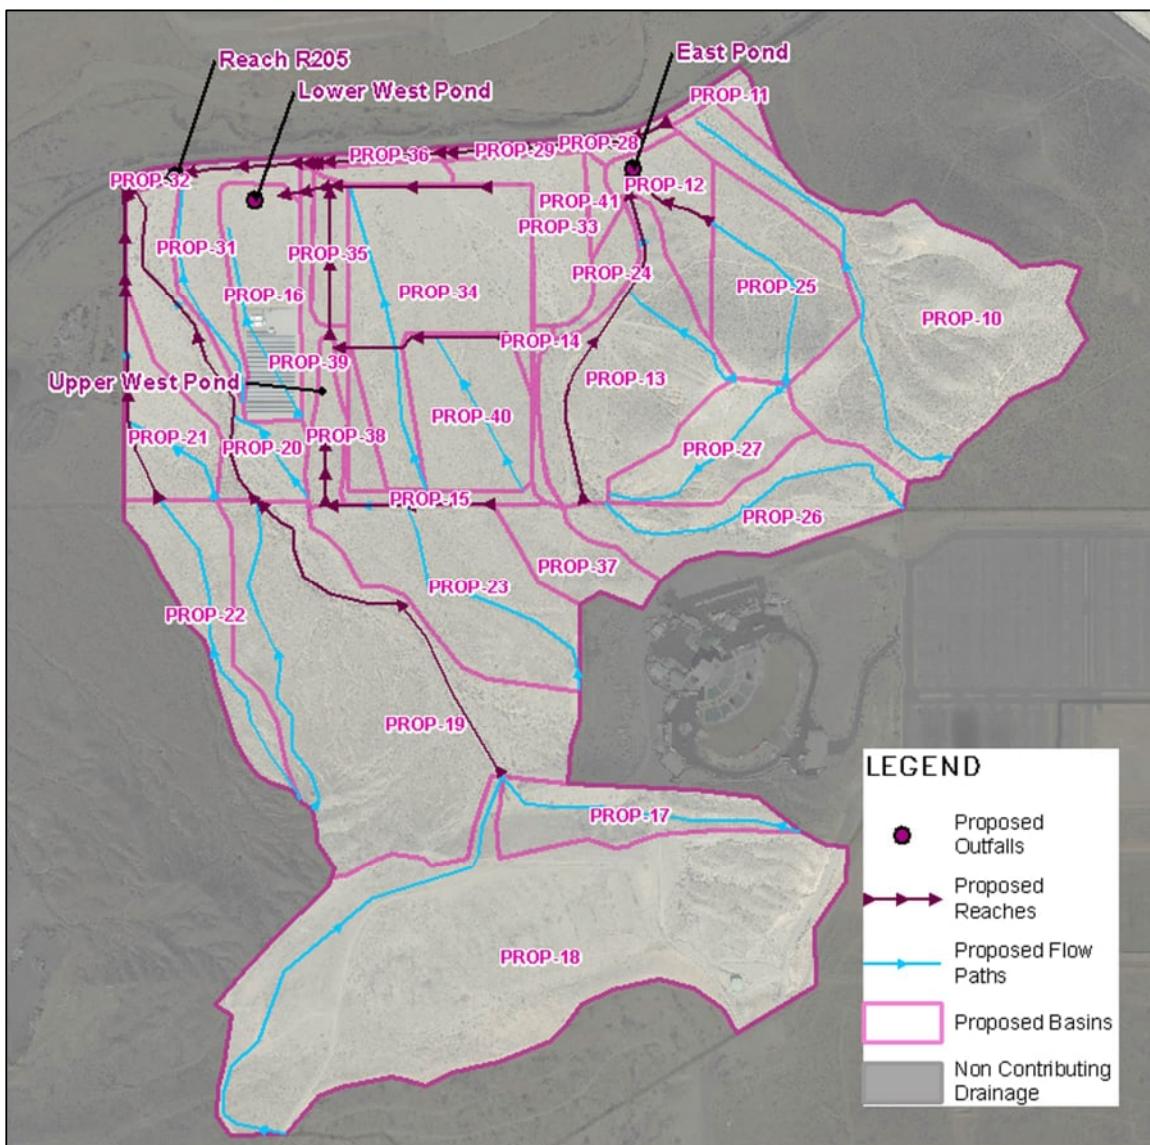

Figure 5: Proposed drainage patterns

The proposed grading will reroute drainage as follows:

- The delineations of basins EXT-12, EXT-13, EXT-14, EXT-15, EXT-16, EXT-19, EXT-20, EXT-23, EXT-24, EXT-26, EXT-28, EXT-29, EXT-30, and EXT-31 will be adjusted due to the proposed grading and relabeled using "PROP" instead of "EXT."
- The delineations of basins EXT-10, EXT-11, EXT-17, EXT-18, EXT-21, EXT-22, EXT-25, EXT-27, and EXT-32 will not be adjusted by the proposed grading, but will also be relabeled using "PROP" instead of "EXT."
- The discharges from PROP-26 and PROP-27 will combine and continue into basin PROP-13. The combined discharge from these basins empties into the East Pond (Retention).
- The discharge from PROP-14 and PROP-24 will be redirected around the proposed substation and will empty into East Pond.
- East Pond also receives the discharge from PROP-10, PROP-12, and PROP-25.
- The discharge from PROP-37 will join with the discharge from PROP-23, which will be extended to drain into Upper West Pond (Detention) at the north end of PROP-38.
- Upper West Pond will also receive the discharge from PROP-15 and PROP-38, and from PROP-40 in the proposed substation.
- Attenuated flow from Upper West Pond will be routed north and into Lower West Pond (Retention)
- Lower West Pond will also receive discharge from PROP-34 in the substation, and from Prop-16 and PROP-35.

Proposed Ponding

Three ponds are proposed with this project and were modeled within HEC-HMS as part of the proposed hydrology.

East Pond: This pond is sized to retain the runoff from the 100-yr, 10-day storm; cumulative inflow volume of 11.6 Ac-Ft. East Pond removes discharges previously flowing across Los Picos and out to the Tijeras Arroyo at outfalls Tijeras-1 and Tijeras-2.

Lower West Pond: This pond is sized to retain the runoff from the 100-yr, 10-day storm; cumulative inflow volume of 8.5 Ac-Ft. Lower West Pond removes discharges previously flowing across Los Picos and out to the Tijeras Arroyo at outfalls Tijeras-2 and Tijeras-3; some flows to the swale along Los Picos Rd are also retained.

Upper West Pond: This pond is sized to detain runoff from the 100-yr, 24-hr storm; peak inflow of 65 cfs. Flows from Upper West Pond are attenuated to 34 cfs by a 30" outlet pipe. Due to the steep slope of the outlet pipe, the pipe will flow partially full and supercritical, meaning the pond outflow will be regulated by the headwater depth at the outfall, modeled as an orifice. Pond storage tables were developed from the proposed pond grading plans and orifice rating tables generated using a simple orifice equation as shown below in Table 1:

Table 1: Upper West Pond Storage and Orifice Information

West Pond Storage Table

Description	Pond Depth	Elevation	Surface Area	Ave End Volume	Cumulative Volume
	Ft	Ft	Sq Ft	Ac-Ft	Ac-Ft
bottom of pond:	0	5077	157	0	0.000
	1	5078	9259	0.108	0.108
	2	5079	11809	0.242	0.350
	3	5080	14415	0.301	0.651
	4	5081	17079	0.362	1.012
top of pond:	5	5082	19798	0.423	1.436

West Pond - Simple Orifice ($Q=Ca(2gh)^{0.5}$), Circular orifice, sharp edge outlet pipe

Orifice Dia	2.5	ft
C coeffic.	0.6	unitless
g	32.2	ft/s^2
area	4.909	sf

West Pond Outlet Rating Table

depth from orifice invert ft	h ft	Q cfs
0.00	-1.25	0

4.50	3.25	42.6
4.75	3.50	44.2
5.00	3.75	45.8

Detailed results for the ponds are provided with the proposed hydrology, Attachment 3. Summary results are provided below (Table 2):

Table 2: Pond Summary Results

East Pond (Retention), 100-yr Storm		Lower West Pond (Retention), 100-yr Storm	
Peak Inflow, 24hr Storm:	161.9 cfs	Peak Inflow, 24hr Storm:	75.3 cfs
Volume, 24hr Storm:	6.7 Ac-Ft	Volume, 24hr Storm:	4.9 Ac-Ft
Volume, 10day Storm:	11.6 Ac-Ft	Volume, 10day Storm:	8.5 Ac-Ft
Upper West Pond (Detention)			
100-yr, 24hr Storm		100-yr, 10day Storm	
Peak Inflow:	64.8 cfs	Peak Inflow:	83.7 cfs
Peak Outflow:	34.0 cfs	Peak Outflow:	40.9 cfs
Peak Storage:	0.75 Ac-Ft	Peak Storage:	1.09 Ac-Ft
Peak Elevation:	3.3 Ft	Peak Elevation:	4.3 Ft

Downstream Capacity: Existing vs. Proposed

For the existing condition, the three Tijeras outfalls on the north side of Los Picos Rd were selected based on imagery and low points in the terrain where storm water flows across Los Picos Rd and into the arroyo. For the proposed condition, these flows across the road will be eliminated by the construction of East Pond and Lower West Pond; remnant flows along the frontage will be conveyed west in an improved swale along the south side of Los Picos Rd. The overall change in flow and volume to Tijeras Arroyo is shown below in Table 3:

Table 3: Change in Tijeras Arroyo Flow and Volume: Existing vs. Proposed

EXISTING, 24-hr Storm			PROPOSED, 24-hr Storm			Change in Flow (cfs)	Change in Volume (Ac-Ft)
Discharge Point	Q ₁₀₀ (cfs)	V ₁₀₀ (Ac-Ft)	Pond	Q ₁₀₀ (cfs)	V ₁₀₀ (Ac-Ft)		
Tijeras-1. Low point in road	96.1	4.0	East Pond (Retention)	161.9	6.7		
Tijeras-2. Low point in road	82.0	3.5	Lower West Pond (Retention)	75.3	4.9		
Tijeras-3. Low point in road	43.5	1.9					
Total Discharge to Tijeras Arroyo:	221.6	9.3	Total Discharge to Tijeras Arroyo:	0	0	-221.6	-9.3

The proposed grading and ponding also slightly decreases the contributing flow along the south side of Los Picos Road via its roadside swale. The values below are conservative because on multiple occasions, the existing roadside swale is silted in due to the sediment transport conveyed through the site, which can diminish the overall capacity. The change in offsite flow and volume at each outlet is shown below in Table 4:

Table 4: Change in Offsite Flow and Volume

Outlet ID	EXISTING, 24-hr Storm		PROPOSED, 24-hr Storm		Change in Flow (cfs)	Change in Volume (Ac-Ft)
	Q ₁₀₀ (cfs)	V ₁₀₀ (Ac-Ft)	Q ₁₀₀ (cfs)	V ₁₀₀ (Ac-Ft)		
R105/R205	63.9	2.9	41.6	1.9	-22.3	-1.0

Hydraulics

The proposed drainage improvements will include numerous swales, storm drain, culverts, and ponds. The ponds were modeled within the hydrologic analysis, the remaining drainage improvements were modeled using Bentley StormCAD CONNECT Edition 3. As there are no existing drainage improvements at this project site, no existing hydraulic analysis was performed. One box culvert is present at the adjacent solar array but will be removed and replaced with this project.

Hydraulic Design Criteria

The drainage improvements are sized to convey the 100-yr, 24-hr peak flows as determined in the hydrologic model. The hydraulic grade lines are determined from the energy grade lines using HEC-22, Third Edition calculated within StormCAD. The culverts are included within the channel profiles, with the headwater depth and inlet/outlet control analyzed using the Federal Highway Administration (FHWA) culvert equations within StormCAD. Geometric data for the improvements were obtained from the proposed grading plan, provided as Attachment 1-2.

Proposed Hydraulics

The calculated flows from the proposed hydrologic model were used in StormCAD to size the storm drain, culverts, and swales. Catch basins are included in substation that will capture some flow. However, the majority flows will be captured by perforated storm drain in gravel pack (French Drains), with the connecting catch basins serving primarily as access and maintenance points.

An over view of the StormCAD Layout, overlaid with the site grading is provided as Attachment 4-1. The following abbreviations are used in the StormCAD model and supporting attachments:

- BW- bottom width
- CB- catch basin
- EARD- East Access Road Ditch
- EDC- East Diversion Channel
- EODC- East Offsite Diversion Channel
- FD- flow depth
- HW- headwall
- LPD- Los Picos Ditch
- LT SS / RT SS- left and right side slopes
- MH- manhole
- SPD- storm drain pipe
- WDC- West Diversion Channel
- XS- cross section

Cross sections called out as 'irregular channel' are V-ditches, remaining ditches are trapezoidal sections.

Input data used to develop the StormCAD model, is provided as Attachment 4-2. Pipe and channel profiles along with output tables are provided as Attachment 4-3. The StormCAD model is included in Attachment 5.

Project Phasing

This project will be constructed in 2 phases as shown in Figure 6: Phase 1 occupying the southern half of the site and Phase 2 expanding the substation into the north half of the site.

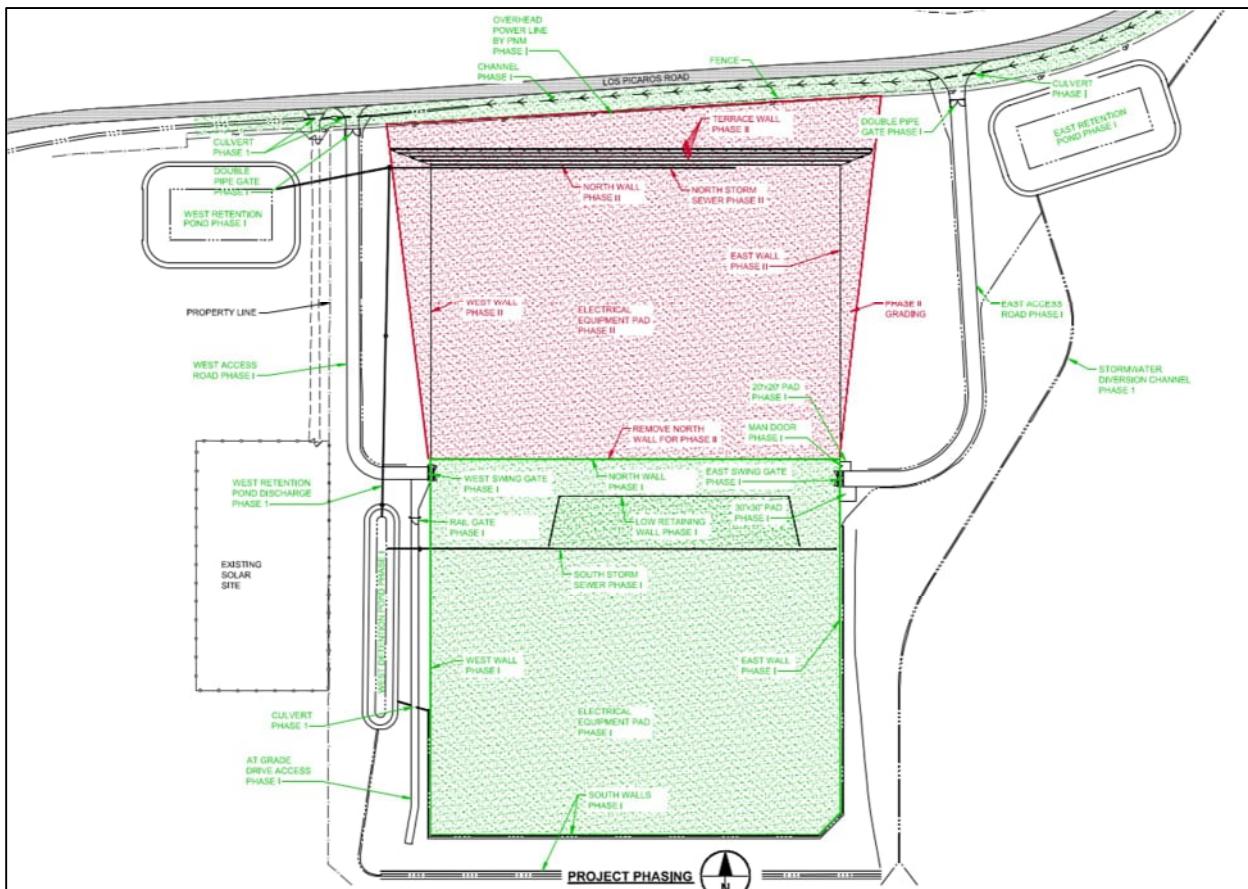

Figure 6: Project Phasing

Almost all permanent, or full build-out, drainage facilities will be constructed in Phase 1. The only substantial facility not constructed is the North Substation Lateral and its associated catch basins. Instead, an armored swale will be constructed in Phase 1 along this future storm drain alignment that will direct flows west and into a 5' x 5' drop inlet. This drop inlet will also serve as the junction box for the Phase 2 North Substation Lateral.

The intermediate swale was sized for the 100yr event using Bentley FlowMaster (CONNECT Edition). The flows will be directed to a 5' x 5' drop inlet; 100yr headwater depth was determined using FlowMaster assuming 50% clogging for inlets in sump. A berm will be constructed around the inlet to contain headwater plus freeboard. Input and output data are provided as Attachment 4-4 and the model is included in Attachment 5.

Storm Water Quality

No runoff from impervious surfaces is proposed with this development; therefore, no retention of storm water for storm water quality purposes is included with this project.

DISCLOSURE STATEMENT

The purpose of this Plat is to divide the Tract of Land described hereon into 2 Tracts as shown on this Plat, meeting the required zoning and set back requirements. Bearings are based on a Survey Plat of Section 16, T. 9 N., R. 3 E., N.M.P.M., Bernalillo County, New Mexico by D. T. Morrison, N.M.L.S. No. 1010, dated April 10, 1972. Property Corners were found and set as shown on this Plat.

Approval of and filing with the Bernalillo County Clerk of this Plat does not vacate or in anyway affect public or private easements.

NOTE: The location of Los Picaros Rd. is from Survey Map made by D.T. Morrison & evidence found in the field.

82 59934

DESCRIPTION:

A Land Division Plat of a certain Tract of Land, lying and being situate in the Southwest Quarter (SW $\frac{1}{4}$) of Section 16, Township 9 North, Range 3 East, N.M.P.M., Bernalillo County, New Mexico, and being more particularly described as follows:
BEGINNING at the Southwest corner of said Section 16, being an Iron Pipe in place, and running THENCE, N. 00 deg. 04' 16" W., along the West line of said Section 16, a distance of 1571.64 feet to the North line of an existing road known as Los Picaros Road;
THENCE, along the North line of said Los Picaros Road, N. 86 deg. 16' 43" E., a distance of 2030.94 feet to a point of curve to the left;
THENCE, Northeasterly along the arc of said curve to the left with a Radius of 914.21 feet, a distance along arc of 481.56 feet to a point of tangent;
THENCE, N. 56 deg. 05' 52" E., along the Northerly line of said Los Picaros Road, a distance of 185.53 feet to a point on the North-South 1/4 Section line of said Section 16;
THENCE, S. 00 deg. 13' 13" W., along the North-South 1/4 Section line of said Section 16, a distance of 1929.90 feet to the South 1/4 corner of said Section 16, being a rebar in place;
THENCE, S. 89 deg. 19' 57" W., along the South line of said Section 16, a distance of 2622.04 feet to the point of beginning and Containing 99.995 acres, more or less.

FREE CONSENT, DEDICATION

The undersigned owners and proprietors of the property described hereon, do hereby consent to the Platting of said property as shown hereon and the same is with free consent and in accordance with their desires.

DISCLOSURE STATEMENT

Replat of TRACT A Sunset Memorial Park

Los Picos LLC
111 University NE
Albuquerque, New Mexico 87102

There are no deed or plat restrictions of record, current zoning is A-1.

Upon development of any habitable building a drinking water system will be installed that meets the current Bernalillo County Drinking Water Well Ordinances and/or other Ordinance or municipal water by the ABCWUA.

Upon development:
A wastewater system will be installed that meets the current Bernalillo County Wastewater Ordinance and/or other Ordinance municipal sewer by the ABCWUA.

A list of suppliers for Solidwaste pick-up will be provided.

A slope analysis with 2' contours as relates to suitability for development, a terrain management plan as relates to soil erosion and the protection of ephemeral waterways and, CDA air quality permits will be obtained.

PNM, Comcast, and Qwest will be contacted for availability of service.

FREE CONSENT:

We, The Undersigned Owners, do hereby certify that we are the owners of the property described hereon and that we have caused the said property to be surveyed and replatted as shown hereon and that this plat is with our free consent. We do also grant any and all easements as may be created by this plat.

LEGAL DESCRIPTION:

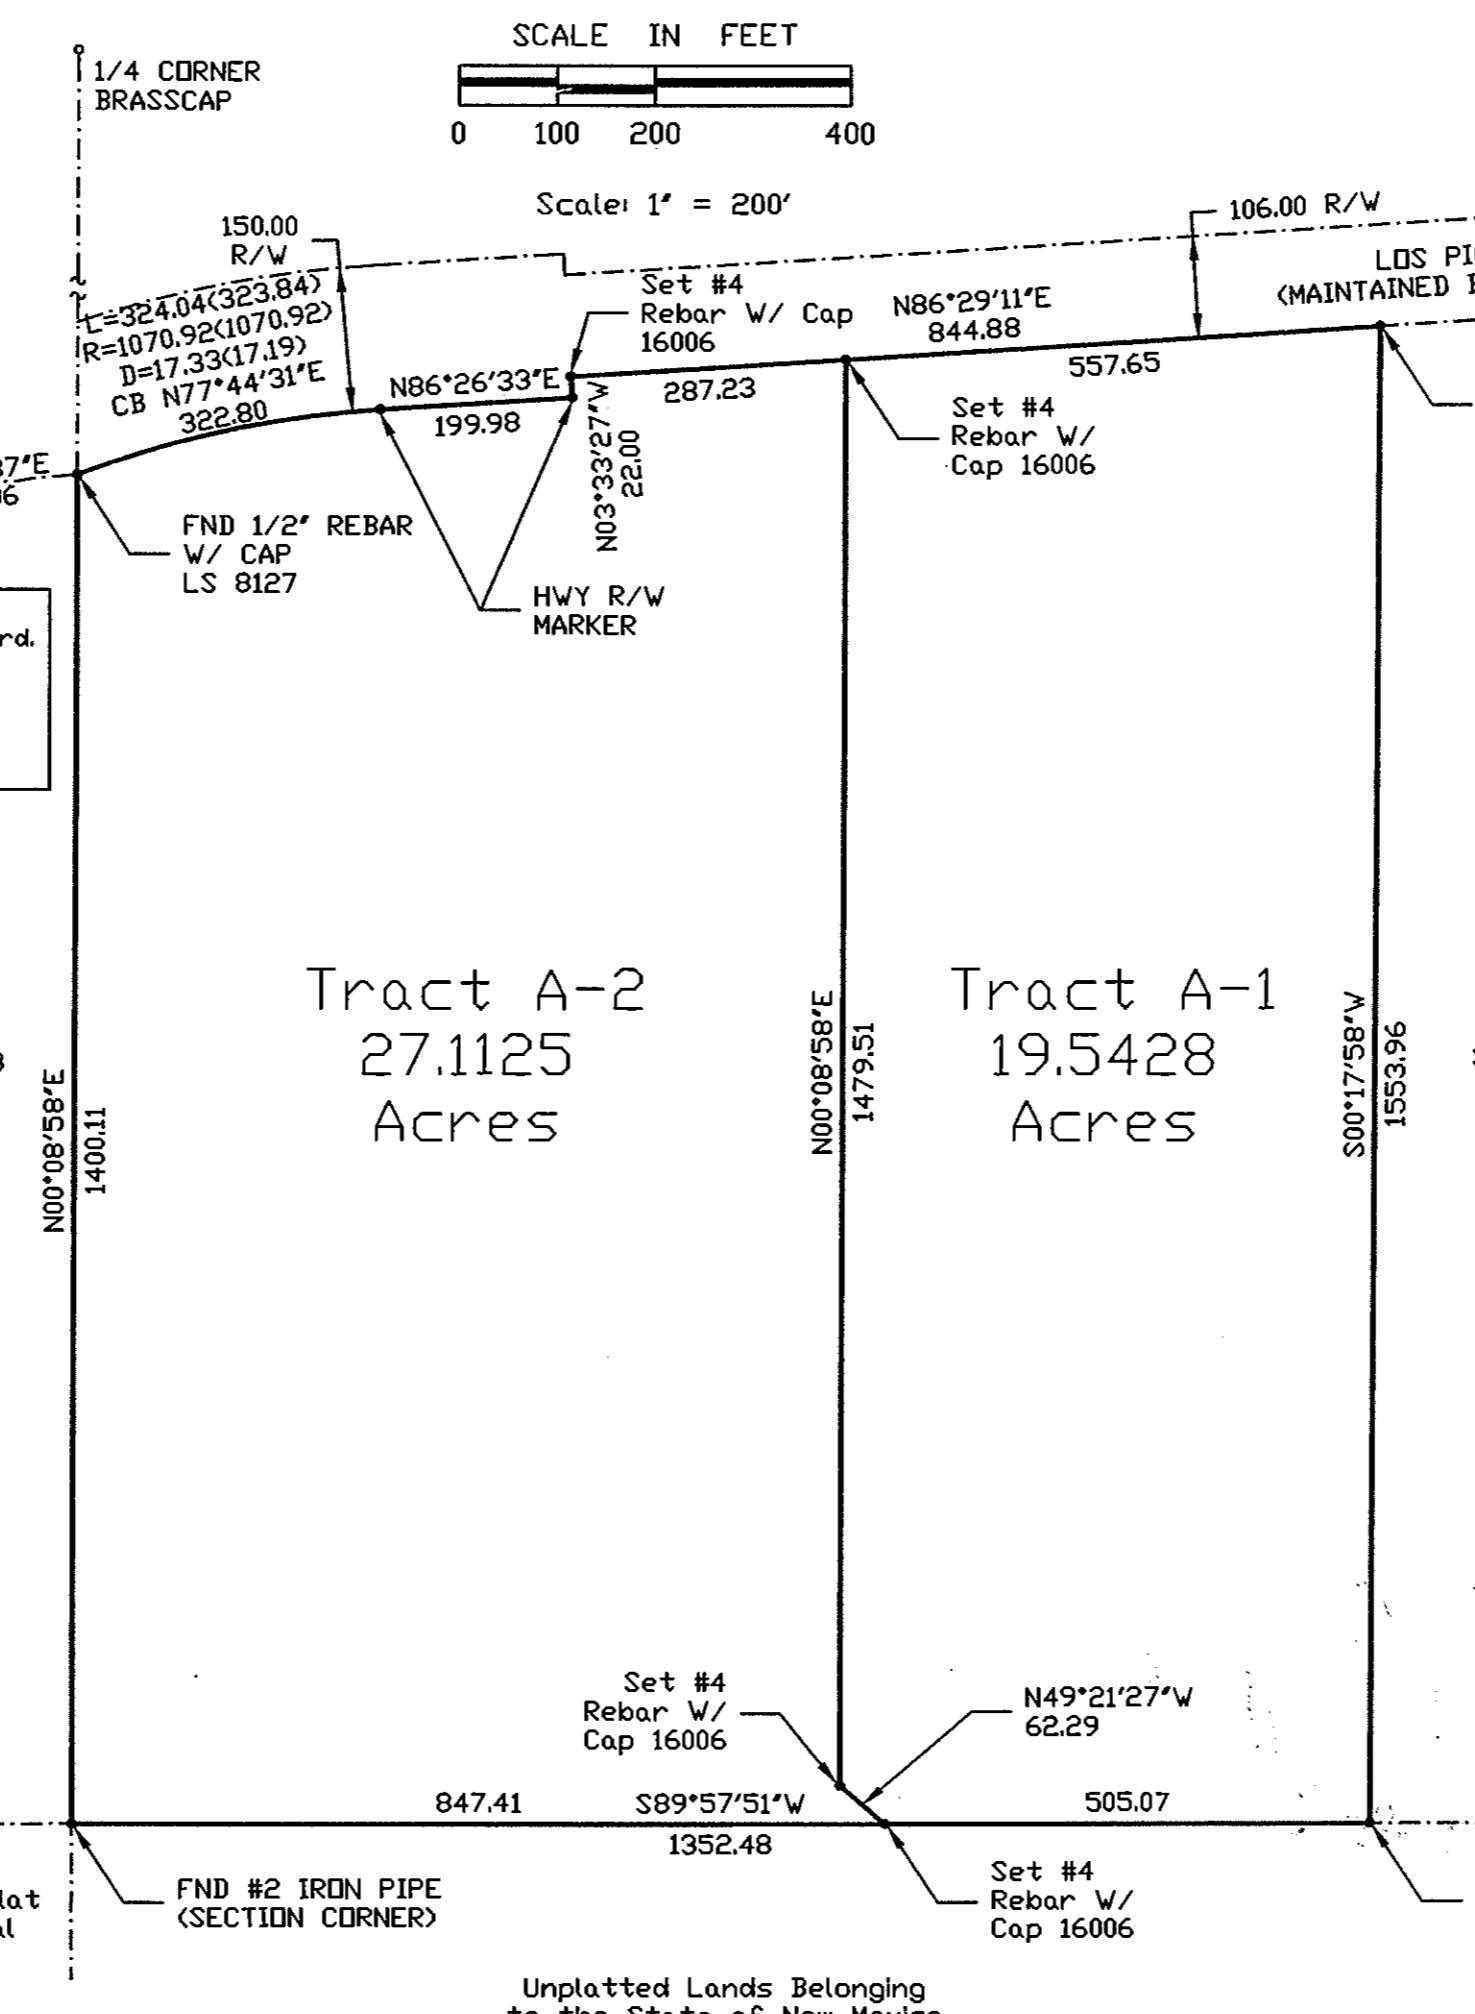

Tract A Replat of SUNSET MEMORIAL PARK, situate in Section 16 T.9 N., R.3 E., N.M.P.M., Bernalillo County, New Mexico, being a replat of Tract A of Land Division Plat Sunset Memorial Park filed for record in the office of the County Clerk of Bernalillo County, New Mexico in Plat Book C20, Page 87 on November 5, 1982.

PURPOSE OF THE PLAT:

The purpose of this plat is to split one Tract into two tracts. Splitting Tract A into Tract A-1 and A-2.

NOTES:

1. Zone Atlas Q-15-Z
2. Bearings are grid based on the New Mexico State Plane Coordinate System Central Zone (NAD83)
3. Distances are ground.
4. Unless otherwise shown, set a 1/2" rebar with plastic cap stamped LS 16006
5. Statement of Declaration: Tract A will be divided into two (2) Tracts.
6. A grading and drainage plan prepared by an engineer registered in the State of New Mexico may be required with future development of these lots.
7. Cross lot drainage must not be increased or impacted by development of these lots.
8. Lots must accept storm water runoff from adjacent roadways and properties as it currently exists.
9. No mass site grading, clearing, or grubbing is allowed without and approved grading and drainage plan.
10. Total gross acreage 46.6553

Plat of Tract A-1 & A-2 of

SURVEYOR'S CERTIFICATION

I, William Goss, New Mexico Professional Land Surveyor No. 16006, hereby certify that this plat was prepared by me, that it meets the minimum requirements for monumentation and surveys of the Bernalillo County Subdivision Ordinance and standards for Surveying in the State of New Mexico as adopted by the New Mexico State Board of Registration for Professional Engineers and Land Surveyors; and that it is true and correct to the best of my knowledge and belief.

¹ Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

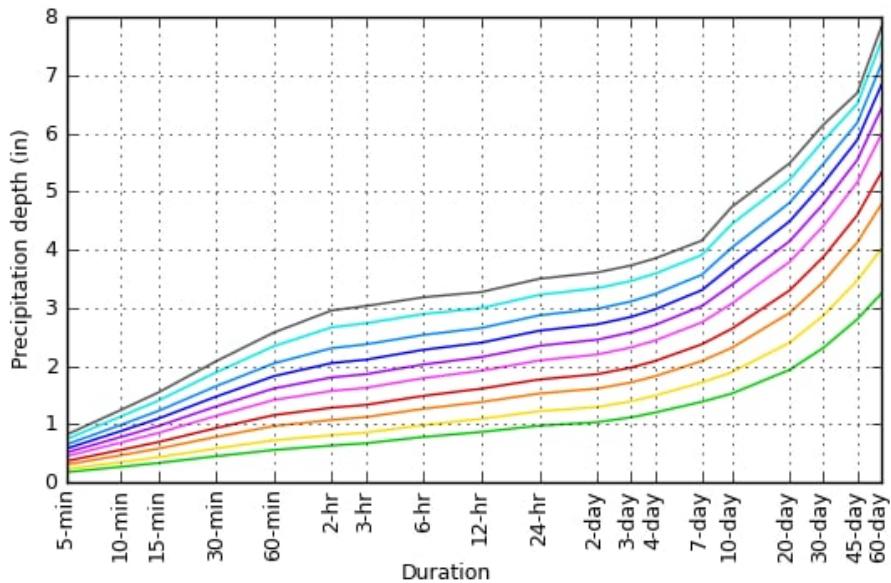

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

4-4 FlowMaster Input and Output Data

Worksheet for Phase 1- N Substation 2' Deep Trap. Swale

Project Description	
Friction Method	Manning Formula
Solve For	Normal Depth
Input Data	
Roughness Coefficient	0.069
Channel Slope	0.020
Left Side Slope	3.000
Right Side Slope	3.000
Bottom Width	3.00
Discharge	31.10
Results	
Normal Depth	17.8
Flow Area	11.0
Wetted Perimeter	12.4
Hydraulic Radius	10.7
Top Width	11.89
Critical Depth	12.7
Critical Slope	0.082
Velocity	2.82
Velocity Head	0.12
Specific Energy	1.60
Froude Number	0.516
Flow Type	Subcritical
GVF Input Data	
Downstream Depth	0.0
Length	0.0
Number Of Steps	0
GVF Output Data	
Upstream Depth	0.0
Profile Description	N/A
Profile Headloss	0.00
Downstream Velocity	0.00
Upstream Velocity	0.00
Normal Depth	17.8
Critical Depth	12.7
Channel Slope	0.020
Critical Slope	0.082

Worksheet for Phase 1- 5x5 MDI in Sag

Project Description	
Solve For	Spread
Input Data	
Discharge	37.85
Left Side Slope	3.000
Right Side Slope	3.000
Bottom Width	6.50
Grate Width	5.00
Grate Length	5.0
Local Depression	0.0
Local Depression Width	0.0
Grate Type	P-50 mm x 100 mm (P-1-7/8"-4")
Clogging	50.0
Results	
Spread	11.8
Depth	10.7
Wetted Perimeter	12.1
Top Width	11.85
Open Grate Area	10.0
Active Grate Weir Length	15.0

Worksheet for Phase 2- 5x5 MDI in Sag

Project Description	
Solve For	Spread
Input Data	
Discharge	6.75
Left Side Slope	3.000
Right Side Slope	3.000
Bottom Width	6.50
Grate Width	5.00
Grate Length	5.0
Local Depression	0.0
Local Depression Width	0.0
Grate Type	P-50 mm x 100 mm (P-1-7/8"-4")
Clogging	50.0
Results	
Spread	8.2
Depth	3.4
Wetted Perimeter	8.3
Top Width	8.19
Open Grate Area	10.0
Active Grate Weir Length	15.0
