**RE: Kairos Power Expansion  
5201 Hawking Drive SE  
Grading Plans and Drainage Calculations  
Engineer's Stamp Date: 07/20/22  
Hydrology File: Q16DA5000A**

Dear Mr. Gomez:

PO Box 1293

Albuquerque

Based upon the information provided in your submittal received 07/26/2022, the Grading Plans and Drainage Calculations are approved for Building Permit, Grading Permit, and for action by the DRB on Platting and Site Plan for Building Permit. Please attach a copy of this approved plan in the construction sets for Building Permit processing along with a copy of this letter.

**PRIOR TO CERTIFICATE OF OCCUPANCY:**

NM 87103

[www.cabq.gov](http://www.cabq.gov)

1. Engineer's Certification, per the DPM Part 6-14 (F): *Engineer's Certification Checklist For Non-Subdivision* is required.
2. Please provide the Drainage Covenant with Exhibit A for the Existing Retention Pond per Article 6-15(C) of the DPM prior to Permanent Release of Occupancy. Please submit the original copies along with the \$ 25.00 recording fee check made payable to Bernalillo County to Carrie Compton ([cacompton@cabq.gov](mailto:cacompton@cabq.gov)) on the 4th floor of Plaza de Sol. Please note that Hydrology will need a pdf copy of the recorded Drainage Covenant prior to Hydrology's approval of Permanent Release of Occupancy.

As a reminder, if the project total area of disturbance (including the staging area and any work within the adjacent Right-of-Way) is 1 acre or more, then an Erosion and Sediment Control (ESC) Plan and Owner's certified Notice of Intent (NOI) is required to be submitted to the Stormwater Quality Engineer (Doug Hughes, PE, [jhughes@cabq.gov](mailto:jhughes@cabq.gov), 924-3420) 14 days prior to any earth disturbance.

# CITY OF ALBUQUERQUE

*Planning Department*  
Alan Varela, Director

*Mayor Timothy M. Keller*

If you have any questions, please contact me at 924-3995 or [rbrissette@cabq.gov](mailto:rbrissette@cabq.gov).

Sincerely,

*Renée C. Brissette*

Renée C. Brissette, P.E. CFM

## Drainage Calculations - 5201 HAWKING DR, Albuquerque, NM 87106

SITE ACRAGE: 16.4 ACRES

NEW / REPLACED IMPERVIOUS  
AREA: 105106 SF

NEW / REPLACED COMPACTED  
GRAVEL: 20425 SF

EXISTING DEVELOPMENT AREA  
DRAINING TO POND: 182400 SF

TOPOGRAPHY: FLAT

NEW OR REPLACED LANDSCAPING, LAWN, EARTH - PERVIOUS

NEW OR REPLACED IMPERVIOUS SURFACE (AC, ROOF, CONC)

EXISTING IMPERVIOUS SURFACE DRAINING TO EXISTING POND

NEW COMPACTED GRAVEL - PERVIOUS

$$A_{ROOF1} := 29980 \text{ ft}^2$$

### BREAKDOWN OF SITE AREAS BY SURFACE TYPE

$$A_{ROOF2} := 22345 \text{ ft}^2$$

$$A_{ROOF3} := 5440 \text{ ft}^2$$

$$A_{AC\_CONC\_1} := 11117 \text{ ft}^2$$

$$A_{EARTH\_1} := 28468 \text{ ft}^2$$

$$A_{AC\_CONC\_2} := 14623 \text{ ft}^2$$

$$A_{EARTH\_2} := 9125 \text{ ft}^2$$

$$A_{AC\_CONC\_3} := 5106 \text{ ft}^2$$

$$A_{GRAVEL\_3} := 3840 \text{ ft}^2$$

$$A_{EARTH\_3} := 15425 \text{ ft}^2$$

$$A_{AC\_CONC\_4} := 3545 \text{ ft}^2$$

$$A_{GRAVEL\_4} := 1780 \text{ ft}^2$$

$$A_{EARTH\_4} := 3700 \text{ ft}^2$$

$$A_{AC\_CONC\_5} := 7550 \text{ ft}^2$$

$$A_{GRAVEL\_5} := 11235 \text{ ft}^2$$

$$A_{EARTH\_5} := 12312 \text{ ft}^2$$

$$A_{AC\_CONC\_6} := 5400 \text{ ft}^2$$

$$A_{GRAVEL\_6} := 3570 \text{ ft}^2$$

$$A_{EARTH\_6} := 12312 \text{ ft}^2$$

$$A_{imp\_n\_r} := A_{ROOF1} + A_{ROOF2} + A_{ROOF3} + A_{AC\_CONC\_1} + A_{AC\_CONC\_2} + A_{AC\_CONC\_3} + A_{AC\_CONC\_4} + A_{AC\_CONC\_5} + A_{AC\_CONC\_6}$$

$$A_{imp\_n\_r} = 105106 \text{ ft}^2$$

TOTAL NEW/REPLACED IMPERVIOUS AREA TO BE  
DRAINED TO EXISTING POND

$$A_{existing\_imp\_pond} := 182400 \text{ ft}^2$$

EXISTING IMPERVIOUS AREA DRAINWD TO  
EXISTING POND

$$A_{new\_gravel} := A_{GRAVEL\_3} + A_{GRAVEL\_4} + A_{GRAVEL\_5} + A_{GRAVEL\_6}$$

$$A_{new\_gravel} = 20425 \text{ ft}^2$$

TOTAL AREA OF NEW GRAVEL PARKING / ROAD

$$A_{n\_landscaping} := A_{EARTH\_1} + A_{EARTH\_2} + A_{EARTH\_3} + A_{EARTH\_4} + A_{EARTH\_5} + A_{EARTH\_6}$$

$$A_{n\_landscaping} = 81342 \text{ ft}^2$$

TOTAL AREA OF NEW LANDSCAPING AND EARTH

## **METHODOLOGY**

DRAINAGE AND RETENTION CALCULATIONS ARE PERFORMED IN ACCORDANCE WITH  
THE DEVELOPMENT PROCESS MANUAL (DPM) OF THE CITY OF ALBUQUERQUE -  
CHAPTER 6

FIGURE 6.2.3 Precipitation Zones

DEVELOPMENT IS IN ZONE  
2 OF THE PRECIPITATION  
ZONES FIG 6.2.3 DPM

### ARTICLE 6-3 SITE DEVELOPMENT

It is beneficial to consider the following items when developing a site:

1. Flood Zone (i.e. Special Flood Hazard Area): May affect finished floor elevation and locations of structures and increase permit requirements. See [Article 6.8](#).
2. Downstream Capacity: May require on-site ponding. See [Article 6.7](#).
3. Off-site Flows: Are generally accepted and conveyed through the site. See [Article 6.2](#).
4. Applicable approved drainage reports and plans: Provide previous approval for downstream capacity and off-site flows. See [Article 6.7](#).
5. Current Topography: Provides accurate depiction of existing conditions.
6. Encumbrances (e.g. utility corridors and easements): May restrict development.
7. Water Quality: Design standard volume and construction runoff. See [Article 6.12](#).

**DEVELOPMENT IS IN ZONE X OF FEMA FLOOD MAPS. FLOOD ZONE REQUIREMENTS ARE NOT APPLICABLE.**

**WE WILL USE THE RATIONAL METHOD TO CALCULATE THE RUNOFF INCREASE INTO THE EXISTING DETENTION POND AND VERIFY THAT IT HAS ADEQUATE CAPACITY. WE WILL ALSO VERIFY THAT THE CULVERTS USED TO TRANSMIT THE DRAINAGE TO THE POND ARE ADEQUATELY SIZED.**

### Part 6-10(A) General Hydraulic Criteria

Closed conduit sections (pipe, box or arch sections) will be designed as flowing full and, whenever possible, under pressure except when the following conditions exist:

1. In some areas of high sediment potential, there is a possibility of stoppage occurring in drains. In situations where sediment may be expected, the City Engineer must be consulted for a determination of the appropriate bulking factor.
2. In certain situations, open channel sections upstream of the proposed closed conduit may be adversely affected by backwater.

If the proposed conduit is to be designed for pressure conditions, the HGL shall not be higher than the ground or street surface, or encroach on the same in a reach where interception of surface flow is necessary; however, in those reaches where no surface flow will be intercepted, an HGL that encroaches on or is slightly higher than the ground or street surface will be acceptable provided that pressure manholes exist or will be constructed.

The stormwater quality volume new development sites are required to manage is the runoff from a 0.62 inch storm. The stormwater quality volume redevelopment sites are required to manage is the runoff from a 0.48 inch storm. A site is defined as a redevelopment site if the land was occupied by an artificial surface or by any structure intended for human occupation, including structures intended for commercial enterprise.

The methodology used in the U.S. Environmental Protection Agency (EPA) Report, *Estimating Predevelopment Hydrology in the Middle Rio Grande Watershed*, New Mexico, TetraTech, April 2014, EPA Publication Number 832-R-14-007, yields runoff values of 0.42 inches for the 90th percentile storm and using the same methodology but generated from HEC-HMS, 0.26 inches for the 80th percentile storm.

To calculate the required SWQV, multiply the impervious area draining to the BMP by 0.42 inches for new development sites and 0.26 inches for redevelopment sites. The calculations of both the required and the provided volume of each BMP must be shown on the Grading and Drainage Plan. Each BMP should be labeled on the Grading and Drainage Plan with the required SWQV and associated water surface elevation and the 100-year water surface elevation. Landscaping of surface BMPs is also required to be noted on the Grading and Drainage Plan.

# **1.0 CHECKING CAPACITY OF EXJISTING POND - IN ACCORDANCE WITH REQUIREMENTS SET IN ARTICLE 6-12 OF DMP**

$$i_{100yr} := 0.62 \text{ in}$$

Performed for new development (more conservative) including area of existing development to check pond capacity.

$$i_{BMP\_factor} := 0.42 \text{ in}$$

$$A_{existing\_imp\_pond} = 182400 \text{ ft}^2$$

$$A_{imp\_n\_r} = 105106 \text{ ft}^2$$

$$A_{imperf\_total} := A_{existing\_imp\_pond} + A_{imp\_n\_r} = 287506 \text{ ft}^2$$

Total impervious area (e & n) going to pond.

$$SWQV_{e\_pond} := A_{imperf\_total} \cdot i_{BMP\_factor} = 10062.71 \text{ ft}^3$$

Stormwater volume that pond needs to accomodate.

$$V_{e\_pond} := 17200 \text{ ft}^2 \cdot 7 \text{ ft} = 120400 \text{ ft}^3$$

Volume of existing pond is great enough to retain the stormwater.

## 1.0 CHECKING CAPACITY OF PROPOSED CULVERTS

$$i_{10yr} := 2.78 \text{ in}$$

DPM requires that 100yr 24hr storm be used - however we are using a more conservative storm intensity of a 15yr 10min tc. The intensity is larger and results in greater flow.

$$t_c := 10 \text{ min}$$

Time of concentration

$$C_{earth} := 0.3$$

Runoff coefficient for lawn area

$$C_{roof} := 0.95$$

Runoff coefficient for roof area

$$C_{ac\_conc} := 1$$

Runoff coefficient for ac road and conc sidewalk.

$$A_{imp\_new} := A_{ROOF1} + A_{ROOF2} + A_{ROOF3} + A_{AC\_CONC\_1} + A_{AC\_CONC\_2} + A_{AC\_CONC\_3} + A_{AC\_CONC\_4} + A_{AC\_CONC\_5} + A_{AC\_CONC\_6}$$

$$A_{imp\_new} = 105106 \text{ ft}^2$$

Total impervious area at site after project completion.

## 2.0 Determining Size of Stormwater Pipe

$$d_0 := 8 \text{ in}$$

8in PVC conduit

$$n := 0.009$$

Manning Roughness Smooth Wall PVC

$$S_{slope} := 0.01$$

Slope of pipe

$$p_{ratio} := 0.9$$

90% full

$$Q_{max} := 1180 \text{ gpm}$$

$$Q_{cb1} := \left( C_{ac\_conc} \cdot A_{AC\_CONC\_1} + C_{roof} \cdot \frac{A_{ROOF2}}{2} + C_{earth} \cdot A_{EARTH\_1} \right) \cdot i_{10yr} = (5.246 \cdot 10^4) \text{ gal}$$

8" conduit is adequate

$$d_1 := 10 \text{ in}$$

$$Q_{max1} := 2140 \text{ gpm}$$

$$Q_{cb1} := \left( C_{ac\_conc} \cdot A_{AC\_CONC\_2} + C_{roof} \cdot \left( \frac{A_{ROOF1}}{2} + \frac{A_{ROOF2}}{2} \right) + C_{earth} \cdot A_{EARTH\_2} \right) \cdot i_{10yr} + Q_{cb1}$$

$$Q_{cb1} = (1.256 \cdot 10^5) \text{ gal}$$

10" conduit is adequate

$$d_2 := 12 \text{ in}$$

$$Q_{max2} := 3481 \text{ gpm}$$

$$Q_{cb2} := \left( C_{ac\_conc} \cdot A_{AC\_CONC\_3} + C_{roof} \cdot \left( \frac{A_{ROOF3}}{2} + \frac{A_{ROOF2}}{2} \right) + C_{earth} \cdot A_{EARTH\_5} \right) \cdot i_{10yr} + Q_{cb1} = (1.637 \cdot 10^5) \text{ gal}$$

12" conduit is adequate

## SUMMARY

DRAINAGE CALCULATIONS DEMONSTRATE THAT THE EXISTING POND IS SUFFICIENT TO CAPTURE AND TREAT THE RUNOFF FROM THE EXISTING DEVELOPMENT AS WELL AS THE PROPOSED DEVELOPMENT. CULVERT SIZES ARE APPROPRIATE AS SHOWN ON PLANS.

# Manning Formula Uniform Pipe Flow at Given Slope and Depth

Printable Title

Printable Subtitle

Inputs		Results		
Pipe diameter, $d_0$	12 in	Flow, Q (See notes)	3481.0299	gpm
Manning roughness, $n$	0.009	Velocity, $v$	10.4178	ft/sec
Pressure slope (possibly $\neq$ equal to pipe slope), $S_0$	0.02 rise/run	Velocity head, $h_v$	20.2412	in H <sub>2</sub> O
Percent of (or ratio to) full depth (100% or 1 if flowing full)	0.9 fraction	Flow area	107.2115	sq. in.
		Wetted perimeter	29.9771	in
		Hydraulic radius	3.5764	in
		Top width, $T$	7.2000	in
		Froude number, $F$	1.65	
		Average shear stress (tractive force), $\tau$	0.3721	psf

Notes:

**This is the flow and depth *inside* the pipe.**

Getting the flow into the pipe may require significantly higher headwater depth. Add at least 1.5 times the velocity head to get the headwater depth or [see my 2-minute tutorial](#) for standard culvert headwater calculations using HY-8.

<sup>1</sup> Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

## 5201 HAWKING DR, ALBUQUERQUE, NM

### GENERAL CONTRACTION NOTES

- ALL CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE MOST CURRENT CITY OF ALBUQUERQUE, NEW MEXICO STANDARD PLANS AND SPECIFICATIONS..
- EXISTING GROUND CONTOURS BASED ON OVERALL GRADING PLAN PREPARED BY MATTHEW F SATCHES DATED SEPTEMBER 2020 NO 24572. CONTRACTOR SHALL VERIFY SITE CONDITIONS.
- LOCATION OF EXISTING UTILITIES ARE APPROXIMATE ONLY. THE CONTRACTOR SHALL VERIFY LOCATION BY OBTAINING UTILITY LOCATE PRIOR TO BEGINNING CONSTRUCTION. EXERCISE CAUTION DURING EXCAVATION.
- VERIFY HORIZONTAL AND VERTICAL LOCATION OF ALL UTILITIES ENCOUNTERED DURING CONTRACTION. RECORD LOCATION AND CHANGES TO UTILITIES IN SURVEY NOTES AND ON AS-BUILD DRAWINGS.
- ELEVATION POINTS SHOWN ARE BASED ON NAVD88 DATUM.
- RESTORE ALL DISTURBED PROPERTY OUTSIDE OF WORK LIMITS TO ORIGINAL CONDITIONS AND/OR IN ACCORDANCE WITH COUNTY OF SACRAMENTO STANDARDS..
- THE CONTRACTOR SHALL FOLLOW ALL CITY OF ALBUQUERQUE REGULATION FOR NOISE HOURS OF OPERATIONS AND DUST CONTROL.
- WATER RESULTING FROM CONTRACTOR'S DEWATERING EFFORT MAY NOT BE PUMPED OF OTHERWISE DIVERTED INTO EXISTING STORM DRAINS UNLESS PERMITS ARE OBTAINED BY THE CONTRACTOR, INCLUDING, BUT NOT LIMITED TO, THOSE REQUIRED BY COUNTY OF SACRAMENTO STORM WATER PLAN REVIEW OFFICE. UNDER NO CIRCUMSTANCES WILL THE CONTRACTOR BE ALLOWED TO DIVERT WATER FROM AN EXCAVATION ONTO ROADWAYS., CONTRACTOR SHALL PROVIDE A DISPOSAL SITE FOR EXCESS WATER AND SHALL BE RESPONSIBLE FOR SECURING ALL NECESSARY PERMITS AND APPROVALS. CONTRACTOR SHALL PROVIDE COPIES OF NECESSARY PERMITS AND APPROVALS TO THE MOA RIGHT OF WAY PERMIT OFFICE.
- KEEP SITE FREE OF CLUTTER.
- MINIMIZE OFF-SITE VEHICLE TRACKING OF SEDIMENTS. SWEEP SITE ENTRANCE AND EXIT DURING CONSTRUCTION WHEN SOILS ACCUMULATE TO DEPTHS GREATER THAN ONE-FOURTH INCH. WATER EXPOSED SOILS AS NECESSARY TO CONTROL GENERATION OF DUST. CONSTRUCTION ACTIVITIES SHALL BE MONITORED ON A DAILY BASIS TO DETERMINE IF TRACKING OF DIRT AND DEBRIS ONTO THE ADJACENT ROADWAYS HAS OCCURRED. ANY NECESSARY CLEANUP SHALL BE ACCOMPLISHED ON A DAILY BASIS.
- REVISIONS THAT ALTER THE REVIEWED AND APPROVED DESIGN INTENT REFLECTED IN THIS SET OF SIGNED CONSTRUCTION DRAWINGS MUST BE SUBMITTED TO CITY OF SACRAMENTO DEPARTMENT OF PUBLIC WORKS FOR REVIEW AND APPROVAL PRIOR TO CONSTRUCTION. ADJUSTMENTS NECESSARY TO ACCOMMODATE FIELD CONDITIONS MAY BE MADE IF SUCH ADJUSTMENTS ARE WITHIN THE SCOPE OF THE DESIGN INTENT AND ARE APPROVED BY THE ENGINEER OF RECORD.
- CONTRACTOR SHALL REFER TO THE ARCHITECTURAL PLANS FOR PRECISE LOCATIONS OF ALL STRUCTURES AND FURNITURE.
- CONTRACTOR SHALL REFER TO THE MECHANICAL, ELECTRICAL AND PLUMBING PLANS FOR SIZES AND TYPES OF UTILITY CONNECTIONS.
- ALL MEANS AND METHODS OF CONSTRUCTION ARE AT THE DISCRETION OF THE CONTRACTOR AND COUNTY.
- ALL EARTHWORK SHORING AND STRUCTURAL SHORING IS BY CONTRACTOR.

CLEARING AND GRUBBING:

A. THE CONTRACTOR SHALL ACCEPT THE SITE IN ITS PRESENT CONDITION. ALL EXISTING PUBLIC IMPROVEMENTS SHALL BE PROTECTED. ANY IMPROVEMENT DAMAGED SHALL BE REPLACED BY THE CONTRACTOR AS DIRECTED BY THE LOCAL JURISDICTION WITH NO EXTRA COMPENSATION.

B. IF APPLICABLE, ALL ABANDONED BUILDING AND FOUNDATIONS, TREE (EXCEPT THOSE SPECIFIED TO REMAIN FOR LANDSCAPING PURPOSES), FENCES, VEGETATION AND ANY SURFACES BEING SHALL BE REMOVED AND DISPOSED OFF THE SITE BY THE CONTRACTOR.

C. IF APPLICABLE, ALL ABANDONED SEPTIC TANK AND ANY OTHER SUBSURFACE STRUCTURE EXISTING IN PROPOSED DEVELOPMENT AREAS SHALL BE REMOVED PRIOR TO ANY GRADING OR FILL OPERATION. ALL APPURTENANT DRAIN FIELDS AND OTHER CONNECTING LINES MUST ALSO BE TOTALLY REMOVED.

D. IF APPLICABLE, ALL ABANDONED UNDERGROUND IRRIGATION DRILL UTILITY LINES SHALL BE REMOVED OR DEMOLISHED. THE APPROPRIATE FINAL DISPOSITION OF SUCH LINES DEPEND UPON THEIR DEPTH AND LOCATION AND THE METHOD OF REMOVAL OR DEMOLITION SHALL BE DETERMINED BY THE SOIL ENGINEER. ONE OF THE FOLLOWING METHODS WILL BE USED:  
1. EXCAVATE AND TOTALLY REMOVE UTILITY LINE FROM THE TRENCH.  
2. EXCAVATE AND CRUSH THE UTILITY LINE IN THE TRENCH.  
3. CAP THE ENDS OF THE UTILITY LINE WITH CONCRETE TO PREVENT THE ENTRANCE OF WATER. THE LOCATIONS AT WHICH THE UTILITY LINE WILL BE CAPPED WILL BE DETERMINED BY THE UTILITY DISTRICT ENGINEER. THE LENGTH OF THE CAP SHALL NOT BE LESS THAN NINE FEET AND THE CONCRETE MIXED EMPLOYED SHALL HAVE MINIMUM SHRINKAGE.

EXCAVATION/TRENCHING:

A. UPON COMPLETION OF THE SITE PREPARATION, THE CONTRACTOR SHALL MAKE EXCAVATION TRENCHING FOR UTILITIES IN ACCORDANCE WITH THE CIVIL UTILITY PLANS, MEP PLANS, ALL FILL AND TRENCH RESTORATION SHALL BE IN ACCORDANCE WITH THE SOILS REPORT BY GEOTECH INC., ROBERT D. BOOTH.

SEASONAL LIMITS AND DRAINAGE CONTROL:

FILL MATERIAL SHALL NOT BE PLACED, SPREAD OR COMPACTED WHILE IT IS AT AN UNSUITABLY HIGH MOISTURE CONTENT OR DURING OTHERWISE UNFAVORABLE CONDITIONS, WHEN THE WORK IS INTERRUPTED FOR ANY REASON THE FILL OPERATIONS SHALL NOT BE RESUMED UNTIL FIELD TEST PERFORMED BY THE SOILS ENGINEER INDICATE THAT THE MOISTURE CONDITIONS IN AREAS TO BE FILLED ARE AS PREVIOUSLY SPECIFIED. ALL EARTH MOVING AND WORKING OPERATIONS SHALL BE CONTROLLED TO PREVENT WATER FROM RUNNING INTO EXCAVATED AREAS. ALL EXCESS WATER SHALL BE PROMPTLY REMOVED AND THE SITE KEPT DRY.

DUST CONTROL:

THE CONTRACTOR SHALL TAKE ALL STEPS NECESSARY FOR THE AVOIDANCE OR PREVENTION OF ANY DUST NUISANCE ON OR ABOVE THE SITE CAUSED BY THE CONTRACTOR'S OPERATION EITHER DURING THE PERFORMANCE OF THE GRADING OR RESULTING FROM THE CONDITION IN WHICH THE CONTRACTOR LEAVES THE SITE. THE CONTRACTOR SHALL ASSUME ALL LIABILITY INCLUDING COURT COST OF CO-DEFENDERS FOR ALL CLAIMS RELATED TO DUST OR WIND-BLOWN MATERIALS ATTRIBUTABLE TO HIS WORK. COST FOR THIS ITEMS OF WORK IS TO BE INCLUDED IN THE EXCAVATION ITEM AND NO ADDITIONAL COMPENSATION SHALL BE ALLOWED.

INDEMNITY:

THE CONTRACTOR WILL HOLD HARMLESS, INDEMNIFY AND DEFEND THE ENGINEER, THE OWNER AND HIS CONSULTANTS AND EACH OF THEIR OFFICERS AND EMPLOYEES AND AGENTS, FROM ANY AND ALL LIABILITY CLAIMS, LOSSES OR DAMAGE ARISING OR ALLEGED TO HEREIN, BUT NOT INCLUDING THE SOLE NEGLIGENCE OF THE OWNER, THE ARCHITECT, THE ENGINEER AND HIS CONSULTANTS AND EACH OF THEIR OFFICERS AND EMPLOYEES AND AGENTS.

SAFETY:

IN ACCORDANCE WITH GENERALLY ACCEPTED CONSTRUCTION PRACTICES, THE CONTRACTOR WILL BE SOLELY AND COMPLETELY RESPONSIBLE FOR CONDITIONS OF THE JOB SITE, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY DURING PERFORMANCE OF THE WORK. THIS REQUIREMENT WILL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS.

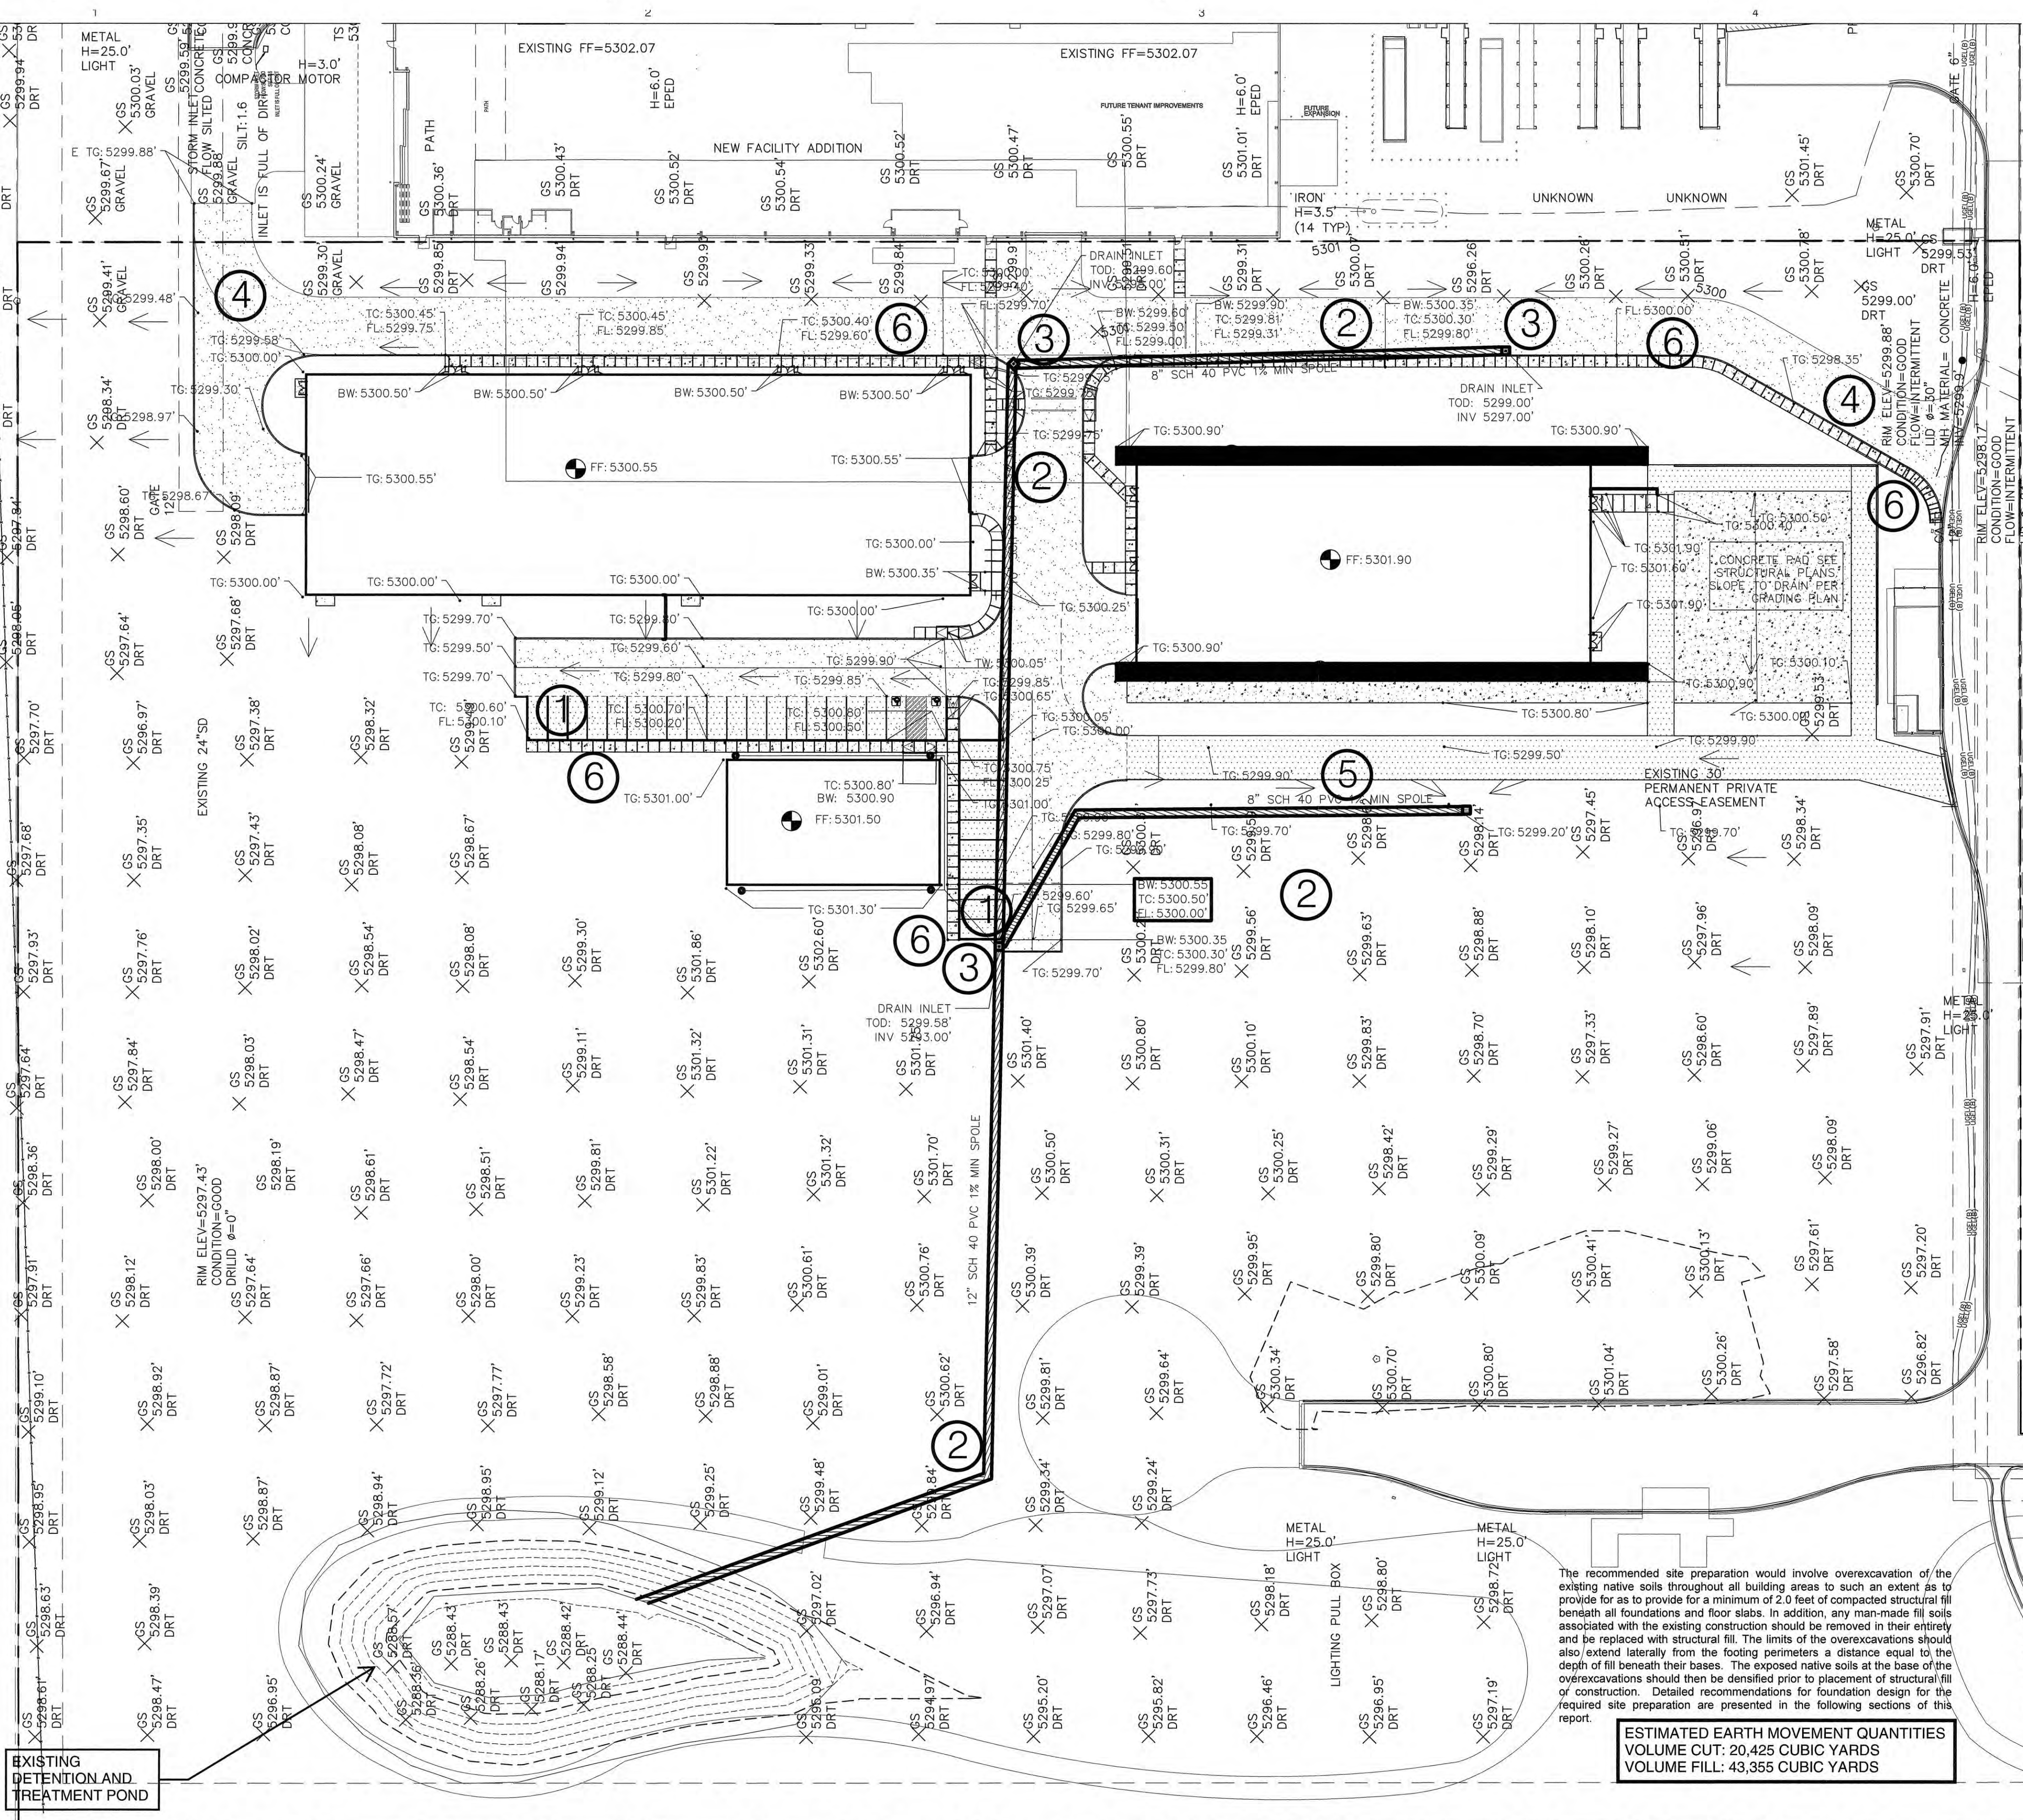

THE DUTY OF THE ENGINEERS TO CONDUCT CONSTRUCTION REVIEW OF THE CONTRACTOR'S PERFORMANCE IS NOT INTENDED TO INCLUDE REVIEW OF THE ADEQUACY OF THE CONTRACTOR'S SAFETY MEASURES, IN, ON OR NEAR THE CONSTRUCTION SITE.

The recommended site preparation would involve overexcavation of the existing native soils throughout all building areas to such an extent as to provide for as to provide for a minimum of 2.0 feet of compacted structural fill beneath all foundations and floor slabs. In addition, any man-made fill soils associated with the existing construction should be removed in their entirety and be replaced with structural fill. The limits of the overexcavations should also extend laterally from the footing perimeters a distance equal to the depth of fill beneath their bases. The exposed native soils at the base of the overexcavations should then be densified prior to placement of structural fill or construction. Detailed recommendations for foundation design for the required site preparation are presented in the following sections of this report.

ESTIMATED EARTH MOVEMENT QUANTITIES  
VOLUME CUT: 20,425 CUBIC YARDS  
VOLUME FILL: 43,355 CUBIC YARDS

## CRITICAL NOTES:

- "NON-UTILITY FACILITIES ARE NOT PERMITTED IN THE JOINT TRENCH INSTALLATIONS WITH COMPANY FACILITIES." CPUC GENERAL ORDER 128, SECTION 111C 91).
- NO CHANGES IN THE CONDUIT AND JT ROUTING ARE TO BE MADE WITHOUT PRIOR AUTHORIZATION FROM EACH UTILITY INVOLVED.
- THE JT MUST MAINTAIN 3' HORIZONTAL AND 12" VERTICAL CLEARANCE FROM ANY WET UTILITY (SIDE OF TRENCH TO SIDE OF PIPE) AS PER SMUD REQUIREMENTS. THE ACTUAL DEPTH OF ANY CROSSING IS TO BE DETERMINED IN THE FIELD AND SHORING MAY BE REQUIRED.
- DEVELOPER TO PROVIDE ALL PERMITS AND ENCROACHMENT PERMITS.

MAINTAIN 12" MINIMUM CLEARANCE AT LATERAL CROSSINGS TO STORM, SEWER AND WATER PIPES. SEE LOCAL GOVERNING AGENCIES FOR POSSIBLE REDUCTION IN 12" MIN CLEARANCE OVER OR UNDER WET PIPE (SEE CRITICAL NOTES FOR REQUIRED DISTANCED FROM WET UTILITIES)
