Bernalillo County Regional Recreation Complex
Bobby Foster Blvd. & University Blvd. - Albuquerque, NM
Traffic Impact Study

Executive Summary

The purpose of this Traffic Impact Study (TIS) is to evaluate the transportation conditions before and after implementation of the proposed Bernalillo County Regional Recreation Complex (BCRRC) to determine the impact of the development on the adjacent transportation system and recommend mitigation measures where necessary. This study is prepared in accordance with the requirements of the City of Albuquerque and Bernalillo County. The scoping summary for this TIS is in Appendix page A-233.

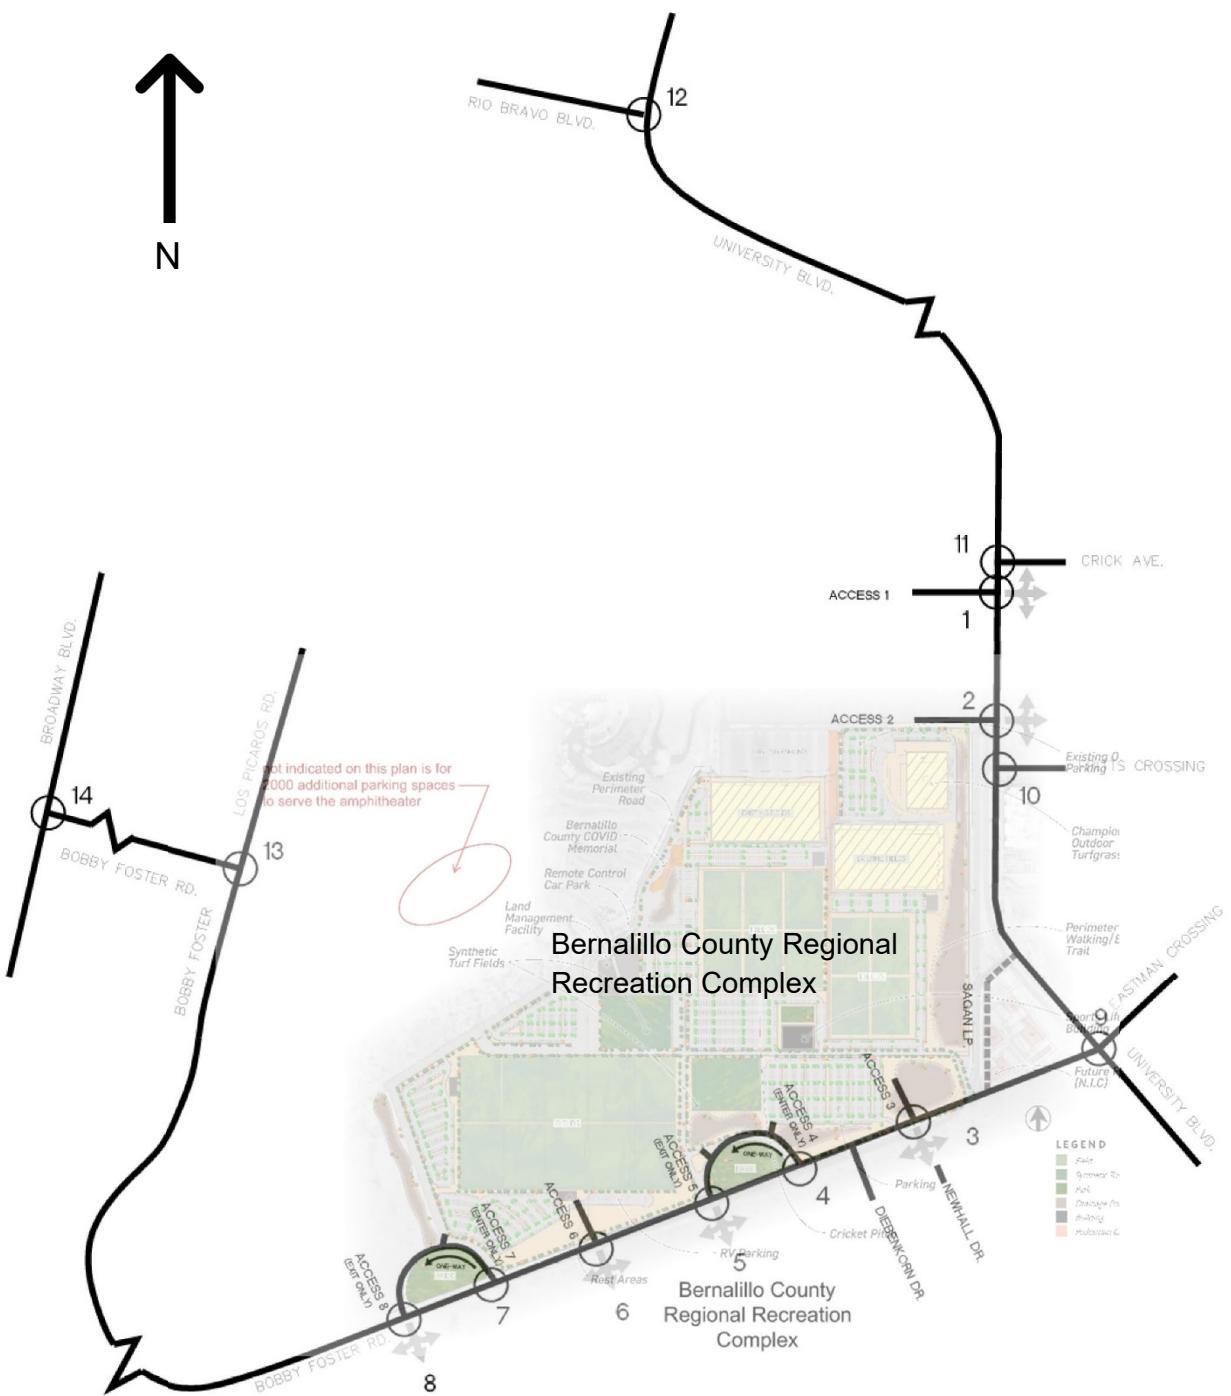

Site Location and Study Area

The proposed BCRRC is to be located at the northwest corner of Bobby Foster Rd. and University Blvd. within the Mesa del Sol Development in Albuquerque, NM. See Vicinity Map below.

The study area includes the fourteen intersections listed below and shown on the following map:

Intersection	Control Type	Proposed or Existing
1. Access 1 & University Blvd.	Unsignalized, Two-way Stop Control (TWSC)	Existing
2. Access 2 & University Blvd.	Unsignalized, TWSC	Existing
3. Bobby Foster Rd. & Access 3	Unsignalized, TWSC	Proposed
4. Bobby Foster Rd. & Access 4	Unsignalized, TWSC	Proposed
5. Bobby Foster Rd. & Access 5	Unsignalized, TWSC	Proposed
6. Bobby Foster Rd. & Access 6	Unsignalized, TWSC	Proposed
7. Bobby Foster Rd. & Access 7	Unsignalized, TWSC	Proposed
8. Bobby Foster Rd. & Access 8	Unsignalized, TWSC	Proposed
9. Bobby Foster Rd./Eastman & University Blvd.	Unsignalized, All-way Stop Control (AWSC)	Partially Existing
10. Crick Ave. & University Blvd.	Unsignalized, TWSC	Existing
11. Fritts Crossing & University Blvd.	Unsignalized, TWSC	Existing
12. Rio Bravo & University Blvd.	Signalized	Existing
13. Bobby Foster Rd. & Los Picos Rd.	Unsignalized, AWSC	Existing
14. Bobby Foster Rd. & Broadway	Unsignalized, TWSC	Existing

Development Description

The proposed BCRRCC will expand the existing soccer facility from six outdoor soccer fields to a total of 30 outdoor soccer fields and a fieldhouse with one indoor soccer field and 5000 square feet (sf) of office space. The total land usage for the BCRRCC is 250 acres, 70-acres of which are currently developed. The site is part of the Mesa del Sol Community, a 12,900-acre mixed-use development south of the Albuquerque International Sunport. To date, less than 10% of the Mesa del Sol Community has been developed. See Vicinity Map below.

The anticipated implementation year for this project is 2026 and the horizon year is 2036. According to the Institute of Traffic Engineers' (ITE) trip generation rates, the project is anticipated to generate 102 new entering trips and 62 new exiting trips during the weekday AM Peak Hour.

period and 267 new entering trips and 288 new exiting trips during the PM Peak Hour period. No pass-by trips are included in the trips generated.

Other Planned or Approved Development and Transportation Improvements

There are two major developments and two planned roadway improvement projects in the influence area that were not completed when the traffic counts were collected for this report. The developments include the Albuquerque Studios Expansion located 1/2 mile southeast of the site and the Montage Units Development adjacent to the BCRRCC development on the south side of Bobby Foster Rd. Traffic Impact Studies for these projects have been approved by CABQ and the traffic counts and trip generation data presented in their respective TIS reports have been used as the basis for this TIS. The Bobby Foster Rd. widening project will be conducted in phases and will start at Los Picos Rd. and continue east to Eastman Crossing. According to the Master Plan for Mesa del Sol, by 2036, University Blvd. from Crick Rd. to Bobby Foster Rd. will become a 4-lane roadway with a 50-ft wide raised landscaped median, dedicated left-turn lanes, pedestrian facilities, bike lanes, and parallel parking along the outside lanes.

Existing Traffic Volumes

Existing traffic volumes for this study were counted in the field at Intersections 9 thru 14 during April of 2021 as part of the Montage Units TIS. The counts were adjusted to pre-Covid conditions by Huitt-Zollars and are provided in Appendix pages A-112 thru A-113. The adjusted volumes are used in this TIS. Existing traffic volumes at the remaining intersections (1 thru 8) were extrapolated from the traffic counts.

A capacity analysis of the study area intersections was conducted in accordance with the Highway Capacity Manual (HCM6) V.6, using Synchro 11 (Build 11.1.1.6). A summary of the analysis results is included in the following table:

HCM Results Summary Table
Bernalillo County Regional Recreation Center

Intersection Name	Signalization	Case	2026		2036		Mitigation

1 - LOS = Level of Service as defined in the STATE ACCESS MANAGEMENT MANUAL, New Mexico State Highway and Transportation Department

2 - Mitigation for 2026 includes converting intersection from unsignalized to signalized only (no geometry modifications until 2036)

3 - Mitigation for 2026 includes retiming signal only

4 - Mitigation for 2026 includes retiming signal and add 2nd SBR lane

Summary of Impacts

In summary, the proposed BCRRRC will have moderate adverse impact to the adjacent transportation system. A summary of the impacts and recommendations based on the results of the analysis, are as follows.

1. Access 1 & University Blvd. and Access 2 & University Blvd. (Unsignalized, Existing)

- **2026 and 2036 HCM LOS Analysis** demonstrates that these intersections have unacceptable Level of Service (LOS) with high delays for the 2026 and 2036 BUILD condition during the PM peak period because of the traffic generated by the development. The poor level of service (LOS=E and F) for traffic exiting these access driveways is caused by the high traffic volumes in the NB and SB thru lanes during the peak hours leading to insufficient gaps in the traffic flow for vehicles making turning movements from the driveways. Adding a second northbound lane improves the LOS to D or better. However, since it has been assumed in this report that the planned improvements (including adding a second NB lane) to University Blvd. will be implemented by others as part of the Mesa del Sol Master Plan prior to 2036, no mitigative measures are recommended on the part of Bernalillo County.
- **2026 and 2036 Queueing Analysis** demonstrates that onsite QSR's and V/C's at Accesses 1 & 2 are less than 1. Therefore, existing onsite queue capacity is adequate, and congestion is minimal. There are no off-site queueing problems at Accesses 1 & 2.
- **Right-turn Deceleration Lanes**, 240-ft long, including transition are warranted at Accesses 1 & 2.

2. Access 3 thru Access 8 on Bobby Foster Rd. (Unsignalized, Proposed)

- **2026 and 2036 HCM LOS ANALYSIS** of these access intersections on Bobby Foster Rd. demonstrates that the proposed BCRRRC will have minimal adverse impact on the traffic movements at this intersection for the 2026 and 2036 conditions. Therefore, no mitigative measures are recommended for 2036.
- **2026 and 2036 Queueing Analysis** demonstrates that 95th percentile Queue lengths at Access 3 thru Access 8 are less than 1 vehicle, therefore, existing onsite queue capacity is adequate, and congestion is minimal (V/C<1 for all movements). There are no off-site queueing problems at Access 3 thru Access 8.
- **A Right-turn Deceleration Lane** 240-ft long, including transition is warranted at Access 4.

3. Bobby Foster Rd./Eastman Crossing & University Blvd. (Unsignalized, Partially Existing)

- **2026 and 2036 HCM LOS Analysis** of Bobby Foster & University Blvd. demonstrates that the LOS for the BUILD condition is unacceptable (LOS = E or F) for the AM and PM peak hours due to the high delays for the NBR and SBL movements. This is an existing problem, as indicated by the NO BUILD data, and since the proposed development does not contribute additional vehicles to this movement, no mitigative measures are recommended on the part of the development. However, a mitigated case, which changes the intersection from an all-way stop controlled intersection to a signalized intersection, was analyzed as a

courtesy for the City of Albuquerque. The analysis (BUILD Mitigated) demonstrates that signalizing the intersection would improve the LOS for all approaches to LOS D or better.

- **2026 and 2036 Queuing Analysis** of Bobby Foster & University Blvd. demonstrates that the existing storage capacity of the NB thru/right lane is exceeded during the PM peak hour. There is also a significant level of congestion for the NB and SB traffic as indicated by the high V/C ratios. Signalizing the intersection (BUILD Mitigated case) demonstrates that QSR's and V/C's are acceptable except for the WB right-turning traffic during the PM peak hour where the traffic may periodically block Newhall Dr. by three vehicle lengths (75-ft) by 2036.

4. **Fritts Crossing and Crick Ave. on University Blvd. (Unsignalized, Existing)**

- **2026 HCM LOS Analysis** demonstrates that the LOS for these intersections is acceptable (LOS=D or better) and remains the same from the NO BUILD to the BUILD conditions. Therefore, no mitigative measures are recommended.
- **2036 HCM LOS Analysis** demonstrates that the LOS for traffic turning left from the side streets during the PM peak hour becomes worse with the additional traffic from the development. The poor level of service is caused by the high traffic volumes in the thru lanes during the PM peak hour leading to insufficient gaps in the traffic flow for vehicles making turning movements from Fritts Crossing. Adding second NB and SB lanes (as shown in the master plan for Mesa del Sol) improves the performance of the WBL turn movement to LOS=E, slightly better than NO BUILD conditions.
- **2026 and 2036 Queueing Analysis** demonstrates that onsite QSR's and V/C's at University Blvd. & Fritts Crossing are 1 or less, therefore, existing queue capacity is adequate, and congestion is minimal.

5. **Rio Bravo & University Blvd. (Signalized, Existing)**

- **2026 HCM LOS ANALYSIS** of the intersection of Rio Bravo Blvd. & University Blvd. demonstrates that the proposed BCRRRC will have an adverse impact on the traffic movements at this intersection for the 2026 conditions but retiming the signal improves the LOS to better than the NO BUILD LOS. During the PM peak hour, the intersection delay becomes worse and the LOS of the EBR and NBL becomes unacceptable (LOS E or F) because of the additional traffic from the development. Retiming the signal improves the intersection LOS to C and the EBR and NBL to NO BUILD conditions.
- **2036 HCM LOS ANALYSIS** yields comparable results as the 2026 analysis except for the PM peak hour, signal retiming and adding a second SBR turn lane only improves the LOS to E and the LOS of the EBR and NBL remain at LOS F even though delays are reduced to below NO BUILD levels. Since these issues are existing and not caused by the development, no mitigative measures are recommended.
- **2026 and 2036 Queueing Analysis** demonstrates that queues will spill over from the turn lanes into the thru lanes and congestion levels will be high for all approaches. With mitigative measures such as signal retiming and adding a second SBR turn lane, queueing capacity of the lanes for the BUILD condition improves to better than NO BUILD condition, but queues will continue to exceed capacity of the turn lanes during the PM peak hour.

6. Bobby Foster Rd. & Los Picaros Rd. (Unsignalized, Existing)

- **2026 and 2036 HCM LOS ANALYSIS** of the intersection of Bobby Foster Rd. & Los Picaros demonstrates that the LOS for the intersection performance remains the same from the NO BUILD to the BUILD conditions and delays become worse by less than 2 seconds per vehicle with the additional traffic from the development. Therefore, no mitigative measures are recommended.
- **2026 and 2036 Queueing Analysis** demonstrates that QSR's and V/C's at Bobby Foster Rd. & Los Picaros are 1 or less, therefore, existing queue capacity is adequate, and congestion is minimal.

7. Bobby Foster Rd. & Broadway Blvd. (Unsignalized, Existing)

- **2026 HCM LOS ANALYSIS** of the intersection of Bobby Foster Rd. & Broadway Blvd. demonstrates that the LOS for the intersection performance remains the same from the NO BUILD to the BUILD condition, LOS=C for the AM and PM peak hours. And delays become worse by 2 seconds per vehicle or less with the additional traffic from the development. Therefore, no mitigative measures are recommended.
- **2036 HCM LOS ANALYSIS** of the intersection of Bobby Foster Rd. & Broadway Blvd. demonstrates that the LOS for the intersection remains the same from the NO BUILD to the BUILD condition. However, AM and PM LOS are unacceptable (E and F), and delays become worse by 10 seconds during the PM peak hour due to additional traffic from the development. Because NO BUILD delays exceed acceptable levels, even minor increases in traffic volumes (only 8 additional vehicles per hour from the development) cause major increases in delays. Therefore, no mitigative measures are recommended.
- **2026 and 2036 Queueing Analysis** demonstrates that 95th percentile Queue lengths at Bobby Foster Rd. & Broadway Blvd. are less than 5 vehicles (125-ft.), therefore, existing queue capacity is adequate, and congestion is minimal (V/C<1 for all movements).

In summary, the proposed BCRRRC will have a minimal adverse impact to the adjacent transportation system with the mitigative measures proposed in this report and listed below. Most of the performance issues at the intersections in the study area are caused by the additional traffic from the Montage Units Development and Albuquerque Studios Expansion (included in the NO BUILD analysis). Most of 2036 Horizon Year LOS and Queueing issues identified in this study are resolved by the improvements planned for Bobby Foster Rd. and University Blvd. as part of the Mesa del Sol Community Master Plan.

Recommendations

Based on the results of the analysis, the following mitigative measures are recommended. Each of the recommendations are designated by “Others” if it is assumed to be the responsibility of the Mesa del Sol Development or another project in the study area, or by “Developer” if it is assumed to be the responsibility of the BCRRCC development.

Developer

1. INTERSECTION 1 – ACCESS 1 & UNIVERSITY BLVD.

2026 - Construct a southbound right-turn deceleration lane, at least 240-ft long including transition. Coordinate design and construction of the lane with the University Blvd. Improvements project.

2. INTERSECTION 2 – Access 2 & UNIVERSITY BLVD.

2026 – Construct a southbound right-turn deceleration lane, at least 240-ft long including transition. Coordinate design and construction of the lane with the University Blvd. Improvements project.

3. INTERSECTION 4 – BOBBY FOSTER RD. & ACCESS 4

2026 – Construct a westbound right-turn deceleration lane, at least 240-ft long including transition. Coordinate design and construction of the lane with the planned Bobby Foster Expansion project.

Others

4. 2036 – University Blvd. - Implement the planned improvements to University Blvd. including, but not limited to, adding a second NB and SB lane and dedicated left-turn lanes from Crick Ave. to Arbus Drive (South of Eastman Crossing).

5. 2036 – Bobby Foster Blvd. - Implement planned improvements to Bobby Foster Blvd. and University Blvd., including, but not limited to, constructing a second EB lane.

6. INTERSECTION 9 – BOBBY FOSTER RD./Eastman Crossing & UNIVERSITY BLVD.

2026 – Implement planned improvements to Bobby Foster Blvd. and University Blvd., including, but not limited to, converting the intersection control from an all way stop control to a signalized control, constructing the west leg of Bobby Foster Rd. with two EB and two WB lanes, and constructing a dedicated NB left turn lane (140-ft long including transition) and a dedicated WB left turn lane (250-ft long including transition).

7. INTERSECTION 10 – FRITTS CROSSING & UNIVERSITY BLVD.

2036 – Consider, as part of the University Improvements project, converting the intersection to a signalized intersection or a roundabout to avoid excessive delays on the minor approaches.

8. INTERSECTION 11 – CRICK AVE. & UNIVERSITY BLVD.

 2036 – Consider, as part of the University Improvements project, converting the intersection to a signalized intersection or a roundabout to avoid excessive delays on the minor approaches.

9. INTERSECTION 12 – RIO BRAVO BLVD. & UNIVERSITY BLVD.

 2026 – Retime signal and increase queueing capacity of the SBR lane by 690-ft. either by extending the existing lane or creating a second SBR lane.

2036 – Consider, major reconstruction of the Rio Bravo Blvd. & University Blvd. intersection or construction of a second 1-25 interchange at Bobby Foster Rd.

10. INTERSECTION 14 – BOBBY FOSTER RD. & BROADWAY BLVD.

2036 – Consider signalizing the intersection to avoid excessive delays for westbound left-turning traffic.

**Bernalillo County Regional Recreation Complex
BOBBY FOSTER RD. & University Blvd. - Albuquerque, NM
Traffic Impact Study**

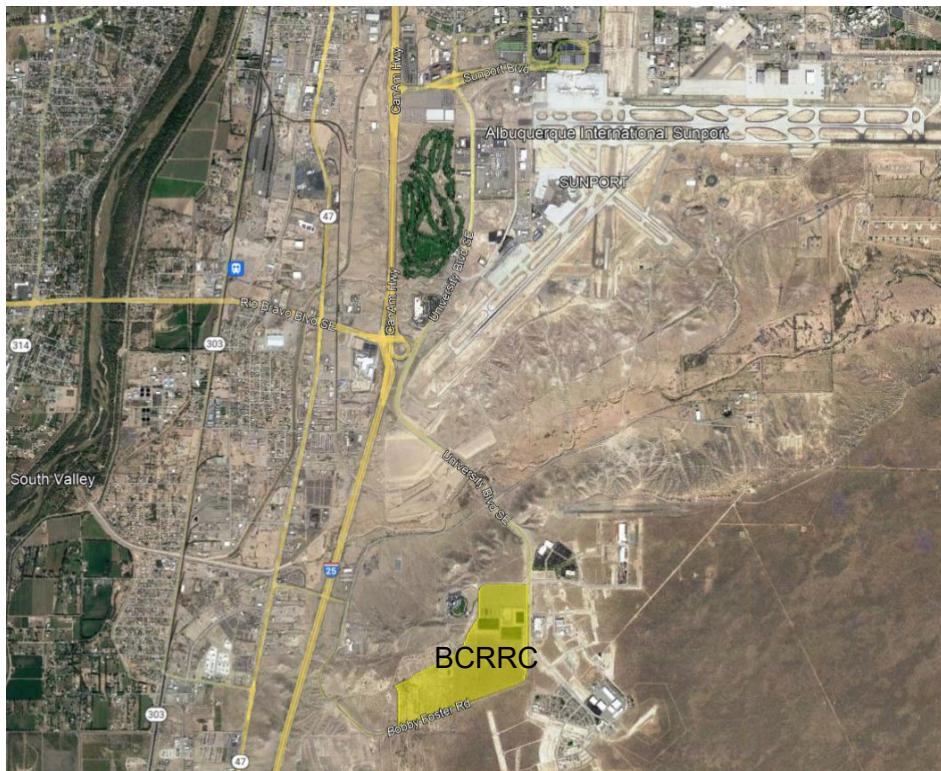

Introduction

The purpose of this Traffic Impact Study (TIS) is to evaluate the transportation conditions before and after implementation of the proposed Bernalillo County Regional Recreation Complex (BCRRC) to determine the impact of the development on the adjacent transportation system and recommend mitigation measures where necessary. This study is prepared in accordance with the requirements of the City of Albuquerque (CABQ) and Bernalillo County (BERNCO).

Description of Proposed Development

Land Use and Intensity

The proposed BCRRC is to be located at the northwest corner of Bobby Foster Rd. and University Blvd. within the Mesa del Sol Community in Albuquerque, NM. The project will expand the existing facility from six outdoor soccer fields to a total of 30 outdoor soccer fields and a fieldhouse with one indoor soccer field and 5000 square feet (sf) of office space. The total land usage for the BCRRC is 250 acres, 70-acres of which are currently developed. The site is part of the Mesa del Sol Community, a 12,900-acre mixed-use development south of the Albuquerque International Sunport. To date, less than 10% of the Mesa del Sol Community has been developed. See Vicinity Map below.

Development Phasing and Timing

The development will be built in three phases; Phase 1 is to be complete by 2036 and Phases 2 and 3 are to be complete by 2026. The traffic analysis is based on all phases being completed by 2026, therefore, the anticipated implementation year for this project is 2026 and the horizon year is 2036. A separate analysis for Phase 1 was not performed for the following reasons:

1. Trips generated from the Bernalillo County Recreational Complex for the Full Build-out (Phases 1 thru 3) are almost 2.5 times greater than trips generated by only by Phases 1 & 2.
2. Even though there are only four access points for Phase I and 8 access points for the full build-out, the number of trips for the full-build-out at the four existing access points is still greater than for Phases I.
3. The Full Build-out condition (Implementation Year 2026) includes 100% of trips generated from the Montage Units and Albuquerque Studios; the Phase I condition (Implementation Year 2036) would include 100% of the Montage Units trips but only 30% of the Albuquerque Studio trips since implementation of the Periphery Development at the Studios (70% of the trips) is not expected until 2026.

Existing and Planned Zoning

The site and the adjacent lands are classified under the CABQ's Integrated Development Ordinance (IDO) as IDO Zone District NR-PO-CF (Non-City Parks and Open Space). The northern half of the site is also designated as (Airport) Air Space Protection Sub-area.

Site Access

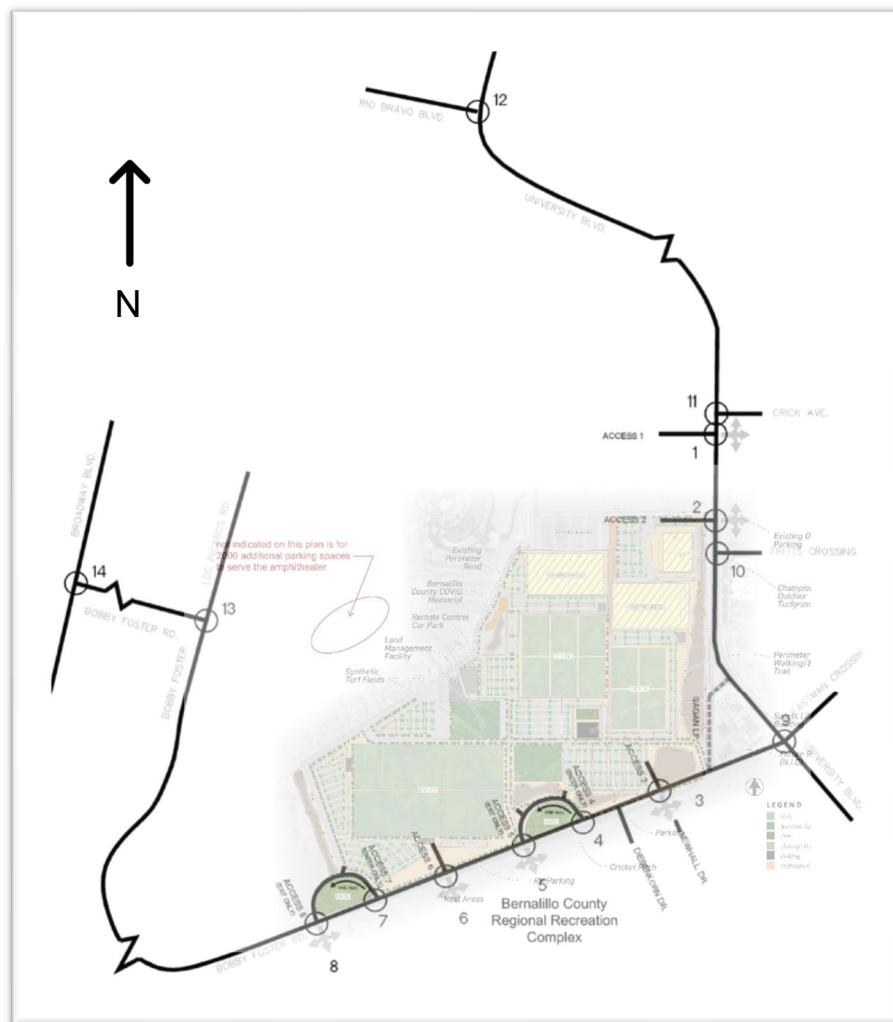

The site is to be accessed through two existing driveways on University Blvd. (Access 1 and Access 2) and six proposed driveways on Bobby Foster Rd. (Access 3 thru Access 8). Access 1, 2, 3, and 6 will be full-access driveways. Access 4 and Access 7 will be enter-only driveways. And Access 5 and Access 8 will be exit-only driveways. The six driveways along Bobby Foster will be spaced between 600 to 800 feet apart starting $\frac{1}{4}$ mile west of the intersection of Bobby Foster Rd. & University Blvd. The proposed site plan, with the access points indicated, is shown below.

Study Area

The initial Traffic Impact Study Scope of Work (SOW) was received from Julie Luna, BERNCO, on February 18, 2022 (Appendix pages A-223 thru A-225). The SOW included 12 intersections including a proposed driveway on Sagon Loop. Later the SOW was revised to include the 14 intersections listed below and shown on the following map (Appendix pages A-226 thru A-237). The driveway on Sagon Loop was eliminated from the site plan.

Intersection	Control Type	Proposed/ Existing
1. Access 1 & University Blvd.	Unsignalized, Two-way Stop Control (TWSC)	Existing
2. Access 2 & University Blvd.	Unsignalized, TWSC	Existing
3. Bobby Foster Rd. & Access 3	Unsignalized, TWSC	Proposed
4. Bobby Foster Rd. & Access 4	Unsignalized, TWSC	Proposed
5. Bobby Foster Rd. & Access 5	Unsignalized, TWSC	Proposed
6. Bobby Foster Rd. & Access 6	Unsignalized, TWSC	Proposed
7. Bobby Foster Rd. & Access 7	Unsignalized, TWSC	Proposed
8. Bobby Foster Rd. & Access 8	Unsignalized, TWSC	Proposed
9. Bobby Foster Rd./Eastman & University Blvd.	Unsignalized, All-way Stop Control (AWSC)	Partially Existing
10. Crick Ave. & University Blvd.	Unsignalized, TWSC	Existing
11. Fritts Crossing & University Blvd.	Unsignalized, TWSC	Existing
12. Rio Bravo & University Blvd.	Signalized	Existing
13. Bobby Foster Rd. & Los Picos Rd.	Unsignalized, AWSC	Existing
14. Bobby Foster Rd. & Broadway	Unsignalized, TWSC	Existing

Assumptions

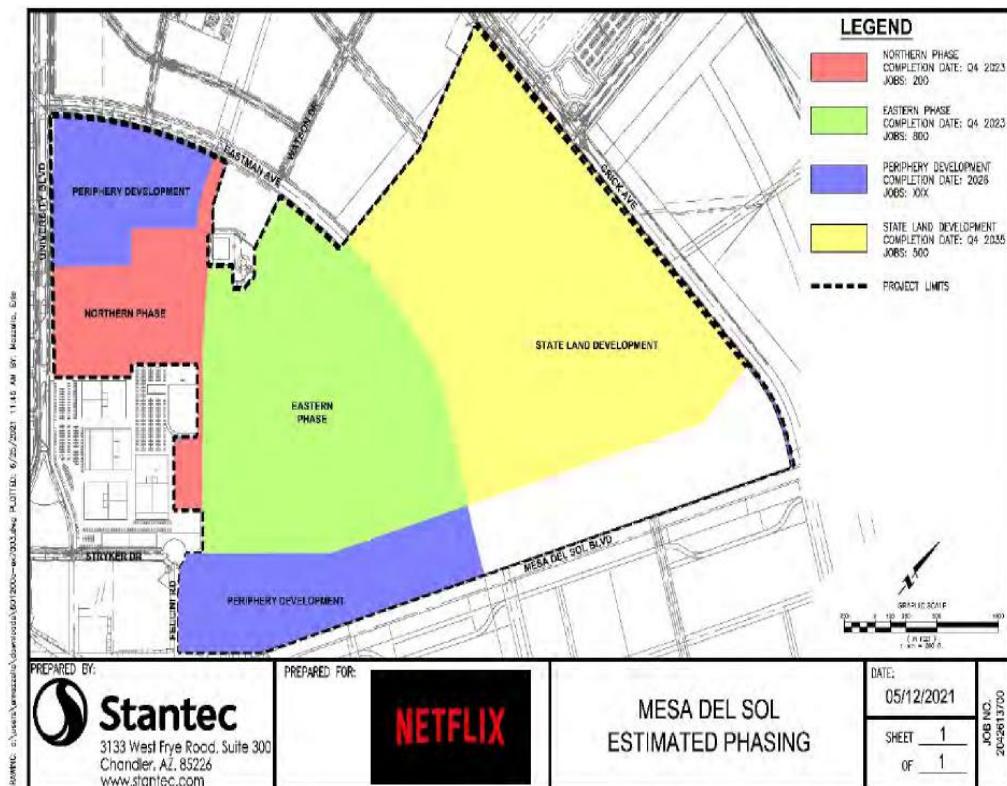

The following assumptions as agreed upon in the project scoping meeting and included in the scope of work were made in preparation of this study.

1. There are two major developments in the influence area that were not completed when the traffic counts were collected for this report, the Albuquerque Studios Expansion, and the Montage Units Development. Trips generated from these developments are included in the NO BUILD traffic volumes for the analysis (see Turning Movement Data Sheets in Appendix A-14 thru A-77)
2. No credit for existing trips to and from the existing soccer fields or pass-by trips are included in the trip generation calculations.
3. Trip Generation volumes are based on the "Phasing Plan" dated 02/28/2022 provided by the developer or developer's representative (square footage of building proposed and other land uses on site as defined on site plan.)
4. Traffic count data (i.e., AM and PM Peak Hour turning movements demand volumes) from the April 2021 as presented in the Montage Units TIS prepared by Huitt-Zollars establish base traffic volumes for the intersections in the study area.
5. Roadway geometries for the NO BUILD and BUILD conditions on **BOBBY FOSTER RD.** match the roadway geometries of the full-build condition (all phases complete) of the Bobby Foster Road Improvement project.
6. Roadway geometries for the NO BUILD and BUILD condition of **UNIVERSITY BLVD.** match the existing roadway geometries. Planned future roadway improvements to **UNIVERSITY BLVD.** are included in 2036 BUILD Mitigated scenarios and assume that these improvements will be implemented by others prior to 2036.
7. Sagan Loop Rd. will be eliminated as a connection between University Blvd. and Bobby Foster Rd.
8. Trip Distribution and Trip Assignments of the newly generated traffic are based on trip distribution percentages presented in the Montage Units TIS with minor adjustments to the trips originating from Bobby Foster Rd./Broadway Blvd. and from the Montage Units Development.

Other Planned or Approved Development and Transportation Projects

There are two major developments and two planned roadway improvement projects in the influence area that were not completed when the traffic counts were collected for this report. The developments include the Albuquerque Studios Expansion located 1/2 mile southeast of the site and the Montage Units Development adjacent to the BCRRC development on the south side of Bobby Foster Rd. Traffic Impact Studies for these projects have been approved by CABQ and the traffic counts and trip generation data presented in their respective TIS reports have been used as the basis for this TIS. The Bobby Foster Rd. widening project will be conducted in phases and will start at Los Picaros Rd. and continue east to Eastman Crossing. According to the Master Plan for Mesa del Sol, by 2036, University Blvd. from Crick Rd. to Bobby Foster Rd. will become a 4-lane roadway with a 50-ft wide raised landscaped median, dedicated left-turn lanes, pedestrian facilities, bike lanes, and parallel parking along the outside lanes.

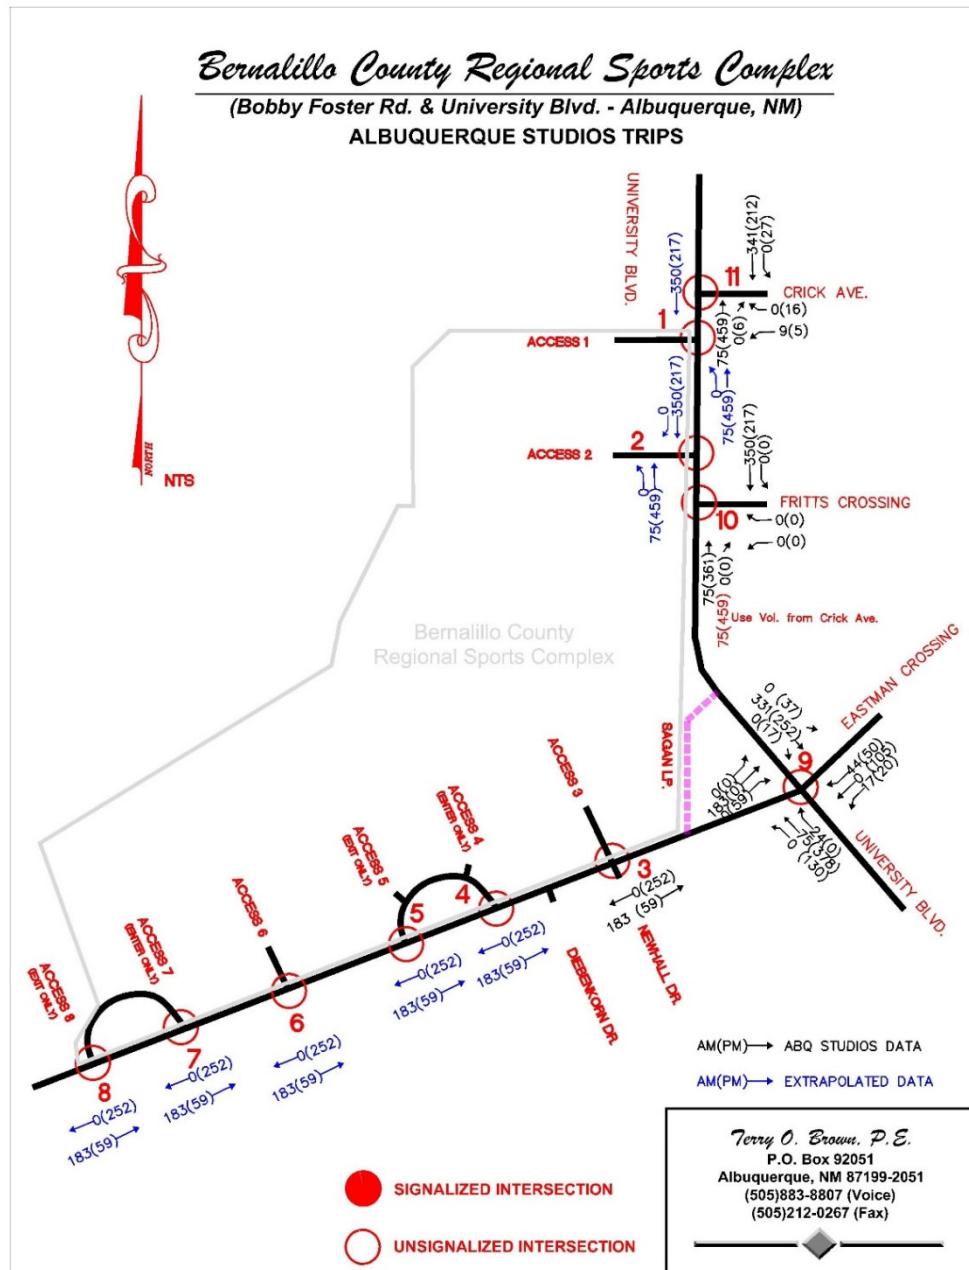

- 1. ALBUQUERQUE STUDIOS Expansion (Final TIS October 2021)** Albuquerque (ABQ) Studios is a film studio located in the Mesa del Sol development in Albuquerque, New Mexico at 5650 University Blvd SE. The project involves a 190-acre expansion of the existing film studio production operation including over 2 million sf of additional office space, a daycare facility, retail space, stages, and other supporting infrastructure. Full build-out, excluding development of the State Land portion of the site, is expected by 2026. The project will be completed in four phases, however, only the first three phases have been fully planned and analyzed in Albuquerque Studios TIS. A site plan showing the project phases is provided below.

Existing traffic volumes in the ABQ Studios TIS are based on traffic counts collected during the week of April 19, 2021 and calibrated for the COVID pandemic. Trip Generation calculations are based on ITE trip generation data and includes internal capture rates of 5% between residential and office and 10% between office and retail. Total AM and PM peak hour traffic volumes generated by the development are 1,380 vehicles per hour and 2,025 vehicles per hour, respectively. Based on Middle Rio Grande Council of Governments ADT data from 2010 to 2019, a growth rate of 0.5% was used to determine background traffic volumes.

Four intersections in the ABQ Studios TIS are common to the Intersections in the BCRRCC TIS (Intersections 3, 9, 10 and 11). 2026 traffic volumes generated by the ABQ Studios Expansion at these intersections are shown on the maps below in black. Volumes for the ten other intersections in the BCRRCC TIS have been extrapolated from these four sets of volumes and are shown in blue.

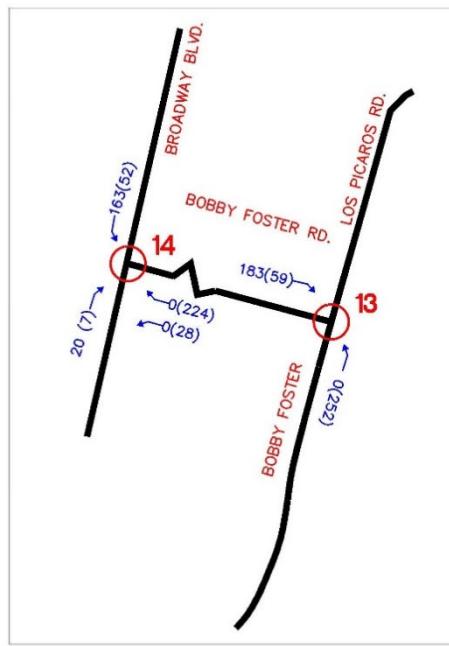

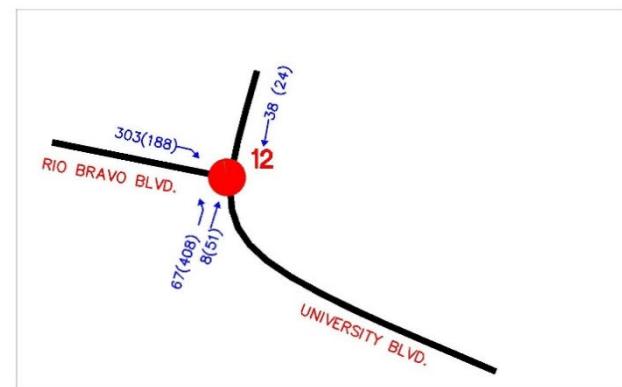

The ABQ Studios volumes were calculated by subtracting the "2026 No-Project" volumes (Figures 9 and 10 in the ABQ Studios TIS) from the "2026 With Project" volumes (Figures 11 and 12 in the ABQ Studios TIS). See Appendix pages A-106 thru A-109 for a copy of the figures.

2. MONTAGE UNITS (Final TIS October 2021)

The Montage Units consist of five single-family residential housing subdivisions (Montage Unit 1, 3-6), a multi-family residential housing subdivision, a commercial development, and a K-12 charter school. The developments include approximately 810 single family detached units, 288 multi-family units, 200 student charter school, and 14,000 sf of commercial development.

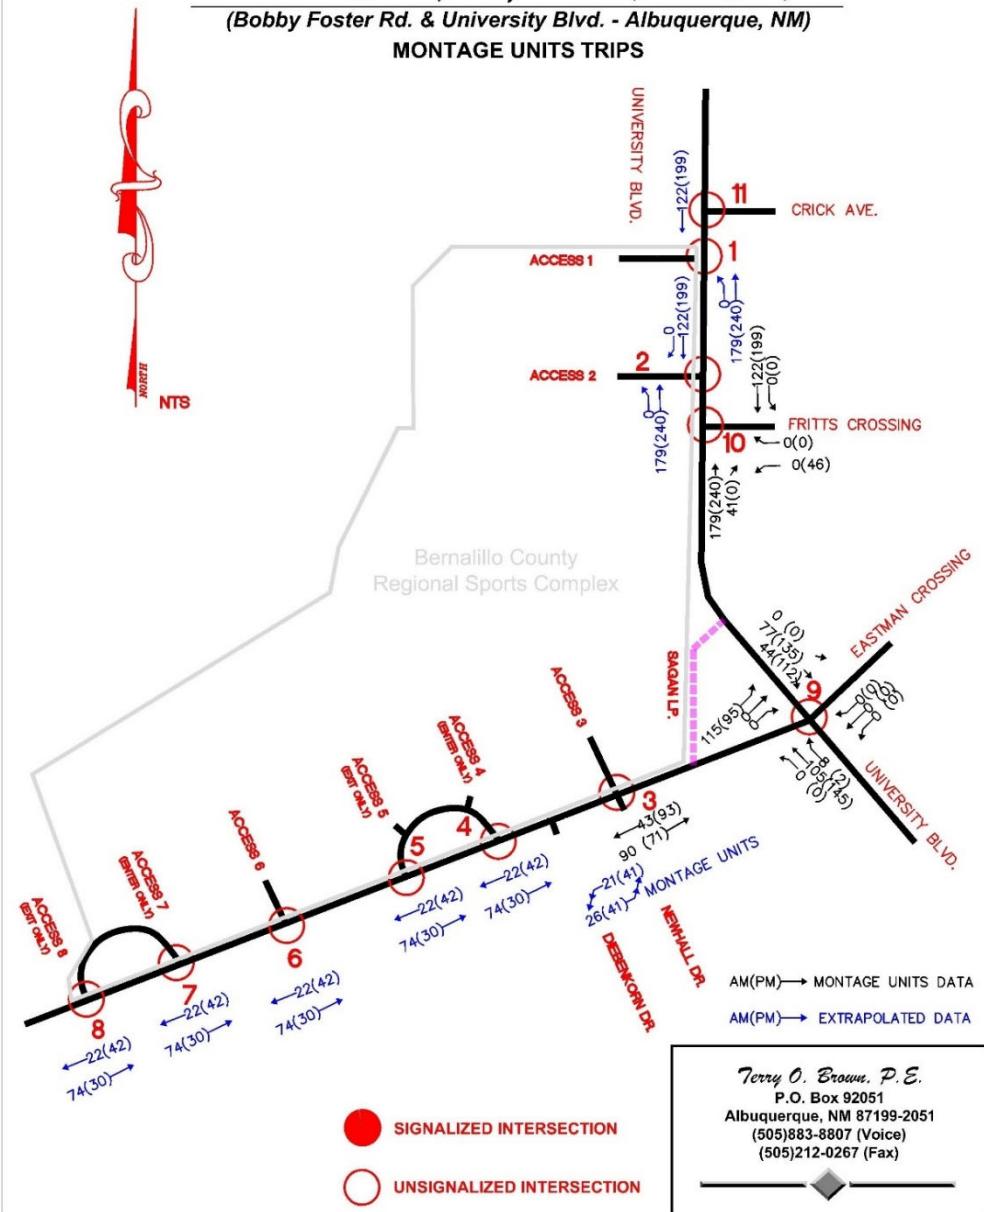

Existing traffic volumes in the Montage Units TIS are based on traffic counts collected during the week of April 19, 2021 and calibrated for the COVID pandemic. Total AM and PM peak hour traffic volumes generated by the development are 707 vehicles per hour and 761 vehicles per hour, respectively. The effect of internal capture is included in the generated volumes. A four percent (4.0%) growth rate was used to forecast future background traffic to the Build-Out year 2036 and 2028. This growth rate was developed from historical, existing, and projected traffic volumes collected from the Mid-Region Council of Governments' (MRCOG) Traffic Flows.

Three intersections in the Montage Units TIS are common to the Intersections in the BCRRRC TIS (Intersections 3, 9, and 10). 2036 traffic volumes generated by the Montage Units at these intersections are shown on the maps below in black. 2036 traffic volumes generated by the Montage Units at the eleven other intersections in the BCRRRC TIS have been extrapolated from these three sets of volumes and are show in blue. The Montage Units volumes were calculated by subtracting the "No Build 2036" volumes (Figure 6, Appendix A, Montage Units TIS) from the "2036 Build" volumes (Figure 23, Appendix A, Montage Units TIS). See Appendix pages A-212 thru A-214).

3. Bobby Foster Rd. Roadway Improvements

By 2036, Bobby Foster Road in the vicinity of the BCRRCC will be expanded from a three-lane roadway with no median, curbs, gutters, or sidewalks to a four-lane roadway with raised medians, curbs, gutters, sidewalks, intermittent areas of parallel parking, and bike lanes. Improvements to the eastbound lanes will be implemented as part of the Montage Units development in 2026. Below is a plan view of the improvements.

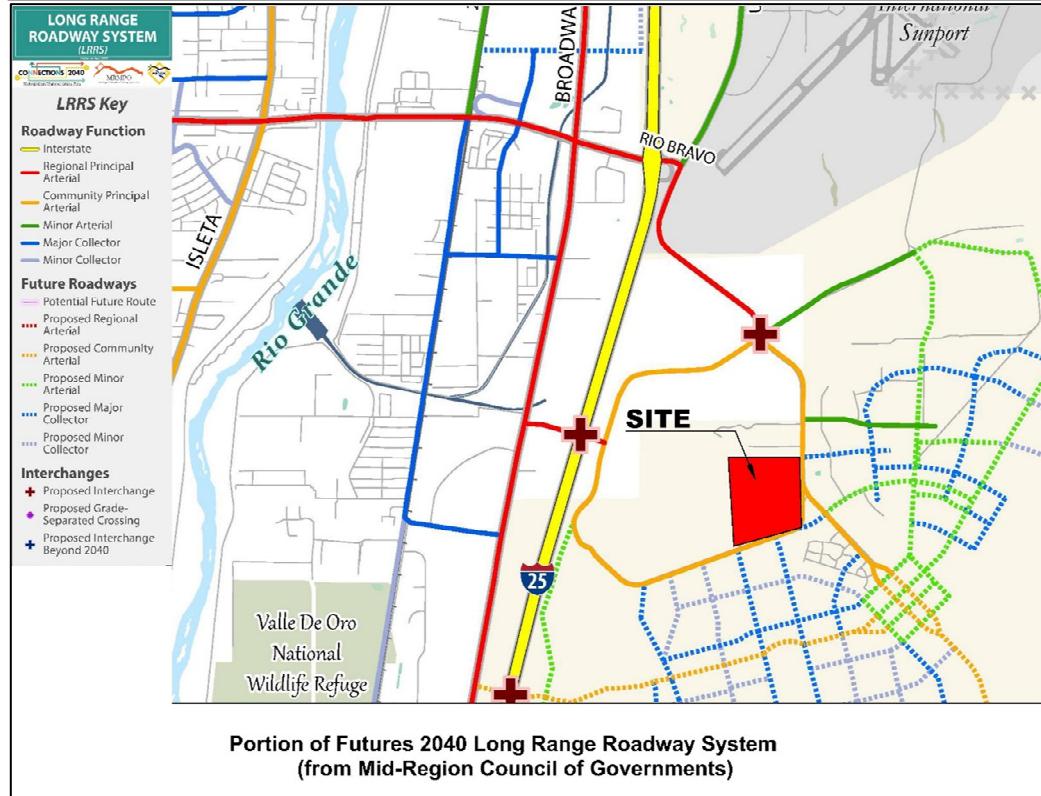

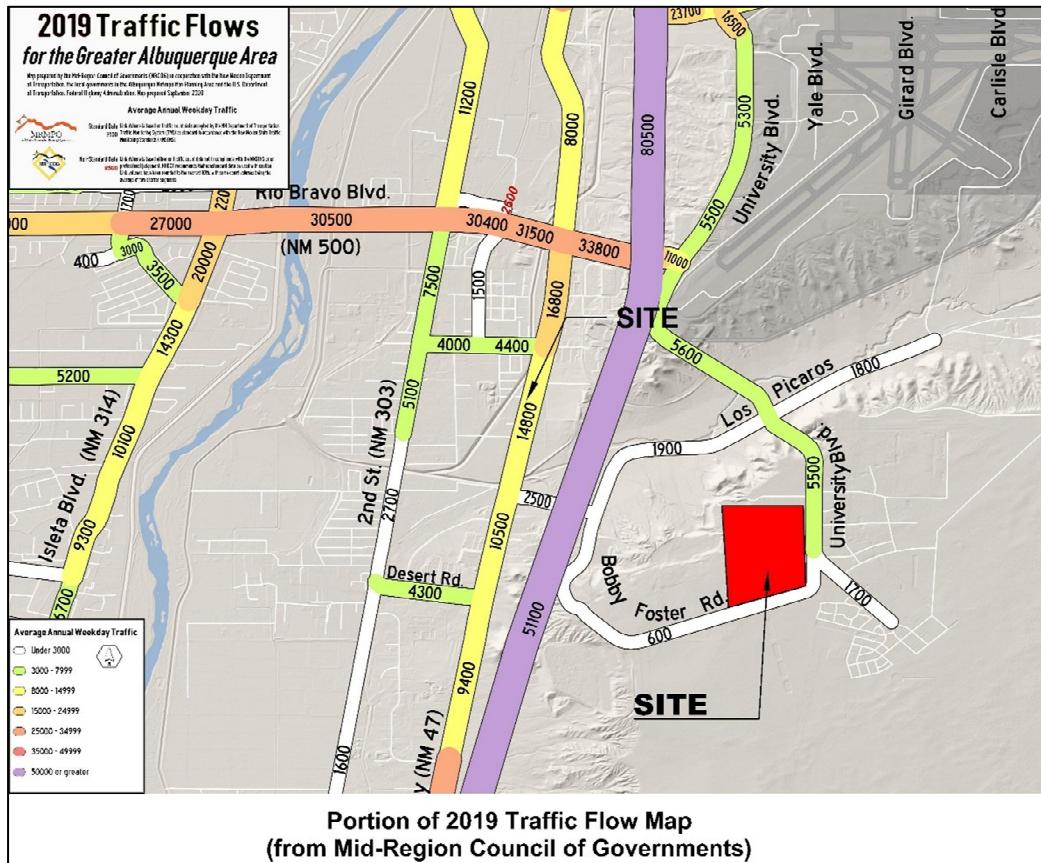

4. University Blvd. Roadway Improvements

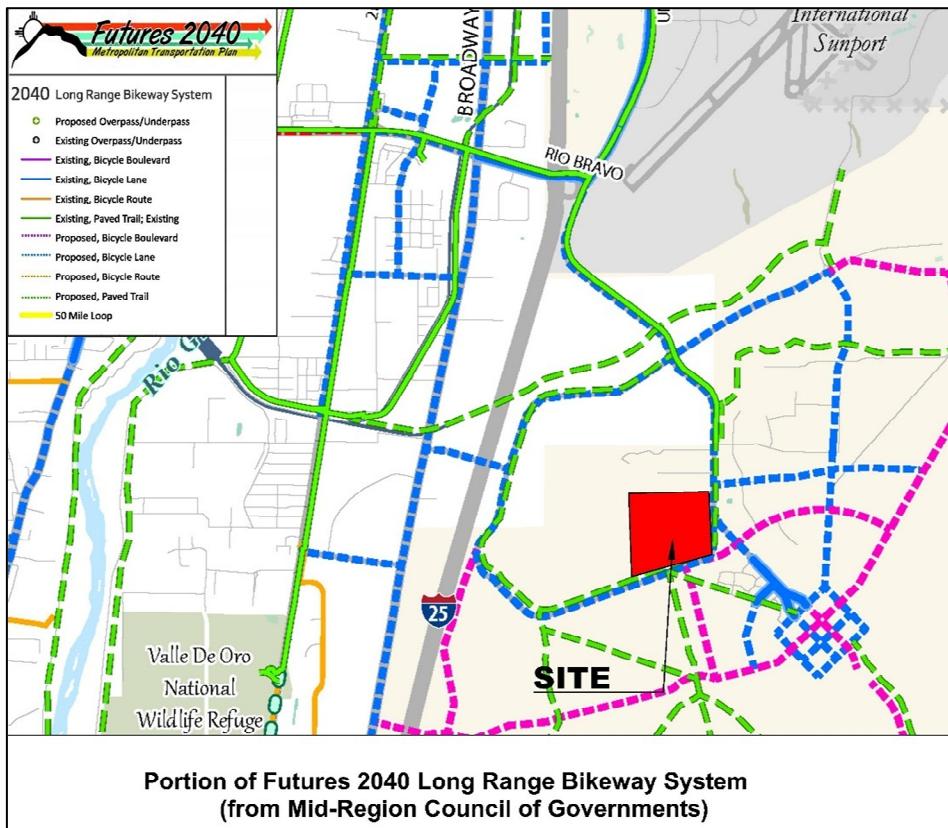

According to the Master Plan for Mesa del Sol, by 2036, University Blvd. from Crick Rd. to Bobby Foster Rd. will become a 4-lane roadway with a 50-ft wide raised landscaped median, dedicated left-turn lanes, pedestrian facilities, bike lanes, and parallel parking along the outside lanes, like the image below. The portion of Bobby Foster Rd. that currently runs parallel to University Blvd., next to the soccer fields, will be incorporated into University Blvd.

Regional Transportation Maps

Following are portions of the regional transportation maps for more information. These include the 2019 Traffic Flow Map, Futures 2040 Long Range Bikeway System Map, and Futures 2040 Long Range Roadway System. Comparing the 2019 traffic flow data presented on the first map to the 2026 volumes presented in the Projected Turning Movements Tables in Appendix pages A-14 thru A-17, the Average Annual Weekday Traffic (AAWT) on University Blvd. is expected to increase from 5,500 AAWT to 15,500 AAWT for the NO BUILD condition and to 16,500 AAWT for the 2026 BUILD condition. As shown on the Futures 2040 Long Range Bikeway System Map, bike lanes and bike paths are proposed for Bobby Foster Rd. and University Blvd.

Analysis of Existing Conditions

Existing Roadways

UNIVERSITY BLVD. is classified as a Regional Principal Arterial North of Los Picaros Rd. and as a Community Principal Arterial South of Los Picaros Rd. (Source MRCOG, Roadway-Functional Classification in the Albuquerque Metropolitan Planning Area [AMPA]). In the study area, UNIVERSITY BLVD. is a three-lane roadway (2 SB and 1 NB) from Rio Bravo Blvd. south to Crick Ave. with a raised divided median and curbs and gutters. A paved bike/pedestrian trail runs along the southbound side. South of Crick Ave it becomes a 2-lane roadway with a two-way left-turn median with curbs and gutters. Sidewalks exist intermittently along the northbound side in this section. The posted speed limit is 35-mph.

BOBBY FOSTER RD. is classified as a Community Principal Arterial (Source MRCOG, Roadway-Functional Classification in the Albuquerque Metropolitan Planning Area [AMPA]). In the study area, BOBBY FOSTER RD. is a three-lane roadway (1 EB and 2 WB) with no median, curbs, or gutters. There are also no pedestrian facilities or bike lanes. The posted speed limit is 40-mph. Planned improvements will widen BOBBY FOSTER RD. to include 2-lanes in each direction, a raised median, and pedestrian facilities.

CRICK AVE. is classified as a Minor Arterial (Source MRCOG, Roadway-Functional Classification in the Albuquerque Metropolitan Planning Area [AMPA]). CRICK AVE. is a four-lane roadway with

raised medians, curbs, gutters, parallel parking spaces, sidewalks, and bike lanes. The posted speed limit is 30-mph.

FRITTS CROSSING is classified as a Proposed Major Collector (Source MRCOG, Roadway-Functional Classification in the Albuquerque Metropolitan Planning Area [AMPA]). FRITTS CROSSING is a two-lane roadway with raised medians, curbs, gutters, parallel parking spaces, sidewalks, and bike lanes. The posted speed limit is 30-mph.

EASTMAN AVE. (Eastern Extension of Bobby Foster Rd.) is classified as a Proposed Minor Collector (Source MRCOG, Roadway-Functional Classification in the Albuquerque Metropolitan Planning Area [AMPA]). EASTMAN AVE. is a two-lane roadway with no median, gutters, or pedestrian facilities. An asphalt curb runs along the southern side of the eastbound lane. The posted speed limit is 30-mph.

is classified as a Regional Principal Arterial North of Los Picos Rd. and as a Community Principal Arterial South of Los Picos Rd. (Source MRCOG, Roadway-Functional Classification in the Albuquerque Metropolitan Planning Area [AMPA]). In the study area, UNIVERSITY BLVD. is a three-lane roadway (2 SB and 1 NB) from Rio Bravo Blvd. south to Crick Ave. with a raised divided median and curbs and gutters. A paved bike/pedestrian trail runs along the southbound side. South of Crick Ave it becomes a 2-lane roadway with a two-way left-turn median with curbs and gutters. Sidewalks exist intermittently along the northbound side in this section. The posted speed limit is 35-mph.

All existing intersections in the study area have **lighting**.

Existing Traffic Volumes

Existing traffic volumes for this study were counted in the field at Intersections 9 thru 14 during April of 2021 as part of the Montage Units TIS. The counts were adjusted to pre-Covid conditions by Huitt-Zollars and are provided in Appendix pages A-112 thru A-113. The adjusted volumes are used in this TIS. Existing traffic volumes at the remaining intersections (1 thru 8) were extrapolated from the traffic counts.

Analysis of Implementation Year and Horizon Year Conditions

Level of Service Criteria (LOS)

According to the City of Albuquerque, Design Process Manual (DPM), LOS standards are defined by Access Category. Table 7.5.88 of the DPM identifies the minimum acceptable LOS standards according to Functional Classification & Roadway Type and City of Albuquerque's ABC Comp Plan Type (see below). University Blvd. and Bobby Foster Rd pass through several ABC Centers in Mesa del Sol. As indicated in the table, Level of Service (LOS) should be D or better or mitigated to maintain the LOS at existing (NO BUILD) condition levels, at all intersections along the University Blvd. and Bobby Foster Rd. corridors.

Functional Classification & Roadway Type	ABC Comp Plan Center Type						
	Transit Station Area	Downtown	Urban Center	Activity Center	Village Center	Employment Center	Outside Center
Premium Transit	E-F	E-F	E-F	E-F	E-F	E-F	E-F
Major Transit	E	E-F	E	E	D-E	D-E	D-E
Multi-modal	E	E	E	E	D-E	D-E	D-E
Commuter	E	E	D-E	D-E	D-E	D-E	D
Other Arterial	E	E	E	D-E	D-E	D-E	D
Minor Arterial	E	E	D-E	D-E	D-E	D	D
Collector	E	D-E	D	D	C-D	C-D	C-D

Traffic Projections

The anticipated implementation year for this project is 2026 and the Horizon Year is 2036. The study area is partially developed. Background traffic volumes were calculated by applying a growth rate of 4% the existing turning movement counts, and trips generated by the other projects in the study area. This growth rate was determined by Huitt-Zollars for the Montage Units TIS and was developed from historical, existing, and projected traffic volumes collected from the Mid-Region Council of Governments' (MRCOG) Traffic Flows Background Traffic.

Trip Generation

According to the Institute of Traffic Engineers' (ITE) trip generation rates, the project is anticipated to generate 25 new entering trips and 14 new exiting trips during the weekday AM Peak Hour period and 313 new entering trips and 178 new exiting trips during the PM Peak Hour period. Trips generated by the existing development are included in the trips generated. No pass-by trips are included. See the Trip Generation Data Table below.

Traffic Volumes

NO BUILD volumes are generated by adding the background traffic volumes and trips generated by the ABQ Studios and Montage Units projects. BUILD volumes are calculated by adding the NO BUILD volumes to the trips generated by the project. The trip assignment percentages are used to distribute the trips generated to the individual traffic movements at each intersection. The turning movement counts for the **2026 and 2036 AM and PM Peak Hour Demand, NO BUILD, and BUILD** conditions for each movement in each intersection the study area are summarized in Appendix pages A-14 thru A-21. Detailed data sheets including trip distribution percentages, background growth, and distributed trips from the Montage Units and Albuquerque Studios projects are provided in the Appendix on Pages A-22 thru A-77.

Traffic Analysis

HCM Level of Service (LOS) capacity analysis of the study area intersections was conducted in accordance with the Highway Capacity Manual (HCM6), using Synchro 11 (Build 11.1.1.6) modeling software. The thresholds for various LOS are summarized in the following tables:

LEVEL-OF-SERVICE CRITERIA FOR SIGNALIZED INTERSECTIONS

<u>Average Delay</u> <u>(secs)</u>	<u>Level-of-Service</u>
≤ 10	A
> 10 and ≤ 20	B
> 20 and ≤ 35	C
> 35 and ≤ 55	D
> 55 and ≤ 80	E
> 80	F

LEVEL-OF-SERVICE CRITERIA FOR UNSIGNALIZED INTERSECTIONS

<u>Average Delay</u> <u>(secs)</u>	<u>Level-of-Service</u>
≤ 10	A
> 10 and ≤ 15	B
> 15 and ≤ 25	C
> 25 and ≤ 35	D
> 35 and ≤ 50	E
> 50	F

Summaries of the analysis results for the 2026 Implementation Year and 2036 Horizon Year are presented in the tables below.

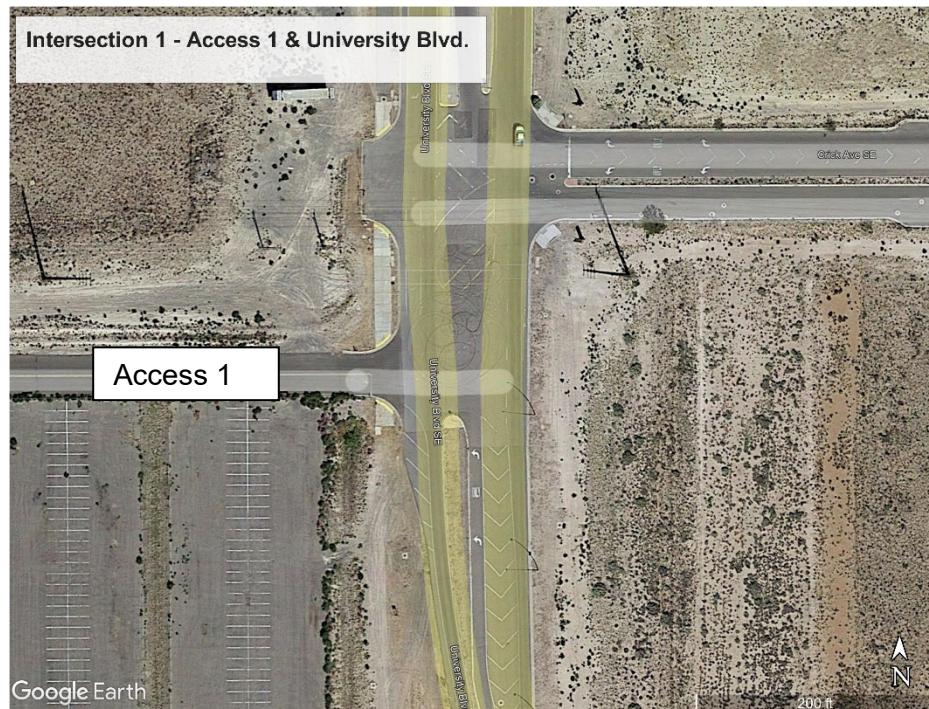

HCM Queueing analysis was conducted on all intersections in the study area. The 95th percentile queue, Queue Storage Ratio (QSR), and Volume to Capacity (V/C) ratio were computed for all movements in the intersections. The Queue Storage Ratio (QSR) is calculated by dividing the

95th percentile queue by the existing lane length. A QSR>1 indicates that the available lane length is insufficient for the queue being generated. The Volume to Capacity Ratio (V/C) is a measure of the capacity of the approach to the volume of traffic. A V/C>1 indicates an area of congestion.

INTERSECTION 1 – ACCESS 1 & UNIVERSITY BLVD.

Unsignalized, Full-access, Existing

Appendix pages A-78 & A-79

Access 1 is a two-lane roadway 160-ft south of Crick Ave., centerline to centerline. It provides access to the existing soccer fields and the Isleta Amphitheater. The following tables summarizes the 2026 Implementation Year and 2036 Horizon Year analysis results for the signalized intersection of BOBBY FOSTER RD. & Access 1.

2026 Implementation Year

Length of Existing Storage Lane	50.0						375.0					
QSR (Queue Storage Ratio)	0.1						0.0					

2026 HCM LOS ANALYSIS of the intersection of Access 1 & University Blvd. demonstrates that the proposed BCRRCC will have minimal adverse impact on the traffic movements at this intersection for the 2026 conditions. The NB and SB LOS on University Blvd. is LOS=A for the BUILD condition. The poor level of service (LOS=E) for traffic exiting Access 1 is caused by the high traffic volumes in the NB and SB thru lanes during the peak hours leading to insufficient gaps in the traffic flow for vehicles making turning movements from the driveway. Since this is an access, not a roadway, and the delays are less than 2 seconds per vehicle greater than LOS D, no mitigative measures are recommended.

2026 Queueing Analysis demonstrates that onsite QSR's and V/C's at Access 1 are less than 1. Therefore, existing onsite queue capacity is adequate, and congestion is minimal. There are no off-site queueing problems at Access 1.

QSR (Queue Storage Ratio)	0.0						0.0					

2036 HCM LOS ANALYSIS of the intersection of Access 1 & University Blvd. demonstrates that the proposed BCRRCC will have minimal adverse impact on the traffic movements at this intersection for the 2036 conditions. The NB and SB LOS on University Blvd. is LOS=A for the BUILD condition. The poor level of service (LOS=F, Delay=62.6 s/veh) for traffic exiting Access 1 is caused by the high traffic volumes in the NB and SB thru lanes during the peak hours leading to insufficient gaps in the traffic flow for vehicles making turning movements from the driveway. However, adding a second northbound lane reduces improves the LOS to D and delays to 27.7 s/veh. Since, it has been assumed in this report that the planned improvements (including adding a second NB lane) to University Blvd. will be implemented by others prior to 2036, no mitigative measures are recommended on the part of Bernalillo County.

2036 Queueing Analysis demonstrates that onsite QSR's and V/C's at Access 1 are less than 1. Therefore, existing onsite queue capacity is adequate, and congestion is minimal. There are no off-site queueing problems at Access 1.

INTERSECTION 2 – ACCESS 2 & UNIVERSITY BLVD.

Unsignalized, Full-access, Existing

Appendix pages A-51 thru A-83

ACCESS 2 is located 290-ft north of Fritts Crossing. It has 2 entering lanes and three exiting lanes, however, the middle lane does not qualify as an exit lane since the intersection is unsignalized and the HCM does not allow for dual turn lanes for unsignalized intersections. The following tables summarize the 2026 Implementation Year and 2036 Horizon Year analysis results for the signalized intersection of Access 2 & UNIVERSITY BLVD.

2026 HCM LOS ANALYSIS of the intersection of Bobby Foster Rd. & Access 5 demonstrates that the proposed BCRRRC will have minimal adverse impact on the traffic movements at this intersection for the 2026 conditions. The LOS for all approaches is B or better for the NO BUILD and BUILD condition. Therefore, no mitigative measures are recommended for 2026.

2026 Queueing Analysis demonstrates that 95th percentile Queue lengths at Access 5 are less than 1 vehicle, therefore, existing onsite queue capacity is adequate, and congestion is minimal (V/C<1 for all movements). There are no off-site queueing problems at Access 5.

2036 HCM LOS ANALYSIS of the intersection of Bobby Foster Rd. & Access 8 demonstrates that the proposed BCRRRC will have minimal adverse impact on the traffic movements at this intersection for the 2036 conditions. The LOS for all approaches is A for the NO BUILD and BUILD condition. Therefore, no mitigative measures are recommended for 2036.

2036 Queueing Analysis demonstrates that 95th percentile Queue lengths at Access 8 are less than 1 vehicle, therefore, existing onsite queue capacity is adequate, and congestion is minimal (V/C<1 for all movements). There are no off-site queueing problems at Access 8.

INTERSECTION 9 – BOBBY FOSTER RD./Eastman Crossing & UNIVERSITY BLVD.

Unsignalized, Partially Existing

Appendix pages A-178 thru A-189

Intersection 9, Bobby Foster Rd./Eastman Crossing & University Blvd., is an unsignalized T-intersection 2.5 miles south of the Rio Bravo Blvd. & University Ave. intersection. The western leg (Bobby Foster Rd.) has not been constructed. Construction of the western leg of Bobby Foster Rd. will coincide with construction of the Montage Units (2026). Full build-out of these improvements will include 2 lanes in each direction on Bobby Foster Rd. and dedicated NB and SB left turns lanes. Analysis of the intersection assumes full build-out conditions. The following tables summarize the 2026 Implementation Year and 2036 Horizon Year analysis results for the intersection of Bobby Foster Rd./Eastman Crossing & UNIVERSITY BLVD.

2026 HCM LOS Analysis of Bobby Foster & University Blvd. demonstrates that the LOS for the BUILD condition is unacceptable (LOS=E or F) for the AM and PM peak hours due to the high delays for the NB and SB traffic heading west. This is an existing problem, as indicated by the NO BUILD data, and since the proposed development does not contribute additional vehicles to this movement, no mitigative measures are recommended on the part of the development. However, a mitigated case, which changes the intersection from an all-way stop controlled intersection to a signalized intersection, was analyzed as a courtesy for the City of Albuquerque. The analysis (BUILD Mitigated) demonstrates that signalizing the intersection would improve the LOS for all approaches to LOS D or better.

2026 Queuing Analysis of Bobby Foster & University Blvd. demonstrates that the existing storage capacity of the NBR lane is exceeded by 50-ft during the PM peak hour as indicated by the QSR=1.1. The V/C>1 for the NBR also indicates an elevated level of congestion. Analysis of the BUILD Mitigated case demonstrates that QSR's and V/C's are acceptable for all movements.

2036 HCM LOS Analysis of Bobby Foster & University Blvd. demonstrates that the LOS for the BUILD condition is unacceptable (LOS=E or F) for the AM and PM peak hours due to the high delays for the NB and SB traffic heading west. This is an existing problem as indicated by the NO BUILD data and since the proposed development does not contribute additional vehicles to this movement, no mitigative measures are recommended on the part of the development. However, a mitigated case, which changes the intersection from an all-way stop controlled intersection to a signalized intersection, was analyzed as a courtesy for the City of Albuquerque. The analysis (BUILD Mitigated) demonstrates that signalizing the intersection would improve the LOS for all approaches to LOS D or better.

2036 Queuing Analysis of Bobby Foster & University Blvd. demonstrates that the existing storage capacity of the NB thru/right lane is exceeded during the PM peak hour by as much as 500-ft. There is also a significant level of congestion for the NB and SB traffic as indicated by the high V/C ratios. Signalizing the intersection (BUILD Mitigated case) demonstrates that QSR's and V/C's are acceptable except for the WB right-turning traffic during the PM peak hour where the traffic may periodically block Newhall Dr. by three vehicles length (75-ft).

INTERSECTION 10 – FRITTS CROSSING & UNIVERSITY BLVD.

Unsignalized, Existing
Appendix pages A-178 thru A-189

Intersection 10, Fritts Crossing & University Blvd., is an unsignalized T-intersection 2.2 miles south of the Rio Bravo Blvd. & University Ave. intersection. Fritts Crossing operates as a two-lane approach but is wide enough to expand to four lanes. The following tables summarize the 2026 Implementation Year and 2036 Horizon Year analysis results for the intersection of Fritts Crossing & UNIVERSITY BLVD.

2026 Implementation Year

Intersection LOS	D - 28.5											
95th Percentile Queue (veh)				1.0						0.0		

2026 HCM LOS ANALYSIS of the intersection of University Blvd. & Fritts Crossing demonstrates that the proposed BCRRRC will have minimal adverse impact on the traffic movements at this intersection for the 2026 conditions. Intersection delays remain the same from the BUILD to NO BUILD condition during the AM peak hour. During the PM peak hour delays for the WB left lane become worse by only 4 seconds per vehicle while the LOS remains acceptable (LOS=D). The LOS for NB and SB approaches remain the same from the NO BUILD to BUILD condition. Therefore, no mitigative measures are recommended for 2026.

2026 Queueing Analysis demonstrates that onsite QSR's and V/C's at University Blvd. & Fritts Crossing are 1 or less, therefore, existing queue capacity is adequate, and congestion is minimal.

2036 HCM LOS ANALYSIS of the intersection of University Blvd. & Fritts Crossing demonstrates that the proposed BCRRRC will have moderate adverse impact on the traffic movements at this intersection for the 2036 conditions. Intersection delays remain the same from the BUILD to NO BUILD condition during the AM peak hour. However, during the PM peak hour delays for the WB left lane become worse by 11.2 seconds per vehicle while the LOS goes from E to F. The poor

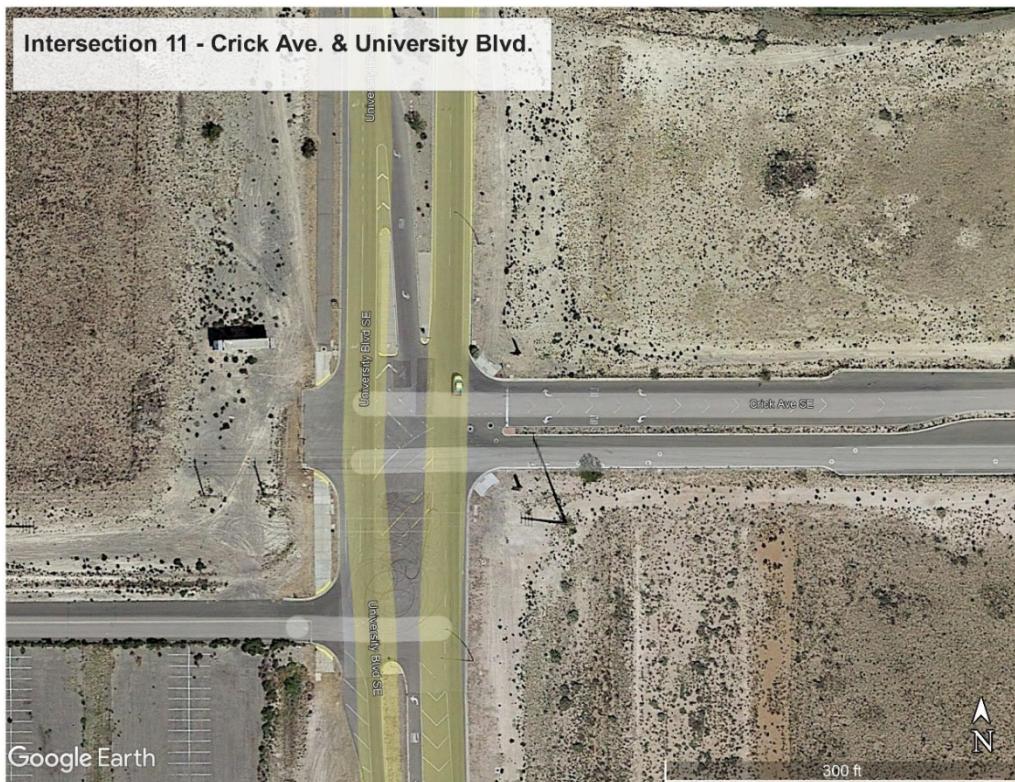

level of service for WBL turn movement is caused by the high traffic volumes in the thru lanes during the PM peak hour leading to insufficient gaps in the traffic flow for vehicles making turning movements from Fritts Crossing. Adding second NB and SB lanes (as shown in the master plan for Mesa del Sol) improves the performance of the WBL turn movement to LOS=E with 40.3 seconds/vehicle of delay, slightly better than NO BUILD conditions. Converting the intersection from a two-way stop control intersection to a roundabout or signalized intersection would significantly improve the LOS for all approaches. However, since these are existing problems and solutions are already planned as part of the Mesa del Sol Master Plan, no recommendations are recommended on the part of the development.

2036 Queueing Analysis demonstrates that onsite QSR's and V/C's at University Blvd. & Fritts Crossing are 1 or less, therefore, existing queue capacity is adequate, and congestion is minimal.

INTERSECTION 11 – CRICK AVE. & UNIVERSITY BLVD.

Unsignalized, Existing

Appendix pages A-178 thru A-18

Intersection 11, Crick & University Blvd. is an unsignalized T-intersection 2.0 miles south of the Rio Bravo Blvd. & University Ave. intersection. Crick Ave. operates as a two-lane approach but is wide enough to expand to three lanes. The following tables summarize the 2026 Implementation Year and 2036 Horizon Year analysis results for the intersection of Crick Ave. & UNIVERSITY BLVD.

95th Percentile Queue (veh)			0.1		0.1					0.4		

2026 HCM LOS ANALYSIS of the intersection of Crick Ave. & University Blvd. demonstrates that the proposed BCRRCC will have minimal adverse impact on the traffic movements at this intersection for the 2026 conditions. The LOS for the intersection performance remains the same from the NO BUILD to the BUILD condition, LOS=B for the AM peak hour and LOS=C for the PM peak hour. And delays become worse by less than 4 seconds per vehicle with the additional traffic from the development. Therefore, no mitigative measures are recommended.

2026 Queueing Analysis demonstrates that 95th percentile Queue lengths at Crick Ave. & University Blvd. are less than 1 vehicle, therefore, existing queue capacity is adequate, and congestion is minimal (V/C<1 for all movements).

Intersection LOS	E - 35.8											
95th Percentile Queue (veh)				0.2		0.2				0.9		

2036 HCM LOS ANALYSIS of the intersection of Crick Ave. & University Blvd. demonstrates that the proposed BCRRCC will have moderate adverse impact on the traffic movements at this intersection for the 2036 conditions. The LOS for the intersection remains the same, LOS=C, and delays become worse by less than 1 second per vehicle during the AM peak hour for the NO BUILD to the BUILD conditions. For the PM peak hour BUILD condition, LOS for the WBL degrades from LOS=D to LOS=E and delays become worse by 6.6 seconds per vehicle. The poor level of service for the WBL movement is caused the high traffic volumes in the NB and SB thru lanes during the peak hours leading to insufficient gaps in the traffic flow for vehicles making turning movements from the Crick Ave. This problem, as indicated by the BUILD Mitigated analysis of ACCESS 1 and ACCESS 2, would be solved by adding a second NB and second SB lane as planned for University Blvd. as part of the Mesa del Sol Masterplan. And since this issue does not arise until 14 years from now, no mitigative measures are recommended on the part of the development

2036 Queueing Analysis demonstrates that 95th percentile Queue lengths at Crick Ave. & University Blvd. are less than 1 vehicle, therefore, existing queue capacity is adequate, and congestion is minimal (V/C<1 for all movements).

INTERSECTION 12 – RIO BRAVO BLVD. & UNIVERSITY BLVD.

Signalized, Existing

Appendix pages A-178 thru A-189

Intersection 12, Rio Bravo Blvd. & University Blvd. is a signalized T-intersection 1000-ft east of the I-25 & Rio Bravo Blvd. interchange. The following tables summarize the 2026 Implementation Year and 2036 Horizon Year analysis results for the intersection.

2026 HCM LOS ANALYSIS of the intersection of Rio Bravo Blvd. & University Blvd. demonstrates that the proposed BCRRCC will have an adverse impact on the traffic movements at this intersection for the 2026 conditions but retiming the signal improves the LOS to better than the NO BUILD LOS. The LOS for the intersection remains the same from the NO BUILD to the BUILD condition, LOS=D. for the AM peak hour and LOS=F for the PM peak hour. Delays become worse by only 1 second per vehicle for the AM peak hour with the additional traffic from the development. The worst performing movement during the AM peak hour, the SBR, has LOS=F but does not

receive additional traffic from the development. However, during the PM peak hour, the intersection delay becomes worse by 17 seconds per vehicle, the EBR degrades from LOS=C to LOS=F, and the NBL degrades from LOS D to LOS F because of the additional traffic from the development. Retiming the signal improves the intersection LOS to C and the EBR and NBL to NO BUILD conditions. The existing timing plan and mitigated plan are provided in Appendix pages A-.

2026 Queueing Analysis demonstrates that QSR's and V/C's at Rio Bravo Blvd. & University Blvd. are less than 1 for all turning movements except the SBR and NBL. The length of SBR turn lane is 150-ft and NO BUILD queue lengths, even with signal retiming, exceed capacity of the lane by almost 1500-ft. (PM NO BUILD Condition). With signal retiming, queueing capacity improves to better than NO BUILD conditions but the capacity of the SBR is still exceeds the capacity of the lane by 690-ft. As an alternative (see the second mitigation scenario) to constructing one 840-ft SBR lane, queue capacity is achieved with the two SBR turn lanes, 250-ft long each.

2036 HCM LOS ANALYSIS of the intersection of Rio Bravo Blvd. & University Blvd. demonstrates that the proposed BCRRRC will have a minimal adverse impact on the traffic movements at this intersection for the 2036 conditions. However, the NO BUILD and BUILD LOS of the intersection is LOS=F. Retiming the signal restores the LOS to better than the NO BUILD LOS, however, the LOS for the intersection remains unacceptable for the PM peak hour due to the poor performance of the EBR, NBL, and SBR turn movements. Delays become worse with the addition of traffic from the development, however, because initial NO BUILD delays exceed acceptable levels, even minor increases in traffic volumes cause major increases in delays. For the AM peak hour, retiming the signal and adding a second SBR lane improves the intersection LOS to C and the

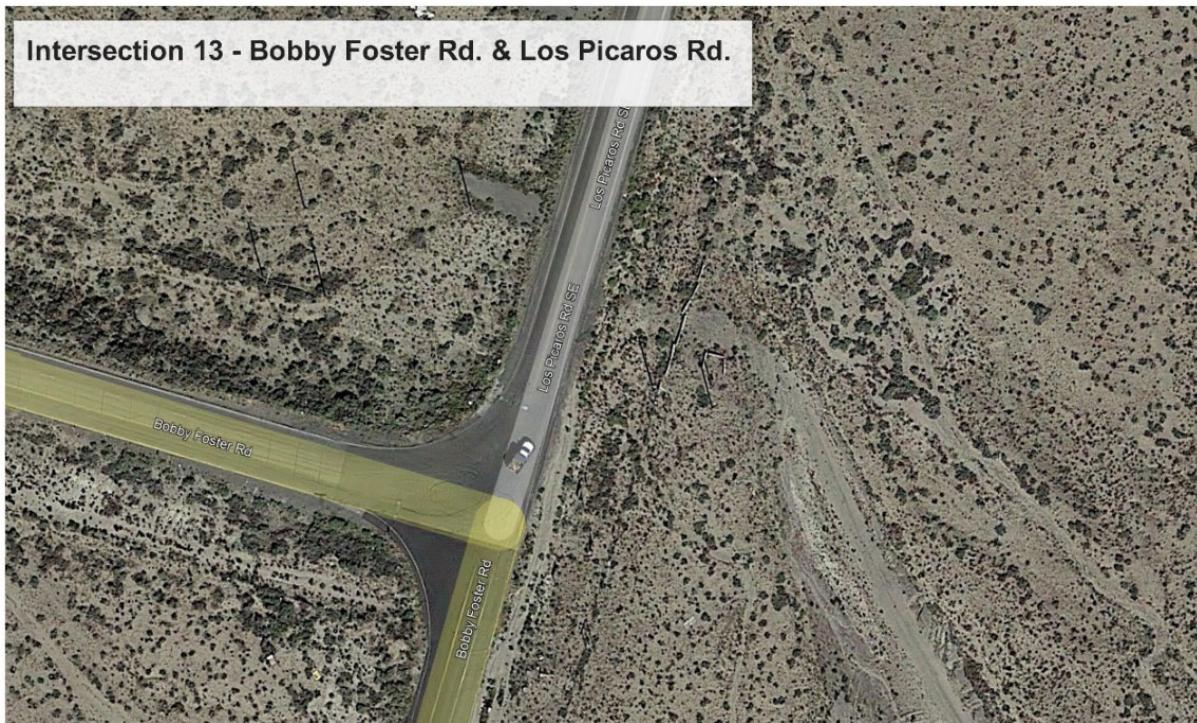

LOS of the individual turning movements to D or better. For the PM peak hour, signal retiming and adding a second SBR turn lane improves the LOS to E, however, the LOS of the EBR and NBL remain at LOS F even though delays are reduced to below NO BUILD levels. Since these issues are not caused by the development, no mitigative measures are recommended. The existing timing plan and mitigated plan are provided in Appendix pages A-

The poor performance of this intersection for the NO BUILD condition is caused by the additional traffic to be generated by the Montage Units Development and Albuquerque Studios Expansion starting in 2026. Given that the intersection already has dual turning lanes for all but one turning movement, major reconstruction of the Rio Bravo Blvd. & University Blvd. intersection or construction of a second 1-25 interchange at Bobby Foster Rd., should be considered as Mesa del Sol continues to grow.

2036 Queueing Analysis demonstrates that QSR's and V/C's at Rio Bravo Blvd. & University Blvd. are greater than 1 for the EBR, NBL, and SBR turning movements for the NO BUILD and BUILD conditions. Therefore, queues will spill over from the turn lanes into the thru lanes and congestion levels will be high for all approaches. With mitigative measures such as signal retiming and adding a second SBR turn lane, queueing capacity of the lanes for the BUILD condition improves to better than NO BUILD condition, but queues will continue to exceed capacity of the turn lanes during the PM peak hour.

INTERSECTION 13 – BOBBY FOSTER RD. & LOS PICAROS RD.

Unsignalized, Existing
Appendix pages A-178 thru A-189

Intersection 13, Bobby Foster Rd. & Los Picaros Rd. is a unsignalized T-intersection $\frac{1}{2}$ mile east of Broadway Blvd. and east of the I-25 overpass. The following tables summarize the 2026 Implementation Year and 2036 Horizon Year analysis results for the intersection.

Control Delay (Seconds)				24.8		0.0				8.8		
Intersection LOS	C - 24.8											
95th Percentile Queue (veh)				1.8						0.5		

2026 HCM LOS ANALYSIS of the intersection of Bobby Foster Rd. & Broadway Blvd. demonstrates that the proposed BCRRRC will have minimal adverse impact on the traffic movements at this intersection for the 2026 conditions. The LOS for the intersection performance remains the same from the NO BUILD to the BUILD condition, LOS=C for the AM and PM peak hours. And delays become worse by 2 seconds per vehicle or less with the additional traffic from the development. Therefore, no mitigative measures are recommended.

2026 Queueing Analysis demonstrates that 95th percentile Queue lengths at Bobby Foster Rd. & Broadway Blvd. are less than 2 vehicles (50-ft.), therefore, existing queue capacity is adequate, and congestion is minimal (V/C<1 for all movements).

2036 HCM LOS ANALYSIS of the intersection of Bobby Foster Rd. & Broadway Blvd. demonstrates that the proposed BCRRCC will have minimal adverse impact on the traffic movements at this intersection for the 2036 conditions. The LOS for the intersection remains the same from the NO BUILD to the BUILD condition, LOS=E for the AM and LOS=F for the PM peak hour. Delays become worse by less than 1 second per vehicle during the AM peak hour but increase to 10 seconds additional delay during the PM peak hour due to additional traffic from the development. Because NO BUILD delays exceed acceptable levels, even minor increases in traffic volumes (only 8 additional vehicles per hour) cause major increases in delays. Therefore, since 2036 NO BUILD PM conditions are unacceptable and the development contributes insignificant volumes to this intersection, no mitigative measures are recommended. However, as a courtesy to the City of Albuquerque, a mitigative case of signalizing the intersection was analyzed. Signalizing the intersection would improve the LOS to A for the AM and PM peak hours.

2036 Queueing Analysis demonstrates that 95th percentile Queue lengths at Bobby Foster Rd. & Broadway Blvd. are less than 5 vehicles (125-ft.), therefore, existing queue capacity is adequate, and congestion is minimal (V/C<1 for all movements).

Determination of Warrants for Deceleration Lanes

Determination of Warrants for Deceleration Lanes for the eight access driveways was conducted in accordance with the City of Albuquerque Development Process Manual. Right-turn deceleration lanes are warranted for three of the driveways, Access 1, Access 2, and Access 4. The lanes are to be a minimum of 240-ft long including transition. A table summarizing the results is provided below.

Turn Lane Warrant
Bernalillo County Regional Recreation Complex

Access	Major Street	Speed Limit (Mph)	Left Turn Warrant Volume (veh/hr) ¹	Maximum Left Turn Volume (Veh/hr)	Left Turn Lane Warranted?	Right Turn Warrant Volume (Veh/hr) ¹	Maximum Right Turn Volume (Veh/hr)	Right Turn Lane Warranted?	Minimum Length of RT Turn Lane Criteria (feet, including transition) ²
Access 1	University Blvd.	35	40	0	NO	50	72	YES	240
Access 2	University Blvd.	35	40	4	NO	50	181	YES	240

Summary of Impacts and Recommendations

In summary, the proposed BCRRC will have minimal significant adverse impact to the adjacent transportation system. A summary of the impacts and recommendations based on the results of the analysis, are stated in the Executive Summary of this report.

Bernalillo County Regional Recreation Complex TIA Scope

2/18/2022

Site Trip Generation

John Barney confirmed that ITE Soccer Complex is the most appropriate ITE land use.

ITE 11th Generation

Recreational	LU Code	Units	Unit Val	Weekday	AM Enter	AM Exit	AM Total	PM Enter	PM Exit	PM Total
Soccer Complex Phase 1 (2023)	488	Fields	10	713	6	4	10	115	59	174
Soccer Complex Full Build (2026)	488	Fields	24	1,712	14	10	24	243	126	369

Trip Distribution Methodology

Provide the standard gravity model trip generation for the site.

Other Mesa del Sol developments assume all trips arrive and leave through University Blvd. Montage Units TIS assumed 10% of trip will be generated within Mesa del Sol and 90% will be from University Blvd north, with 60% of trips allocated to the University Blvd main entrance north of Fritts Crossing. The trip distribution for Montage Units mostly reflects this with 30% of trips University north, 5% University south, but 17% of trips were allocated to Bobby Foster SW.

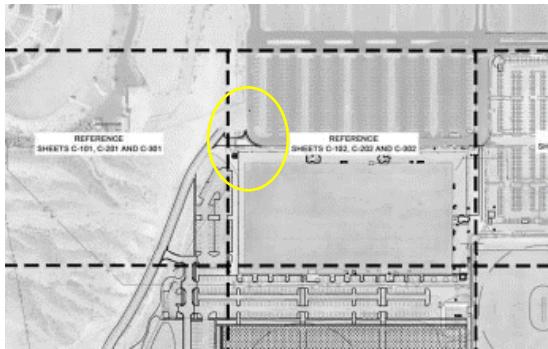

Study Intersections for Regional Sports Complex

- University & Crick (goal to move Access 1 so that it aligns with Crick)
- University Blvd Access (Access 2)
- University & Fritts (future roundabout)
- Sagan Loop & Access 3 (not needed if removed when Access 4 at Newhall Drive is constructed)
- Bobby Foster & Access 4 (Newhall Drive)
- Bobby Foster & Access 5
- Bobby Foster & Access 6
- Bobby Foster & Access 7
- Bobby Foster & Access 8
- Bobby Foster & Broadway
- Bobby Foster & Los Picos
- ~~See if City of Albuquerque requires other intersections~~ University Blvd and Rio Bravo Blvd intersection

It is acceptable to use March 2021 counts with COVID adjustments.

Main Circulation

1. This project needs to strive to not use public roads for site circulation. If someone is traveling south on University Blvd and wants to get to the southernmost field, the site circulation needs to be robust enough to encourage trips through the site over trips on the surrounding roads. This is an odd pinch point that needs to be improved in order to provide connectivity between the existing and future parking.

2. Recommended Traffic Control – Provide recommended traffic control, if any, on the site's main circulation network. There are areas where it is very clear which motorist will need to yield to other motorists. At the pinch point above where it is not clear who will need to yield or stop.
3. The 2022 phase provides parking surrounding the fields where a motorist on the main circulation route can clearly see available spaces from the circulation route. The 2024 and 2026 phase clusters parking with the circulation route on the far periphery of the site in areas. The 2023 phase reminds me of a modern shopping mall with parking interspersed with destinations and the 2024/2026 phase reminds me of a traditional mall with large amounts of parking surrounding outside the area. If there is a method how parking will function on this large site, please provide those goals.

TIA Analysis Phases and Horizon Year

Phase I (2022): The ten fields anticipated to be constructed in the summer of 2022 are shown in yellow. On the site plan. There is a very different road network in 2022 than expected for 2026. The study intersections for this phase are University Blvd Access 2, Sagan Loop Access 3, Access 7. Provide recommended improvements to access configurations.

Full Build Out (2026): All study intersections. Assume final road network. Do not assume interchange is in place.

Horizon Year (2031): All study intersections. Assume final road network. Do not assume interchange is in place.

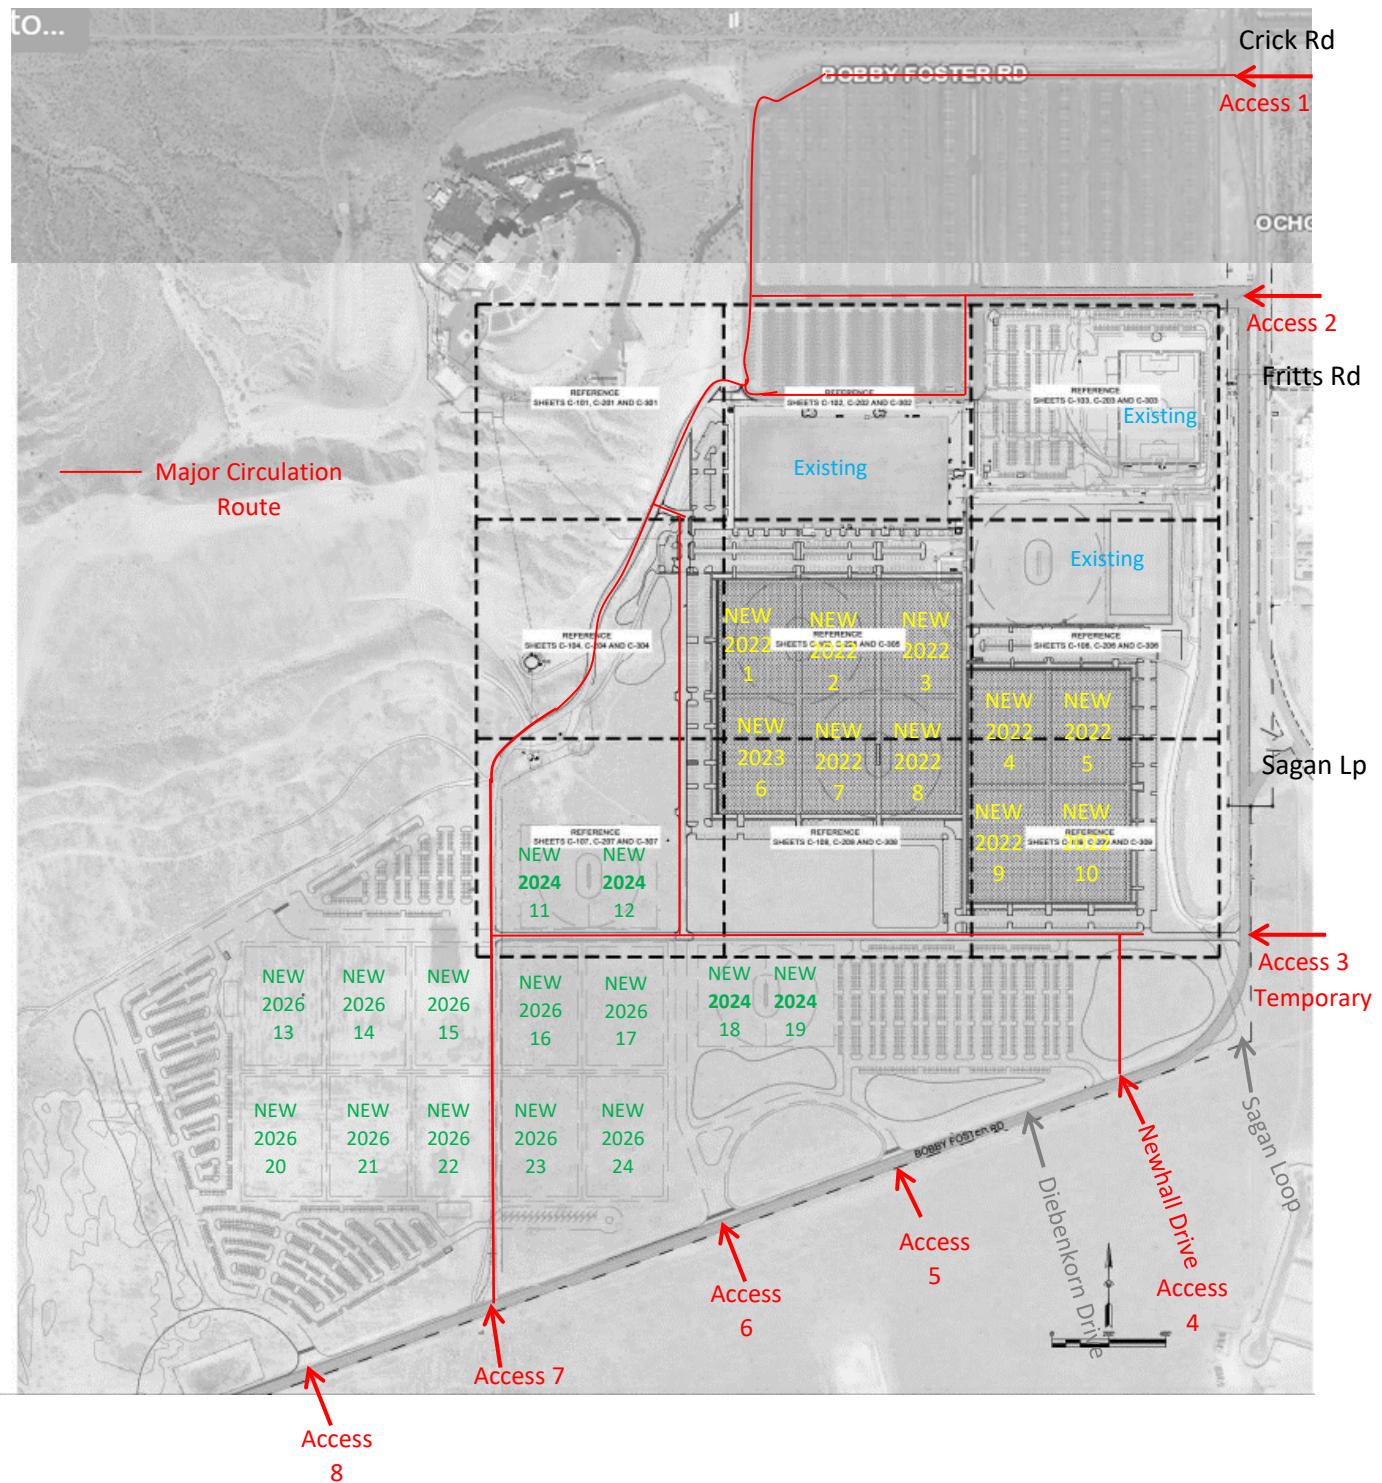

Other Developments:

- Netflix phase 1 build out is 2026
- Montage Units build out year is 2023 – The internal capture rates for Montage is overly optimistic. However, I think the trip assignments as provided need to be used.
- Montage Units provided a horizon year of 2028 that included the Regional Sports Complex. This study did not include the access points to the Regional Sport Complex.
- The following intersections are anticipated to be multi-lane roundabouts:
 - University Blvd & Fritts,
 - University Blvd & Bobby Foster.

Other Development TIS can be found at <ftp://amus.bernco.gov/JLuna/>

Netflix TIS is the same as earlier and a final has not been provided. Montage Units has an updated TIS found under RMdS_TIA_MontageV2

SITE PLAN

Bernalillo County Regional Sports Complex

**Scope of Work for the
Traffic Impact Study**

APRIL 18, 2022

Terry O. Brown, P.E.

Scope of Work

The scope of work for the Traffic Impact Study (TIS) for the Bernalillo County Regional Sports Complex (BCRSC) contained herein is based on the information provided by Bernalillo County and Dekker Perich Sabatini representatives during the virtual meeting on February 17, 2022.

Site Location

The BCRSC will be located in the Mesa Del Sol Community in the northwest quadrant of Bobby Foster Rd. and University Blvd. The project will expand the existing facility from six outdoor soccer fields to a total of 26 outdoor soccer fields and a 29,000 square foot indoor multi-use athletic facility.

Site Plan

Analysis of the traffic conditions before and after implementation of the proposed project will be based on the site plan and land uses presented on the conceptual site plan below. The site will be accessed by six driveways: two existing driveways on University Blvd. and four proposed driveways on Bobby Foster Rd. (see the location of the access driveways in the map in the Study Area Intersections section below)

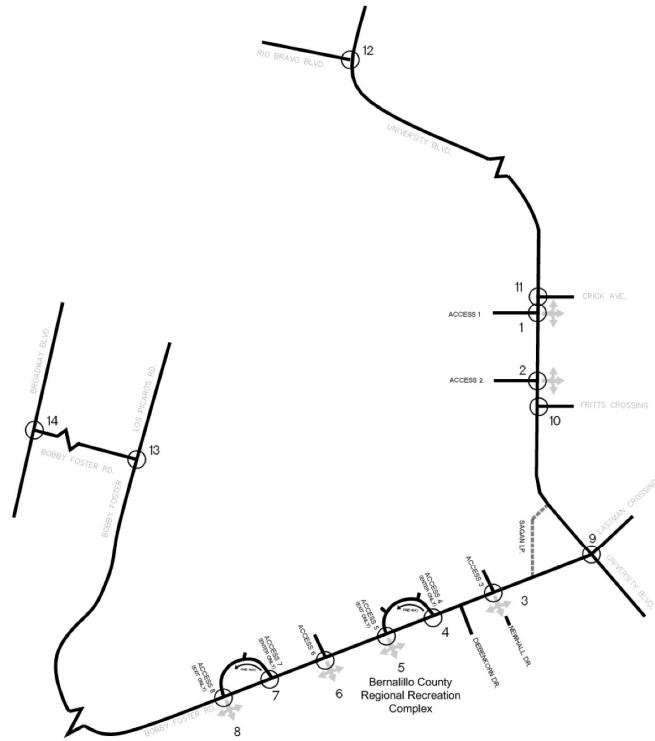

Study Area Intersections

The study area will include the following 11 Intersections, six access driveway intersections and five existing off-site intersections. All intersections are unsignalized.

1. Access 1 & University Blvd. – Existing, Full Access
2. Access 2 & University Blvd. - Existing, Full Access
3. Access 3 & Bobby Foster Rd. – Proposed, Full Access
4. Access 4/Newhall Dr. & Bobby Foster Rd. – Proposed, Full Access
5. Access 5 & Bobby Foster Rd. - Proposed, Full Access
6. Access 6 & Bobby Foster Rd. - Proposed, Full Access
7. Access 7 & Bobby Foster Rd. - Proposed, Full Access
8. Access 8 & Bobby Foster Rd. - Proposed, Full Access

3

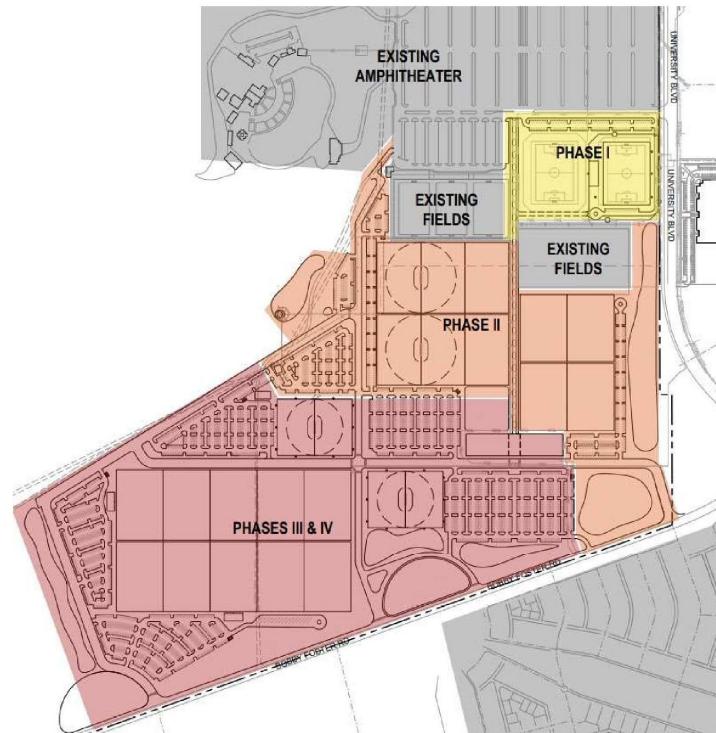

9. Bobby Foster Rd./Eastman & University Blvd. – North Leg, South Leg, & East Leg Existing.
10. Crick Ave. & University Blvd.
11. Fritts Crossing & University Blvd. – Existing, t-intersection
12. Rio Bravo Blvd. & University Blvd.
13. Bobby Foster Rd. & Los Picaros
14. Bobby Foster Rd. & Broadway Blvd.

4

BCRSC Phases

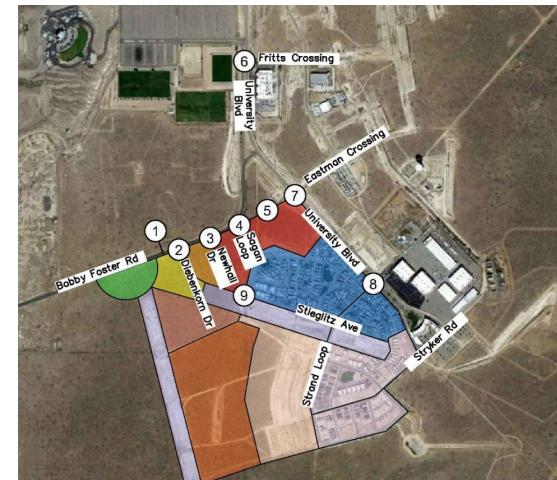

The BCRSC will be completed in four phases (I thru IV). The TIS will analyze the full-build condition (all phases) for the 2026 Implementation Year and 2036 Horizon Year.

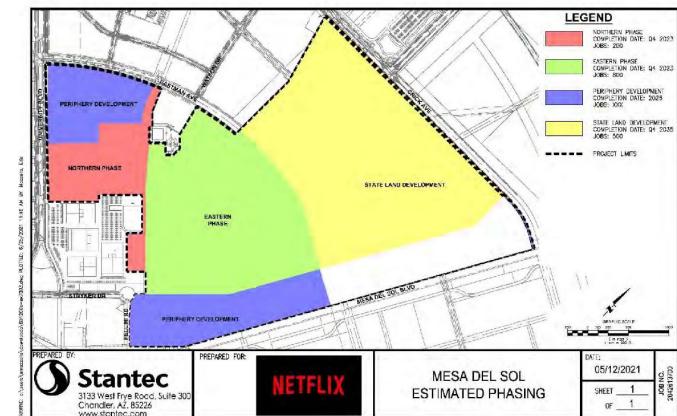

5

Other Projects in the Study Area

- Montage Units (2023) – TIS August 25, 2021

- Albuquerque Studios Expansion (2026) – TIS June 18, 2021

6

Background and No BUILD Traffic Volumes

Existing Peak Hour Volumes (PHVs), as calculated as part of the Montage Units TIS, will be used in the analysis. These volumes are based on counts were taken during April and May of 2021 and adjusted for COVID-19 conditions using factors provided by the City of Albuquerque.

A growth rate of 4%, as used in the Montage Units TIS, will be applied to the traffic counts to determine the background traffic.

Trips generated from the Montage Units Development and the Albuquerque Studios Expansion will be included in the NO BUILD traffic volumes and distributed the same as shown in their corresponding TIS reports.

Trip Generation

Trips Generated by the development are based on the most recent site plan and the ITE 11th Edition Manual and are slightly greater than the trips calculated in the Montage Units TIS. See below. The new trip generation data will be used in the HC analysis.

Trip Generation from the Montage Units TIS (10th Edition)

Development		Fields/Courts	Total Generated Trips	% Entering	Trips Entering	% Exiting	Exiting Trips
Public Parks/Fields (Code 488)	AM Peak	24	24	61%	15	39%	9
	PM Peak		369	66%	243	34%	126
Indoor Practice Facility (Code 488)	AM Peak	1	1	61%	1	39%	0
	PM Peak		49	66%	32	34%	17
Sports Lifestyle Center (Code 490)	AM Peak	6*	0	61%**	0	39%**	0
	PM Peak		26	66%**	17	34%**	9
TOTAL		AM Peak	25	61%	16	39%	9
		PM Peak	444	66%	292	34%	152

*Converted SF of Sports Lifestyle Center to # of Courts.

** Assumed directional distribution similar to Land Use Code 488.

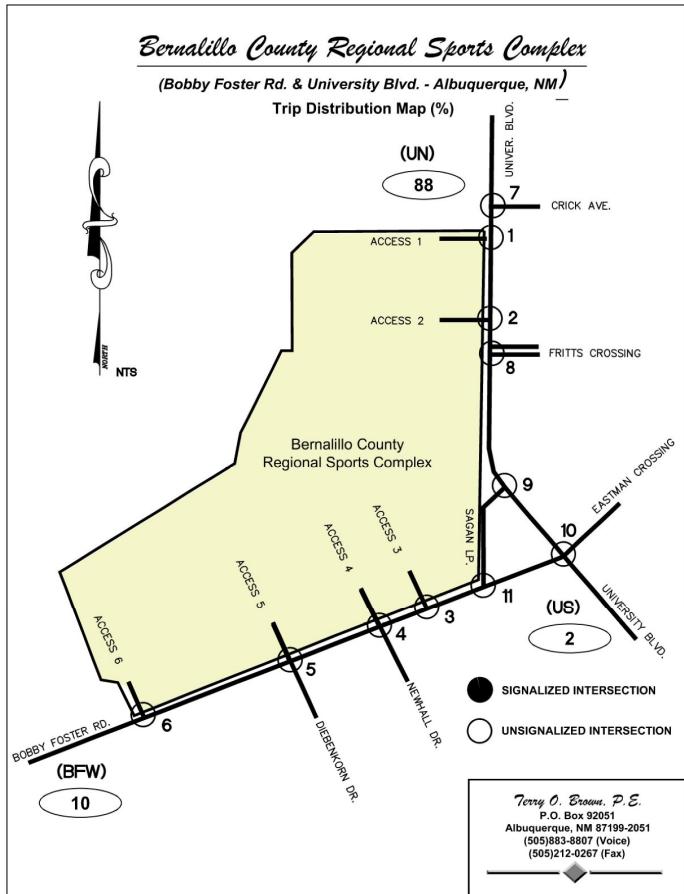

New Trip Generation based on ITE 11th Edition and Current Site Plan

Development			Fields/Sq. Ft.	Total Generated Trips	Trips Entering	Exiting Trips	
ITE Land Use: Soccer Complex (ITE Code 488)	AM Peak	26	26	16	10	14	
	PM Peak		427	282	144	144	
ITE Land Use: Multipurpose Recreational Facility (ITE Code 435)	AM Peak	29,000 sq. ft.	0	0	0	0	
	PM Peak		104	57	47	47	
TOTAL			AM Peak	26	16	10	
			PM Peak	531	339	192	

Trip Distribution

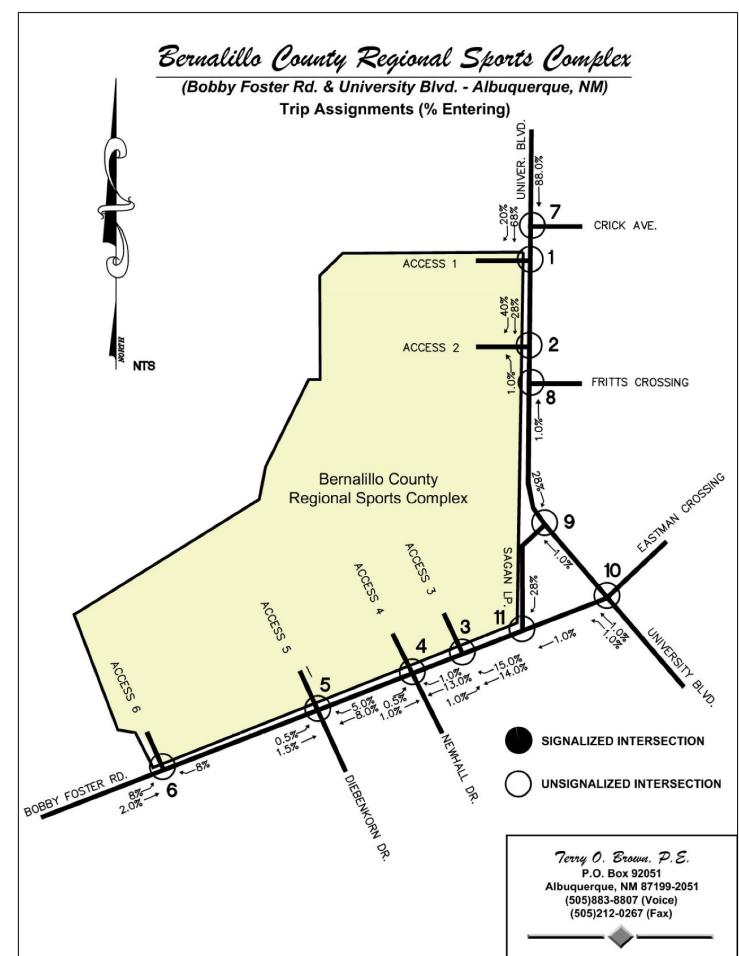

Trips for the new development will be distributed according to the maps below.

Overall

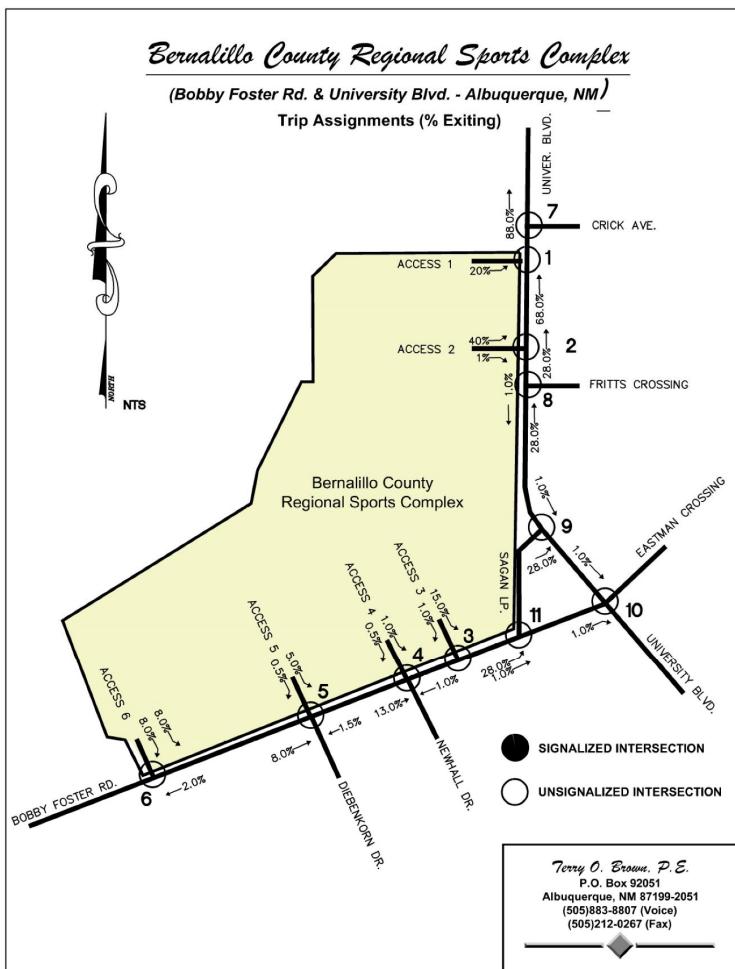

9

Trips Entering

10

Trips Exiting

11

Assumptions

1. The BCRSC project Implementation Year is 2026 and the Horizon Year is 2036.
2. Trip generation calculations for the BCRSC assume full build-out (Phases I thru IV) and use the ITE 11th Edition data.
3. To be conservative, no allowance is taken for trips generated from the existing soccer fields for the BUILD condition.
4. The existing access off Sagan Loop will be eliminated upon implementation of Phases II through IV and therefore, is not part of the analysis.
5. The proposed BCSC facility will have a total of 26 soccer fields and one 29,000 square foot multi-use indoor athletic facility when all phases are complete.
6. The proposed BCSC facility will have least one main internal circulation roadway and all parking areas will be accessible from this roadway.
7. All driveways will be full access unsignalized driveways.
8. The portion of Bobby Foster Rd. from Sagan Loop to University Blvd. will be completed as part of the construction Montage Units Development south of Bobby Foster Rd. prior to completion of the BCRSC.
9. The proposed Driveways on Bobby Foster will be aligned with the proposed roadways south of Bobby Foster Rd. as shown on the Montage Units Site Plan in the 2021 TIS.
10. The BCRSC will share Access 1 with the Amphitheater.
11. Trips generated by the Montage Units Development and Albuquerque Studios Expansion will be included as presented in their respective TIS reports.
12. COVID-19 adjusted traffic counts from the Montage Units TIS will be used in the Analysis.
13. Synchro 11 traffic analysis software will be used to analyze the 11 intersections specified in this SOW.
14. I-25/Bobby Foster Interchange Project will not be considered in the analysis. And, since only 10 percent or less of the traffic generated by the development will use the existing Bobby Foster Rd. & Broadway Blvd. no analysis of this intersection is necessary.
15. Existing driveways on the west side of University Blvd. (Access 1 and Access 2) and the existing corresponding roadways on the east side of University (Crick Ave. and Fritts Crossing) are offset and will not be realigned as part of this project.
