I. INTRODUCTION

This report establishes a Drainage Management Plan for Mesa Del Sol Drainage Area 8 (DA-8), as defined by the *Mesa Del Sol Innovation Park III – Overall Drainage Management Plan* (COA Hydrology File R16D097D). Included in this area is a majority of the City Center area of Mesa del Sol, University Boulevard south of the Aperture Center down to the Level B Boundary, and the future tracts immediately west University Boulevard.

The purpose of this report is to provide site-specific drainage analysis for existing, interim, and ultimate roadway and contributing basin conditions for development within the area referred to as Mesa Del Sol DA-8. This plan is prepared and submitted to support design and grading of the roadways, as well as the regional retention ponding areas that accommodate the discharge from the trunk public storm drains within the public Right-of-Way(s).

II. METHODOLOGY AND REFERENCES

All analysis was completed to reflect fully developed conditions for onsite and offsite contributory areas as well as the interim condition, with only the roadways fully developed. Runoff from the contributing basins was computed for the 100-year, 24-hour storm in accordance with the City of Albuquerque Development Process Manual (DPM), Chapter 6, dated June 15, 2020. Given that previous drainage analyses and master planning efforts have identified the “mesa top” area of Mesa del Sol as a closed basin that does not drain to the Rio Grande, much of the drainage management strategy relies on retention ponding schemes. These retention ponds are required to accommodate the 100-year, 10-day storm as defined by the City DPM (see **Table 1** and **Table 2**). All other drainage management infrastructure—including streets, inlets, and storm drains—were all analyzed and sized to accommodate the 100-year, 24-hour storm.

This drainage report for Drainage Area 8 and the assumptions associated with the surrounding areas is consistent with previously approved drainage reports for Mesa Del Sol. Specifically, the following approved Drainage Management Plan will be referenced throughout this report (**EXHIBIT A**), as this document established the high-level drainage management strategy for this area when it was prepared in support of a large bulk land plat for portions of the project area: *Innovation Park III – Overall Drainage Management Plan* (COA Hydrology File R16D097D). This document will herein be referred to as the “Overall DMP”.

TABLE 1– POND ANALYSIS – INTERIM CONDITIONS

Retention Pond ID	Req'd Volume (V100, 10day) (acre-feet)	Provided Volume (acre-feet)*	Pond Bottom (ft)*
Pond 1	3.6	17.8	5269.00
Pond 2	0.5	11.8	5268.00
Pond 3	2.4	27.0	5264.00
Pond 4	2.2	18.5	5264.00
TOTAL	8.7	75.1	

TABLE 2 – POND ANALYSIS – ULTIMATE CONDITIONS

Pond Analysis - Ultimate Conditions				
Retention Pond ID	Req'd Volume (V100, 10day) (acre-feet)	Provided Volume (acre-feet)*	Pond Bottom (ft)*	WSEL 100yr, 10d (ft)*
Pond 1	32.1	17.8	5269.00	-
Pond 2	0.7	11.8	5268.00	-
Pond 3	6.0	27.0	5264.00	-
Pond 4	2.2	18.5	5264.00	-
TOTAL	41.0	75.1**		5274.29

*Pond design is subject to change.

**Ponds 1 through 4 will be connected via equalization pipes to collectively provide the required volumes.

III. SITE LOCATION AND CHARACTERISTICS

This project is located within the Mesa del Sol South Master Planned Area, in south Albuquerque. Drainage Area 8 (DA-8) encompasses a portion of the Mesa del Sol City Center—a focal point at the intersections of two major master-planned roadways: Mesa del Sol Boulevard and University Boulevard. DA-8 includes the southern extension of University Boulevard from its current southern extent at Stryker Road, south to the current Mesa del Sol Level B boundary. DA-8 includes the roadway itself, regional retention ponding and park areas to the east of University Boulevard, and several large tracts to the west of University Boulevard. DA-8 encompasses approximately 193 acres.

East of the DA-8 regional ponds, a “special industrial use area” has been identified and is in the process of being platted. This area is identified as Drainage Area 9 (DA-9) in the *Overall DMP* will feature individual tracts that are responsible for retaining the drainage from each respective tract on-site and will not drain to the regional pond facility along University.

Similarly, the tracts north of the special industrial use area, currently owned by University of New Mexico (UNM), will be required to retain drainage on-site. In the northeast limits of City Center, three of the tracts are part of Drainage Area 3B (DA-3B) and do not drain to the DA-8 storm drain and pond system. Instead, those area will be incorporated into the storm drain system currently discharging to Pond OS-7 (located within the eastern Mesa del Sol Couplet), which will eventually be relocated further to the northeast. West of DA-8, an additional Drainage Area 10 (DA-10) has been identified. This area will be located west of a future southern extension of Dekooning Avenue and drain to a separate retention ponding system west of DA-8.

IV. EXISTING CONDITIONS

The overall project area primarily consists of undeveloped lands with sparse desert vegetation (grasses and small shrubs) on gentle slopes. Areas east and west of University generally slope towards the future roadway alignment and eventually concentrate drainage within the existing playas, which are discussed in more detail within the Mesa del Sol Level B Master Plan. Slopes are considered moderate, ranging from 0.5% to 2%. Based on the survey, existing dominant soil types are type A with up to 10% slopes, minimal disturbance and compaction, and a higher level of infiltration with a 100 year 24 hour initial abstraction of 0.65 inches. For additional information and an overview of the project area drainage patterns, refer to the Overall DMP and the Mesa del Sol Level B Master Plan – **EXHIBIT A**.

In the interim, temporary ponds have been graded as a temporary solution in the undeveloped tracts in City Center and west of University Boulevard. Assuming these undeveloped basins all have a 100% type B land treatment, these ponds have been sized to protect future roadways from offsite flows. A summary of these basins can be found in **Table 3**.

TABLE 3 – INTERIM BASIN TABLE

TOTAL	135					318	8.99	9.83

*Volume is calculated based off City of Albuquerque DPM Section 6.2.8

V. DEVELOPED CONDITIONS

While development is eventually anticipated throughout the DA-8 project area, this particular report can only assume development densities for the adjacent tracts. This report is prepared in support of the public infrastructure to serve a number of these adjacent tracts, as well as those located in other Drainage Areas. Specifically, Mesa del Sol has begun the design of East and West University Boulevard within the City Center project area as part of a City of Albuquerque Public Work Order (PWO Package C) CPN 393572, as well as University Boulevard south to the Level B Boundary (PWO Package D), CPN 393573.

PWO Package C (CPN 393572) includes full roadway sections of East University Boulevard (from Stryker Road to the Southern Couplet), West University Boulevard (from North Mesa del Sol Boulevard to the Southern Couplet), storm drain improvements within East and West University Blvd roadways, and a portion of the regional pond system east of University Boulevard.

PWO Package D (CPN 393573) includes the east half-roadway section of University Blvd from the South Couplet to the southern limits of the Mesa del Sol Level B Boundary, storm drain improvements within University Boulevard, and regional retention ponding east of University Boulevard.

Upon completion of PWO C and PWO D, the storm drain and pond infrastructure will be able to accommodate full build-out of the remaining tracts within DA-8, although the development of these tracts and their adjacent public right-of-way will require appropriate drainage infrastructure to connect to these trunk systems.

The developed conditions basins identified in Overall DMP for DA-8 have been divided into sub-basins for detailed analysis purposes (see **EXHIBIT B** for Proposed Basin Map). These sub-basins contain flows (**APPENDIX A**) that will drain into the roadways and proposed ponds. See **Table 4** for a summary of these calculations. All roadways in the drainage area (East and West University Blvd, North and South Mesa del Sol Blvd, Cather Crossing, Fellini, and University Blvd) have been divided into basins that have been determined by design profiles and the typical roadway sections (see **APPENDIX B**). The roadways will be constructed with standard 8" curb and gutter and will convey all storm runoff from these fully developed roadway basins. Flows directed to low points in the roadways will be collected by inlets in sump condition on both sides of the street and conveyed through public storm drain to the regional retention ponds. All inlets (see **APPENDIX C**) have been sized to allow for ultimate developed conditions of the roadway basins and all storm drain pipes (see **EXHIBIT D**) have been sized to allow for ultimate developed conditions of all basins. Summaries of inlet and storm drain calculations can be found in **Table 5** and **Table 6** below.

VI. GRADING PLAN

The grading plans for East and West University Boulevard, University Boulevard, and the interim ponds for the undeveloped tracts' fully developed conditions are included in 'EXHIBIT E–Grading Plan' of this report. This grading is based on the 60% design for PWO packages C and D. Pond grading will be optimized and reduced in the future but will meet required volumes.

The trunk storm drain system will be within West University, where it will include stubs for future storm drain within the intersection roadways (North Mesa del Sol, South Mesa del Sol, Cather Crossing). These cross streets are assumed to accept flows from fully developed conditions from the adjacent tracts, which the storm drain has been sized to accommodate. The storm drain will slope south, where it will combine with a similar trunk system in East University and inlets along the roadway, before discharging directly into Pond 8-1, southeast of the southern University couplet.

South of the couplet on University Boulevard, curb inlets at low points and at intersections with future roadways will collect roadway flow on both sides of the road and drain east into Ponds 8-1, 8-2, and 8-3. At these future intersections, storm drain stubs will be extended to the east to accommodate future storm drainage infrastructure within those streets and to serve the tracts east of University Boulevard. Culverts that serve as equalization pipes between the various ponds along University Boulevard will be constructed to connect ponds so that they can collectively meet the required runoff volume from the developed basins.

VII. CALCULATIONS

All the calculations to support the narrative are included in the appendices and were computed in accordance with the COA DPM, Chapter 6. The COA DPM rational method utilizes land treatment designations and imperviousness to represent surface losses. This site is located in precipitation zone 2. Land treatments are based on fully developed conditions. All roadway basins are based on the roadway sections with 90% D and 10% C. The smaller basins located in the City Center (Basins 8-1C, 8-1F, 8-1H, 8-1J, 8-1L, and 8-1N) are assumed to have 90% D, 5% C, and 5% B. The larger basins east of the ponds are assumed to have 50% type D with the remaining split between type B and C. Refer to **Table 4** for a hydrologic summary of these basins.

Primarily, Rational Method (per the COA DPM) was used to calculate basin runoff for the contributing basins, Manning's equation for open channel flow was used to analyze the roadway capacities, while HEC-22 methodology was used to analyze inlet and storm drain capacities. Inlets have been sized with a 50% clogging factor (**APPENDIX C**). Modeling results from Stormwater Studio have been included in **APPENDIX D**. The design storm used in the analysis of roadway and storm drainage infrastructure is the 100-year, 24-hour storm event. As all ponds are full retention, they were analyzed following the requirements and procedures in the City of Albuquerque Development Process Manual (COA DPM) Part 6-2(A), using the 100-year, 10-day storm event (**APPENDIX E**).

VIII. CONCLUSION

This drainage report follows the previously approved drainage master plans, drainage reports, and chapter 6 of the COA DPM. The proposed storm drain infrastructure and drainage management schemes allow for the safe management of storm runoff and preservation of the natural terrain in permanent conditions. Attached analysis demonstrates that the proposed drainage infrastructure has been sized accordingly and the 100-year 10-day runoff is effectively managed.

RE: Mesa del Sol Innovation Park III - Overall Drainage Management Plan
Drainage Management Plan Submittal for Bulk Land Plat
Drainage Management Plan Engineer's Stamp Date: 2/27/2024
Hydrology File: R16D097D

Dear Mr. Brown,

Based upon the information provided in your submittal received 3/4/2024, the Drainage Management Plan is preliminary approved for Bulk Land Plat action by the DHO.

PO Box 1293
Albuquerque
NM 87103

For future grading & drainage plan submittals, the land treatment percentage values for DA 9 needs to be verified. It looks like they should be 0%, 10%, 10% & 80% for land treatment A, B, C & D respectively based on 9-A through 9-E land treatment percentages. Please also check the land treatment numbers for DA8 & DA10.

DA 9	498.50	0.0%	5.0%	5.0%	90.0%
------	--------	------	------	------	-------

If you have any questions, please contact me at 505-924-3695 or tchen@cabq.gov.

Sincerely,

www.cabq.gov

DRAINAGE MANAGEMENT PLAN

INTRODUCTION/PURPOSE
THIS SUBMITTAL DESCRIBES THE DRAINAGE MANAGEMENT SCHEME FOR MESA DEL SOL LEVEL B - SOUTH MASTER PLANNED AREAS, SPECIFICALLY WITHIN THE CITY CENTER AREA, SOUTH UNIVERSITY BLVD CORRIDOR, THE SPECIAL INDUSTRIAL USE AREA, AND THE RESIDENTIAL AREA WEST OF SOUTH UNIVERSITY BLVD. THIS DRAINAGE MANAGEMENT PLAN WILL SERVE AS A GUIDING DOCUMENT FOR FUTURE DEVELOPMENT WITHIN THESE AREAS-PROVIDING DRAINAGE CALCULATIONS AND ULTIMATE POND SIZING FOR THE RESPECTIVE GENERAL DRAINAGE AREAS (REFERRED TO HEREIN AS "DAs"). SPECIFICALLY, THIS DMP IS SUBMITTED IN SUPPORT OF COA HYDROLOGY APPROVAL FOR A BULK LAND PLAT THAT COVERS A LARGE PORTION OF THE ABOVE-DESCRIBED AREA(S). IN ADDITION, THIS PLAN WILL ALSO PROVIDE A FRAMEWORK FOR FUTURE DRAINAGE MANAGEMENT PLANS THAT FOCUS ON SMALLER DEVELOPMENTS WITHIN THIS OVERALL AREA.

EXISTING CONDITIONS

THE DRAINAGE AREAS SOUTH OF THE EXISTING APERTURE CENTER AND CURRENT EXTENTS OF MESA DEL SOL DEVELOPMENT ARE GENERALLY CHARACTERIZED BY UNDEVELOPED LANDS WITH MODERATE SLOPES (0.5%-2%) THAT DO NOT INCLUDE MAJOR ARROYOS OR DRAINAGEWAYS WITH INCISED CHANNELS. THE EXISTING VEGETATIVE LAND COVER IS PREDOMINANTLY DESERT SHRUB AND SCRUB SLOPES THAT CONCENTRATE DRAINAGE ALONG THE EXISTING PLAYAS, WHICH ARE DISCUSSED IN MORE DETAIL WITHIN THE MESA DEL SOL LEVEL B MASTER PLAN. AT A HIGH LEVEL, THIS DMP MAINTAINS FIDELITY TO THE EXISTING DRAINAGE PATTERNS BY REPLICATING THE RETENTION STORAGE OF THE EXISTING PLAYAS VIA CONSTRUCTED RETENTION PONDS THAT ALSO PROVIDE GREEN SPACE AND MULTIFUNCTION RECREATION FACILITIES.

PROPOSED DRAINAGE MANAGEMENT PLAN

THIS DRAINAGE MANAGEMENT PLAN CONTINUES THE APPROACH TAKEN PREVIOUSLY AT MESA DEL SOL UNDER THE MESA DEL SOL DRAINAGE AREA ZERO DRAINAGE MANAGEMENT PLAN (R16DA0, STAMP DATE 1/17/2008). THE NAMING CONVENTION CONTINUES IDENTIFYING DISCRETE DRAINAGE AREAS (STARTING AT DA8) FOR RESPECTIVE AREAS. A NUMBER OF THE AREAS ARE IDENTIFIED AS NON-CONTRIBUTING AREAS THAT ARE SELF-CONTAINED AND DO NOT CONTRIBUTE TO THE PROJECT AREA ALONG THE UNIVERSITY AND DEKOONING TRUNK PONDS AND ASSOCIATED STORM DRAINS. THESE ARE DA3A (ABQ STUDIOS EXPANSION - R16DA3006AA), DA11, DA12, DA13, DA15, AND DA10 (MONTAGE SUBDIVISIONS). DA8 CONSISTS OF THE CITY CENTER DRAINAGE AREA, DA9 IS THE SPECIAL INDUSTRIAL USE AREA EAST OF UNIVERSITY BOULEVARD, AND DA10 IS THE FUTURE RESIDENTIAL AND MIXED USE AREAS WEST OF UNIVERSITY BOULEVARD.

DA9 (SPECIAL INDUSTRIAL USE AREA) IS PLANNED TO REQUIRE FULL RETENTION ON-SITE FOR EACH OF THE TRACTS WITHIN THIS AREA. THIS APPROACH IS APPROPRIATE FOR THE LAND USE AND IS CONSISTENT WITH THE EXISTING MESA DEL SOL EMPLOYMENT CENTER TO THE NORTH. ON-SITE PONDS WITHIN THE VARIOUS TRACTS WILL BE REQUIRED TO RETAIN THE 100-YEAR, 10-DAY STORM EVENT AND NO RUNOFF FROM THIS AREA WILL IMPACT THE PUBLIC STORM DRAINS AND PONDING FACILITIES (APART FROM DRAINAGE WITHIN THE PUBLIC RIGHT-OF-WAYS).

DA10 WILL ALLOW THE VARIOUS TRACTS WITHIN THIS DRAINAGE AREA TO FREELY DISCHARGE DEVELOPED FLOWS TO REGIONAL, PUBLIC PONDING FACILITIES (PONDS 10-1 AND POND 2). THIS INCLUDES EXTENSION OF PUBLIC STORM DRAINS FROM THE SOUTHERN-MOST PORTION OF THE MONTAGE 3B SUBDIVISION THAT CURRENTLY DRAINS TO A TEMPORARY RETENTION POND AT THE WESTERN MESA DEL SOL BOULEVARD COUPLETT. THESE PONDS WILL ALSO PROVIDE A BUFFER BETWEEN THE RESIDENTIAL AREAS COMPRISING DA10 FROM THE MIXED USE CORRIDOR IMMEDIATELY WEST OF UNIVERSITY BOULEVARD. BASED ON ASSUMED FUTURE LAND USE, DA10 WILL PRODUCE 53.84 ACRE-FEET OF RUNOFF VOLUME IN THE 100-YEAR, 10-DAY STORM. PONDS 10-1 & 10-2 PROVIDE 73.88 ACRE-FEET OF RETENTION TO ACCOMMODATE THIS RUNOFF.

DA8 INCLUDES THE CITY CENTER AREA WITHIN MESA DEL SOL, AS WELL AS THE UNIVERSITY BOULEVARD CORRIDOR'S IMMEDIATELY ADJACENT TRACTS. THESE AREAS WILL FEATURE STORM DRAINS THAT CARRY FLOWS TO THE SOUTH, WHERE REGIONAL PONDS WILL BE LOCATED ALONG THE EAST SIDE OF UNIVERSITY BOULEVARD. BASED ON ASSUMED LAND USE, THESE DA8 BASINS WILL PRODUCE 60.89 ACRE-FEET OF RUNOFF VOLUME DURING THE 100-YEAR, 10-DAY STORM EVENT. THIS RUNOFF WILL BE ACCOMMODATED IN PONDS 8-1, 8-2, AND 8-3 THAT WILL PROVIDE 135.23 ACRE-FEET OF RETENTION VOLUME.

THESE REGIONAL RETENTION PONDS WITHIN DA10 AND DA8 WILL BE SUBJECT TO FUTURE SITE PLANNING CONSIDERATIONS WHICH WILL INCORPORATE WATER QUALITY FACILITIES, ALONG WITH AESTHETICALLY PLEASING FEATURES SUCH AS A TRAIL SYSTEM, PEDESTRIAN AMENITIES, AND SEDIMENTATION BASIN FACILITIES. ADDITIONALLY, INFILTRATION BASINS WILL BE INSTALLED WITHIN THE BOTTOM OF THE RETENTION PONDS TO HELP MANAGE NUISANCE FLOWS AND ENCOURAGE INFILTRATION.

THESE INFILTRATION BASINS HAVE NOT BEEN INCLUDED INTO THE 100-YEAR, 10-DAY POND VOLUME CALCULATIONS.

FLOODPLAIN

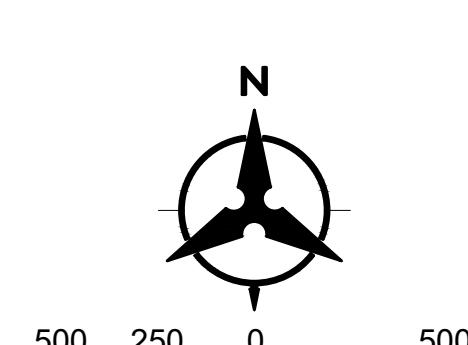

THERE IS A ZONE AE FLOODPLAIN PARTIALLY LOCATED WITHIN DA9 (MAP PANEL NUMBER 35001C0555H) DUE TO ONE OF THE EXISTING PLAYAS. DEVELOPMENT WITHIN DA9 WILL BE REQUIRED TO DEVELOP A MITIGATION STRATEGY FOR THIS PARTICULAR FLOODPLAIN. AS THIS FLOODPLAIN IS A RESULTANT OF THE EXISTING PLAYA (LOW POINT), AS OPPOSED TO AN ACTIVE FLOODWAY, THIS APPROACH IS APPROPRIATE MITIGATION STRATEGY THAT IS SPECIFIC TO THE DEVELOPMENT OF THE AFECTED TRACTS, AS OPPOSED TO THIS REGIONAL MANAGEMENT PLAN.

CONCLUSION

THIS DRAINAGE MANAGEMENT PLAN SUBMITTAL HAS BEEN PREPARED IN ACCORDANCE WITH CITY OF ALBUQUERQUE AND MESA DEL SOL LEVEL B MASTER PLAN REQUIREMENTS. THE PLAN DEMONSTRATES THE PROPOSED DRAINAGE MANAGEMENT CONCEPTS HAVE BEEN SIZED APPROPRIATE FOR THE DESIGN STORM EVENTS AND THE IMPLEMENTATION OF THESE IMPROVEMENTS WILL EFFECTIVELY MANAGE STORMWATER RUNOFF DURING THE 100-YEAR, 10-DAY STORM EVENT. INDIVIDUAL SITES WITHIN THE STUDY AREA WILL BE SUBJECT TO SEPARATE CITY OF ALBUQUERQUE HYDROLOGY REVIEW AND APPROVAL, IN CONJUNCTION WITH THE GUIDELINES SET FORTH IN THIS DRAINAGE MANAGEMENT PLAN. WITH THIS SUBMITTAL, WE REQUEST HYDROLOGY DEPARTMENT APPROVAL FOR THE BULK LAND PLAT ASSOCIATED WITH THIS SAME PROJECT AREA.
