Executive Summary

This traffic impact study was prepared for North Development expansion (Phase I) at the Albuquerque Studios Site located at (7650 University Blvd) Mesa del Sol (MdS) in Southeast Albuquerque. The study area for the North Development encompasses University Boulevard and two access points onto University Boulevard.

The North Development (Phase I) is anticipated for build-out, implementation and opening in April 2023.

Phase I consists of an expansion of the existing film studio production operation as follows:

- Vendor Village 2 Buildings 100k SF
- Mill 2* Buildings 50k SF
- Production Office 1 Buildings 145k SF
- Total 5 Buildings 295k SF

*A second Mill is proposed as a replacement for an existing Mill for a net-zero increase in traffic for this building replacement.

The total building square footage of the existing Albuquerque Studios site is approximately 331,000 SF.

The Average Daily Traffic (ADT) on University Blvd is 3,602 Vehicles per day (April 2021) with nearly equal direction distribution (50%) in the Northbound and Southbound directions. The percentage of Heavy Commercial (%HC) was determined to be 5.15% during the study count period in April 2021.

The peak hour periods varied for the study area. On University Boulevard adjacent to the site, the corresponding AM Peak Hour, Noon Peak Hour, and PM Peak Hour occurred from 7:45 AM to 8:45 AM, 11:45 AM to 12:45 PM, and from 4:15 PM to 5:15 PM, respectively.

The projected trip generation (enter and exit) at Gate B is forecasted to be 98, 145, and 98 for the AM Peak Hour, Noon Peak Hour, and PM Peak Hour, respectively. See Figures 1 and 2 for Gate A and B locations.

Site mitigation recommendations include Gate A and Gate B to be constructed with two exit lanes, two enter lanes, and Stop-controlled Traffic Controlled traffic operation. The

ALBUQUERQUE STUDIOS EXPANSION PHASE I, NORTH DEVELOPMENT

existing southbound (SB) left-turn lane at University Boulevard & Gate B should be opened for use. Gate B should be constructed similar to Gate A to allow for pedestrian access with ADA accommodations and required queue length. It is recommended that turn-around locations be provided in advance of the gate. Additionally, pull-off areas designated for taxi and ridesharing should be provided for both Gate A and Gate B.

The maximum queue length forecasted for the southbound to eastbound left turns at Intersection 3 (University Boulevard & Strand Loop/Existing Gate A) is 44 Feet (3 vehicles). The maximum queue length forecasted for the southbound to eastbound left turns at Intersection 4 (University Boulevard & Avedon/(Gate B) is 54 Feet (3 vehicles).

The provided queue capacity of 400 Feet (2 lanes @ 150 Feet + 100 Feet on University Boulevard) exceeds the maximum expected queues at both gates.

1.0 INTRODUCTION AND BACKGROUND

This Traffic Impact Study (TIS) was conducted to support site plan approval for the expansion of the North Development Phase 1 of the Albuquerque Studios site located at 7650 University Blvd in Mesa del Sol Planned Community in the City of Albuquerque.

1.1 STUDY PURPOSE

The study purpose is to assess the traffic impacts on the roadway network within the study area for the Northern development phase of expansion of the Albuquerque Studios site.

1.2 STUDY PROCEDURES

The TIS procedures follow the current edition of the Development Process Manual, City of Albuquerque dated September 4, 2020.

1.2.1 Information Sources

Existing traffic data were collected during the week of April 19, 2021 for use in this TIS. This data was used to develop the trip generation estimates for the site development and for development of the baseline for the traffic analyses.

Crash data were obtained from UNM-TRU (a division of the University of New Mexico geospatial and Population Studies Department) for the study area [TRU Request Data | Geospatial and Population Studies \(unm.edu\)](#)

The MRCOG website [Traffic Flow Maps and Busiest Intersections | Mid-Region Council of Governments, NM \(mrcog-nm.gov\)](#) was referenced in determination of background traffic and growth of traffic expected on University Blvd. Additionally, the Traffic Analysis and Querying Application (TAQA) available from MRCOG was referenced for existing traffic data to support this TIS.

“Big Data” Platform using anonymous cell phone “pings” and other Global Positioning System (GPS) devices was used to calibrate the traffic data for impacts of COVID to reflect Pre-COVID (“Normal”) Traffic patterns and volumes was obtained for use in this TIS.

1.2.2 Scope

The scope of the TIS includes University Boulevard adjacent to the site and two site access points (Gate A and Gate B) along University Boulevard. Gate A aligns with Strand Loop SE public roadway on the west leg of the intersection, and Gate A serves as the east leg of the site access intersection. Gate B (proposed access) aligns with Avedon Avenue SE.

Additional intersections were included in the Traffic Data Collection area to be used for future analyses in support of additional phases of development.

1.2.3 LOS

The desired Level of Service (LOS) corresponds to LOS C-D (Table 7.5.88 pg. 7-164 DPM). LOS is a traffic analysis term that represents the delay traveling through intersections. Traffic LOS is designated “A” through “F” with LOS A representing free flow conditions and LOS F representing severe traffic congestion.

Table 1. City of Albuquerque (CABQ) Level of Service (LOS) Criteria

Functional Classification and Roadway Type	Employment Center
Collector	LOS C-D

2.0 EXISTING CONDITIONS

The roadway network and existing conditions are described in this section. Also described are current traffic volumes and roadway conditions used in the traffic analysis for this TIS.

2.1 GENERAL AREA CHARACTERISTICS

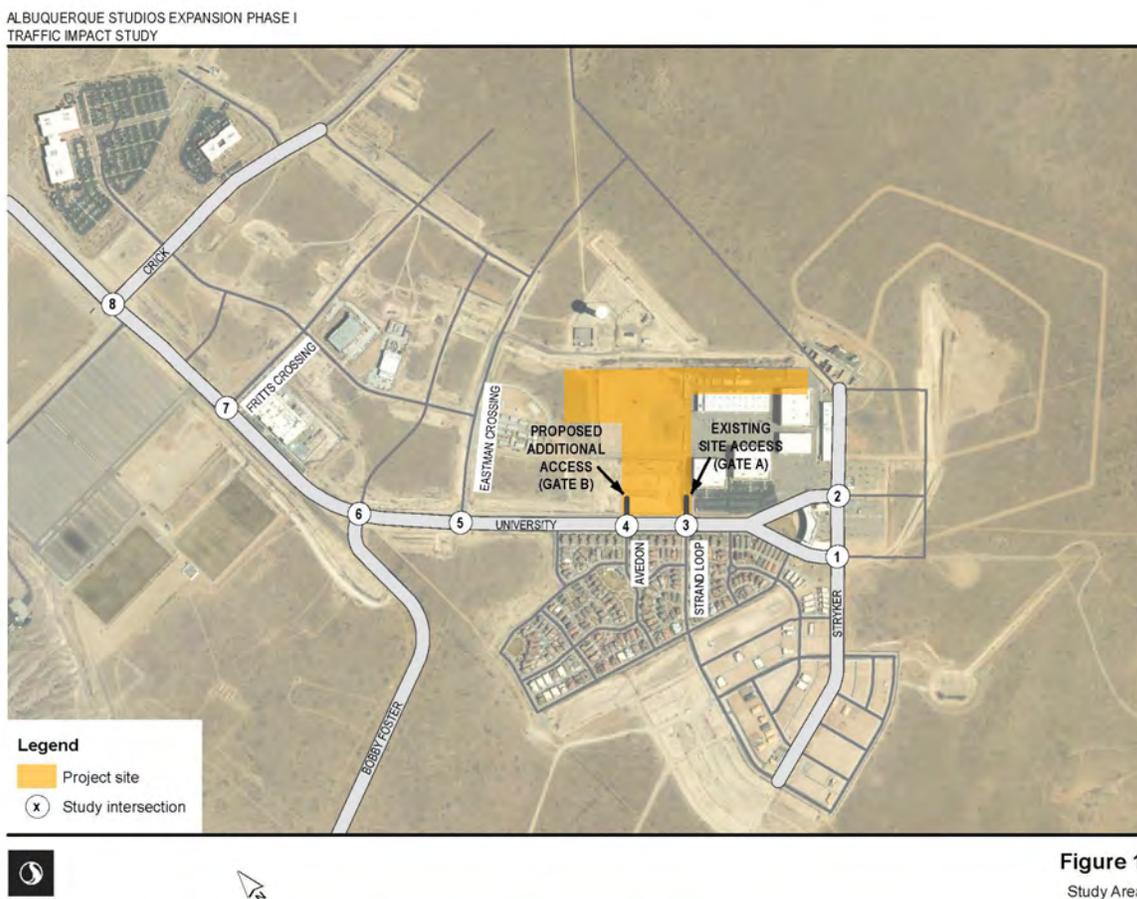

The project site is located in the planned community of Mesa Del Sol in southeast Albuquerque. Land use for the site is designated as Employment Center. Adjacent to the site and to the west is residential single-family housing. The Mesa del Sol Master Plan includes a complete mixed-use land use. The site is currently zoned as a Planned Community (PC). A copy of the zone atlas page R-16-Z is provided in the Appendix. Other planned development at Mesa del Sol includes residential construction, schools, and planned construction/expansion of athletic facilities.

ALBUQUERQUE STUDIOS EXPANSION PHASE I, NORTH DEVELOPMENT

The study area is shown in **Figure 1** and a site plan of the development is provided in **Figure 2**.

Figure 1. Study Area Map

Other planned development at Mesa del Sol includes residential construction, schools, and planned construction/expansion of athletic facilities.

A site plan of the development is provided in **Figure 2**.

2.2 AREA STREET NETWORK

The street network in the influence area includes University Boulevard adjacent to the site and the corresponding intersecting streets Strand Loop SE/Gate A and Avedon Avenue SE. Both intersecting streets provide access to single-family residential.

University Boulevard is classified as an Urban Major Collector Street (Source MRCOG, Roadway-Functional Classification in the Albuquerque Metropolitan Planning Area [AMPA]). University Boulevard is constructed with two standard width driving lanes in the northbound (NB) and southbound (SB) directions with parallel parking along the outside curb line. The existing speed limit is 35 mph for University Boulevard. Bike lanes (5 feet) are provided along University Boulevard on the outside of the right thru travel lane. The street is a paved typical urban typical asphalt concrete pavement section with roadway lighting along University.

University Boulevard has existing permanent “Wrong Way” and “Do Not Enter” signs to alert vehicles of the illegal movement of NB traffic traveling in the SB lanes.

Figure 3. Southbound University Blvd at Site

University Boulevard is constructed with a raised landscaped median (50 feet wide). 110 feet long left-turn lanes exist at the median openings along University Boulevard.

2.3 EXISTING TRAFFIC VOLUMES

Traffic data were collected for the study along University Boulevard from Crick Avenue (North) to Stryker Road (South). Average Daily Traffic (ADT) and intersection turning movement counts (TMC) were collected for this (TIS). Traffic data were collected during the week of April 19th, 2021. Raw traffic data is provided in the appendix.

Traffic data were calibrated using the NMDOT Methodology issued in October 2020. An analysis was conducted pre-COVID (April 2019) and during COVID (April 2020). A corresponding factor was obtained and applied to the April 2021 TMC traffic data collected for this Study. Any outliers determined using the “Big Data” platform were limited to a 1.42 increase or a 0.42 decrease. This value was determined from the ADT decrease from April 2019 to April 2020.

Table 2. Summary of Intersection TMCs*

Intersection	AM Peak Hour	Noon Peak Hour	PM Peak Hour
1. University (SB) and Stryker	69 (7:30 AM – 8:30 AM)	98 (11:45 AM – 12:45 PM)	43 (3:45 PM – 4:45 PM)
2. University (NB) and Stryker	32 (8:45 AM – 9:45 AM)	85 (11:45 AM – 12:45 PM)	44 (3:45 PM – 4:45 PM)
3. University and Gate A/Strand Loop	200 (7:45 AM – 8:45 AM)	327 (11:45 AM – 12:45 PM)	286 (4:15 PM – 5:15 PM)
4. University and Avedon	320 (7:45 AM – 8:45 AM)	361 (11:30 AM – 12:30 PM)	299 (4:15 PM – 5:15 PM)
5. University and Eastman Crossing	387 (7:45 AM – 8:45 AM)	413 (11:30 AM – 12:30 PM)	308 (3:00 PM – 4:00 PM)
6. University and Bobby Foster	295 (7:45 AM – 8:45 AM)	226 (11:30 AM – 12:30 PM)	322 (3:00 PM – 4:00 PM)
7. University and Fritts	504 (7:45 AM – 8:45 AM)	406 (11:15 AM – 12:15 PM)	433 (3:00 PM – 4:00 PM)
8. University and Crick	597 (7:45 AM – 8:45 AM)	496 (11:30 AM – 12:30 PM)	560 (3:00 PM – 4:00 PM)

*Data calibrated for COVID using NMDOT Methodology (Method 3, October 2020)

Table 3. Summary of ADT (April 2021)

Location	ADT – Direction 1	ADT – Direction 2
Stryker Rd.	233 (Eastbound)	250 (Westbound)
University Blvd*	1,602 (Northbound)	1,606 (Southbound)
*The percentage of Heavy Commercial (%HC) for University was 5.1%		

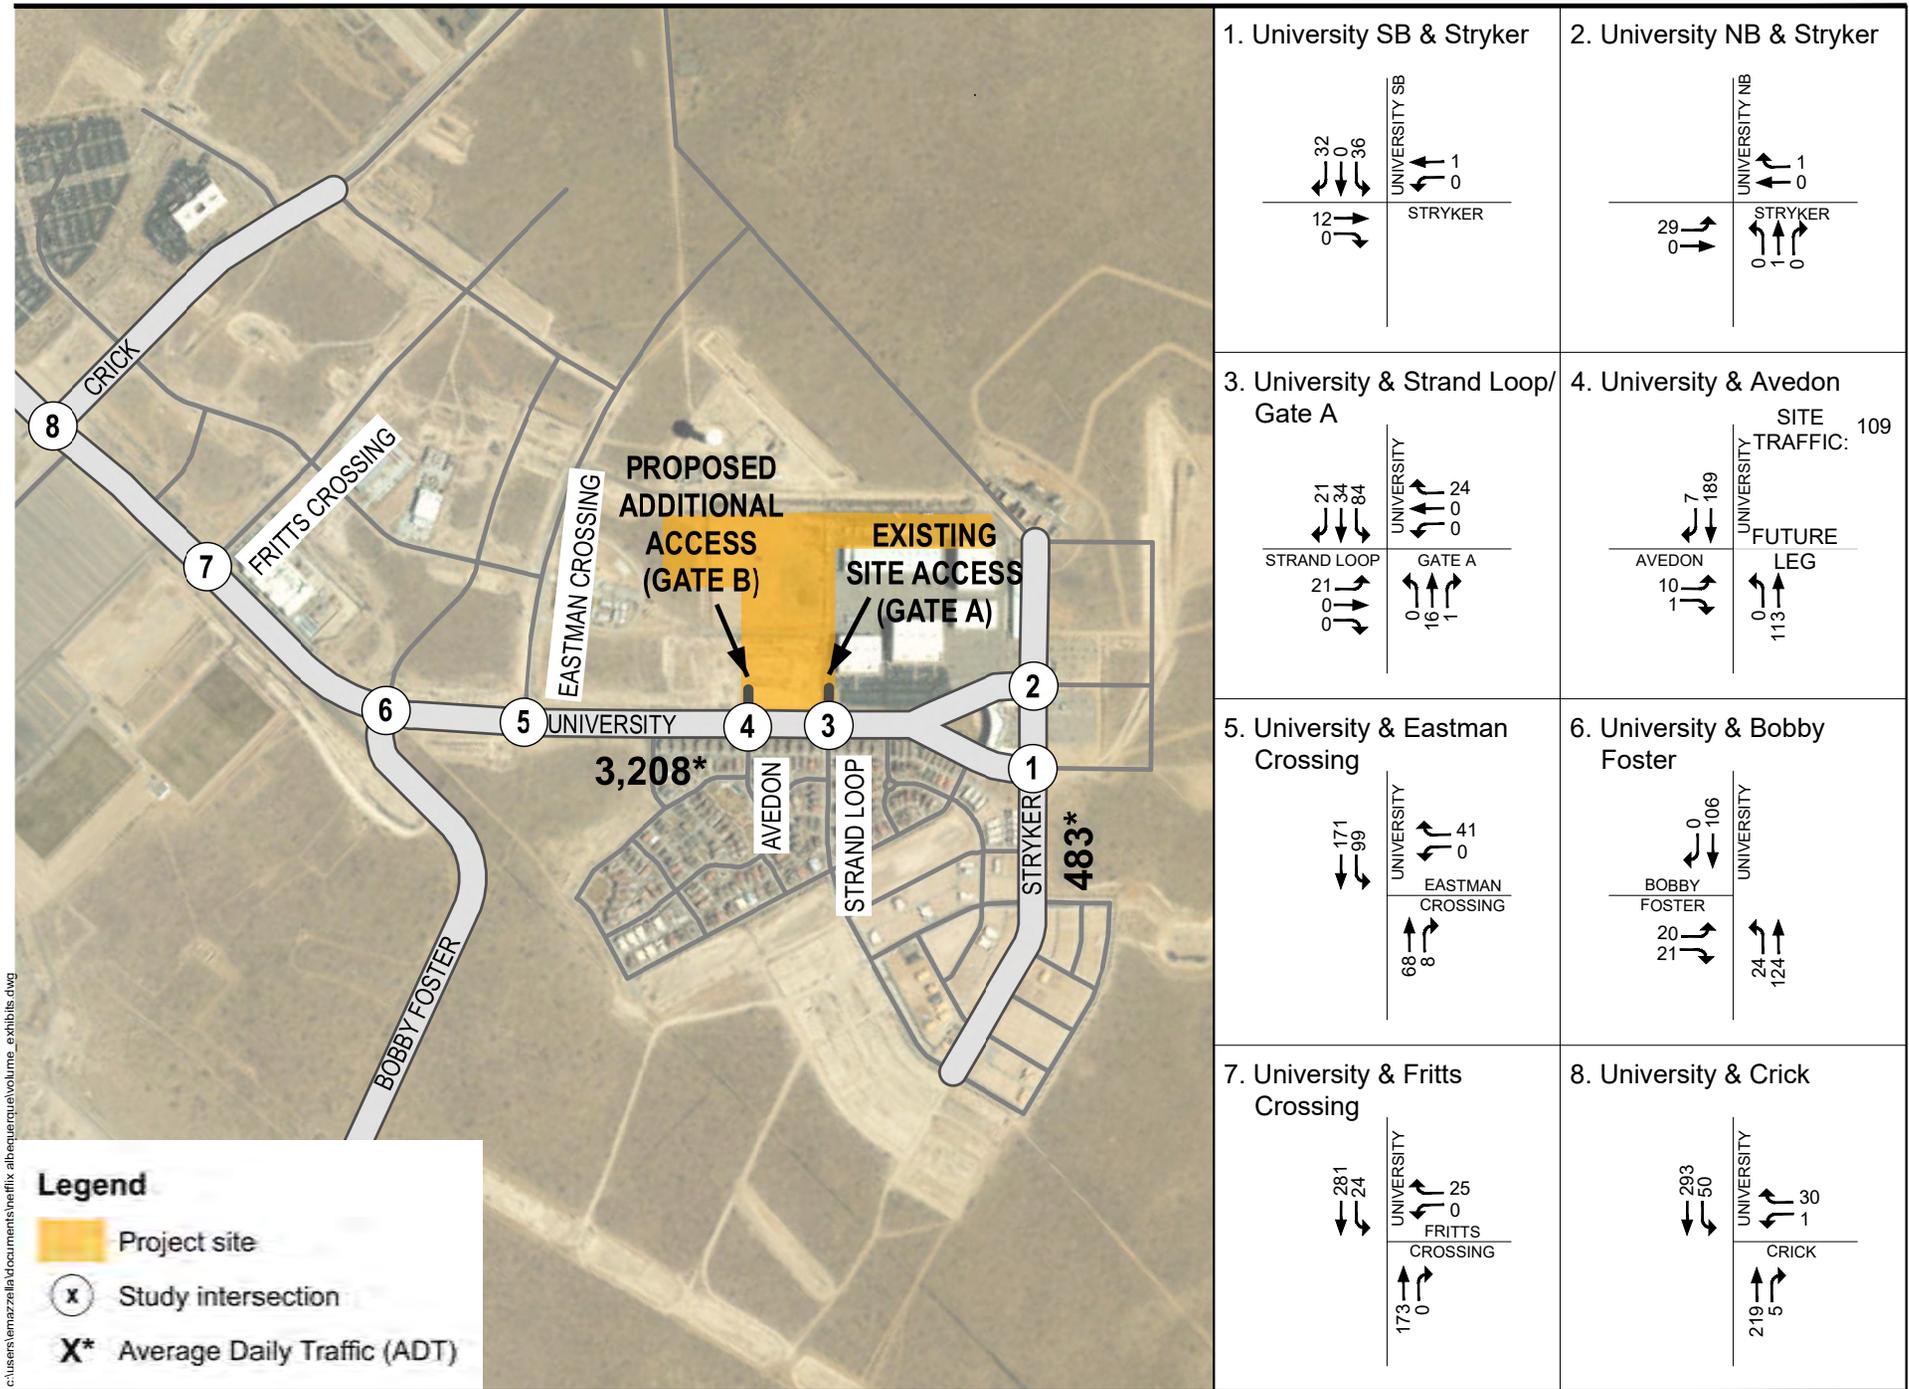

Figure 4

Existing Intersection AM Peak Hour Volumes and Average Daily Traffic (ADT)

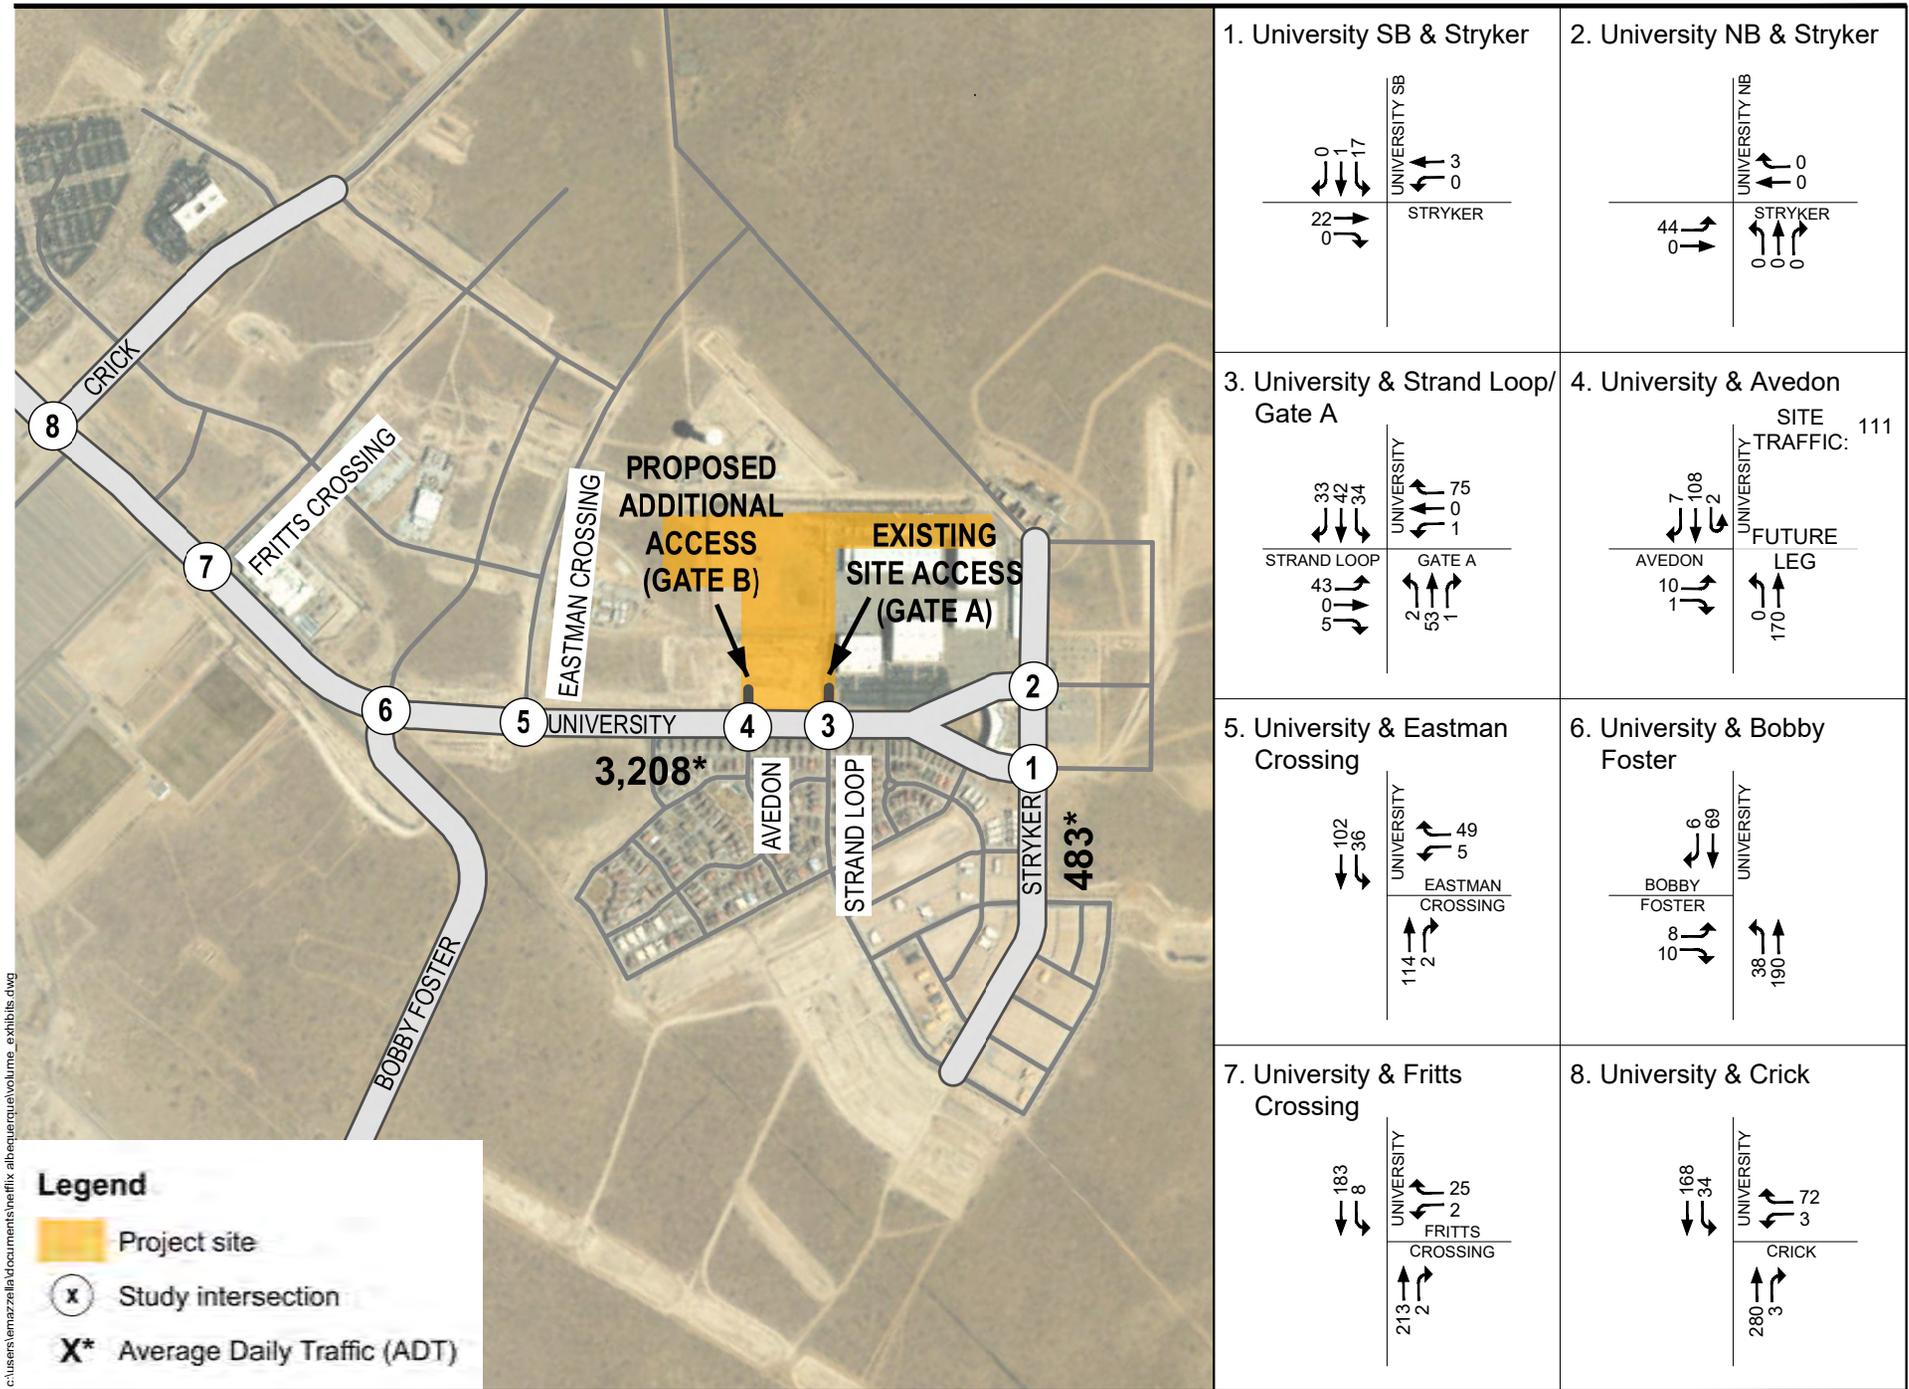

Figure 5

Existing Intersection PM Peak Hour Volumes and Average Daily Traffic (ADT)

2.4 EXISTING LEVELS OF SERVICE (LOS)

Table 4. Summary of Existing LOS

Intersection	Traffic Control	*AM Peak Hour Delay (sec), LOS	Noon Peak Hour Delay (sec), LOS	*PM Peak Hour Delay (sec), LOS
1. University (SB) & Stryker	TWSC	0.0, A	9.9, A	9.4, A
2. University (NB) & Stryker	TWSC	8.4, A	0.0, A	0.0, A
3. University & Ex Gate/Strand Loop	TWSC	10.9, B	12.3, B	10.5, B
4. University & Future Gate B/Avedon	TWSC	10.3, B	10.5, B	9.8, A
5. University & Eastman Crossing	TWSC	9.0, A	10.5, B	9.7, A
6. University & Bobby Foster	TWSC	10.4, B	9.5, A	10.3, A
7. University & Fritts Crossing	TWSC	9.5, A	9.3, A	9.7, A
8. University & Crick	TWSC	9.4, A	9.9, A	10.0, B
TWSC – Two-way stop-control				
*Existing Peak Hour Factors (PHFs) and % HC were used in the LOS analysis				

The existing storage length for ingress traffic is 150 feet at the gate * 2 lanes + 100 FT for the Southbound to Eastbound turning movement. Existing Gate A storage is for approximately twelve (12) vehicles on site and an additional four (4) vehicles on University Blvd. (SB to EB).

An existing queuing analysis was conducted on May 20, 2021. Arrivals to Gate A and processing of vehicles into the site were analyzed during the 11:30 AM to 1:00 PM noon peak period. The maximum queue length was two (2) vehicles during this period. Gate processing rates generally took less than five (5) seconds. Maximum gate processing times were approximately 3 minutes. The maximum rate occurred on occasion but not routinely.

2.5 EXISTING TRANSIT SERVICE

At present time, public transit/transportation is not available to or from MdS. Rio Bravo is the closest a present time. Future transit to Mesa del Sol is currently being planned for. The nearest transit stop/service is from Rio Bravo bus route 222.

2.6 BICYCLE AND PEDESTRIAN CONSIDERATIONS

Multi-modal transit plays an important role in the MdS community. Bike lanes exist along both sides of University Boulevard. Public sidewalks parallel University Boulevard and are constructed to meet Americans with Disabilities Act (ADA) requirements. Additional protection is provided to pedestrians with a landscaped buffer on University Boulevard.

Table 5. Existing Pedestrians and Bicycle Flow on University Boulevard

Intersection	Daily Pedestrian Flow	Daily Bicycle Flow
1. University (SB) and Stryker (9-hour)	26	2
2. University (NB) and Stryker (9-hour)	2	0
3. University and Gate A/Strand Loop (12-hour)	40	1
4. University and Avedon (9-hour)	33	0
5. University and Eastman Crossing (12-hour)	12	1
6. University and Bobby Foster (12-hour)	0	2
7. University and Fritts Crossing (9-hour)	4	2
8. University and Crick (9-hour)	1	0

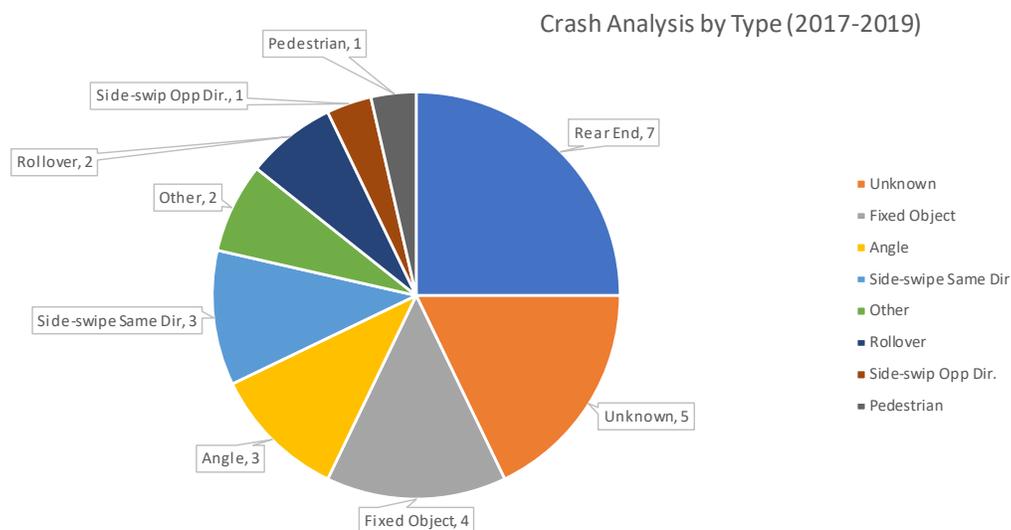

2.7 SAFETY EVALUATION/CRASH DATA

Crash data along University Boulevard and in the study area were obtained from UNM-TRU for the three most recent years available (2017-2019). There were a total of twenty-eight (28) crashes during the three-year period. There were no reported fatal crashes. There was one (1) reported serious injury crash, two (2) non-serious injury crashes, three (3) possible injury crashes, and twenty-two (22) property damage only crashes. The average crash frequency for the area was just over nine (9) crashes per year during the study period.

The crash analysis revealed that that the predominant types of crashes were rear end (7) and Fixed Object (4). There were five (5) crashes of unknown type. There were three (3) angle crashes and three (3) side-swipe same direction crashes. Angle crashes typically occur at intersections or access locations.

Figure 6. Crash Analysis (2017-2019)

3.0 FUTURE TRAFFIC CONDITIONS AND ANALYSIS YEARS

3.1 PROJECT IMPLEMENTATION YEAR

The North Development (Phase I) is anticipated for implementation, build-out, and opening in the Spring of 2023.

3.2 SITE TRAFFIC

Site traffic is traffic attributable to the site development at time of implementation and opening (Spring 2023).

The total traffic forecasted for the North Development during the AM, Noon, and PM Peak hours are as follows:

- AM Peak Hour - Total of 98 Trip Ends
- Noon Peak Hour - Total of 145 Trip Ends
- PM Peak Hour - Total of 98 Trip Ends

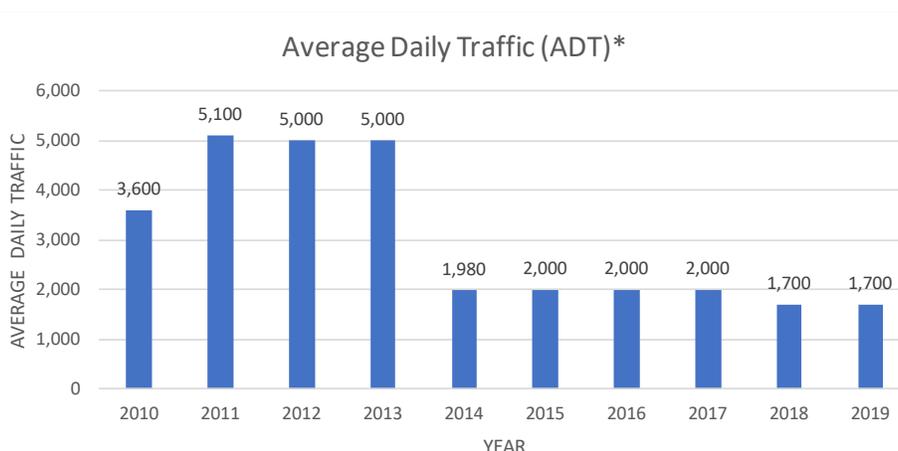

A Trip End is defined as either an arrival to the site, or departure from the site.

The site traffic is further described and detailed in the Trip Generation Section of the report in Section 4.2 Trip Generation.

3.3 GROWTH IN THROUGH TRAFFIC

A review of the MRCOG 10-year historical growth rate in traffic are shown to have declined from 3,600 ADT in 2010 to 1,700 in 2019. Based upon the decline, this study has elected to use a 0.5% annualized growth rate (Minimum required by DPM, reference pg. 7-167).

Figure 7. Historical Average Daily Traffic at Mesa del Sol

*Source MRCOG website.

3.4 OTHER PLANNED DEVELOPMENT

There is ongoing development at MdS. The projects have been coordinating traffic data for existing conditions and proposed conditions for this study. This coordination is anticipated to continue with future master planning for this Albuquerque Studios Site. Other known planned development consists of residential, commercial, retail, and construction of a new school and athletic facilities.

3.5 CONSIDERATION OF PROGRAMMED ROADWAY IMPROVEMENTS

Public stakeholders include the CABQ, BC, MRCOG, and NMDOT. Currently there are localized improvements north of the study area on University Boulevard. A widening

project of the bridge over the Tijeras Arroyo is under construction. No other planned improvements are programmed for University Boulevard at this time.

Mesa del Sol Boulevard is a future proposed arterial roadway to Mesa del Sol. A timeline has not been established for the roadway at this time. Other improvements associated with Mesa del Sol Blvd include a study to plan and design of a new interchange at Mesa del Sol Boulevard & I-25. Also being studied are improvements at Bobby Foster/Los Picaros that include the possibility of a new Interchange with I-25. This study is expected to commence in Fall of 2021.

4.0 PROPOSED SITE TRAFFIC CHARACTERISTICS

4.1 SITE DEVELOPMENT CHARACTERISTICS

The North Development is proposed as an expansion of existing operations to reflect similar density and building facilities compared with the existing site. A summary of the existing site facilities and proposed facilities for the Northern Development are shown in Table 7 and Table 8, respectively.

Table 7. Existing Site Facilities

Development Summary	Quantity and Size
Building A, Stage 1, and 2	1 @ 50 TSF
Building B, Stage 3, and 4	1 @ 60 TSF
Stage 5 and 6	1 @ 36 TSF
Stage 7 and 8	1 @ 65 TSF
Mill	1 @ 80 TSF
Production Offices	1 @ 40 TSF
Total	6 @ 331 TSF
TSF – Thousand square feet	

Table 8. Proposed Northern Development

Development Summary	Quantity and Size
Vendor Village	2 @ 50 TSF
Mill *	1 @ 60 TSF
Production Offices	1 @ 145 TSF
Total	4 @ 305 TSF
TSF – Thousand square feet	

- Note: Two (2) Mill Buildings are proposed for the North Development Phase, however one of the Mill Buildings is a replacement for an existing Mill Building on-site

4.2 TRIP GENERATION

Trip Generation for this project was estimated based upon existing conditions at Gate A. Existing Gate A traffic data was collected during April 2021 (April 20, 2021). April 2021 was indicated as a high-use period for business operations by the Owner. The April 2021 Gate A data were calibrated for COVID, following the NMDOT Guidelines (Method 3) issued in October 2020. The North Development Phase I is nearly equal to the size of the existing Albuquerque Studios Development (approximately 90% of the size). Corresponding trip generation is also projected at 90% of existing trip generation at Gate A.

Table 9. Peak Hour Trip Generation Projections

Gate	Gate A (Existing)	Gate B (Proposed)
– Enter	Enter	Enter
– AM Peak Hour	85	76
– Noon Peak Hour	107	95
– PM Peak Hour	34	30
– Exit	Exit	Exit
– AM Peak Hour	25	22
– Noon Peak Hour	56	50
– PM Peak Hour	76	68
– Total Trips	Total	Total
– AM Peak Hour	110	98
– Noon Peak Hour	163	145
– PM Peak Hour	110	98

ALBUQUERQUE STUDIOS EXPANSION PHASE I, NORTH DEVELOPMENT

The forecasted Trip Generation for the peak hour (Trips) by Building Type is summarized below:

	AM	Noon	PM
Mill (17%) of the Trips Generated:	17	25	17
Vendor Village (34%) of the Trips Generated	34	49	34
Production Offices (49%) of the Trips Generated	48	71	48

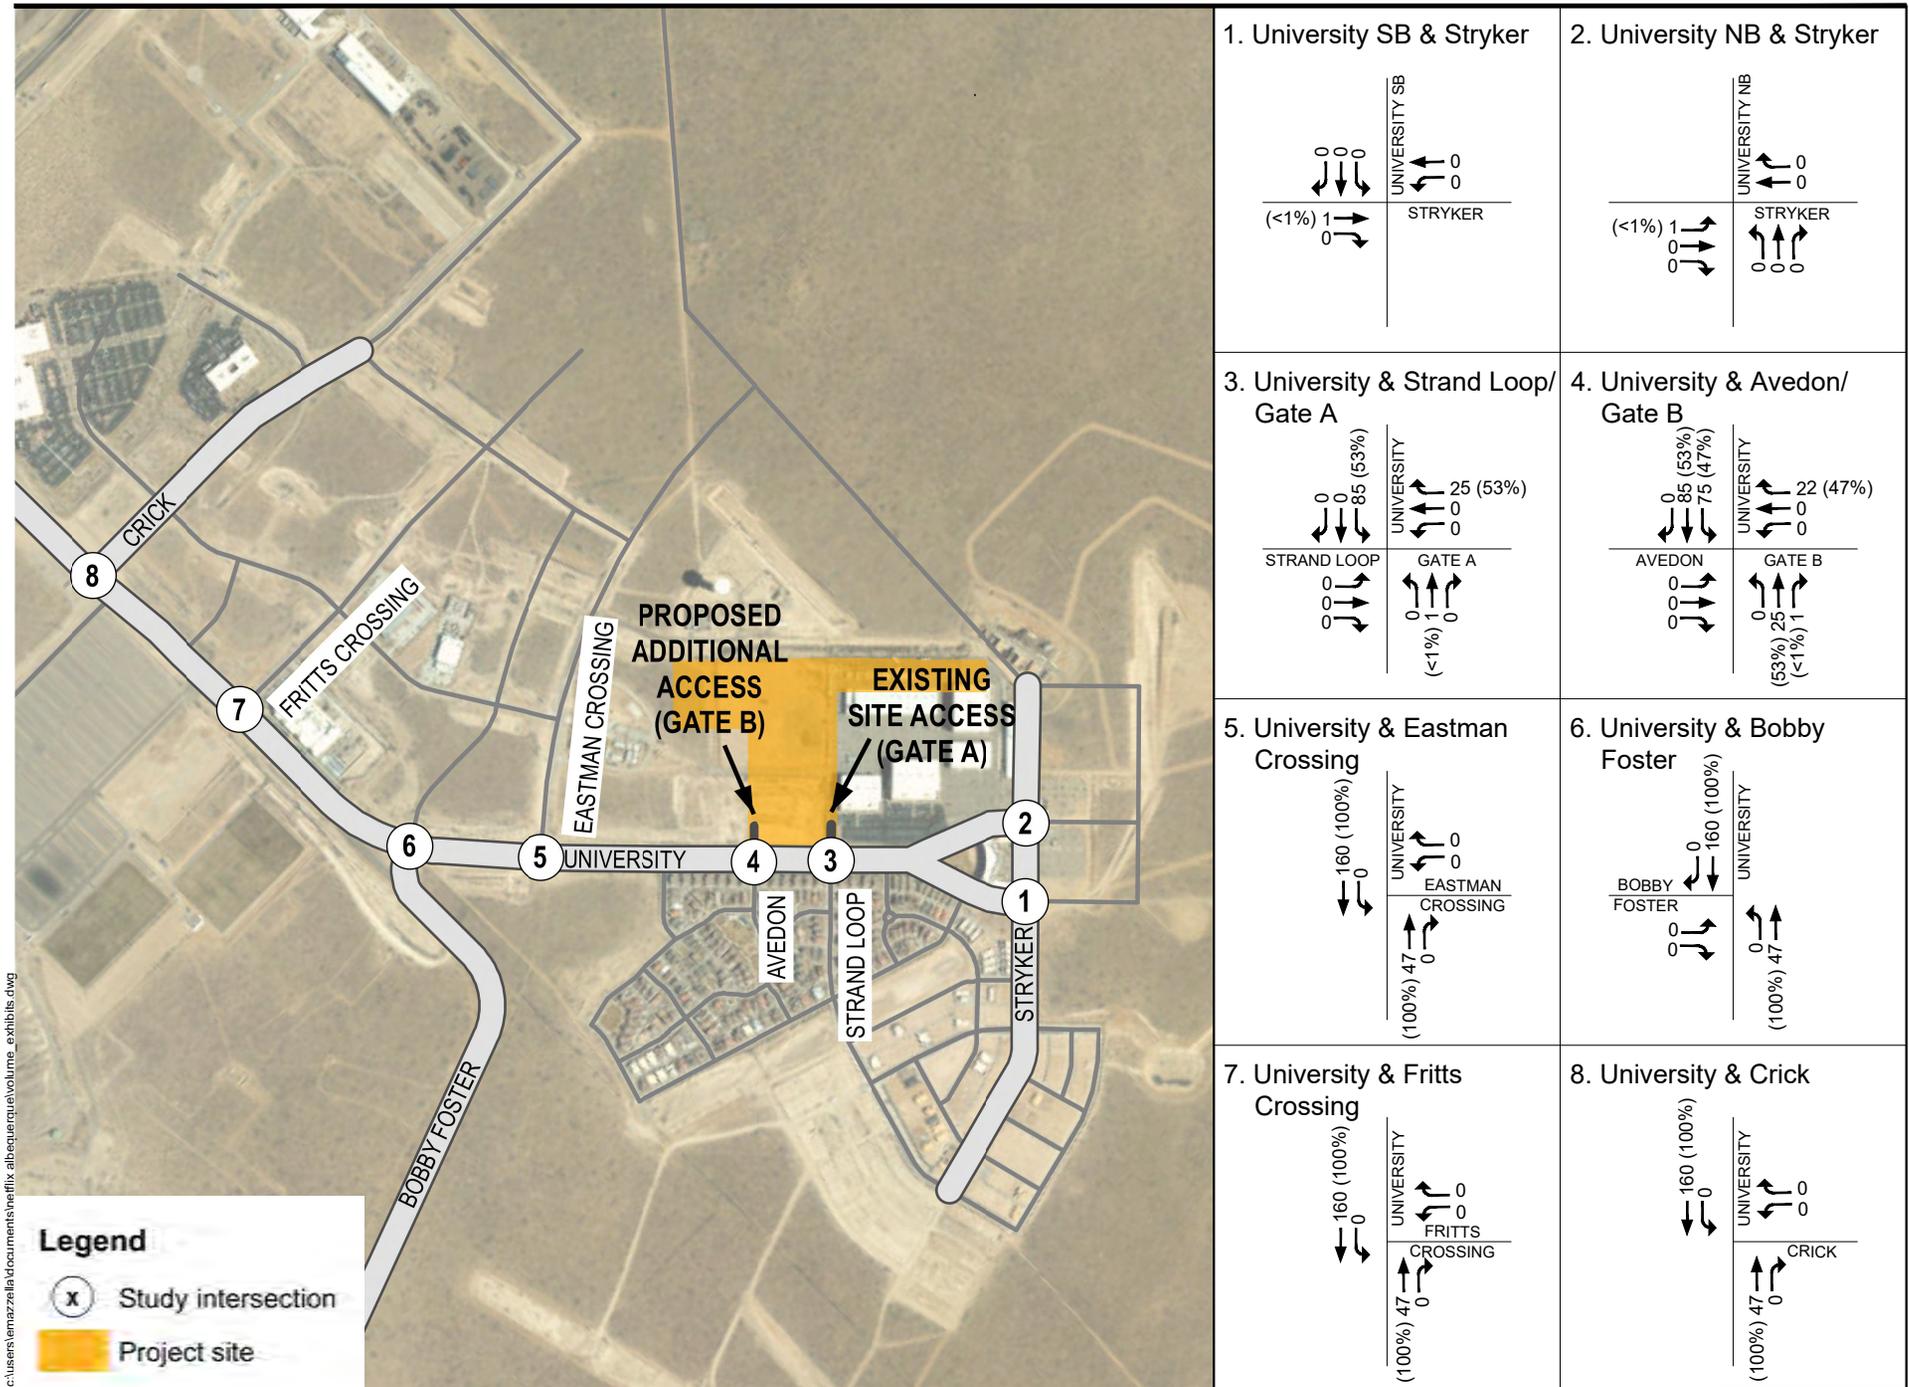

Figure 8

Project-Only Intersection AM Peak Hour Volumes

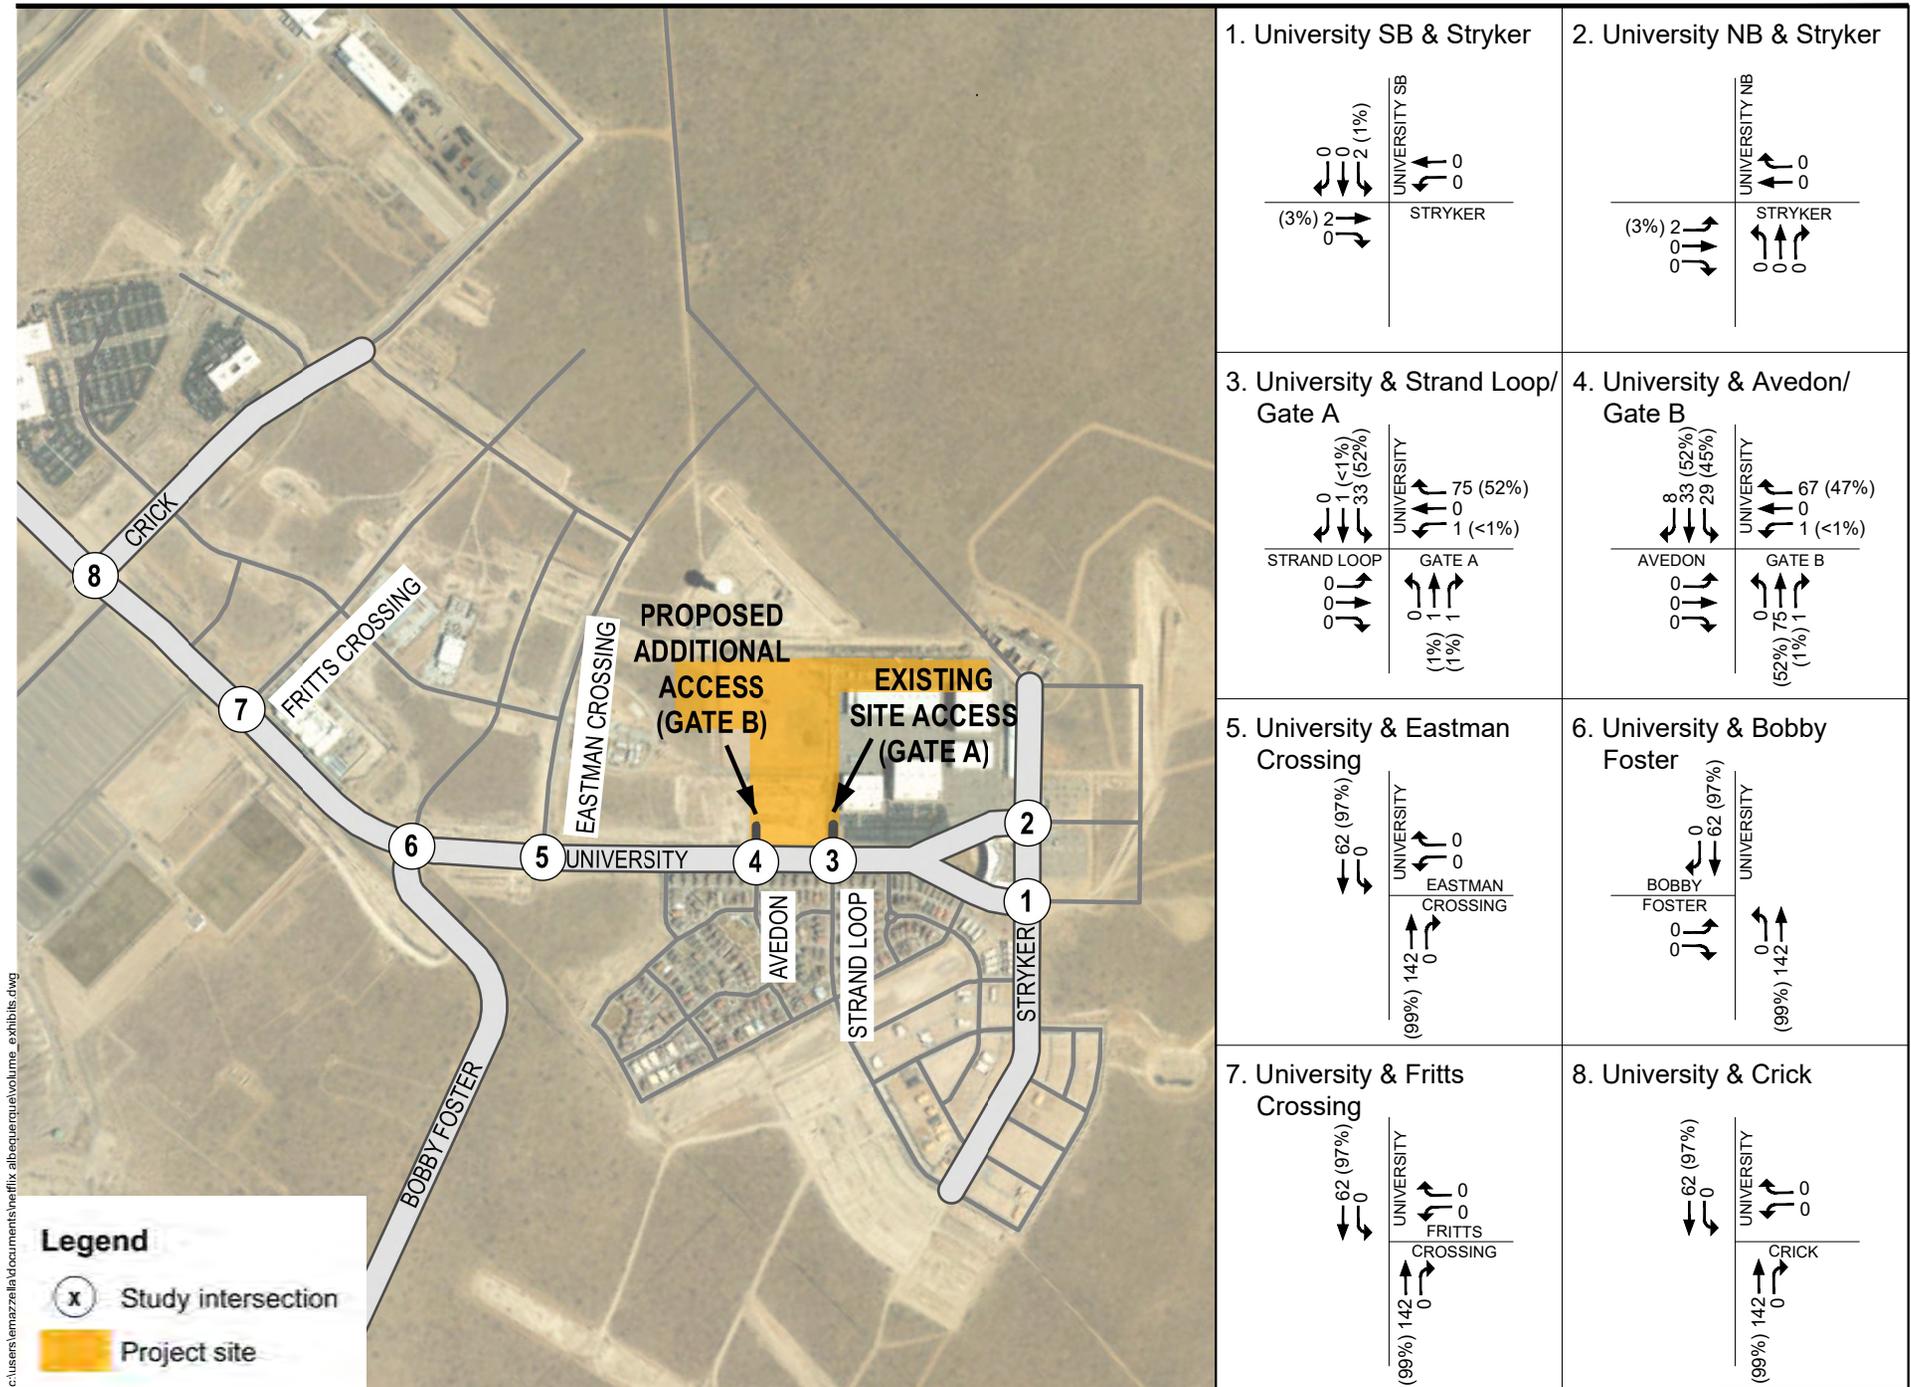

Figure 9

Project-Only Intersection PM Peak Hour Volumes

4.3 OTHER TRIP GENERATION CONSIDERATIONS

No other trip generation considerations were relevant to this analysis.

4.4 TRIP DISTRIBUTION

The primary distribution of Ingress/Egress traffic for this project (Phase I, North Development) is expected to use University Boulevard to and from the North to access I-25. Forecasted traffic was distributed considering existing travel patterns and distribution. The trip distribution along with percentages is depicted on the traffic flow and trip generation diagrams (Figures 7-10).

4.5 TRAFFIC ASSIGNMENT

Forecasted traffic was based upon the existing traffic distribution entering and exiting the site at Gate A.

5.0 TRAFFIC ANALYSIS

Synchro traffic engineering analysis software was used to conduct intersection and access operational analyses. Existing and build-out LOS were determined for each of the peak periods for the Gate A and Gate B access points. Figure 9 and Figure 10 illustrate the forecasted traffic conditions for implementation year (2023) during the AM and PM Peak Hour analysis periods, respectively.

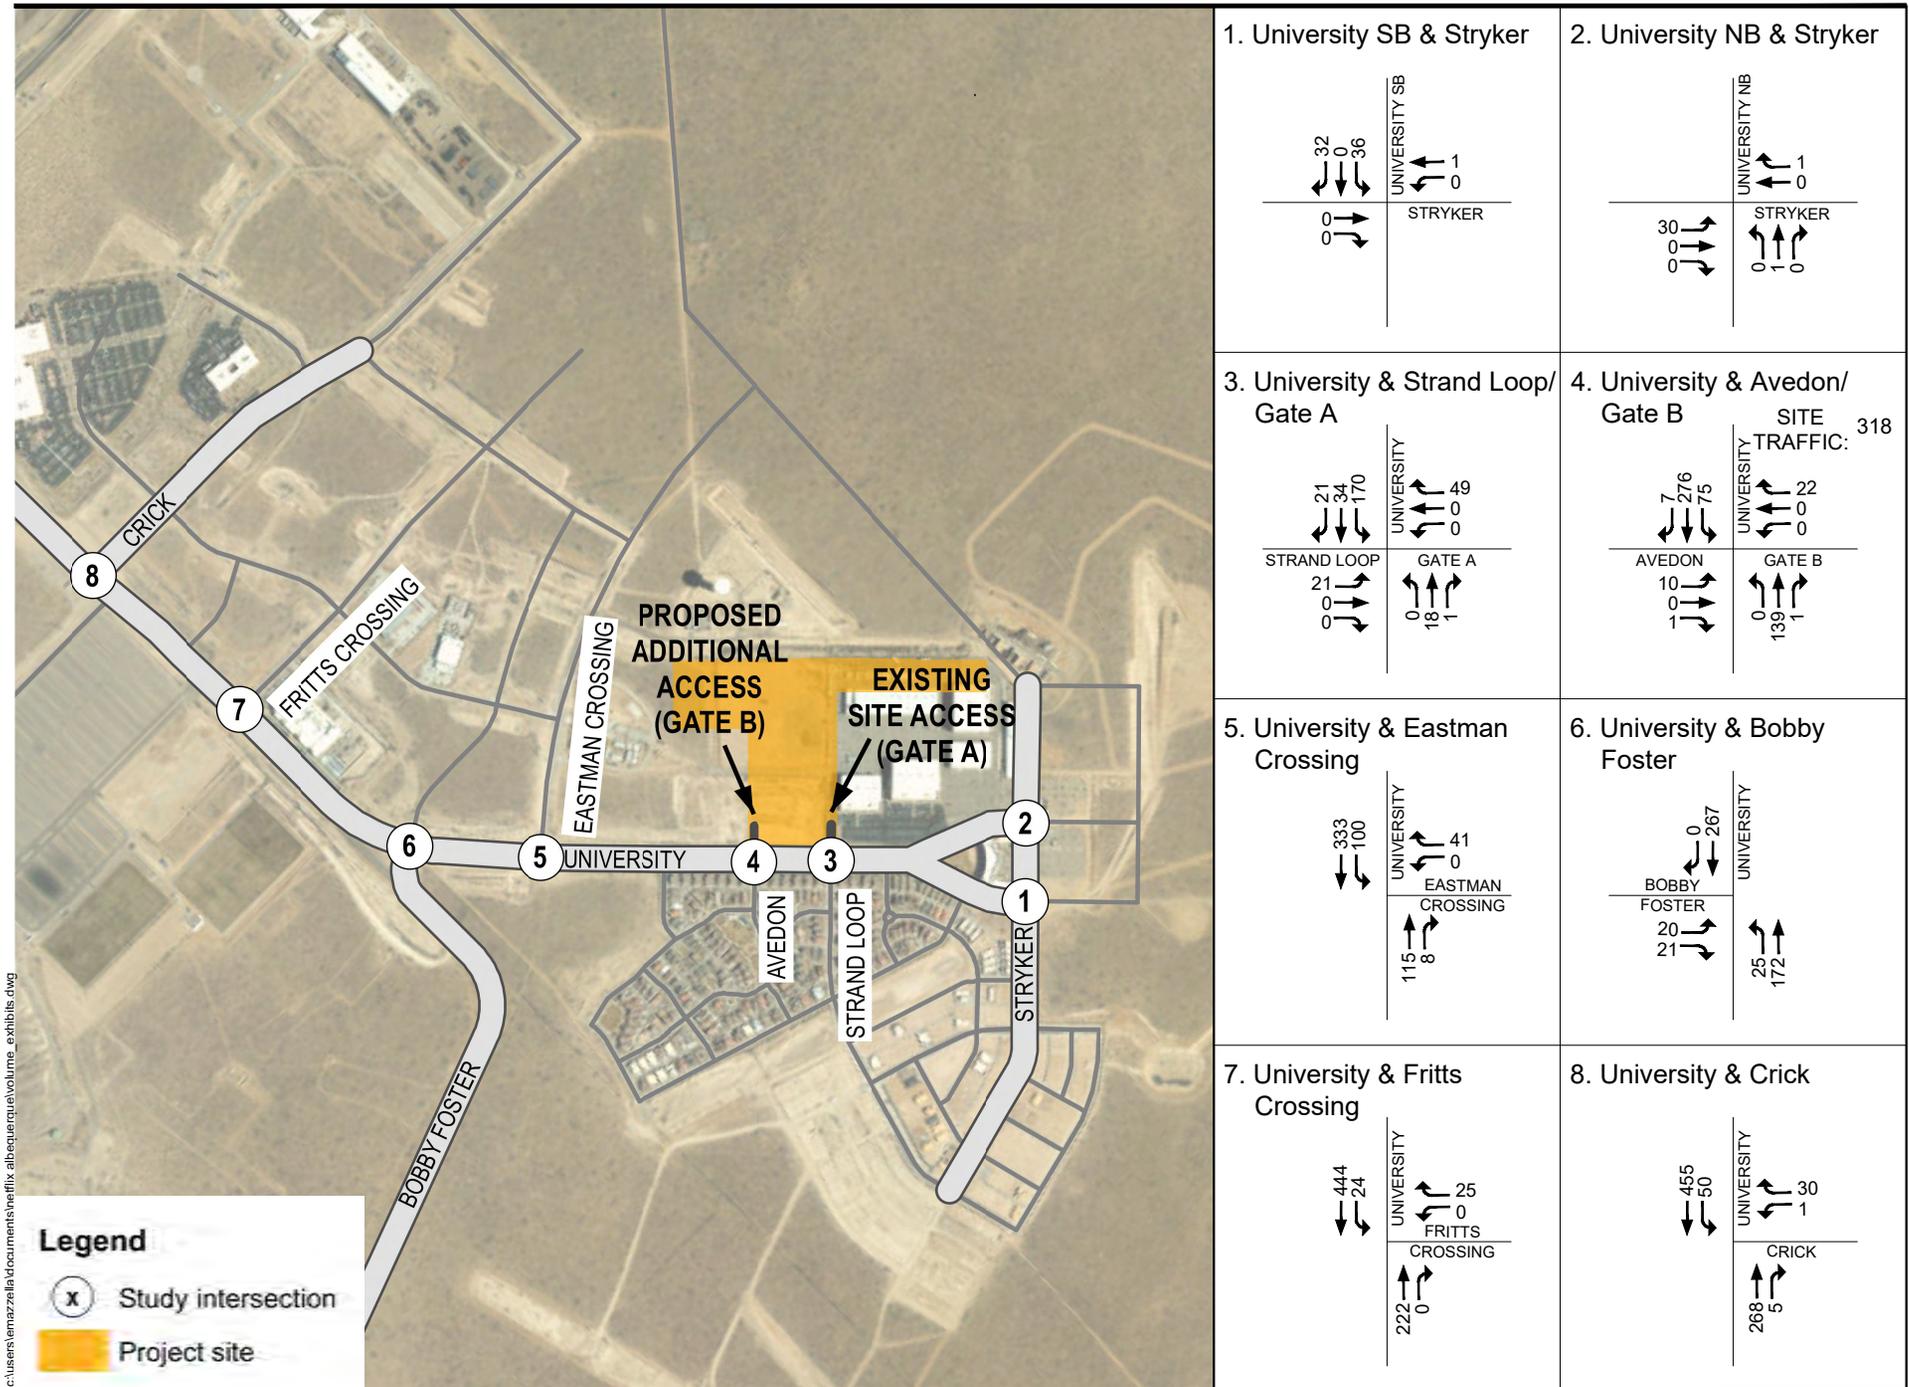

Figure 10

Opening Year (2023) with Project Intersection AM Peak Hour Volumes

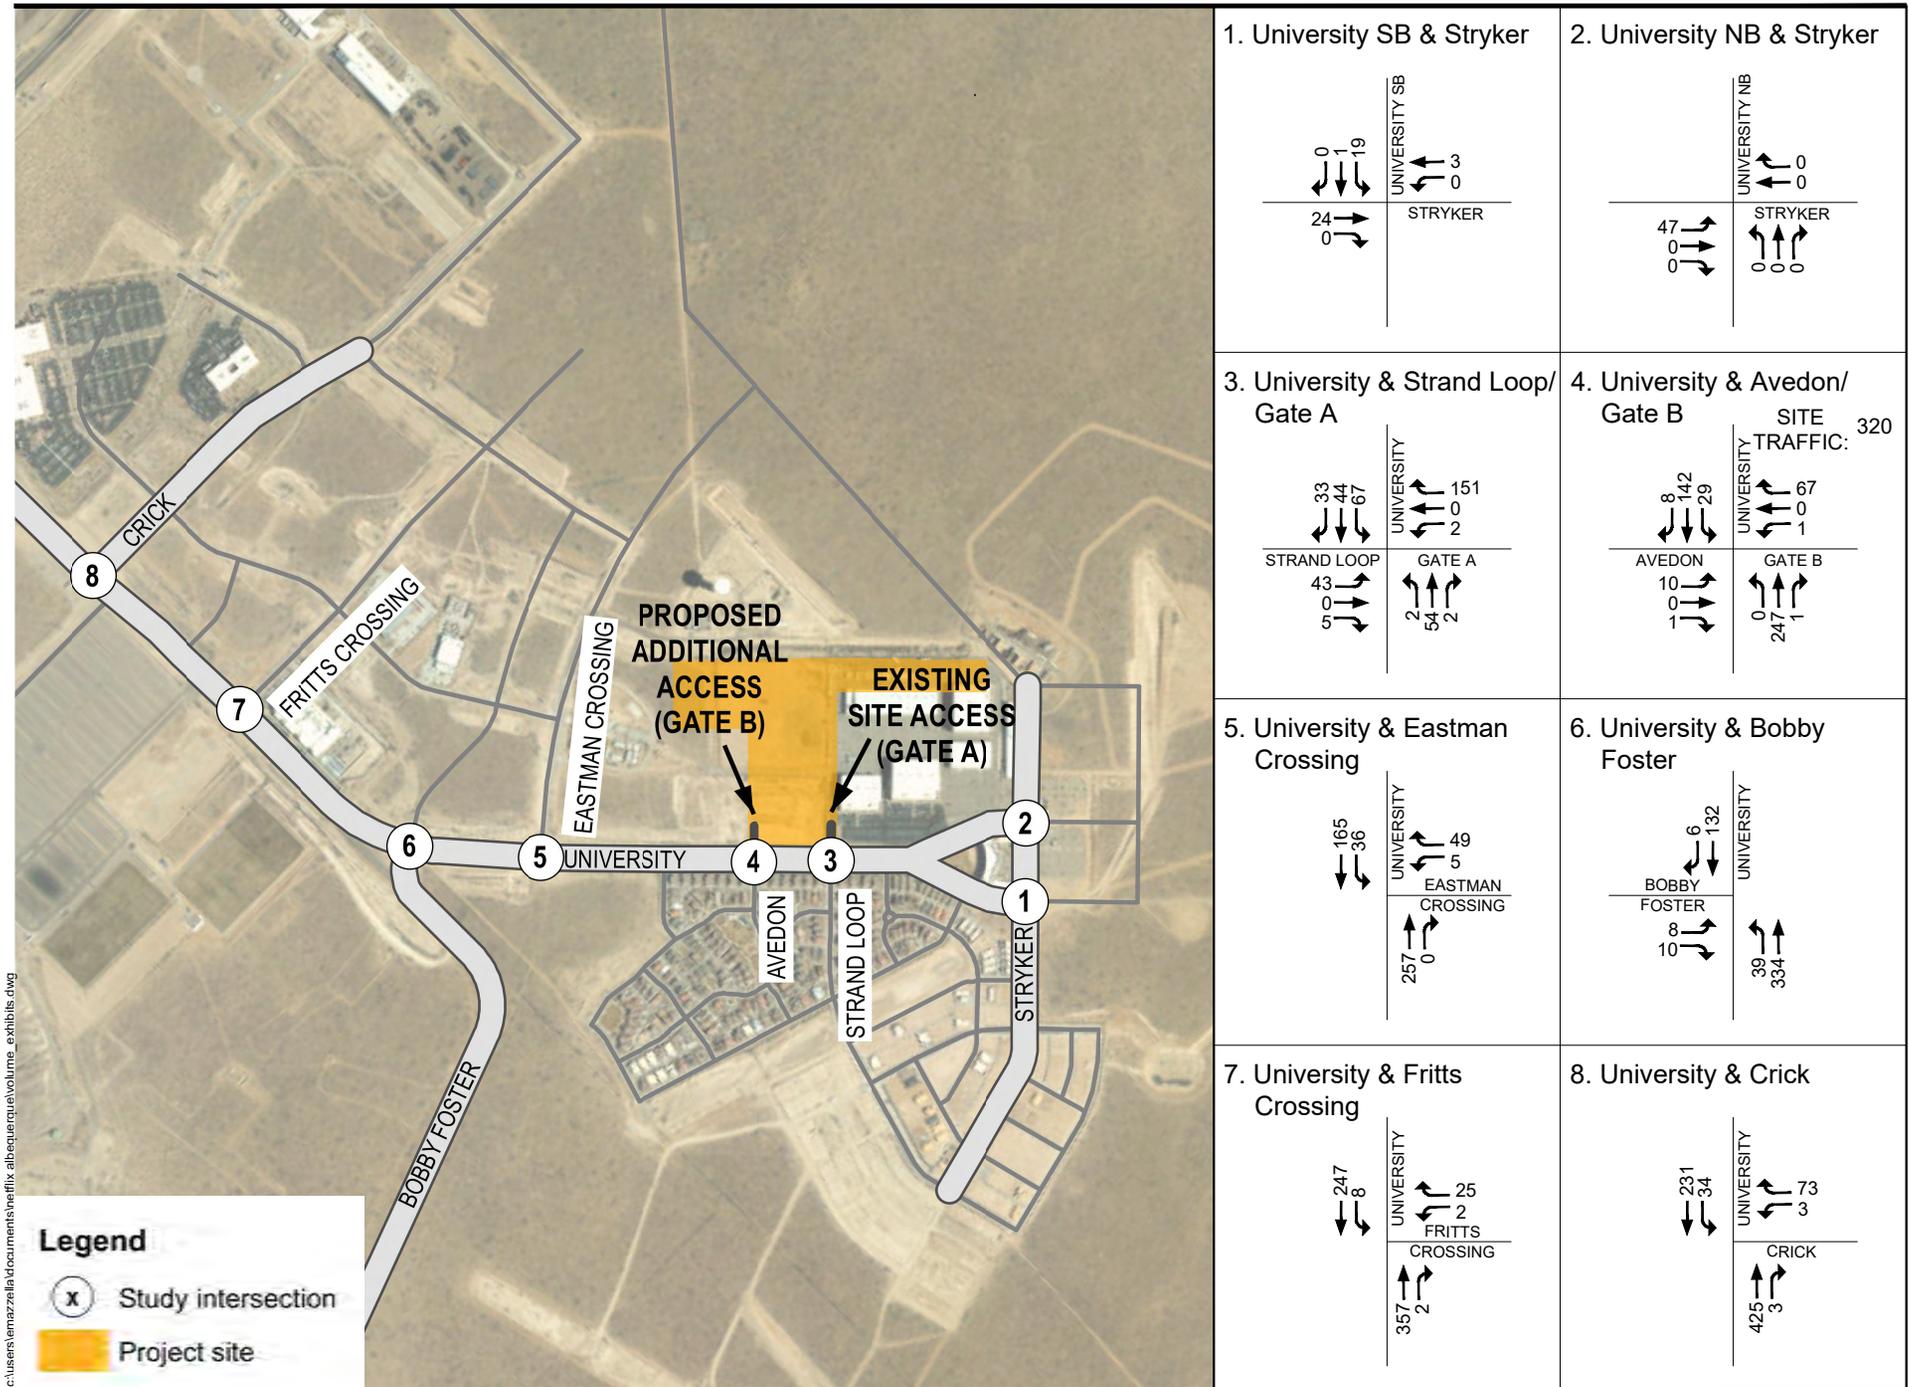

Figure 11

Opening Year (2023) with Project Intersection PM Peak Hour Volumes

5.1 INTERSECTION AND ROADWAY ANALYSES

The study area includes the site gates, residential intersection legs (Strand Loop) and Avedon, and University Blvd.

Table 10. Summary of Implementation Year (2023) LOS

Intersection	Traffic Control	AM Peak Hour Delay (sec), LOS	Noon Peak Hour Delay (sec), LOS	PM Peak Hour Delay (sec), LOS
1. University (SB) & Stryker	TWSC	0.0, A	10.1, B	9.4, A
2. University (NB) & Stryker	TWSC	8.4, A	0.0, A	0.0, A
3. University & Ex Gate/Strand Loop	TWSC	14.0, B	17.5, C	12.0, B
4. University & Future Gate B/Avedon	TWSC	14.4, B	16.1, C	11.7, B
5. University & Eastman Crossing	TWSC	9.4, A	12.9, B	11.4, B
6. University & Bobby Foster	TWSC	13.0, B	11.7, B	12.2, B
7. University & Fritts Crossing	TWSC	9.9, A	10.2, B	10.8, B
8. University & Crick	TWSC	9.7, A	11.0, B	10.9, B
TWSC – Two-way stop-control *Existing PHF and %HC were considered and used in the Implementation Year Traffic Analyses				

5.2 IDENTIFY ALTERNATIVE INTERSECTION AND ROADWAY DESIGNS

Ingress is proposed through two travel lanes toward the gate in the eastbound direction. One exiting lane is proposed in the westbound direction. A modification to the gate processing operation is being evaluated and proposed to allow Owner operation traffic to pass through the gate from the right lane using an electronic security detection system. The left lane is proposed for visitors and will require gate attendant interaction.

5.3 EVALUATE ALTERNATIVE INTERSECTION AND ROADWAY DESIGNS

The proposed intersection at Gate B is similar to the existing intersection configuration at Gate A. Minor modifications described in Chapter 6 are proposed at Gate B to accommodate the site plus background traffic.

5.4 PERFORM SIGNALIZATION AND STOP SIGN WARRANT ANALYSES

Traffic data for University Boulevard and Strand Loop/Gate A was reviewed determined if more detailed signal warrant analyses should be conducted. The initial review indicated that the four primary warrants that are applicable include:

- Warrant 1. Eight-Hour Vehicular Volume
- Warrant 2. Four-Hour Vehicular Volume
- Warrant 3. Peak Hour
- Warrant 4. Pedestrian Volume

Based upon a review of the traffic data, existing and forecasted volumes are well below the flows the thresholds that would satisfy any of the applicable traffic signal warrants. Therefore, further investigation is not needed at this time.

6.0 SITE ACCESS REQUIREMENTS

Access to the site is proposed through the addition of one new Gate (Gate B). Gate B is proposed approximately 460 feet north of existing Gate A on University Boulevard.

Minor roadway improvements are proposed at University Blvd. The existing lane for SB left-turning traffic at Gate B is proposed for access for SB to EB left turns entering at Gate B. It is recommended that Gate A geometry remain unchanged. The existing median opening width at Gate B location is sufficient to accommodate the proposed lane configuration and geometry.

Installation of a new standard stop sign for WB traffic exiting Gate B is recommended.

Any obstructions to limit sight distance to such as street lighting poles, landscaping, signing, etc. should be removed or relocated.

Access (Gate B) at the existing intersection of University Boulevard and Avedon Avenue is proposed for the North Development. The access is proposed as a stop-controlled access onto University Boulevard. Full access is proposed to allow all movements at the intersection.

The proposed Gate B access configuration will include two inbound standard width driving lanes and one standard width exiting lane. A raised median approximately 12-15 feet is proposed to separate ingress and egress movements.

Based upon a preliminary analysis of queues, queue length for Gate B is expected to be less than or similar to existing queues. Implementation of electronic gate processing for site employees and staffs should accelerate the rate of vehicles entering the site.

7.0 SUMMARY OF FINDINGS

Based upon the traffic analyses conducted herein, no adverse impacts associated with the development are foreseen. If the recommendations proposed in Section 8 are implemented, existing and future traffic should be accommodated in a safe and efficient manner.

8.0 RECOMMENDATIONS AND MITIGATION MEASURES

The following recommendations and mitigation measures are proposed for Phase I.

- Open (remove) existing temporary curb for the University Boulevard SB Left Turn Lanes to accommodate SB to EB left turning movements into the site.
- Align Gate B with Avedon Avenue (West leg)
- Install typical Standard Stop Sign for westbound traffic exiting Gate B.
- Remove or relocate any obstruction such as landscaping, signage, street light poles and other potential obstruction so that adequate sight distance is provided for traffic. Any landscaping or vegetation on University Boulevard limiting adequate sight distance should be removed, relocated, or pruned.
- Maintain the existing roadway lighting along University Boulevard for both Gate A and Gate B.
- Provide ADA and bicycle related accommodations at Gate B Access.
- Gate A: Addition of an additional exiting lane, to consist of two ingress lanes and two egress lanes.
- Gate B Lane Configuration: two-ingress lanes and two egress lanes.
- Just prior to the access gates, it is recommended that pull-out, drop off areas be provided for ridesharing operations.
- It is recommended that Gate B be provided with a turn-around area, similar to the configuration at Gate A.
- Use retro-reflective pavement markings as appropriate for the Access

ALBUQUERQUE STUDIOS EXPANSION PHASE I, NORTH DEVELOPMENT

- Removals or relocation of existing infrastructure on the east side of University Boulevard to accommodate Gate B access will be necessary. These items include minor pavement marking removals, landscaping (NB University Boulevard), street lighting pole, signing, curb and gutter, and sidewalk,
- It is recommended that pedestrian access/accommodations be incorporated through sidewalks and ADA ramps at Access B. Bicycle lanes should remain unchanged on University Boulevard in the NB and SB directions. Future accommodations for transit/bus stops are contemplated as Mesa del Sol grows and develops.

NMDOT COVID TRAFFIC DATA CALIBRATION METHODOLOGY

SUBJECT: Alternative methods for Traffic Counts

DATE: October 5, 2020

To: David Quintana, Chief Engineer

From: Afshin Jian, State Traffic Engineer *Afshin Jian*
New Mexico Department of Transportation

Alternative Means to Develop Base Turning Movements Volumes for Traffic Impact Studies During COVID-19 Times:

Since February 2020 Governmental policies and social attitudes due to the COVID-19 crisis have impacted traffic volumes and traffic patterns during the AM, Noon, and PM Peak Hour periods. Therefore, traffic counts during this period are not representative of “normal” vehicular traffic volume or patterns. A memo was distributed for guidance on 5/1/2020. To provide more guidance to develop traffic counts and continue development within the State of New Mexico, alternative methods of generating base Turning Movements Volumes (or turning movement counts (TMC)) for Traffic Impact Studies have been developed using recent data and data generated from Big Data models. The “Big Data” models generate traffic counts from anonymized location record from smart phones and other GPS devices. Following are three alternative methods of developing base turning movements volumes based on the levels of data that might be available for any given intersection.

Method 1 – Use Recent Turning Movement Data

Recent pre-COVID19 traffic counts are the preferred data source since in most cases the data is still representative of normal traffic conditions and it provides turning movement volumes, not just approach volumes. The New Mexico Department of Transportation has allowed turning movements volumes up to four years old to be utilized as base Turning Movements Volumes for Traffic Impact Studies. Valid data collected is between September 2016 and February, 2020.

Method 2 – Use Current Big Data Calibrated with Tube Count Data

For Intersections where there is no recent turning movements volumes data, recent tube count data may be available at most or all legs. This is the case for most of the Mid-Region Council of Governments area on major streets intersection from Mid-Region Council of Governments' (MRCOG) Transportation Analysis and Querying Application (TAQA) website. This case might not be available in rest of the state that is not under MRCOG. Tube counts provide approach volumes and departure volumes but do not provide turning movement volumes. The Big Data can be utilized to approximate raw turning movements volumes at these intersections which can be calibrated with recent TAQA data. This method calibrates the turning movements volumes at the intersection to comply with TAQA approach volumes, but does not account for the changes that may occur in traffic patterns (i.e., proportions of left, thru, and right turns) as a result of the temporarily changed traffic conditions. To adjust turning movements volumes at the intersection to account for changed traffic patterns, it is proposed to use Big Data to develop a comparative scenario to establish a turning movements volumes ratio approximating that of pre-COVID-19 turning movements volumes. The pre-COVID-19 ratio of the turning movements volumes for each approach to an intersection can be utilized to re-allocate the left / thru / right volumes at each approach of an intersection to correlate with pre-COVID-19 traffic patterns. The following page demonstrates a generic calculation for a single approach to an intersection which demonstrates the proposed methodology:

Method 2: User Pre-COVID Big Data Calibrated with Tube Count Data:

Method 2: Use Big Data Calibrated with Tube Count Data

127 → $400 / 220 * 70$

Method 3 – Use Big Data Only and Current COVID-19 TMC Volumes

This method is used for intersections where there is no recent traffic data at all. These intersections are mostly in smaller communities in New Mexico where there is no formal data collection program such as the Mid-Region Council of Governments. In such cases, it is proposed to conduct a current turning movements volumes AM / Noon / PM count as needed to acquire current actual volumes (COVID-19 volumes). Subsequently, acquire two sets of turning movements volumes from an approved Big Data source. First, acquire COVID-19 turning movements volumes for the same month as the current actual traffic count was conducted. Next, acquire pre-COVID-19 turning movements volumes for the same intersection. Subsequently, the ratio of pre-COVID-19 to COVID-19 turning movements volumes (from Big Data) can be applied to adjust the current actual volumes to achieve base turning movements volumes for the Traffic Impact Study. The following page demonstrates a generic calculation for a single approach to an intersection which demonstrates the proposed methodology:

Method 3: Use Big Data Only and Current COVID-19 TMC Volumes:

The major concerns regarding Big Data turning movements volumes are:

- 1) The data is not reported in 15-minute increments. At least one company is working on developing the ability to acquire 15-minute volumes.
- 2) The sampling rate for Big Data is approximately 40%.
- 3) The data from Big Data sources is not considered to be demand volumes.

The proposed methodology addresses those issues as described below:

- 1) The existing current proposed field count will provide 15-minute increment volumes that will be proportioned to approximate pre-COVID-19 conditions.
- 2) The sampling rate becomes a non-issue because by dividing the pre-COVID-19 TMC's from Big Data by the COVID-19 TMC's from Big Data sources, the sampling rate is cancelled because it is the same for both pre-COVID and COVID conditions.
- 3) In cases where TAQA data is available, the TAQA adjustment should allow demand volumes to be achieved for the base turning movements volumes. In smaller communities where TAQA type of data is not available, it has been my experience that the adjustments made for demand volumes are not significant (i.e, less than 1% or 2% generally). It seems that adjustments for demand volumes is not as critical at intersections in smaller communities.

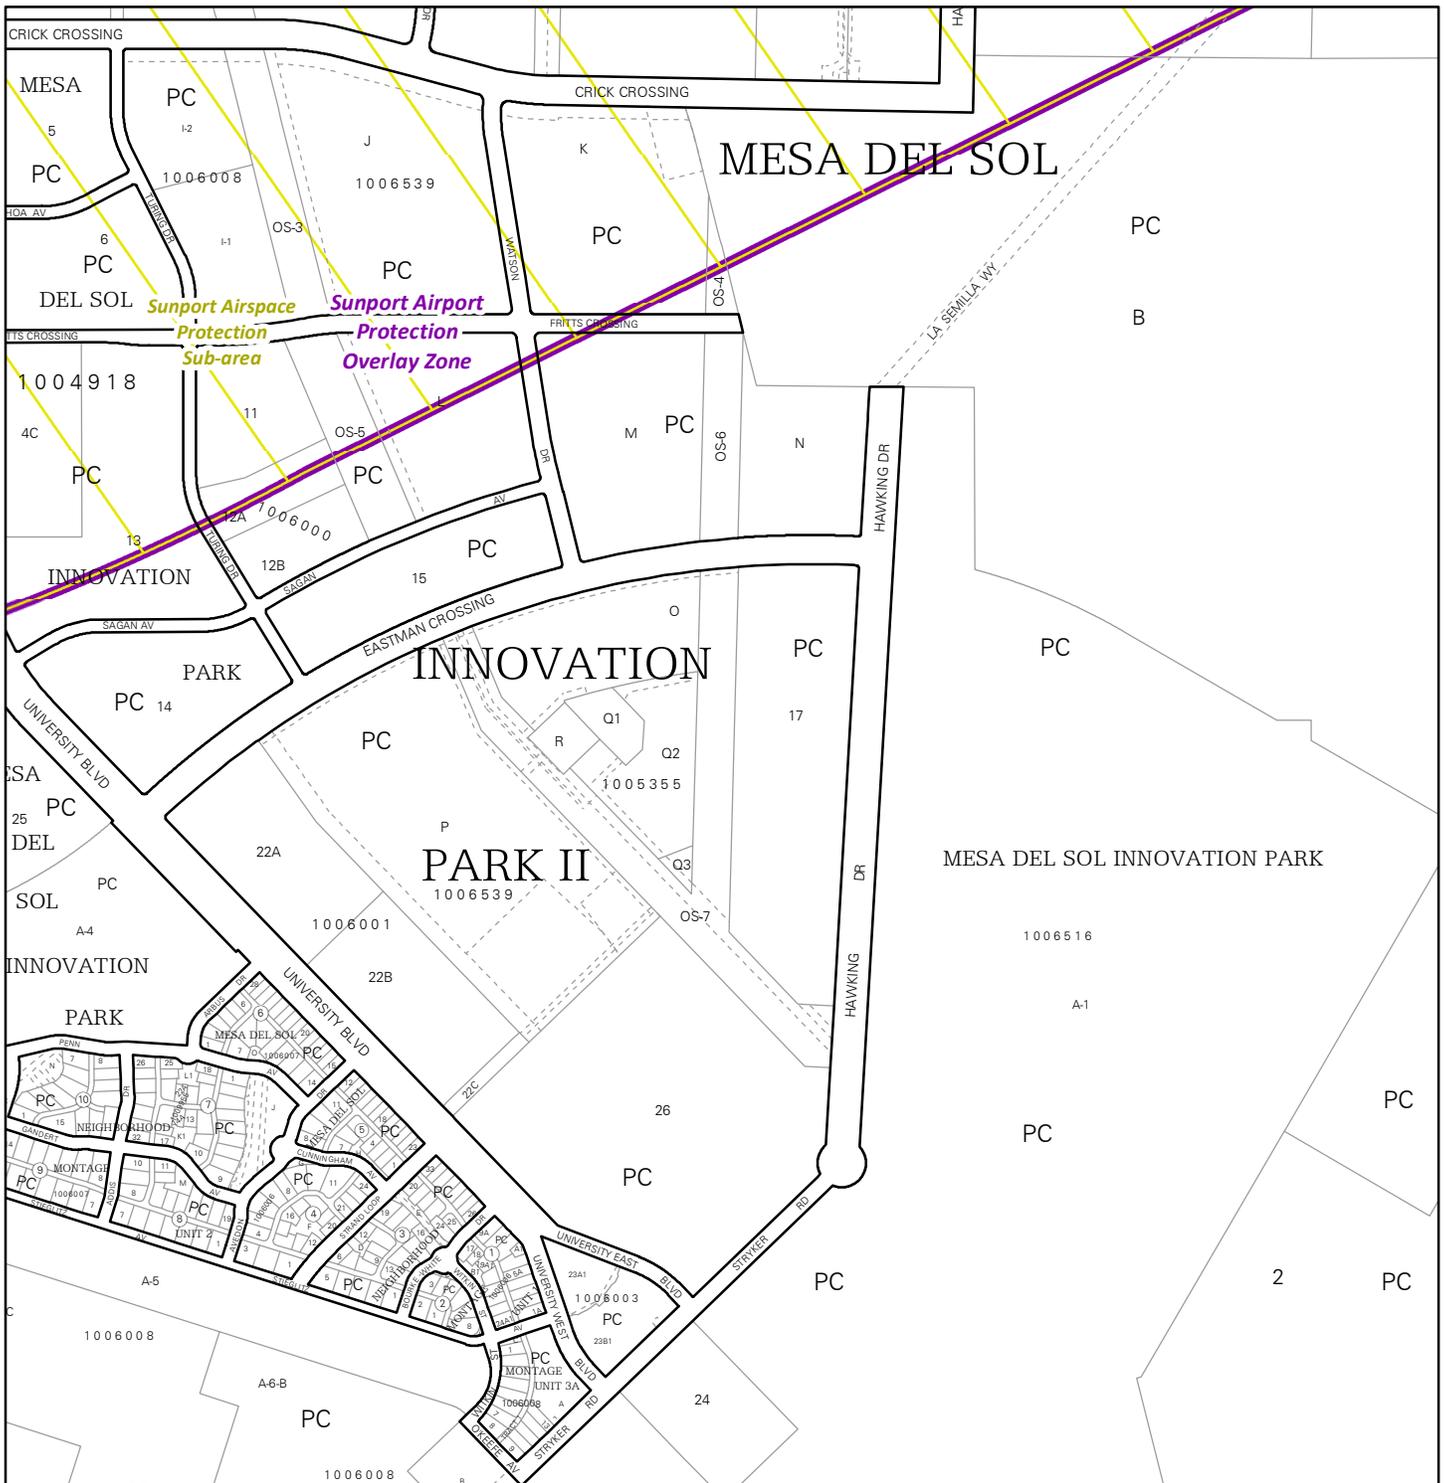

To compensate for any uncertainties in this methodology, it might be prudent to include a safety factor to be added to all of the base turning movements volumes as a general rule. That safety factor would be set and established by the New Mexico Department of Transportation.

In a recent meeting with [Streetlightdata.com](https://www.streetlightdata.com) staff, I was informed that there is a four to six week period of time before data would be available on the Streetlightdata.com website application. Therefore, this method, if approved, would still incur a four to six-week delay while awaiting updating / vetting of the Streetlightdata.com data before posting to their website for use by the user.

CABQ ZONE ATLAS

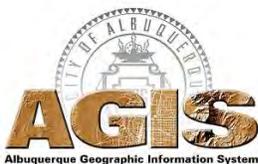

Excerpt

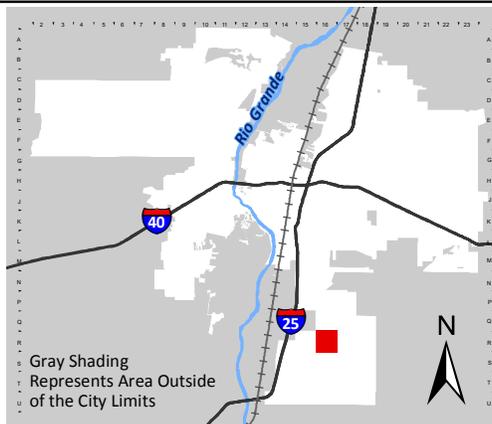

For more details about the Integrated Development Ordinance visit: <http://www.cabq.gov/planning/codes-policies-regulations/integrated-development-ordinance>

IDO Zone Atlas May 2018

IDO Zoning information as of May 17, 2018
The Zone Districts and Overlay Zones
are established by the
Integrated Development Ordinance (IDO).

Zone Atlas Page:
R-16-Z

- Easement
- Escarpment
- Petroglyph National Monument
- Areas Outside of City Limits
- Airport Protection Overlay (APO) Zone
- Character Protection Overlay (CPO) Zone
- Historic Protection Overlay (HPO) Zone
- View Protection Overlay (VPO) Zone
